At the fair on Wednesday there was a pitch 66 tons, and a large attendance of buyers and brisk trade was experienced. Best Cheshire made 62s. to 66s. per cwt., medium 56s. to 60s., and lower grades down to 52s. These quotations are 5s. per cwt. higher than those of the last fair.

CORRESPONDENCE.

Marking of Foreign Eggs and Poultry.

SIR,—Through the courtesy of the secretary, Mr. W. C. Young, of the Dairy Farmers' Association, who is anxious to give every assistance to important questions connected with the farming industry to be discussed, I am glad to be able to announce that a meeting will be held in the club-room at the Dairy Show, on Thursday, October 10, at 5 30 punctually, open to all members of the poultry industry, to advance the interests of the movement for marking foreign eggs and poultry, and to propose those whom they consider most suited to represent them on the committee, and to complete the number required on the Executive Committee.—I am, &c.,

HERBERT M. YETTS,
Hon. Secretary and Treasurer.

SIR,—As members of the Executive Committee, which was formed at a public meeting held at the Liverpool Street Hotel on June 26 last for the purpose of considering the advisability of the marking of foreign eggs and poultry, we feel it necessary, if we are to carry on the duties entrusted to us to extend the scope of our work and thus bring the question to a successful issue.

So far we have received most gratifying support from all quarters of the United Kingdom from county councils, agricultural societies, poultry associations, societies, and clubs, besides letters of approval from many leading and influential private members of the poultry industry in all its various branches

Before asking the President of the Board of Agriculture to receive a deputation of members of the poultry industry we consider it advisable to circularise individually all other agricultural and co-operative poultry societies and endeavour to induce them to still further strengthen our hands.

This will necessarily entail a large expenditure, and whilst up to the present the committee have borne the entire outlay—a considerable sum—we now feel that the movement having been officially recognised and placed before the poultry industry, we are justified in asking poultry keepers and agriculturists to contribute towards the expenses of a movement by which they will be direct beneficiaries. In view of the national importance of this movement we feel that we have only to ask for the necessary funds for them to be forthcoming. If every poultry keeper were to contribute the small sum of 1s., amp'e funds would be provided for all necessary requirements, but we trust that those who have the interest of the movement at heart will contribute as liberally as it is possible for them to do, in view of the fact that a considerable amount will be required. Postal orders and cheques should be made payable to the treasurer, Captain Herbert M. Yetts, E. and P. Fund, and crossed —— and Co., and addressed to him, care of Dr. J. C. Hogan, 140, Fenchurch Street, London, E.C.

Contributions will be acknowledged in the poultry and agricultural Press. Signed, Deerhurst, chairman; F. J. Broomhead, J. T. Brown, A. Lockley Cook, J. C. Hogan, M.D., T. H. Lewer, Horace J. Wright. Herbert M. Yetts, hon. sec., treasurer.

Thistles on a College Farm.

SIR,—Thistles are no respecters of places or persons, and these bold plants will even grow on the farm of that well-known collegiate establishment known as the South-Eastern Agricultural College, Wye, Kent.

A neighbouring gentleman, Mr. J. N. Sutton, presumably a farmer, has noticed the growth of the obnoxious vegetation, and has thought well to express his views on the matter in the following letter to the *Kentish Express*:—

"A few years ago we were informed that by the aid of technical education and experimental farming combined, all interested in agriculture would reap great benefit.

"Yet, to my great surprise, I find a large proportion of the pastures this season used by the South-Eastern Agricultural College at Wye well stocked with thistles of fine specimens seeding to perfection. If this is the example given by practical experience, I fail to see the knowledge gained, especially as our pasture is one of the principal items in agriculture at present."—Yours, &c.,

LUX.

September 26, 1907.

Carrots Gone to Seed.

SIR,—"Of two acres of carrots that I drilled the middle of May, nine-tenths have gone to seed (white Belgian sort). Query, is it the season or the seed?" Perhaps one, perhaps the other, perhaps both. There can be no doubt that the excessive moisture this season has been responsible for roots running to seed, and one hardly sees a piece of mangolds or carrots without noticing a good many runners. But nine-tenths of the crop is a very large proportion, and other conditions being favourable, I should hardly like to hold the season responsible for so many, particularly as I have noticed in the case of root crops generally that the smallest proportion of runners is to be found where the best strains of seed were sown. It is impossible to give a positive reason why roots run to seed, as they are no doubt influenced by the weather, while the strain of seed cannot be left out of the reckoning.—Yours, &c.,

September 26, 1907. RUSTICUS.

Sunday Labour During Harvest.

SIR,—With all respect to "Farmer's Wife," page 362, I do not think she is quite fair in her condemnation of the writer of "Lincolnshire Notes," *re* Sunday labour during harvest. I also saw the note which "Farmer's Wife" takes exception to, and I imagined the writer, a farmer wearied and worried with his haymaking in the catchy season now ended, and finding himself on Sunday with hay ready for carrying and prospects of rain again before Monday morning. If in such a predicament a man departs from the rule and picks up a few loads of hay, I think he is as justified in doing this as any other work of necessity. This is not turning the "one day of rest" into a working day as "Farmer's Wife" would imply, but merely meeting an extreme case by what in the ordinary course would be extreme measures. If I read the writer of "Lincolnshire Notes" aright, he thanks God for the Sunday the same as we all do, but it is difficult to make hay when the sun shines if Old Sol refuses to perform his proper function for a week at a stretch, and I do not for a moment think that the writer in question would advocate carrying hay on the Sunday if there was a reasonable prospect of the following day being fine. I agree that the greatest blessing we have in this country is our weekly rest day—our Sunday—which tired men and tired horses all appreciate; but in a hay season like that of 1907, when over and over again it was fine in the daytime and rained at night, I do not think any farmer acted sinfully who strained a point when occasions demanded it and carried hay on the Sabbath.—Yours, &c., LUX.

September 25, 1907.

SIR,—It is gratifying to think that "Farmer's Wife's" indignant protest against the above has but given expression to the feelings of the majority of farmers. If the writer of "Lincolnshire Notes" is so keen an advocate for work on the Sabbath, then let him become the proud possessor of a small holding, and he might then learn, what he evidently knows nothing of now, what harvest work really is. Can there be found another class of workmen who work so hard, have such long hours, and who have such few privileges? Their working hours are from six in the morning to six at night, with two or three hours extra in haytime and harvest; no holiday allowed during the whole year, and if a day is begged off to visit any local recreation, as often as not his day's wage is stopped. No words can be found in sufficient condemnation to such men as the writer of the above "Notes." The only gratification would be to find him similarly placed as the poor agricultural labourer, then, indeed, he might be glad of his Sunday rest.—Yours, &c, H. L.

Defective Sample of Barley.

SIR,—Enclosed please find two ears of barley, being a sample of a large quantity of similar ones grown. You will notice they are defective. I would be glad if you could give me a reason for the same.

It was grown from special seed, and with artificial manure containing no potash.

I intended to use some for seed next year. Do you think I could safely do so, and have a good crop free from defective heads?

Thanking you in anticipation for a reply in an early edition of your paper.—Yours, &c.,

A CONSTANT READER.

*** I regret to say that from the evidence before me I am unable to say definitely why a large proportion of the heads of barley are defective like the specimens you sent for examination. Appearances point to the seed being of an inferior strain or a poor variety, but you say that it was special seed, and I take it from this that you obtained it from a reliable source, and that a good variety was sown. Even with the best varieties, of course, it is necessary that the cultivation be good in order to get the best results, and the nature of the land, and the treatment thereof have a good deal to do with the samples grown. With no particulars before me I am unable to say whether the cultivation has anything to do with the defective heads, but you will doubtless be in a position to judge of this for yourself. Without going so far as to say that good barley could not be grown next year from the seed, in spite of the defects, provided cultural and other conditions are favourable, there would certainly be some risk in using the seed from this year's crop which is defective for sowing. Whether it would be wise to again use the seed depends on the proportion of defective heads, and whether the cause is due to faulty cultivation or poorness of the strain. In my opinion, however, there is nothing like seed from crops that are well up to standard and show no defects, and acting on this principle I should be disposed to avoid risks and secure a fresh supply of seed for next season.—RUSTICUS.

Swedes Attacked by Insects.

SIR,—I should be glad if you can give me any information as to the treatment of swedes infected with what is known among farmers in Yorkshire as "smother fly," which is really a species of aphis, pale slate-blue in colour. I am afraid, if not checked, it is going to make havoc among swedes this year. I remember (I believe it is six years since) we had a field of swedes which looked full of promise about harvest, tops meeting in rows, but the "smother fly" got on them and they only turned poor at the end. I have wondered if, with a knapsack sprayer and suitable solution, something might be done to check the ravages of this pest while it is only confined to patches. Would the Board of Agriculture's paraffin emulsion, or any other of their recipes, be likely to answer my purpose? Or can you suggest anything else? Shall be glad to hear from you through your columns.—Yours, &c.,

YORKSHIRE.

*** Though the term "smother fly" is new to me, and probably is a local term, I am well acquainted with the aphis, which attacks swedes at this time of the year, and in some cases causes a considerable check to the growth. I do not know whether it is so in your case, but as a rule, swedes are the most liable to attacks of aphis when grown on thin or poor lands, or where there is an insufficiency of plant food in the soil. In other words, when the plants are robust and vigorous they usually repel the pest, except, perhaps, an odd specimen here and there. A bad attack of aphis is a serious trouble, as the insects increase rapidly, and by sucking the juices from the leaves the plant is weakened and growth is checked. The glorious weather we have enjoyed of late has been most favourable for the increase of the pest, but if we happened to get a change, which might come at any time now to wet, or colder conditions, the pests would soon disappear. In the meantime, however, the crop is suffering and the evil is spreading, and it would probably be to your interest to put a check on the aphis while it is confined to patches in the field. You could do this by means of a knapsack sprayer and an insecticide that will destroy aphis, but care must be taken to apply the liquid to all parts of the foliage where the insects are secreted. The paraffin emulsion you refer to is a certain destroyer of aphis, but if this is used the directions for mixing must be closely followed, because if the oil is not thoroughly incorporated with the soap and water, injury to the leaves might follow. Quassia extracts are good for destroying sucking insects, and if you boil ½ lb. of soft soap and 1 lb. quassia chips till the former is dissolved and the bitterness is extracted from the quassia, and then dilute to make 10 gallons, you will have a useful insecticide. It should be thoroughly strained or the bits will clog the sprayer, and if applied lukewarm so much the better.—RUSTICUS.

The Harvest in Mid-Staffordshire.

SIR,—The recent spell of fine weather has done wonders in the way of giving a good finish to a harvest which a short time ago caused much anxiety. In this neighbourhood the corn crops generally have been rather troublesome to cut—specially so in the case of oats, which being much laid have in many cases been cut by hand, or with a combined mowing and reaping machine. Wheat generally has stood up well for work with a self-binder.

Late as the ripening of corn has been, the yield has been proved to be above an average, and, inasmuch as the selling value of all grains is higher than it has been in any year of late, the general return from corn growing will be more satisfactory than usual.

The writer has thrashed and sold 45 bushels of wheat per acre from a field of 7 acres, and it is reported that from a field of oats in the neighbour-

hood there has been a yield of 68 bushels per acre, The bulk of straw and hay gathered this season is much over an average.

Of hay the quality in most cases is decidedly inferior, although the damage done by bad weather has not been so great as it would have been if rain had been more continuous and the temperature had been high.

Live stock have done well, and the pastures still continue very good. Ponies also are fairly satisfactory. Notwithstanding periods of long-continued anxiety in the harvests of both hay and corn, the record of the season will be the record of a fat year. MID STAFFS.

September 24, 1907.

The Crops in Essex.

SIR,—In my district the crops generally are good and quite up to the average. The weather was troublesome during the first two weeks of harvest, but fine afterwards. Rain is now much needed for the root crops, also for the young seeds and clovers now exposed since the cutting and carrying of the corn. The pastures are getting very dried and want a good soaking.—Yours, &c., D. G.

Colchester, September 25, 1907.

A Better Outlook in East Suffolk.

SIR,—Harvest prospects a month ago were not bright, but the last fortnight's fine sunny weather has gladdened the hearts of farmers, and the corn is now mostly carted. Some of the earlier corn carted will need some time on the stacks, but the barley and wheat carted this last fortnight has come up in splendid order. Wheat seems to be about a fair crop—eight, nine, and ten coombs to the acre; hardly sufficient barley has been threshed yet to form an opinion of the crop. Samples generally will not be bright; some of the light land barleys look very promising as to colour and yield. Brans, both spring and winter, promise a good crop; peas medium.

Markets for wheat very firm, ranging from 34s. to 33s. per qr. Peas also are selling well.

Seed clover is very fit, and many fields should be carried next week. Beetroots about an average. Turnips promise well, and there looks like the prospect of plenty of winter keep.

Altogether, the prospect looks favourable for farmers generally, with a prospect of better prices. EAST SUFFOLK.

September 25, 1907.

Earl Carrington Declines to Attend the Scottish Conference.

A special meeting of the directors of the Scottish Chamber of Agriculture was held in Edinburgh on Wednesday to consider correspondence between the Chamber and Earl Carrington, President of the Board of Agriculture. Arrangements had been nearly completed for a conference between Lord Carrington and the Chamber, at the annual meeting of the Chamber on October 23, when, on September 6, Lord Carrington wrote stating that he thought the Board had better not be represented. Questions connected with the Scottish Small Holders Bill were sure to come up for discussion, and it would, he was afraid, be difficult to avoid a somewhat heated controversy. The Bill, continued Lord Carrington, represented the settled policy of the Government, in which he entirely concurred.

In reply to this letter the secretary of the chamber stated that to remove any difficulty they would strike the subjects of the Bill out of the conference programme.

Lord Carrington wrote in reply appreciating this action of the chamber, but said he felt very little advantage would be gained by the discussion of a programme so curtailed. The proposals in the Government Bill overshadowed everything else with which the Scottish agriculturists were concerned at the present time, and until these were carried into law minor matters must stand over for consideration under the new *régime* which they proposed to inaugurate.

It was agreed to hold the conference in spite of the fact that the Board of Agriculture was not to be represented. The various resolutions to be discussed were adopted, as already drafted, and it was agreed that the land question be discussed on a motion to the effect that the Government be strongly urged before reintroducing the Bill to amend it on a purchase basis system.

The live and dead farm stock at the Home Farm, Laughton, and the property of Sir James Duke, was dispersed by auction on Tuesday, in consequence of the farm having been let. The sale included a good number of pure bred Southdown sheep, which are descended from Sir James Duke's well known and old-established flock, No. 48 in the Flock Book, and these met a good demand at prices up to 6 guineas. Some Aberdeen and mixed bred cattle made up to £24 a head, while draught horses and colts realised up to 49½ guineas.

West Country Notes.

THE harvest is now well forward, and there is a general feeling of surprise that it is so good. There is nothing to brag over in most places, but everywhere the worst fears were entertained, and that there has been a disappointment on the right side has put heart into the farmer that was wanting. Prices have hardened a bit for corn.

CHEESE, however, on which so many in the West depend, shows a return of 8s. to 10s. per cwt. behind last year. At Frome Fair on the Tuesday trade was decidedly slack, and this gave a check to sales, which recovered on the Wednesday. A great deal of the year's make changed hands at 6d. per lb., and the good ordinary lots made only about 58s. to 60s. The cheese-dealers' view of the position was that the high prices of last year checked the consumption, and they would not risk such a thing again.

THEY also asserted that a great proportion of the cheese was too tasty. The uncertainty of the season, and the sudden ripening during the past few weeks, has probably had some effect; but judging from the samples in the show itself there was something to be said on the farmers' side. Really, there were very few samples under the mark, and the general quality has greatly improved since the earlier shows. The best dairies made their mark, but there was certainly a big drop in all classes from the prices prevalent a few weeks ago.

SOME of the Wiltshire hiring fairs have been held this week, and this test of the condition of the labour market proved a surprise. Farmers found no difficulty in securing hands at Swindon on Monday, and the terms asked by the men were not stuck to so hardly as for some time past. Bargains were easily struck at moderate rates, and most of the farmers were suited. This is ascribed, in part at any rate, to the labourers having learnt that there is less to be gained by removal to towns than was the case at one time. The interchange of visits by means of excursions and trips of various sorts, and the greater tendency and ability for letter writing, are having some effect on the migratory tendencies of the labourer, in the view of those who have special facilities for studying the subject.

THE people who wished to see the butter at Frome Show were grumbling a little at so many of the lots being covered up with muslin. Last year the grumbling was at the grit which smothered the exhibits. It is difficult to please everyone, and the keenest and most obliging of stewards and committees must always find that something fails to go right.

THE bringing of flowers into agricultural shows, particularly into the dairy sections, has caught on in the West, and it is evident that it proves an attraction to the ladies who do not care overmuch for the inspection of cattle and horses. The fair sex who come to the shows have an important share in securing a good gate, and therefore must be studied. Though horticulture and "husbandry" are not strictly within the limits of the show scope, yet it is more closely allied to agriculture than were the balloon ascents, Blondin exhibitions, and boxing kangaroos, to which a few years ago some of the shows resorted to bring grist to their mill.

THE price of bread generally has gone up in the West, but it has not been found possible in all cases to maintain it. The boards of guardians, asylum boards, and others who have to make their contracts for the ensuing three or six months, find that the extra cost is making a considerable difference to their outgoings; and in some cases it has sent the rates up to the extent of a farthing, and even a halfpenny, combined with the increase in the price of coal and other necessaries.

DEVON County Council met last week, and amongst the subjects on the agenda was that of small holdings. The committee who have been going into the question presented a report which was practically a replica of that to other county councils in the West—and elsewhere.

SIR JOHN SHELLEY stated that his committee found in the county that large numbers of small holdings were provided, in some cases more were wanted and land was available, and in other places the needs could not be so readily met. There the matter ends till the next meeting, when further steps will be possible.

THE welcome intimation of a decrease in the expenditure on main roads is certainly an unusual one nowaday, and was much appreciate those who have to pay the rates in Devon.

THE abundance of keep in the West generally is having the effect of keeping cattle off the markets in many districts. At some of the Devon ram sales the prices of exceptionally good animals keep up to 10 or 12 guineas, but 5 or 6 guineas is the average run; and registered ewes are selling at really moderate prices.

THE question of puppy hounds is still agitating the minds of the hunt masters in the West, who almost unanimously declare that it is not advisable that these should be compelled to wear collars. The Board of Agriculture have been appealed to from Devonshire, and Lord Poltimore informed the County Council that the Board have stated that the question is purely one for the local authority.

IN the neighbouring county of Somerset this week there comes into force the new regulation for keeping all dogs in confinement during the night, or under strict control.

September 26, 1907.

PUBLICATIONS RECEIVED.

Messrs. Gartons, Ltd., the well-known seed growers and experts of Warrington, have issued a neatly arranged catalogue containing instructions and full descriptions of the new breeds of seed wheats raised by their own system of plant breeding. Messrs. Gartons claim that these new breeds of wheats are not only heavier croppers than the older varieties cultivated, but they are also much richer in gluten, and therefore much more valuable from a miller's point of view. New and improved breeds of winter barleys, winter oats, and other seeds for autumn sowing are also fully described.

The official report has now been issued of the Second National Poultry Conference which, it will be remembered, took place at Reading on July 8 to 11 inclusive. The report, which has been edited by Mr. E. Brown, F.L.S., the hon. secretary, extends to close on 400 pages, the major portion of which is taken up with the numerous papers which were read and discussed at the conference. These will be read with considerable interest by all who were unable to be present at the conference, whilst they will also be appreciated by those who were fortunate enough to be able to attend. The subjects dealt with cover a wide range, and these, together with the details of the time, make the report one of great interest to all poultry breeders. It is published at 5s net, and copies can be had of the hon. secretary, National Poultry Conference, 12, Hanover Square, London, W.

We are in receipt of "British Rainfall, 1906," in which the distribution of rain in space and time over the British Isles during the year 1906, as recorded by more than 4,000 observers, is discussed by Dr. Hugh Robert Mill, who also gives a number of articles upon various branches of rainfall work. This is the fifty-sixth annual volume, and though Dr. Mill has had the misfortune to lose, through death, two of his most valued assistants, the volume made its appearance only a fortnight later than usual, and is in every respect up to its predecessors as regards records and interesting and serviceable articles. Such a work as this must involve unending trouble and unerring knowledge, and Dr. Mill has earned the gratitude of thousands for his great work, which is deserving of more financial support than it receives. Such a subject as this is one which the Government might very well assist with a subsidy, and we trust that they will shortly see their way clear to do so. The volume, which extends to close on 300 pages and is nicely bound, is published at 10s. by Messrs. E. Stanford, 12, 13, and 14, Long Acre, London, W.C.

Farmer and Child Labourers.—Thomas Porter, farmer and landowner, Hutton Dacre, was charged at Penrith on Tuesday with employing two boys who were not legally exempt from school attendance. He told the Bench he was "guilty, and had been so for the last twenty-five years," meaning that he had always employed such boys. He asserted that the feeling of the country was against such a restriction, and he stood out for the good of the country. It was a poor thing if a man with a large family could not benefit by the opportunity of the children earning something, and at haytime men were costly and bad to get. For the prosecution, it was stated that defendant had persistently set the education authority at defiance. He was a man who farmed his own land and owned other property, so that his was not the case of a small struggling farmer. The Bench fined the defendant 10s. and costs in one case and ordered him to pay the costs in the second.

Where Are We Now?

The hop harvest is practically concluded, and the business of selling and buying has commenced. What can be said about the position as far as it has been revealed? This is a difficult question to answer, and I venture to declare that if it were addressed to a dozen traders in the Borough to-day, as many different answers would be forthcoming. The factors are optimistic, as a rule; they generally cling to their estimates of very defficient crop, and arguing therefrom that prices must advance, are in many cases advising their clients to wait further developments.

The growers who have decided to open their samples are therefore generally firm in their demands, and are refusing the bids of possible buyers, and the results of this policy are seen in an improving tone, which has culminated in the establishment of advanced prices to the extent of 10s. to 15s. from the lowest figure at which the trade started. But on the other hand the merchants are expressing their belief that the final result of the crop will be larger than it is figured by factors and growers.

One merchant's circular just issued and quoted in this week's *Times* gives the average of 10 cwt. per acre, or a total of about 450,000 cwt., and merchants say in addition, that they cannot yet venture upon anticipating what their customers will do, whether they will operate early or play the "hand-to-mouth" game, as before. Therefore their present purchases are small and experimental, and thus far they are not encouraged by the experience of their travellers. We seem consequently to be now resting on the horns of a dilemma, a position that is far from satisfactory to all parties concerned.

The ultimate solution of our doubts rests, as usual, with the brewers. If a legitimate demand from them sets in, it is easy to prognosticate the issue. The crop, however favourably estimated, cannot be too large for the consumption; we are reasonably assured that foreign supplies will not be excessive this year, and thus we may expect further enhancement of values, which will benefit those who are not in a hurry to sell. Should the brewers decide to buy only what they require from week to week, we shall have a dragging trade, and the tendency will rather be in the direction of lower than of higher prices.

But for my part, I am inclined to take courage from the experience of the past week, and hope for the best. It is painfully evident that the figures at which sales have hitherto been made, are absolutely unremunerative, and even spell loss for growers, whose determination to make a stand against them has, in some slight degree, been rewarded.

The producers of any product should have a voice in settling its value, and although it must be admitted that the strength in the fight is generally found associated with money, there are conditions very prominent just now which impart power to the weaker side.

It therefore seems desirable that our growers should exert all the influence they possess to avoid the crushing down, which is unfortunately their fate too frequently. If such policy is persevered in I have great hopes that they will succeed in raising the market still further, and eventually obtaining such prices as will sufficiently recompense them.

Consumption of Beer.

I will not now attempt to discuss whether it is to the advantage or disadvantage of the nation to consume more beer than formerly, but I hold a private opinion that increased demand for our national beverage is an indication of increasing prosperity, and therefore note with some satisfaction that the Inland Revenue returns for the year ending March 31 last show substantial improvement in this respect on the immediately preceding twelve months. Since 1900-1, the output of our breweries has been steadily declining, but now a change has taken place. The production of beer in 1906-7 was 34,352,313 barrels of standard gravity, being an increase on the previous year of 243,050 barrels.

The actual bulk of liquid barrels, of the average gravity at which the beer is consumed, show an increase of 340,603, and we may safely assume therefrom that about 6,000 cwt. of hops were required in excess of the quantity used in 1905-6. This, in itself, is encouraging to us, and we have the satisfaction of knowing that this increase does not carry with it any tendency towards the greater absorption of an intoxicating drink (as our friends the total abstainers might argue), for we find that, owing to the enlargement of our population, the average consumption of beer per head has been slightly reduced.

Invitation to Foreign Growers.

An incident, which has surprised and puzzled the Borough lately, has been the knowledge that a leading firm of factors has recently issued to German growers a circular printed in German stating that, owing to the shortage of the English crop, there will be room for all foreign hops that may be sent here, and offering their services for the disposal of them. It is understood that the firm referred to justify their action by maintaining that they will thus be able to raise the prices of these competing growths, and in proportion benefit English planters. Such reasoning is very difficult for the ordinary observer to appreciate, and I must confess I am not able to support it.

Supply and demand always has ruled, and will continue to rule any market, and it is impossible for the most ingenious sophistry to alter the universal laws of trade. It appears to my simple mind that the issue of the circular must defeat its own professed ends, and that the inducements offered will of necessity rather tend to damage our market than improve it. Our competitors are keen enough to find out for themselves what is going on here, and we have quite enough to do when we are called upon to meet the pressure of their shipments.

It is therefore hard to understand why such an invitation should have been issued, especially as it emanates from gentlemen whose declarations of their special interest in the English hop-growing industry are so frequently heard.

Nuremberg.

The business thus far has been fairly active, and the great square in which the bales of green hops are exposed for examination and sale has been well filled daily, and the space allotted to growers and traders has been constantly thronged. Prices have not varied much since the market opened, occasionally buyers have been able to secure a slight reduction, say of 5s. or so, but renewed activity soon wiped this off, and previous values in due course were re-established.

Some demand for medium qualities for shipment to England has assisted in the support of prices, but the local brewers are buying pretty freely of the choice lots, and thus the tone of the trade is well maintained. Recent quotations are:—Market hops, 37s. to 52s.; hill growths, 55s. to 60s.; Hallertaus, 60s. to 80s.; Spalts, 60s. to 75s.; Wurtembergs, 60s. to 80s. It must always be remembered that the above are the values of air-dried hops, and that something like 20s. must be added thereto to represent them by the time they are ready for the brewer. During the week ending September 18 the arrivals at Nuremberg were 8,000 bales, and the sales for the same period were 6,500 bales.

Brussels.

The harvest is now completed, and the returns of the output show that there is a substantial falling off from expectation. This is especially the case in the Alost districts. Although the business has hitherto been comparatively unimportant, the market is fairly well sustained, quotations for Alosts for October-November delivery being about 48 francs, and Poperinghe-villes 38 to 39 francs.

Hops in Belgium.

In the current issue of *Le Petit Journal du Brasseur* I find an interesting article by M. Hector Miserez, Agronome de l'Etat, or Government expert. It is headed "Reproduction Interdite," but I venture to take advantage of the usual consideration of my friend the Editor to translate some extracts from the article for the information of my readers.

M. Miserez says:—"The cultivation of hops in Belgium seems to have been practised for at least 600 years. It appears to have originally been established in the districts of Alost and Poperinghe, and the earliest historical references have relation to about this period. Statistical returns were then generally defective, and it is not until about the middle of the last century that regular agricultural returns were undertaken. The first that can be relied upon was issued in 1846, from which we ascertain that the area of hops then under cultivation was practically the same as at present, with the difference that the cultivation was then less limited as regards location. For instance, the province of Hainaut at that time included more than one-sixth of the total area, whilst the province of Liège, from which the plantations have now entirely disappeared, then included nearly 1,300 acres of hops. From this date the hop area was increased year by year, until in 1880 it attained its maximum of nearly 10,500 acres. Gradually from this point the area has been diminished, being returned in 1895 as 9,260 acres, and five years later it had fallen to about 6,750 acres, which figure has remained practically stationary to the present moment. Since 1846 hop growing has been gradually limited to certain districts, so that now almost all the Belgian hops are grown within six cantons, mainly those of Poperinghe, Ypres, Roulers, Iseghe, Haringhe, Asscke, Lennick-Saint-Quentin (in the Brussels district), and Alost. In fact, there is now not more than forty of the parishes in Belgium where hop culture remains in an honourable position. This is evidently a sign of the times.

"Outside these well-known regions, and a small area which is maintained at Buvrinnes, there is the neighbourhood of Ertvelde, where M. Van de Voorde is attempting to introduce hops, having at present about 70 acres in hand. The greater part of our plantations are established in soils that contain a good proportion of lime. This is notably the case in the two great centres of Poperinghe and Alost, although here and there are found plots of a more sandy character, or even distinctly stronger owing to the presence of clay. In the vicinity of Alost and Termonde one meets with soil showing the transition between lime and sand, and producing most excellent hops. But the limy soils are preferred, as they are generally not deficient, either in the quantity or the quality of the crop, while too heavy or too light soils are not infrequently disappointing. It may be noted here that the experiments at Ertvelde are being made on soils that are essentially sandy, both on the surface and beneath it, but good results are obtained by copious manuring.

"From the topographic point of view the Belgian hop districts present sufficient variety. Throughout Poperinghe the plantations are established on a generally flat country, but in Brabant, and notably about Assche, Pamel, Goyke, and Scheplael they are scattered about in various positions on the highlands, in the valleys, and on the slopes of the hills, all more or less picturesque. Another difference is observable. The Poperinghe hop grounds are found in the open country, distant from dwellings, and each contains thousands of plants, in comparison with hundred that comprise the average contents of the plantations in Alost, where they are contiguous to houses, after the fashion of the gardens and orchards they have superseded. Thus they are designated hop gardens in this province. Again hops are here planted on small patches of ground, instead of being included in one larger area. It is, therefore, hardly necessary to explain that the method of cultivation, being thus parcelled out, in this part of the country must be very different to that which is practised in the greater centres of production. Not only so, but whereas the Poperinghe planters nearly always control a certain amount of capital and are relatively developed intellectually, and are also either their own masters in holding their lands in their own right, or leasing them for long terms, we find ourselves in the Alost country in the company of small farmers, who have for the most part received only a rudimentary education, and perhaps only possess one or two cows. They have little or no capital, which is frequently so limited that the poles they have bought in the spring are not paid for till the hops they assisted to produce shall have been sold in the autumn. If they harvest no more than a small crop their position is awkward.

"If it be true, as is generally acknowledged, that the soil exercises the preponderating influence upon the nature of its products, Belgian hops should present attractive qualities. But as parishes and provinces vary, and also plantations according to their conditions, it can hardly be said that two hops resemble one another. However that may be, one fact remains evident, there is only one price, and this is fixed by the Brussels Bourse."

For the convenience of exhibitors at the Dairy Show, to be held at the Agricultural Hall, Islington, on October 8 to 11, the London and North Western Railway Company have made arrangements for through vans for the conveyance of exhibits to be run to London on Monday, October 7, by trains leaving Carlisle at 8 30 a.m., Liverpool (Lime Street) at 12 noon, Manchester (London Road) at 12.10 noon, Shrewsbury at 12.35 p.m., and Northampton (Castle) at 3.38 p.m. (These will be in addition to the vans running regularly on the through trains to London.) Consignments from the branch lines, and from Nottingham, Peterborough, Oxford, Cambridge, &c., will be placed in these vans at the various junctions, thus ensuring direct transit to the show. Rates for the conveyance of exhibits can be obtained at the various stations on the line. Arrangements will also be made for the return of the traffic in through vans at the close of the show. The company's representatives will be at the show to answer inquiries with regard to the arrangements for the return journey. All information can be obtained of Mr. Robert Turnbull, Superintendent of the Line, Euston Station, London.

Midland Notes.

SINCE my last notes in this column the death has taken place of Mr. William Worthington, of Weston in Arden, near Nuneaton. The late Mr. Worthington had a fondness and talent for public work which made him well and widely known, and he belonged to a family which is said to have resided in the parish of Bulkington for three centuries.

I HAVE been looking lately at the records of some other Midland families, whose firm and constant attachment to the soil of one parish or village is no less striking. Even without special inquiry, almost anyone can point to tenancies of two and three generations which may easily cover a century. And so it is also among the labourers. I call to mind one who died a year or two ago at eighty-six. His father, eighty-two, was born, lived, and died in the same cottage; so did his father before him. And now the place remains to the son of the late octogenarian—as thrifty, honest, self-respecting a man as any of his forbears. These are the aristocracy of village life; and no class is more valuable, or better worth encouragement.

A SHROPSHIRE friend kindly sends me details of a lengthy dispute, ending apparently in a deadlock, which has arisen between the Bridgnorth Rural District Council and the Local Government Board. The council, it seems, regard the model regulations under the Cowsheds Order as entirely unsuitable to a district where cows are on the fields at least half the year; the Board, of course, thinks otherwise, and there the matter rests. Since the air-space regulations (to which objection is taken) apply only to sheds, the cows in which are not habitually turned out and grazed, it is a little difficult to see the grounds on which the Bridgnorth protest is based. But there is no doubt these model regulations are not regarded with much fondness in the dairying districts.

THE fine September weather came in time to add some weight to the later hops of Worcester and Hereford. Perhaps 8 cwt. per acre may be picked if all the crop be harvested; but that is doubtful. Lately the heavy dews at night have been browning the ripe hops, especially upon light soils. It is evident that samples will vary very largely. There will be some choice qualities sent to market from the better cultivated gardens in the Worcestershire valleys; but as to the general run, the prices at the opening sales were not promising. Rates of 40s. to 70s. per cwt. are much too low to be contemplated with equanimity.

IT is not surprising in the circumstances to find some of the factors making a strong plea for English hops. There is no doubt the dealers are beginning to be concerned over the continual shrinkage in the hop area, and corresponding reduction of the volume of trade they do. Meanwhile there remains an uneasy suspicion with the growers that even a lowering of the standard of quality in certain beers—the usual explanation—will not wholly account for the low rates offered for their produce. They discern also the baneful influence of grossly over-capitalised brewery companies, which can only raise their dividends by beating down the price of raw materials below what is fair and reasonable.

A NOTE by the MARK LANE EXPRESS hop expert upon the primitive accommodation available for certain pickers in the Worcester district directs attention to the interesting statement on the same subject which was made some days ago by the Mayor of Dudley.

HIS Worship, it appears, has been making a tour of inspection, in order to be able to make a report to the Local Education Committee, which has taken to arranging school holidays so as to fit in with the picking season. He went, among other places to Stanford Court, Stockton Court, Chilsey Walsh, Bromyard, Weston Baggard, Stoke Edith, Ashperton, Ledbury, Colwall, and Leigh Sinlox, and he visited farms which find employment for any number between twenty or thirty and 500 to 700 pickers. He found them "in many cases living under quite as good conditions as they did at home;" and he was "surprised" (one wonders why) "at the superior character of the growers, even in out of the way places."

IN another sentence there is a hint to farmers, which might possibly be worth taking to heart. The Mayor of Dudley found some of the children "willing to remain in the country permanently." Probably the majority would change their minds if they fully realised what farm work means. Still, might it not be possible to keep some of these young people for a time, and let them try the experiment?

September 26, 1907.

LINCOLNSHIRE FARMERS' UNION.

RAILWAY RATES.

CENTRAL COMMITTEE MEETING.

The Central Committee of the Lincolnshire Farmers' Union met at Lincoln on Friday under the presidency of Mr. Colin Campbell, those present including Messrs. G. A. Bellwood, E. W. Howard, J. G. Glew, H. Rawding, E. Harrison, J. C. Mountain, G. Bartholomew, E. J. Bullen, C. Featherstone, J. D. Blanshard, W. S. Fox, &c., with the secretary (Mr. W. H. Palmer).

There was laid before the meeting, in circular form, the following copy of the letter written by Mr. E. J. Bullen, on behalf of the Midland Corn and Agricultural Trades' Association, to the President of the Board of Trade on the question of railway rates:—

"I am desired by the Lincolnshire Farmers Union, the Lincolnshire Chamber of Agriculture, the Lincoln Chamber of Commerce, the Midland Corn and Agricultural Trades Association, the Notts. Dairy Farmers' Club, the Millers' Association, the Lincolnshire Hay Dealers' Association, and the Newark Maltsters and others interested in the production, sale, and manufacture of agricultural produce, to enquire whether you would kindly receive a deputation from the above associations, to discuss the question of the exceptionally heavy railway rates on agricultural produce and requisites in Lincolnshire and the Midland Counties, the same being 25 per cent. higher than the corresponding rates in the Northern Counties served by the North-Eastern Railway, and the Southern Counties by the London and South-Western Railway. And also, as far as grain is concerned, in the Eastern Counties served by the Great Eastern Railway. It is suggested that the proposed deputation should consist of a small body of say, ten to twenty representatives of the associations concerned. The facts have been brought before the railway companies concerned, and I enclose you a copy of the note taken at the conference. The railway companies having refused to put into force scales of rates as desired. They have, however, given reduced rates for five ton truck loads of grain only of an unsatisfactory character, conveyed distances of seventy miles or upwards, but each case is considered separately, and a reduced rate may be given or withheld at the caprice of the railway companies."

The combined associations specially complain of two things:—

1. The absence of scales of rates per truck loads of agricultural produce and requisites to and from any place at which the same are, or may be consumed or produced. Such scales of rates are in force on the North-Eastern, and London and South-Western Railways—copies enclosed.

2. The fact that the irregular individual rates in force in Lincolnshire and the Midland counties are so largely in excess of the rates in other parts of the country.

It is desired to discuss the facts and suggest methods with a view to legislation by which agricultural produce, which is produced and consumed all over the country, may be distributed all over the country by means of the railway companies, so that farmers and others in all parts of the country may be able to compete for the trade of London, Manchester, Leeds, &c., on equitable terms, and that no part of the country shall be prejudiced as Lincolnshire and the Midland Counties are at present, by unjust heavy railway rates in forwarding or receiving agricultural produce or requirements.

Mr. Bullen attended the meeting to bring the question forward, and stated that a letter had been received from the Board of Trade, but they had not been able to fix a date for the deputation. He alluded to the necessity of combination amongst those interested if they were to successfully fight the combined companies.

The chairman inquired whether the Union would appoint a deputation to join the other associations in attending upon the Board of Trade, and on the proposition of Mr. Mountain, seconded by Mr. Harrison, Messrs. W. S. Fox and J. D. Blanshard were appointed to represent the Union.

A suggestion was then made by Mr. Bullen that it was desirable to hold a mass meeting in Lincoln on the subject, and that the local Members of Parliament and leading agriculturists be invited to attend.

It was decided, on the motion of Mr. Howard, seconded by Mr. Bellwood, that the Lincolnshire Farmers' Union were willing to join the other associations named in Mr. Bullen's letter in organising such a meeting, and that it be held at the Lincoln Corn Exchange on some Friday to be subsequently selected.

Lincolnshire Notes.

JOHN BARLEYCORN has sair surprised us all again. The harvest is upsetting all our most cherished anticipations. It is not a long one, as we fondly imagined, it is not even particularly late; it is not ruined by the rains, and it is being gathered in the most glorious weather. And the prices! To-day wheat is quoted at between 34s. and 35s. per qr., whereas last year it was 26s, and there are plenty of farmers who can remember having sold wheat at 18s. per qr. On the other hand, one is reminded of the time when 70s. was realised, and when during the Crimean War the famine price of 105s. was touched. But 35s. will do very well. It means that farmers are making £1 an acre more out of their land. It means that they will practically pay their rent out of the extra prices. Yes, we shall remember the harvest of 1907.

DOES it pay to grow wheat? An interesting calculation is presented by an agricultural contemporary, based on the experience of a Lincolnshire farmer. This is how he works out the figures:—

	£	s.	d.
Rent	2	10	0
Ploughing		10	0
Harrowing		2	0
Drilling		5	0
Seed		10	0
Seed harrowing		1	0
Rolling		1	0
Harrowing		1	0
Hoeing		2	6
Weeding		2	6
Cutting (reaper)		4	0
Leading		5	0
Threshing		10	0
Carting to station		2	6
Total	£5	6	6

which means that the farmer is not making any undue demand in asking for a fairly steady market for his corn at 35s. to 40s. Four quarters to the acre at 30s. would allow him quite little enough margin.

EVEN the potato crop, long given up as ruined, has improved with the change in the weather. The yield is likely to be smaller, but that, of course, will mean better prices. In many fields, particularly in small gardens, there is a large proportion of rotton tubers. But some farmers are anticipating quite a respectable crop. And it is a fact to be noted well that buyers are very busy.

BRAVO the Moulton Parish Council! This courageous little body is rapidly perfecting its small holdings experiment. The council will provide thirteen houses, which are to be occupied only by married persons or by tenants who intend to marry and settle on the land. Six of the tenants chosen are eligible bachelors, who have contracted to take to themselves wives, and set up domestic establishments "within a reasonable time." There is the originality of genius behind the council's plan. It is doubtless the creation of their genial clerk, Mr. J. H. Diggle.

AN important sale of Shorthorns was held last week by Mr. Freir, of Deeping St. Nicholas. It realised the capital average of 20 guineas, with an aggregate of 1,232 guineas. He also did well with his famous Curly Coated pigs.

AN interesting challenge has been issued *apropos* of the rivalry between breeders of the Lincolnshire Curly Coats and of the equally famous Yorkshire Whites. A bet of £20 has been fixed up between Mr. H. Caudwell, of Midville, on behalf of the Lincolnshires, and Mr. T. Henson, of Peterborough, for the Yorkshires. The heaviest dead weight of two animals from the own breed of each party to the bet will win.

A CONSIGNMENT has just been sent off to South America of fifty shearling rams from the flock of Mr. Tom Casswell, of Pointon, near Billingborough. This is the second lot of a consignment of 140 animals which Mr. Casswell is under contract to supply.

September 27, 1907.

A serious outbreak of fire occurred on Thursday afternoon on the extensive farm of Saughtrees, on the Wamphray estate of Sir Robert Jardine, Bart., of Castlemilk, and in the occupation of the proprietor. It originated in a large hay shed containing 3,000 stones of this season's hay. This was totally consumed, and the building was destroyed. The origin of the fire is not exactly known, but it is supposed to have arisen through children playing with matches.

POULTRY.

The Poultry Farmer's Medicine Chest.

Many a farmer does not believe in spending much time or much trouble over poultry that are ill or diseased; he believes it does not pay, and is often better to wring a bird's neck than to attempt to cure it—and cheaper withal. This method of peremptory "cure," however, must be carried on within limits; it obviously will not do to apply it indiscriminately to valuable stock, however freely it may be resorted to with mongrels, and it is mainly with a view to showing how a small series of useful general remedies can be prepared and kept together to be brought into requisition when obviously it is worth while to attempt a little "doctoring" that the following has been penned.

Common Troubles to be Provided for.

Let us see what are the commonest ailments and troubles that occur amongst poultry; we can then readily determine what remedies will be required. We offer no suggestion as to the form of medicine "chest" suitable to contain the remedies described. That can be arranged for by each individual poultry-keeper for himself according to his own ideas and his own needs.

But now as to the diseases. There is roup, there is liver complaint, there is cramp, there is egg-binding, there are feather troubles, and skin complaints like comb-disease and scaly-leg. There is also consumption, or "going light"; but we need not enumerate any more, but will give, under those headings, particulars of a series of remedies that will cover all the ordinary needs of the poultry yard.

A FIRST PRIZE GOOSE.

Necessary Surgical Appliances.

A few words, first of all, about surgical appliances, which may, if desired, form part of the poultry-keeper's outfit. There are a good many accidents of various kinds which need attention where a large number of poultry are kept, ranging from the trifling injury caused by a thorn, which a pair of small pincers will extract in a moment, to the more serious trouble known as "crop-binding," which frequently calls for a surgical operation—neither risky nor troublesome but requiring to be performed with proper appliances and in a proper manner.

A pair of sharp-pointed and a pair of blunt scissors of the ordinary surgical type, needles and some silk thread, a piece of soft sponge, a threepenny roll of calico bandage about 1½ in. wide, a pair of small "tweezers," and a small surgical knife, or a sharp penknife. These are every one sure to be useful, and will be all that the fancier is likely to require for surgical purposes, if in addition he is armed with some carbolised ointment and a bottle of weak carbolic lotion, both to be used, the latter for bathing and the former for anointing in cases of wounding (even in such a matter as comb-tearing by fighting cocks). Now for ailments proper. Take first

Roup and Liver Medicines.

There are several types of roup, and liver trouble does not always take the same form; but we want first of all a good, useful alterative medicine which can safely be given in any case (if we except that form or stage of liver disease when diarrhœa or dysentery set in).

There is such a remedy as this in common Epsom salts, or a mixture of equal parts of Epsom salts and Glauber's salt. The two may be crushed up together by the aid of the family rolling-pin, and the powder should be kept in a bottle for use as required. No better cooling alterative medicine than this could possibly be given in either case. The only objection to it is that it is not easy to administer. It must be added to the drinking-water—a teaspoonful to half a pint; then the fowls will often remain thirsty instead of taking it by reason of its nauseous flavour. Well, let us see if there is not another remedy equally good.

Compound rhubarb pills—that renowned old family physic—are wonderfully good for poultry. Get them in three-grain size and, preferably, uncoated. One for a half-grown and two for a full-grown fowl will have a good effect upon the liver, and will cool the system in cases of roup. Then keep a bottle of castor oil and a bottle of sweet oil.

In case of diarrhœa, always shun "chalky" remedies, and begin with a brisk dose of castor oil, which will clear away all fœtid matter from the intestines; then follow on with frequent doses of sweet oil (half to one teaspoonful at a time) to keep the bowels soothed.

Liver complaint needs no other remedies than these. If they fail there is nothing more to be done. But in roup treatment you need a lotion. Nothing can possibly be more useful, whether it be for sponging the nostrils and mouth of a roupy bird or for bathing a sore place or wound on a healthy bird than a lotion made by dropping a few crystals of permanganate of potassium into a tea-cupful of water. The crystals should be kept in a glass bottle, and they will suffice for the purpose of making instantaneously an antiseptic lotion whenever such is required for any purpose whatsoever.

A Serviceable Liniment.

For cramp and leg-weakness the only remedy needed is a good stimulating liniment. Equal parts of soap liniment and camphorated oil mixed together will make a very serviceable article. The only thing about this mixture is that it needs to be well shaken up every time it is used, as the ingredients quickly separate again.

The liniment will answer not only for cramp affecting chickens and ducklings, but also for the rheumatic affections of older poultry; it is, moreover, a very serviceable application for scaly-leg if used before the ointment to be described later on in this article. It tends to destroy the parasites which burrow under the leg-scales, and set up the unsightly trouble so called.

(To be continued.)

There was only a small show of beasts on offer at Bourne September Fair on Thursday, except in the auction marts. Beef made 7s. 6d. a stone. Store sheep sold well, theaves making up to 67s., and ewes up to 64s. Lambs were a better trade, and realised 44s. Pigs were in good demand, suckers selling freely at late rate rates, and pork making 6s. 6d. to 7s. per stone.

At Dumfries Horse Fair, held on Tuesday and Wednesday there was a good supply, but trade was slow. The best lots sold at about £80 to £85, and one came near the three figures, whilst a good number of the better class changed hands at £55 to £65. Others were sold at prices from £35 upwards. For young horses there was very little demand, but a number of two-year-olds were sold at about 40 guineas each. In saddle and harness horses very little business was done.

For 1907.

GARTONS

Distinct New Breeds of

WHEATS,

WINTER OATS

AND

WINTER BARLEY.

Trifolium Incarnatum, Broad-leaved Rape, Italian Ryegrass, and all other Seeds for present and later sowing.

Full particulars in New Autumn Catalogue, post free on application.

Seed Growers and Experts,

WARRINGTON.

CORRUGATED IRON SHEETS.

SPECIAL OFFER of 400 Tons of Seconds at bargain prices for immediate deliveries only; suitable for Sheds and Fences. Full details free. NEW HAY BARNS from £22 each. Full Catalogues. Dept. 3, JOHN A. REEVE, Stony Stratford.

NOW READY.

TO MANURE AT A PROFIT.

Every Farmer his Own Experimenter.

TWO FRONTISPIECES (J. J. WILLIS and H. B. M. BUCHANAN).
OBJECT OF THE BOOKLET.
FORMATION OF PHOSPHATES AND NITRATES.
NEED OF AIR AND MOISTURE.
SKILFUL CULTIVATION.
FARMYARD MANURE AND ARTIFICIALS.
CLOVER AS A FERTILISER.
HOW TO USE ARTIFICIAL MANURE.
BASIC SLAG.
SULPHATE OF AMMONIA.
SOOT AS A MANURE.
HOW TO DOUBLE THE HAY CROP.
IMPROVEMENT OF POOR MEADOW LAND.
IMPORTANCE OF GOOD SEED.
LIME—RESULTS OF.
MANURING GENERALLY.
TO TREAT FOR "FINGER AND TOE."
ROTHAMSTED EXPERIMENTS.
POLITICIANS AND WASTE LANDS.

Price 6D. Post Free.

W. A. MAY, "MARK LANE EXPRESS" OFFICE, 3, WELLINGTON STREET, STRAND, LONDON.

Birmingham Onion Fair is now only a ghost of its former importance, and at that held last week the supply of onions was on a limited scale. What English ones there were forward were chiefly from Bedfordshire, and they commanded a fairly ready sale at 4s. to 4s. 6d. per dozen ropes. For the rest, the market was made up to a great extent of the foreign article—Valentia at 5s. to 6s. a case, Dutch onions and Belgian onions at 3s. to 4s. 3d. a hundredweight.

Wycombe Michaelmas Hiring Fair—about the oldest in Buckinghamshire—was held in High Wycombe on Monday, when agricultural servants of all descriptions assembled in the vicinity of the market place, and offered their services for the ensuing year, many specifying, as of yore, "with the addition of harvesting beer" or its equivalent in wages. The hirelings decorated themselves in peculiar fashion, carters and wagoners displaying knots of horsehair and pieces of whipcord, while shepherds sported tufts of wool in their hair. There was a good demand for servants, and the rates of remuneration were well up to the average.

Fertilisers and Feeding Stuffs.

A Few Remarks on Fertilisers.

It may be well from time to time to keep before us the principles that underlie the use of fertilisers, and that should serve as a guide in their application to our crops. Thus we may first consider

What Plant Foods are Deficient from the Soil?

Among the considerable number of substances which plants require for proper growth and development, three are of special importance, because the soil is often deficient in them; these three are nitrogen, phosphoric acid, and potash, and in company with them may be placed frequently a fourth, lime. The farmer has to see that no one of these ingredients in an available condition is wanting in the soil, because they may be said to form a fertilising chain, and if the chain is weak in one of the fertilising links, the result must be unsatisfactory.

Farmyard manure contains all these substances, and therefore it is the duty of every farmer to protect from loss, and preserve this valuable substance as much as he possibly can. Farmyard manure must be the foundation of the fertility of his crops—"muck's the mother of money." But there is not sufficient farmyard manure to replace in to-day's intensive cultivation, the plant food taken from the soil in the cereals, roots, meat, milk, &c. These products extract yearly nitrogen, phosphoric acid, and potash in large proportions, and in order to restore these necessary ingredients it is necessary to have recourse to artificial fertilisers. That being taken for granted, we may then consider

What Fertilisers can most Profitably be Used?

This is a subject on which different farmers, and indeed scientists, have different opinions. One may prefer nitrate of sode, another guano or sulphate of ammonia; one man pins his faith on superphosphate, another finds basic slag gives the best results; one man considers potash essential, another says it is an unnecessary expense, and so on. There is no hard-and-fast rule. All may be right, according to the varying conditions of their soil and system of farming. All that can be said is that the fertiliser which supplies the requirements of the particular soil and particular crop is the best in each case. In order to find out which substance is wanting in the soil of a farm the best method is, no doubt, by field trial. It may be thought that chemical analysis of the soil would supply the answer, but soil analyses are not trustworthy guides. They show the total ingredients present, but not the available proportion, and that is what the plant utilises.

Now field trials and practical experience have proved over and over again that although soil analysis may indicate no lack of nitrogen or phosphoric acid or potash in the soil, still, as a general rule, the application of these three ingredients produces the most profitable results. The use of a one-sided fertiliser, whether only nitrogen, or phosphoric acid, or potash is not a rational system. Of course there are exceptions, as, for instance, in growing leguminæ the application of nitrogen may be dispensed with, and on well-worked heavy clay land it may not be necessary to add potash; but in general, the precept holds good that it is best to supply the crop with the three important constituents.

In what Form can they be obtained?

Nitrogen is principally bought in nitrate of soda or sulphate of ammonia, and in smaller quantities as guano, fish manure, bones, &c.

Nitrate of soda is the most rapid in action, and in a few days after its application, assuming the weather favourable and the soil supplied with other necessary ingredients, its effect is visible in the quickened growth of the crop. Wheat, oats, mangels all respond quickly to the quickening power of nitrate. Wheat, especially after a long winter, is much benefited.

Sulphate of ammonia is slower, and therefore more suited to crops that occupy more time in maturing, such as turnips, swedes, and potatoes. It is also considered preferable for barley where a stimulant is required for this crop.

Phosphoric acid is generally applied in the form of superphosphate or basic slag, although there is always a good demand for bone manures, bone meal, and phosphatic guano. Farmers should make trials on their soil to ascertain which kind of phosphate is the most suitable. If a soil contains a good supply of lime, superphosphate should be used; in the reverse case basic slag. Guano and bone manures are suitable for all classes of soil. A rough test as to the presence of sufficient lime in the soil is to take a small sample of the soil and pour on it a little hydrochloric acid. If it bubbles, that indicates a sufficiency of lime; if not, lime is deficient.

The presence of sufficient lime in the soil is so essential to the healthy growth of plants that soil known to be poor in lime should receive a good dressing of this valuable substance every few years.

It would not do to forget the importance of potash, we would rather say available potash, because in most heavy lands there is plenty of this constituent; but it is locked up in the soil in a combination which prevents the plants utilising it. Applications of readily available potash in the well known forms of kainit, sulphate of potash or muriate of potash, in combination with phosphate of lime and nitrogen, will often make a remarkable difference in the bulk and quality of a crop, particularly in the cultivation of crops of which potash forms the dominant constituent, such as potatoes, clovers, beans, &c.

Application of Fertilisers to the Bean Crop.

The cultivation of the bean crop, which showed a marked decrease during the last decade, is again receiving increased attention, especially in the Eastern Counties. During the past four years the average under the crop has increased every year, thus in

1904	it was	252,782 acres.
1905	,,	254,765 ,,
1906	,,	288,891 ,,
1907	,,	309,761 ,,

The average yield of the crop over the whole country for ten years has been 27·66 bushels per acre.

Suffolk leads the way in the industry, having more than 35,000 acres devoted to the crop, while Lincolnshire and Essex follow closely behind.

The yield of the crop shows a considerable variation in the different counties. In this respect Lincolnshire has the place of honour in England with an average of 32·09, whereas the average of Suffolk is 27·62, and in some of the counties it is as low as 20 bushels per acre.

Some parts of Scotland seem especially adapted to bean cultivation, as in Renfrew, the ten years average is as high as 39·06 bushels, and in Kincardine 36·64 bushels per acre.

The question as to the best system of applying fertilisers to the bean crop has been the subject of considerable investigation and experiment.

Analysis shows that the bean is rich in phosphoric acid and potash, and care must therefore be taken to ensure a supply of these ingredients on the soil.

A treatment which can safely be recommended is a moderate dressing of farmyard manure, say 10 to 12 tons, supplemented by the application of 3 to 4 cwt. of superphosphate or 5 to 6 cwt. of basic slag, according to the character of the soil, with 1 to 1½ cwt. of sulphate of potash in cases where there is reason to think that available potash is deficient.

When farmyard manure has been applied it is not necessary to add artificial nitrogen to the dressing, although the application of a small quantity of quickly available nitrogen has been found very efficacious during the first stages of growth.

When it is not convenient to give a dressing of farmyard manure, a complete fertiliser should be used. In such cases a dressing of 5 to 6 cwt. of a fertiliser containing:—

4 to 5 per cent. of ammonia,
15 to 17 ,, soluble phosphate,
5 to 6 ,, potash (pure),

can be trusted to produce good results.

To Manure at a Profit.

We have pleasure in directing attention to the booklet "To Manure at a Profit—Every Farmer His Own Experimenter"—published at the office of this paper at the small price of 6d. It is a reprint of the series of articles, which appeared in these columns some time ago, and attracted a good deal of attention. The writers of the articles combine a thoroughly practical and scientific knowledge of the important subject dealt with, and have succeeded in putting their suggestions and recommendations in simple language capable of being grasped by the reader, who is too busy to study the scientific books usually written by scientific men.

Every farmer should read the booklet and keep it by him for reference.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, in the paper.

Fertilisers and Feeding Stuffs Act, 1906.

Amendments Affected by the New Act.

As some of our readers may be considering their autumn purchases of fertilisers, it may be opportune to call their attention to the leaflet recently issued by the Board of Agriculture, summarising the principal amendments of the law relating to fertilisers and feeding stuffs, which were made by the new Act.

They are as follows:—

1. The actual percentages, and not merely the minimum percentages, of nitrogen, soluble phosphates, insoluble phosphates, and potash must be stated in the invoices of fertilisers which have been subjected to any artificial process in the United Kingdom or imported from abroad.

2. The Act applies to sales of fertilisers however small the quantity sold.

3. Statements of the percentages of chemical and other ingredients in any article sold for use as a fertiliser, whether contained in the invoice or in an advertisement or circular descriptive of the article, will have effect as warranties; but, in the case of statements in an invoice as to percentages of nitrogen, phosphates, and potash, the extent of the warranty is affected by the "limits of error" which are prescribed by regulations which have been made by the Board.

4. In the case of any feeding stuff artificially prepared otherwise than by being mixed, broken, ground, or chopped, the invoice must state the percentages of oils and albuminoids.

5. Provision is made for analysis by the official agricultural analyst of samples taken without any communication of the fact to the seller.

6. Local authorities are authorised to appoint official samplers who can take samples of any fertiliser or feeding stuff without the consent of the owner.

7. Provision is made to secure sellers from unreasonable prosecutions, and for prescribing by regulation the "limits of error" within which they will be free from civil liability in respect of the statutory warranty arising from the statement of percentages contained in invoices.

8. The Act applies to foods for poultry as well as foods for cattle, sheep, goats, swine, and horses.

Use of Fertilisers in Afforesting.

The subject of utilising waste lands by converting them into forests, which would eventually more than repay the cost of the work, is occupying the serious attention of economists in this country. It is work which would be a national benefit, both in the increased value of the land and as finding a means of employing a good deal of waste labour.

On the Continent the contemplated industry is no new thing. In Germany, Holland, and Belgium much has been done, and favourable results obtained; but as it is no good trying to make a silk purse out of a sow's ear, so it is no use planting trees on land so poor and barren that the young trees cannot get sufficient nourishment to make a start in life. As Mr. Peters, in his pamphlet, "The Use of Artificial Manures in Forestry," points out, it is essential that the soil should have ample supplies of phosphate of lime and potash.

The chief credit of having opened the way in respect to the use of artificial manures in reafforesting waste land belongs to Luxemburg and Holland. At present Belgium is following this lead most energetically. Recognising the immense profit which has accrued to agriculture as the result of the use of artificial manures, and the probability of the growth of timber being also considerably enhanced by the same means, the Belgian Government has, since 1893, continuously induced the parishes to carry out experiments, granting liberal subventions for this purpose. Considerable allowances are also made in respect to cultivating or afforesting waste land. As a rule one-third of the total cost is refunded where the heath land is planted with conifers, half the cost where the land is cultivated for farm crops, and two-thirds of the cost if the land is reafforested with foliage trees.

This action of the Belgian Government has been followed by very successful results. Not only have these experiments afforded valuable guidance in dealing with land of a similar nature, but they have also induced the owners of estates to undertake reafforesting of large areas. The following are a few of the results yielded by the experiments:—

The parish of Bocholt, near Brée (Belgium), started a detailed experiment on common spruce in 1893, under the auspices of Mr. Halleux, Forest Officer of the Belgian Government. The soil experimented on is poor heath land, consisting of

grey and yellowish sand, deficient in organic matter. The experiment comprised five plots, which were manured for planting as follows:—

Plot 1.—15 cwt. basic slag and 1½ cwt. kainit per acre.

Plot 2.—9 cwt. basic slag and 3 cwt. kainit per acre.

Plot 3.—3 cwt. basic slag and 4½ cwt. kainit per acre.

Plot 4.—3 cwt. basic slag.

Plot 5.—Unmanured.

In August, 1903, the nine-year-old plants were carefully measured, and the following average heights ascertained:—

Plot 1	8 ft. 10 in.
Plot 2	7 ft. 8 in.
Plot 3	6 ft. 4 in.
Plot 4	5 ft. 8 in.
Plot 5	4 ft. 3 in.

All the plants on Plot 5 looked poorly, having only short needles, and already showed signs of decay. The spruces on Plot 1 and Plot 2 had at the time of measuring already covered the soil for four years, whereas on Plot 3 and Plot 4 this was not expected to take place until two years later. Plot 1, to which the largest quantity of basic slag was applied, undoubtedly presents the best appearance in respect to vigour, of growth, height of the plants, and dark green colour of the leaves.

Although nitrogen, phosphoric acid and potash, as absolutely necessary plant foods, must be present in all fertile soils not only in sufficient quantities, but also in available forms, yet each ingredient has a special function to perform on the organisation of the plant.

Whether and up to what limit any one of these three essential ingredients can compensate for a partial deficiency of another has not been definitely determined. It is a problem which still remains to be solved by science.

Prices of Fertilisers.

There is now a brisk demand for fertilisers required for autumn application, particularly for basic slag, superphosphate and potash salts, while we hear of contracts also being made for nitrate of soda and guano for Spring delivery.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	11	17	6
Peruvian guano	according to analysis		
Superphosphate, 26 per cent.	2	10	0
,, 35 ,,	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.	9	10	0
Fish guano, first quality, scarce & dear	6	12	6
Ditto, second quality	5	7	6
Kainit	2	7	6
Sulphate of potash	10	0	0

MICHAELMAS.

There are several epoch-marking periods in the agricultural year, and Michaelmas is one of them, as it is a time of endings as well as beginnings. With the advent of Michaelmas comes the conclusion of the harvest, and though at one time we thought that October would be far advanced ere the fields were cleared, thanks to the delightful spell of Indian summer weather we have enjoyed of late splendid progress has been made, and the majority of farmers South of the Trent have written *finis* on the harvest operations of 1907.

Michaelmas, as we have said, is a time of beginnings as well as endings. We have the conclusion of harvest and the conclusion of tenancies; auctioneers at this season are busy with sales, and it is no uncommon sight just now to meet waggons on the roads laden with the goods and chattels of farmers who are leaving one homestead and taking up their abode in another; giving up one farm that has served them well or ill to try their luck on another about which they know little or perhaps nothing.

It is no business of ours to pry into the reasons why men leave farms at Michaelmas time, but we do say that changes, however desirable or necessary they may be, are always attended with risks, and when a fresh sphere of labour is begun on a new holding there are natural anxieties that all may turn out well.

The glory of the old time fairs is slowly, but surely, departing, and even those gatherings which still retain some of their ancient importance are not the fairs that they used to be by any means. In days gone by the Michaelmas fairs held in different parts of the country were events to be looked forward to both by business men and people who sought pleasure, but amid the changes of recent years the old-time fair has declined in popularity and importance.

Railway facilities, weekly markets, and auction sales have all affected fairs and made them less indispensable than they were in the days when distances were great owing to slow means of locomotion.

Still, by right of custom Michaelmas fairs are held, and for the keeping up of the pleasure side of these events the travelling showman must be given credit. In the majority of places fairs have been removed from the streets after something of a struggle, and all the paraphernalia which contributes to the fun is collected on a site selected for the purpose.

The showman will see that the Michaelmas fair does not die out, for though his apparatus and means of providing amusement have all changed, he is the same showman still, and possessed of all the nomadic habits of his grandsires. His shows are more elaborate, there is more brass and more tinsel, and he moves his apparatus by means of traction engines, but the modern showman keeps his place and his reputation in spite of all the different means of amusement offered to the public of to day.

In country places there still remains a native love for the fair; extra shillings that have been earned in the harvest are freely spent at the Michaelmas gathering, and in spite of education and other advancement the retailer of quack medicines, sham jewelry, and purses with crown pieces in them can gull his customers just as easily as his grandfather did before him.

Northern Notes.

THE advent of a long spell of sunshine is a boon that has been appreciated in the backward hay districts of the North, and during the past three weeks a lot of hay has been "berthed" in fair condition, considering the fact that we are nearing the end of September. The hay and corn harvests are in some places coincident operations. Waste in the hay field was inevitable; and we cannot help thinking that a few people have not exerted themselves as they might have done to secure the crop. Much corn is being cut green all over the north of England. This proceeding is not to be commended, but we can well understand the farmers becoming impatient, and in the light of past experience coming to the conclusion to cut while the weather is fine, let the outcome be what it may. Yesterday the first heavy rain of three weeks fell. Turnips will be greatly improved, as mildew has made its appearance. Roots are very backward, and sheep-dealers have difficulty in effecting sales. They are standing up for high prices notwithstanding; and the sales of breeding sheep have been remarkably good.

NOTWITHSTANDING reports of prevalence of disease among tubers, potatoes are cheap in the north, very good samples being retailed at 6d. per stone, and in bags of 8 stones at 1d. less. Many crops already tested are turning out poor in quality and yield. With such a summer as we have experienced it would be a matter for surprise if the crops generally were at all approaching a normal state. They are the best on dry soils.

EARL CARRINGTON has written in a sympathetic tone to Mr. White, the member for Buckrose, in reply to a petition the hon. member presented to the Board of Agriculture complaining of the hardships of the Swine Fever Regulations in Yorkshire. Lord Carrington has not consented to their withdrawal, as he was asked, but he has done the next best thing, having caused to be gazetted a modification of the Orders now in force. This modification is novel in character.

AT present, where an Order relating to the movement of swine is in force, pigs removed from a market under a licence have to remain at the place of detention for twenty-eight days. The new Order, which came into force on the 23rd inst., gives the owner the privilege of obtaining a second licence for the purpose of transferring the same pigs for the unexpired period covered by the first licence to some other place other than a public market. This concession may possibly create greater activity in the pig trade in the districts affected. It is to be hoped it will do so.

EARL CARRINGTON makes a point in his letter by calling attention of his critics to the fact that notwithstanding the Board's regulations the agricultural returns show an increase this year of over 300,000 pigs as compared with 1906. These figures are somewhat difficult to get over; but his lordship very wisely refrains in his letter from commenting upon another set of figures, relating to swine fever outbreaks and the slaughter of diseased and in-contact pigs. Here the president would have been treading on ground of a less certain nature, as for the thirty-six weeks of the present year (I am quoting from the MARK LANE EXPRESS table) 1,862 outbreaks of swine fever were recorded, compared with only 796 in the corresponding weeks of 1906, and of 610 in 1905. These figures must of a certainty impress the public with the ineffectiveness of the Board's policy, which it is continuing in its efforts to "stamp out" what most practical men say is an ineradicable disease.

IN a North Riding market this week I heard of a farmer selling an acre of oats as they stood in the field for £15. I assume that the straw went into the bargain. Even at that the yield must have been very liberal. There are some tremendous crops in Yorkshire, which will far exceed the estimates given in the official reports. Stackyards are crowded, and it is not an uncommon experience to see a few stacks placed outside in the nearest position possible to the stack "garth," or in the cornfields some distance from the homestead.

THE immense crop of stone fruit has led to much proffered advice to people to preserve it fresh. A visitor to Scarborough informed me that at Covent Garden Market he had seen fruit (good English grown plums) retailed at a penny for 5 lb. On his arrival at the seaside the same class of fruit was ticketed at the greengrocers at 6d. per lb. Fruit bottling may well be termed a domestic industry, and it is to be hoped the method of preserving our plentiful supplies in a fresh state will be largely resorted to. The Leeds University (Agricultural Department) has done very much to educate the public in this direction by demonstrations at the Yorkshire and other agricultural exhibitions. The plan of bottling may with advantage be extended to other fruits and vegetables, such as green peas. The practice is not intended as a substitute for jam-making. One reason why the poorer classes do not make much jam is because of the outlay required in sugar. In bottling fresh fruit no sugar is required, nor any preservatives. The fruit retains its freshness and flavour.

THE North Riding Education Committee have decided that managers of all schools in the Riding be communicated with as to the desirability or otherwise of arranging for annual school exhibitions of nature study work. They have also decided that the secretaries of agricultural and horticultural societies be approached as to the inclusion of a nature study section in connection with the shows. The children have taken the deepest interest in this work in the rural schools, and it is held to be an important factor in the school curriculum, as the knowledge thus imparted may influence the after life of the scholars and induce them to remain on the land.

REPORTS of stack fires are now numerous. The firing was not unexpected. A very sensible suggestion from an experienced farmer reaches me. He recommends others to follow his example if they have not got their hay all carted —*i.e.*, to construct lengthy and narrow stacks, and not round stacks or "pikes," as they are sometimes called in Yorkshire. In round stacks he contends the heat centres in the middle and cannot escape. His reasons for making long stacks are that they are easier to make, easier to thatch, and easier to cut down. The ideas may be very useful when the 1908 crop is ready.

September 27, 1907.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended September 21, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (11,506), 9,208; sheep and lambs (921), 1,483; horses (239), 710.

Fresh meat:—Beef (121,687 cwts.), 107,830; mutton (89,107), 81,773; pork (10,883), 11,482

Salted or preserved meat:—Bacon (113,978 cwt.), 87,623; beef (2,075), 2,417; hams (24,057), 12,139; pork (5,292), 5,531; meat (9,791), fresh, 13,569; salted 1,191; meat, preserved (3,697), 6,329.

Dairy produce and substitutes:—Butter (81,031 cwt.), 69,823; margarine (21,776), 13,715; cheese (72,239), 63,755; milk, fresh in cans or drums (120), —; cream (79), 58; milk, condensed (21,163), 16,283; milk, preserved (218), 47.

Eggs (great hundreds):—(376,604), 427,949; poultry (value £1,552), £1,950; game (value £2,220), £1,854; rabbits, dead (not tinned), (48,184 cwt.), 43,398; lard (30,623 cwt.), 24,980.

Corn, grain, meal, and flour:—Wheat (1,890,100 cwt.), 2,482,100; wheat meal and flour (373,300), 240,300; barley (510,500), 667,900; oats (218,700), 55,900; peas (23,250), 21,560; beans (13,300) 3,830; maize or Indian corn (867,600), 582,500.

Fruit (raw):—Apples (23,796 cwt.), 14,957; grapes (21,242 cwt.), 39,197; pears (40,176 cwt.), 27,630; plums (72,556 cwt.), 3,047.

Hay (1,755 tons), 939; straw (931 tons), 1,375; moss litter (1,450 tons) 1,281; hops (2,242 cwt.), 1,467; locust beans (810 cwt.), 23,400.

Vegetables (raw):—Onions 200,824 bushels), 208,433; potatoes (15,616 cwt.), 51,622; tomatoes (23,123), 25,903.

Damage to the extent of nearly £2,000 was caused by a fire at Stinches Farm, St. Mary's-in-the-Marsh, Kent, on Wednesday. Twelve stacks, which had been erected only a few weeks, and a large barn were destroyed, despite the efforts of the Lydd, New Romney, Hythe, and Sandgate fire brigades.

Notes of the Week.

A good harvest is Nature's bank dividend.

Says an old saw:—
"In harvest time, harvest folk, servants and all,
Should make together good cheer in the hall."

"All flesh is grass," contended Isaiah, which is consoling in view of the fact of the continually increasing area under grass in this country.

If flesh is grass on the authority of such a reliable old prophet, why should vegetarians so strongly object to it?

A crop of tobacco 5 ft. high may be seen in the gardens of the Royal Botanic Society.

The proof of the tobacco will be in the smoking.

Some parts of the country have been visited by a veritable plague of green flies.

In other districts mosquitoes of a sanguinary carnivorous disposition have done their best to make life unpleasant.

Rural education—Village schoolmaster (explaining biped and quadruped): "Now, little boy, what is the difference between me and a pig?" Little boy: "Couldn't tell you, sir."

The blackberry season is now on, and the fences of many a farmer are down.

With a fine autumn and prospects of better prices for wheat, there should be a greatly-enlarged area under the crop.

We should remember that the "seed is the beginning of life" and take care to put in pure seed of good vitality.

The primeval inhabitants of the globe must have encountered monstrous animals. A skeleton of a beast, "dinosaurus," 80 feet long, has been discovered.

Lincolnshire is becoming quite famous in the matter of Unions.

There is the "Farmers' Union," growing in power, active and energetic in advancing the interests of their class.

Now it is stipulated in the grant of small holdings at Moulton, Lincolnshire, that unmarried applicants must enter into the union of marriage before their application will be considered.

Cheshire is happy. There is a regular boom in cheese.

An interesting relic of old customs is the gleaner's bell, still rung in an Essex village.

The announcement of the coming Brewers' Exhibition is a reminder that the year is fast going.

"Here's a health to the barley mow,
Here's a health to the man
Who very well can
Both harrow and plough and sow."
(A favourite old toast.)

"The battle of the breeds." The respective merits of the curly-coated pig and the Yorkshire White is to be tested, as the result of a wager £20 a side.

A French professor is said to have made the startling discovery of the secret of life. He has some special chemical preparation, containing ammonia, in which he immerses non-productive eggs and they become vitalised.

The world's production of wool is estimated to be 2,666,000,000 lb., of which Australia supplies the largest proportion.

The cultivation of rubber is taking an important place in the agriculture of Ceylon; more than 150,000 acres are now devoted to this profitable crop.

THE FARMERS' DIARY.

TUESDAY, OCTOBER 1.—Sale of Berkshire Pigs at Henley-on-Thames — Middlesex Agricultural Society: Annual Meeting, Hayes Gate, near Southall—Horningsea Farm Sale—Hunton Farm Sale—Stirling Great Smithfield Club: Entries Close for the Implement Department—Sheep Sale—Entries Close for the Crewe Autumn Horse Sale.

WEDNESDAY, OCTOBER 2.—Peterborough Great Horse Sale—Sale of Romney Marsh Sheep at Elham, near Canterbury—Friningham Farm Sale—Necton Farm Sale—Okehurst Farm Sale—Bethersden Farm Sale.

THURSDAY, OCTOBER 3.—Great Sheep Sale at Lichfield—Sale of Aberdeen-Angus Cattle at Chelmsford—Hawkins' Sale of Shorthorns at Daventry—Ospringe Farm Sale—Barming Farm Sale—Smarden Farm Sale—North Elmham Farm Sale—Kelshall Farm Sale, Herts—Maulden Farm Sale.

FRIDAY, OCTOBER 4.—Sale of Shorthorns at Newport, Mon.—Bannister's Sale of Sussex Cattle at Haywards Heath—Great Annual Stock Sale, Strood, Kent—Feltwell Farm Sale—Lancing Farm Sale—Yeovil Live Stock Sale.

SATURDAY, OCTOBER 5.—Smithfield Club Post Entries—Many Michaelmas Fairs this day (Saturday after Michaelmas), which is also a big market day for all the country towns having Saturday for their chief market

MONDAY, OCTOBER 7.—Dairy Show, Islington—Luncheon, Judging, and Private Inspection by Members of the Dairy Farmers' Association (Public Opening 9 a.m. on the 8th—Fairs and Special Markets at Darlington, St. Ives, Sleaford, and Stamford.

PIGS.

Bacon Curing in Hertfordshire.

At the invitation of Viscount Hampden, Mr. L. M. Douglas, of Edinburgh, delivered a lecture on September 24 at Hitchin on bacon-curing.

There was a very large attendance of agriculturalists from the neighbouring counties, as it was market day. Mr. Matthew Gray, agent to Viscount Hampden, was in the chair, and presided over an interesting discussion which took place on the possibilities of successful bacon-curing in Hertfordshire.

The lecture was copiously illustrated with lantern slides showing the various breeds of pigs in the country, and the fittings and general design of modern bacon factories.

The lecturer referred to the history of pig-breeding and bacon curing in Europe, and of the vast strides that had been made by Denmark and some of the other countries which supplied England with a large portion of the bacon they used. He also pointed out that the conditions were such that there was no reason why similar developments should not take place in England. The propaganda which had been carried on for a year or two in connection with pig breeding, had resulted in an enormous increase in the pig population of the United Kingdom during the past year, which seemed to augur well for the prosperity of the bacon-curing industry.

The lecturer pointed out that a bacon factory may be constructed either under a scheme of co-operation amongst farmers, or could be owned privately. A co-operative scheme amongst farmers would undoubtedly be a very likely one, inasmuch as each farmer would have a special interest in the success of the undertaking. This is the system which has succeeded so well in Denmark. On the other hand, a privately-owned factory in a specially agricultural area like Hertfordshire had every prospect of being a successful venture, as it was a curious thing that no bacon factory of any consequence seemed to be in operation in the eastern part of England.

The following students at University College and the British Dairy Institute, Reading, have passed the examinations for diplomas and certificates offered by the British Dairy Farmers' Association, held at Reading on September 5 to 7:—Pandit Ram Gopal, Grace Heather Mason, Ethel Morris, Stanley Scott Trevor, Janet James, Barham Middleton, Hilda Taylor.

VETERINARY.

Advice of a Veterinary character, by a M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

A Shiverer.

Sir,—I have a two year-old colt, and some of my neighbours say he is what is called a shiverer. If there is such a thing, could you tell me what are the symptoms, or what way they are affected? Is it a disease or weakness of any part, or only a habit? Would it do him any harm for work; if it would, what would you advise me to do with him?—Yours, &c., A Subscriber.

*** Whether or no your neighbours are correct in saying that your colt is "what is called a shiverer," we can, of course, form no reliable opinion, but there certainly is "such a thing," and it is by no means impossible that your animal is affected, although the symptoms are not generally developed until the horse has been some time at work. Your questions—"What are the symptoms or what way are they affected? Is it a disease or weakness of any part, or only a habit? and would it do them any harm for work?" will be perhaps best answered by the following quotation from Williams' "Principles and Practice of Veterinary Surgery":—"'Shivering' is another peculiar nervo-muscular affection of the posterior extremities, resembling stringhalt, and manifested more particularly during the acts of 'backing' or 'turning round.' In a case of this kind the animal, when made to back, will perform that act with some difficulty; the muscles of the gluteal and femoral regions are thrown into a state of 'clonic spasm,' contracting and relaxing in a very irregular manner; hence the term 'shivering,' from the resemblance of the muscular action to trembling or shivering. In some cases the tail is spasmodically elevated and depressed in the manner of a pump-handle, and the limbs elevated from the ground by a peculiar rigid or stiff movement; the foot often suspended for a moment, as if the animal were unable to direct the action of the muscles. When moved forwards, the necessary actions will be performed tolerably well, but the backward movement is done with more or less difficulty, and sometimes cannot be performed at all. Shivering, *immobilité*, jinked back, and their various modifications, must be considered as causes of unsoundness, since their tendency is to increase in severity as the animal becomes older. They often interfere with his condition, and generally give him an aged appearance before he has reached his prime; and they prevent him lying down, particularly if he is confined to a stall. Some horses while so affected lie down well enough; the majority, however, scarcely ever do so, but fall down in their sleep occasionally, and, being unable to rise again without assistance, often injure themselves by struggling." "What would you advise me to do with him?" is a difficult question to answer—one we are inclined to shirk and leave to your perception of the fitness of things. You will gather from what has been said about these obscure nervo-muscular diseases that they are progressive and incurable, so that it is of no use attempting treatment, and the longer you keep the colt the worse it will get, and the greater difficulty there will be in selling it. If you have any experience of horses you will know what usually happens to animals that are what the dealer calls "wrong over the bridge"; but, needless to remark, we do not recommend the practice of taking in the stranger.—M.R.C.V.S.

Forthcoming Sales.

A sale of Sir Gilbert Greenall, Bart.'s, Galloway, Angus, and Blue Grey stock cattle will be held by Mr. W. Bainbridge at the Stud Farm, Terrington St. John, Norfolk, on Wednesday, October 9. The consist of two and three-year-old bullocks and heifers, a number of which have been cake-fed and are fat, whilst others just require finishing. The stores are very thick and forward, and will make good weights. The sale will commence 1.30 sharp.

Messrs. Cobb will hold their annual sheep sale on Friday next at Strood, Kent, when they will offer ninety-three pure-bred Kent ram tegs from the well-known flocks of Messrs. T. Baker, C. J. G. Hulkes, J. Robinson, and R. G. F. Locke; eleven Kent rams and ram tegs, the property of Mrs. B. Tuff; twenty-eight Hampshire Down ram lambs from Mr. G. F. Hohler's, the Right Hon. the Earl of Darnley's and Messrs. R. H. and G. French's flocks, also 3,256 Kent-Hampshire and half-bred sheep and lambs, the property of many well-known breeders. Luncheon will be provided, and arrangements will be made for a supply of trucks at Strood Station. Catalogues may now be obtained.

Sir Alexander Acland-Hood, M.P., presided at a meeting of the Taunton and West Somerset Farmers' Club, on the 31st inst., when the Agricultural Holdings Act was discussed. Mr. Samuel Kidner condemned the attempts which, he said, had been made to coerce tenant-farmers to contract themselves out of the provisions of the Act. If tenant-farmers were to be coerced by land agents, he would ask Sir Alexander to put the question in Parliament. In passing the Act, the Government had acted in the interests of agriculturists. Sir Alexander Acland-Hood said that it was no business of one man to criticise the act of an agent of another man's property. No landlord had the least intention of getting rid of a man who was farming his land well. He should not like that club to interfere between landlord and tenant. It would be introducing Irish methods, which had wrought so much havoc in thesister island. He advised the club not to carry the discussion further. This course was adopted.

THE FUTURE OF HORSE-BREEDING.

Mr R. L. Angas's Letter—The Thoroughbred Horse—Scarcity of Good Stallions—Keeping a Stallion—Mr. Angas on Racing—Hunter Breeding—The Profit of Hunter Breeding—Prices and Selling.

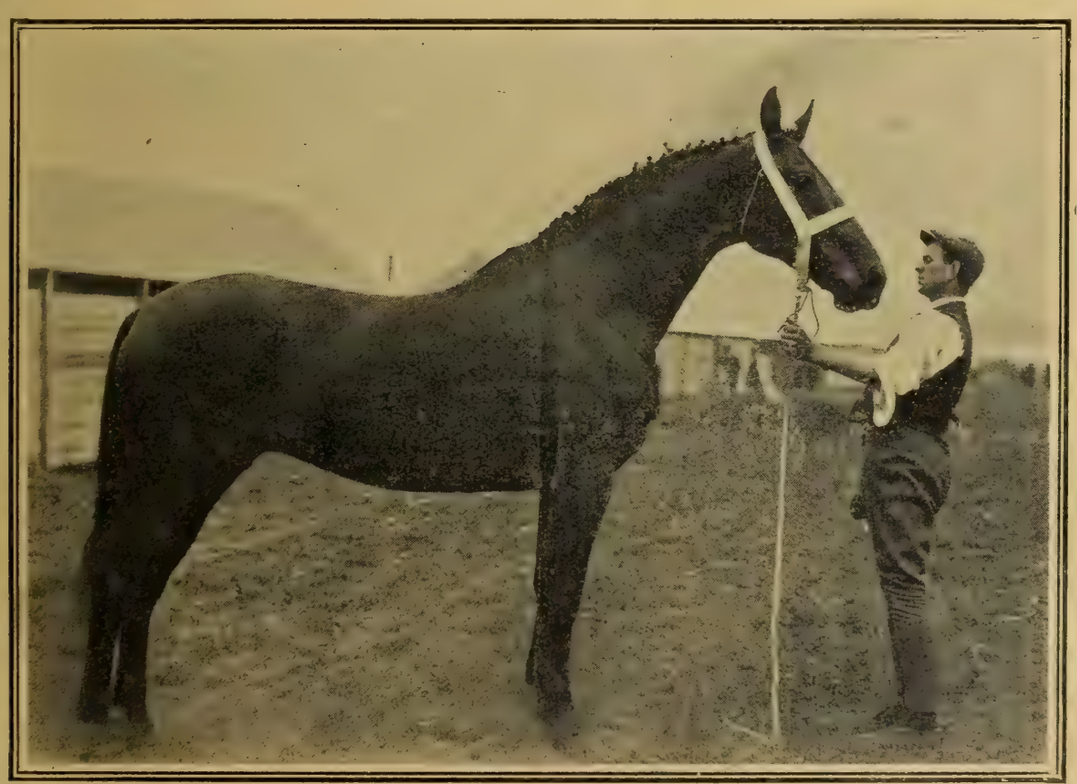
Mr. R. L. Angas's Letter.

I CANNOT do better this week than refer to a few points in the long and able letter which appeared over the signature of Mr. R. L. Angas. On many points I am in complete agreement with Mr. Angas; on some I regret to say that I differ from him. I say regret "advisedly," for Mr. Angas is a man of wide experience in the horse world, a fine judge of a horse, and a man that puts his views temperately. That he sometimes only sees one side of a subject is merely to say that he is human. So much by way of preface.

The Thoroughbred Horse.

TO begin with the Thoroughbred horse. I must join issue with Mr. Angas as to his opinion about the Thoroughbred horse, but if he will modify it so far as to say the Thoroughbred horse as he is seen as the average King's Premium winner, I am in complete agreement with him. There cannot in my opinion be a greater mistake than to imagine that the horses shown for King's Premiums are representative of the best horses that are available as Hunter sires. With a few notable exceptions I should feel inclined to say that they were the worst. Of course, horses like Roe O'Neill, Wales, Drummond's Pride, though he did not get a premium last March, and a few more that can be mentioned, are exceptions, but in a lump they were bad, and have been moderate from the commencement of the shows. Nor is the reason far to seek. A man with a really good horse can make more money of him without the premium with it, on account of the rules and restrictions imposed. He can select what route he likes for his horse, and he prefers to keep full control of is own property. Can you blame him?

Scarcity of Good Stallions.



I AM also with Mr. Angas when he speaks of the scarcity of good stallions, but I do not agree with him as to the causes of the scarcity. Travelling about the country as I do from January to December to shows and race meetings I see many Thoroughbred horses that are admirably adapted for country stallions, horses such as Mr. Angas describes, with size, power, and action. What becomes of them? They are sold to go abroad! Foreign buyers have their emissaries all over the country, who will give a little more for a Thoroughbred stallion they like than he will bring in England; the owner, rather than be put to the annoyance and worry of travelling his horse, pockets his extra fifty or so, and the horse goes abroad to sire some of those horses of which we import, as Sir Walter Gilbey and Mr. Angas point out, some 30,000 every year at a cost of nearly a million per annum.

Keeping a Stallion.

THE man who keeps a stallion "for the good of his neighbours" has not a very rosy time of it. He seems to be fair game for most of them. Let me give an instance from my own experience. I had a couple of stallions, very good horses of their breeds. One of my customers insisted upon having a couple of mares at the price of one-and-a-quarter, which I could not for a long time get him to see as a very different thing to taking four mares at the price of three. His final argument was that he always made a bargain, so it did not matter. I would not give way, and we did not trade. Others insisted on the mares proving in foal—I believe one man went so far as to want a living foal born—before they would pay the full fee. To this I was compelled to agree. Mark the sequel. One well-to-do man had three mares to my horses, one to one of them and two to the other. I left the immediate neighbourhood, and when I applied for my balance in the spring was told that these mares were not in foal. He only paid for one foal. Now five years after that I had a letter from a man asking me for the pedigree of my horse, as he had two very good mares by him he had bought at X's sale. These mares were sold for some £65 each. I asked for the breeder's address when I sent horse's name and pedigree, and was informed that he was dead. Now I was not only robbed of the money due to me; but my horse was "crabbed" as well as an uncertain foal-getter. If these mares, which were shown as young ones *without a pedigree*—an opening to fraud, of which show secretaries seem to take no notice—had been shown with their full pedigrees, my horse would have got the credit he deserved, and I should have been richer by a considerable sum eventually. So I do not blame men who part with their stallions to go abroad at little more than market price, though I cannot help saying with Othello "Oh the pity o' it!"

Mr. Angas on Racing.

MR. ANGAS makes a pretty sharp attack on racing and racing methods, and urges the necessity of drastic reforms. With early two-year old racing I have no sympathy, but we have no early two-year-old racing now of any importance. No valuable two-year-old race is allowed to be run until June, and by June any two-year-old that has been judiciously reared and fed is quite fit for the work inherent on training for and running in a two-year-old race. The abolition of two-year-old racing would be a drastic change indeed, but it is one which there is no necessity to discuss, because it is entirely out of the range of practical politics. Then, again, Mr. Angas would have no race under one mile. Here again he does not quite see what would be the result of such a law. The reason of shorter races is to give moderate horses a chance, horses that cannot stay a distance. But much as I believe in long-distance races I should not like to see us revert to the old days of four-mile heats or four-mile races in which they crawled for three miles and a half and raced for half a mile. It may perhaps come as a surprise to some of my readers that a straight mile takes more "staying" than any other course. An experienced jockey told me that in all his experience he had only ridden three horses that could gallop a mile from end to end. Then Mr. Angas would raise the weights to a minimum of 7 st. I am sure he has never considered what an unfair thing that would be to the best horses. It would have raised Velocity's weight in the City and Suburban to 10 st. 2 lb., and in the Kempton Jubilee Handicap to 10 st. 12 lb.; and it would have brought Bridge of Canny's weight in the Great Yorkshire Handicap at Doncaster to 9 st. 11 lb. No great weights to carry either, it may be said. Perhaps not, but very serious weights—indeed, impossible weights to race under. No one can have any idea at the pace a race is run at unless they have ridden in one, and the strain on a horse's muscles and sinews is immense, and of course, all the more if there is a heavy weight up. And it is a well-known fact that if weights are raised a stone all round it is all in favour of the lower weights, that is of the worst horses.

The animal shown above is the Cleveland Bay Mare Aislaby Beauty, winner of First Prize for Cleveland Bay Brood Mares, and Silver Medal for Best Mare of the Breed, at the Yorkshire Agricultural Society's Show at Barnsley this year. Aislaby Beauty was born in 1900, sire Prince George, dam Hetty, and was bred by Mr. G. Elders, Toft House, Aislaby, but is the property of Mr. J. H. Tyerman, Pond Farm, Hinderwell, S.O.

Hunter Breeding.

I CANNOT think that Hunter breeding is quite such an unprofitable business as Mr. Angas would have us believe. That only a small percentage of tenant farmers can make Hunter breeding pay as it is at present carried

on is quite true. To get the most out of Hunter breeding it is essential that a man should be a horseman; that his sympathies should be with horses, and that he should care rather more for them than just as a means of making money. He should make them to a certain extent a hobby as well as a business. All the successful breeders I have known have loved their horses. And the finer the breed the more is this sympathy necessary, though it must be there whatever the breed is, if a breeder would be successful. So much may be taken for granted; and it may also be taken for granted that at any rate a considerable proportion of tenant farmers do not care much about horses. These men of course are not likely to make money out of breeding Hunters or any other kind of horses.

The Profit of Hunter Breeding.

THERE are some ways of Hunter breeding and training which are sure to result in loss even if very good horses are bred. Let me give an instance. A man whom I knew bred a very good mare indeed; to spare expense he had her broken in at home by a lout of a ploughboy whose nerve was undeniable, but whose hands were wooden and whose brains, so far as horses were concerned, lay in his heels. I bought that mare for £40, and though in a way she did well with me, it would have been better for me if I had never seen her, for though I got her to go well and to be a fine hunter she gave me a smashing fall before the operation was concluded, and I had a bad break, amounting nearly to a compound fracture, which kept me on the sick list for twelve weeks. Now if the mare had been properly broken I would gladly have given £120 for her, and I should have been in pocket.

Prices and Selling.

THE estimate that a Hunter to pay must make £150 at four years old is I think wide of the mark. He should cost very little up to the time he is three—that is to say, he should not consume a great deal of corn. Some he should have every winter, and other good food to keep him growing, but a four-year-old can be sold at a profit for considerably under that sum, and I think if one with another £80 were averaged, or even less, no harm would be done to the breeder. And many times a real good horse is bred which costs a good deal more than £150. But why wait till four years old to sell? Four years old is perhaps the very worst age at which a horse can be offered nowadays. Formerly it was not so, but then times have changed, and people with them. But a good three-year-old generally commands a ready market, and the shows provide an excellent market. I am, however, reminded that I am at the end of my paper, and I shall have more to say on this subject of the sale of Hunters next week, when I shall also touch on some more points raised in Mr. Angas's letter, such as the forcing of Thoroughbreds and Government encouragement of other breeds.

THE LOOKER-ON.

Sale of Suffolk Horses.

In consequence of the farms being let, the famous stud of Suffolk horses founded by the late Mr. W. Biddell, and on his death taken over by his son-in-law, the Rev. Henry Taylor, was on Thursday brought under the hammer at Lavenham in the the presence of a representative company of breeders, and there was some keen competition. The success attending the reverend gentleman's stud during the past six years may be seen in the fact that at the Royal Show his exhibits gained three second prizes; at the Suffolk Show one first, three seconds, and three thirds; at the Essex, one second; and at local shows, thirty-one firsts, seven specials, and challenge cup. The top price realised was 72 guineas, which was given by Mr. Cordy Wolton, the incoming tenant, for a four-year-old mare, Hollesley, and by Mr. Stephens (Stephens' Inks) for Tiffen III., an eight-year-old mare, with no less than fifteen prize cards attached to her. The mare Countess by Court Fop realised 67 guineas, and other mares made 50, 49, 47, and 44 guineas, &c., whilst fillies realised up to 44 guineas each.

Sale of the Barrow Hills Stud.

The show Hunters and brood stock from Barrow Hills, Chertsey, with which Mr. J. A. Mullens has been so successful at all the leading shows for some years, formed the chief lots at the sale of Messrs. Warner, Sheppard, and Wade, at Leicester, on the 21st inst. The attendance was very large and every lot was sold, the stud aggregating 1,019 guineas, a very satisfactory return considering that Mr. Mullens sent his horses to Leicester for practically unreserved sale. The Royal and Peterborough winning brood mare, Glow Worm, and Everlasting, another of the team which did so well for the stud at Lincoln this year, each realised 95 guineas, and 61 guineas was accepted for the three-year-old Beaver, a son of Riverstown, and the winner of many prizes.

Offers of 54 guineas and 50 guineas were accepted for a colt and a filly foal by Glenrossal, with which Mr. Mullens won at Lincoln and Richmond, and the handsome chesnut colt, Golden Flag, by Chevele d'Or, was a bargain at 40 guineas, while Gay Lassie, a winner of the Hunters' Improvement Society's medal, and claiming Glenrossal as her sire, appeared to be cheap at 35 guineas. A good stamp of brood mare, Red Cross II., the dam of several winners, was allowed to go at 35 guineas.

Among the miscellaneous lots sent from Barrow Hills were the steeple chasers Larry and Seaford II. They reached 46 guineas and 52 guineas respectively, while a small draft of Shetland ponies averaged 8 guineas each. All round, Saturday's sale was a good beginning of the autumn season at Leicester, other lots which sold well being Mr. W. Fitzherbert's Fire Brand, 110 guineas; Mr. W. Herbert's Lady Marmion, 70 guineas; Mr. A. E. Bower's Riverstown Panto, 50 guineas; and Mr. T. Chance Quarrell's brown gelding and chesnut gelding, 120 guineas and 90 guineas respectively.

Welsh Pony and Cob Society.

At the annual meeting of the Welsh Pony and Cob Society, held on Monday, Lord Glanusk was unanimously elected president for the ensuing year, and Mr. C. Lloyd Edward, Pwllheli, and Mr. J. D. Lewis, Narberth, were elected vice-presidents. The annual report showed that the society had a credit balance of £537. Reference was made to the great demand for Welsh ponies in America, and the difficulties breeders in Wales labour under in consequence of the high import duties imposed by the States Government. In order to secure the removal of these duties it was pointed out that it would be an advantage if the Government would give local authorities power to clear the hills of undesirable stallions, and regret was expressed that Lord Carrington had not yet put forward such a Bill.

The chairman moved the adoption of the report, saying that seven of the Welsh county council's had passed resolutions in favour of legislation, and that the other councils had the matter in hand.

The secretary (Mr. James Hamer) said he had received information that the United States Government had consented to recognise the Welsh Pony and Cob Society, and if that was so, then their ponies would in future go in free. The report was adopted.

SHEEP: NOTES AND JOTTINGS.

THE leaderette in the issue of the 17th inst., *re* sheep exports and imports, deserves some notice, because the matter referred to is of direct importance to the whole of the sheep-breeding industry of this country. There are several points to which special attention might with profit be directed. One, the enormous increase in the supply of mutton. When this increase will end it is impossible to tell, and the only certainty about it appears to be that our home breeders and feeders will have, at any rate for some time to come, a still larger quantity sent to our markets in competition with the home-grown and fed article.

INCREASED exports of stud sheep are most satisfactory. On the other hand, it is these increased exports of stud sheep that confirm the opinion expressed above, that our mutton supplies from the colonies and abroad will still be larger.

NO artificial restriction can well be devised that will prevent this inevitable result. This being the case, it follows that other means will have to be adopted by those engaged in mutton production at home to face the inevitable keener demand.

THE writer is no believer in restrictions in freedom of trade. The developments that have taken place during the past decade have made distance of but little object, and have made the metropolis the central market of a world's supply instead of that of our own country. With these facts before us, there stand out clearly two points that the flockmaster's attention must be fixed on: the first one is a reasonable one, and one that should be insisted upon both in the interests of those who produce the mutton and those who consume it. It is that means should be taken to compel all who sell mutton to state clearly and distinctly the source of its origin. No question is raised as to its quality or its merit, but the flockmasters of this country have a right to insist upon their mutton being sold for what it is, and an equal right to insist upon imported mutton being sold as imported mutton, and the consumers have the same right. Consequently this point is one which has a direct interest and bearing to all classes of the community.

NOW with regard to the other point, and that is one that affects the flockmasters and feeders of sheep only. The facts mentioned above show them distinctly that the competition they are going to meet with from countries beyond the sea will be still keener in the future than at the present time, and as is well known in every line of business, it is the best qualities that secure both the readiest sale and the best prices. This brings out clearly that other point mentioned—*i.e.*, that if our home breeders and feeders are to be able to maintain their position in respect to the supply of mutton at home, it will only be done by their producing the very best quality. To do this means that the flockmasters will have to breed the best class of sheep for mutton production, they will have to breed the best shaped sheep, and they will have to breed those sheep that produce the larger proportion of the more valuable joints, and the lesser proportion of those of lower value.

THE last paragraph places in a nutshell the reason why the work of the stud or pedigree sheep-breeder is so extremely valuable to the ordinary flockmaster, and in view of the still keener competition one may reasonably expect, it is quite certain that the work of the stud breeders will be still more profitable to the ordinary flockmaster in the future.

THERE are some—probably many—who will laugh at this what they may term theoretical reason why the work of the stud or pedigree sheep breeder will be of increased value to the flockmaster.

LET all who doubt the correctness of this deduction examine carefully any group of stud sheep from a leading flock, and note the development of the different parts of their carcase, and then go and take a similar number of sheep from an ordinary flock and put them through the same examination, then compare the result, and they will find that the first lot will be incomparably more valuable to the butcher in respect to the worth of their flesh than the latter.

IF it were possible to be able in almost every market of the country to have a demonstration such as is referred to in the previous paragraph, what an immense difference it would make amongst the general run of flocks throughout the country.

WE have, unquestionably, a large number of flocks that cannot be equalled in any country, but, unfortunately, there are very many that need great improvement to bring them up to the standard they should be to produce the best-formed joints and the largest possible proportion of the most valuable parts of the carcase.

MORE than one Colonial has called the writer's attention to this fact, and as stated by one of them, "It is most striking and surprising to me to find as I go about the country that there are so many of what one may term inferior sheep; it is incomprehensible that this should be so." It is unfortunately impossible to controvert the result of the observation mentioned above, and it is just as well that this observation should be brought clearly to the notice of those most interested.

IT is far better to have a keen critic than a flatterer, and as the gentleman from whom the observation is quoted is a practical sheep breeder, it is just as well that our flockmasters should know that there are some of them at least who could with advantage adopt the foreign or colonial breeders' method and use in their flocks high-class stud sheep, with a view of doing that which their competitors are doing abroad and in the colonies—*i.e.*, improving the formation of the carcase, increasing the depth and wealth of the flesh, and by so doing enable either themselves or those who will ultimately finish the sheep for the market to be in a better position to more successfully meet the keener competition that must inevitably come from the great sheep countries across the sea.

A Cure for Distemper.—Dr. Rodas Shaw, a well-known medical practitioner residing at Bowness, Windermere, has, after considerable research, evolved a medicine which promises to abolish distemper in dogs. Many valuable animals are yearly lost through this disease, and Dr. Shaw has already had marked success with all the cases he has treated locally. Such a medicine would be invaluable in all kennels, and, in fact, to everyone owning a dog. The dose, which is in liquid form, is given in small quantities (one teaspoonful for small dogs, two for large), and can be mixed with milk or broth. Such a discovery has been long awaited, as the disease has always been very difficult of treatment.

SHEEP SALES AND FAIRS.

KENT AND ROMNEY MARSH SHOW AND SALE

The eleventh show and sale has proved to have been one of the most successful ever held in connection with the Kent and Romney Marsh sheep. Never before at any sale have four yearling rams been sold for over the century, nor have so many of these high-priced rams been disposed of. From start to finish the sale was one in which the best rams went at high prices, and the inferior ones were quite neglected.

One of the features of this show and sale is the competition for the very handsome challenge cups. A new one this year was for the best five yearling rams given by Sir Richard Cooper. Mr. J. B. Palmer won it, Mr. Theame took second honours. Mr. Rigden was rn, and Messrs. C. File and G. Farmer were hc, and Messrs. Quested and A. Amos commended. The competition for the Laurence Hardy Challenge Cup was a very keen one; here Mr. F. Neame was followed by Mr. J. B. Palmer and A. Amos as second and; third Mr. Farmer was rn, Mr. Amos hc, and Messrs. Quested and C. File commended. The Lord Harris Challenge Cup for the stud rams followed. Here a four-year-old from Mr. H. Rigden was first, Messrs. L. H. and G. W. Finn were second, with Mr. Farmer rn, Mr. F. Neame hc, and J. B. Palmer c. In that fine class for the best woolled ram, Mr. C. File's ram first at the Royal Thornton, Mr. D. Murray was the runner up; 20 guineas, Mr. B. Chambers, for New Zealand; 16, 12, and 11 guineas for the home breeders; the average for the seven sold was £28 4s.

Mr. J. H. Harvey sent five; these gave an average of £22 19s., Mr. F. Neave, pushed by Mr. T. Wotton, paying 75 guineas for one of them.

Mr. F. Neame, who was the owner of two rams that won the Challenge Cup for the best yearling ram averaged for twenty four £22 16s. 9d. The top price was 140 guineas for the cup winner, and one of the pen that were second for the Cooper Challenge Cup, Mr. C. E. Gunther was the purchaser, the other four of this lot made 24 guineas, W. F. Wood; 29 guineas, Exors. W. Elvy; 19 guineas, Lord Harris; and 22 guineas, J. T. Thornton and Co. Mr. Lister Kay gave 21 guineas for one, as did also Major Powell Colton, and the others ranged down to 10 guineas. Mr. A. Amos found his top priced ram in the 3rd prize yearling ram, this went to Messrs. Liebig, Mr. E. Astherson gave 55 guineas, Mr. Miller 42 guineas, Mr. W. W. Chapman 30 guineas, this buyer took five others at low prizes. Mr. D Murray gave 20 guineas for New Zealand, &c., Mr. Arthur Finn realised an average of £14 11s. 4d. for twenty, 31 guineas was paid twice, once by Major Denny, and once by Mr. Kinwood, who also gave 25 guineas for a second. Mr. J. E. Quested gave 15 guineas, and the remainder went down to 10 guineas. Mr. G. Fenner's level lot were in good request, the twenty-five made an average of £13 14s., Mr. Arthur Finn gave top price, 45 guineas; Mr. Law, of Knockbridge, gave 40 guineas; Mr. Robson, for the second prize two-shear at the Royal Show, 23 guineas, and 21 guineas for another; Mr. Chapman gave 16 guineas, and the others went down to 3½ guineas. Mr. H. Rigdon's last lot was the first prize old ram, a four-year-old, bred by Mr. T. Wotton; here the competition was a keen one, Mr. Green wanting him, but Mr. J. B. Palmer would not be denied, and 80 guineas was paid for him, a record price for a stud ram. Mr. D. Murray, for New Zealand, gave 50 guineas, Mr. L. Hardy, M.P., 30 guineas, Mr. W. E. Long 26 guineas, Mr. A. Brown 26 guineas, Mr. T. Wotton 20 guineas, the Hon. S. Tufton 22 guineas, and the average worked out at £13 6s. Twenty-nine from Mr. J. E. Quested went at an average of £11 19s. 4d.; 40 guineas was the best price to Messrs. J. Thornton & Co., Mr. J. Finn, Kelsey, gave 29½ guineas for one and 15 guineas for another, Messrs. Zubig 19½ guineas, and several went to Messrs. Cooper Nephews for export. The following are the averages and best prices for the other consignors:—

Messrs. Miller, twenty-eight at £1| 1s. 7d., top price 21 guineas; Mr. T. Wotton ten at £10 17s 4d., top price 8 guineas; Mr. J. File, thirteen at £10 17s. 4d., top price 18 guineas; Mr. F. de B. Collard, nine at £9 4s. 4d., top price 21 guineas; Lord Harris, twenty-four at £8 9s. 4d., top price 26 guineas; Mr. E. Aschurm, eight at £8 2s. 9d., top price 9½ guineas; Mr. E. Hambrook, three at £7 10s. 6d., top price 10 guineas; Mr. G. C. Swinde'ls, twenty-three at 7 guineas, top price 21 guineas; Exors. W. Elvy, ten at £7 3s. 10d., top price 9½ guineas; Mr. G. Birley, four at £6 19s. 1d., top price 7 guineas; Mr. S. Kingsworth averaged £6 19s. for five; Captain Sumerset Webb, £6 0s. 9d. for eight; Major Powell Cotton, £5 18s. 1d. for four; Mr. T. File, £5 18s. 4d. for four; Mr. J. D. Maxted, £5 15s. 6d. for five; Earl Sondes, £5 11s. 6d. for twelve; Mr. G. M. Goodson, £5 11s. 3d. for five; Mr. W. R. Harvey, £5 11s. 3d. for five; Mr. J. B. Blake, £5 10s. 3d. for two; Mr. L. Hardy, M.P., £5 10s. 3d. for eight; Mr. J. P. Barnes, 5 guineas for three; Mr. d'Avigdor Goldsmid, 5 guineas for two; Mr. C. E. Hawkins, 5 guineas for one; and Earl Verulam 4½ guineas for fourteen.

The general average of this year's sale was £12 17s. for 410 head, and the following table gives the general averages, &c., of the whole of the series of sales since 1897:—

SCENES AT LEWES SHEEP FAIR.

Removing Lambs. | On the Downs. A General View of the Fair.

won with ease, Mr. Palmer came second, and Messrs. Neame, G. Farmer, and J. E. Quested were hc, and c to the latter two.

Messrs. F. Austin, Bensted, J. Finn, Kelcey, and H. Spanton judged the cup classes; and Messrs. W. M. Dean, Patagonia, W. Elgar, New Zealand, and D. Murray, New Zealand, that for the best-woolled ram.

The best average was £42 for Messrs. L. H. and G. W. Finn's second prize old ram, which went to Mr. Quested at that figure, only one ram being sent by these consignors. Mr. C. File's grand lot of seventeen in reality made the best average of the sale, namely, £10 10s. 4d., Mr. D. Murray, one of the wool judges, giving 150 guineas for that grand ram, first for wool, out of the whole entry of just under 500, an unbeaten ram at the summer shows, and one of great merit and superior quality; the same buyer took another at 21 guineas. Four others, or six out of the seventeen, were taken by the wool judges for New Zealand; these went to Mr. W. Elgar at 130, 30, 25, and 23 guineas respectively—a striking testimony of the popularity of Mr. File's sheep in New Zealand. Messrs. J. Thornton and Co. got two, one 96 guineas, and two others at 45 guineas; Messrs. Cooper and Chapman, &c., were also purchasers.

Mr. J. B. Palmer, who won the cup for the best five rams, realised for these 110 guineas to Messrs.

	No. Sold.	Average. £ s. d.

Ayr Ram Society.

The annual show and sale of the Ayr Ram Society took place at Ayr last week, and, as usual, attracted a good entry and a large attendance of buyers, whilst some capital prices were realised. The top figure was £88 for one of the Borland first-prize group of five, the purchaser being Mr. Hamilton, Woolfords. The others of the Borland group also sold well; Mr. M'Dougall, High Craigton, bought one at £62; Colonel M'Kenzie, Muirhouses, Duntocher, one at £51; and Mr. Scott, Bogside, one at £31; the total for the group being £246 10s., or an average of £49 6s. each. The Woodfords second-prize group realised £177 10s. One of the lot brought the second-best price of the day, namely, £70, and the purchaser was Mr. Howatson, Carskeoch, the others selling at £53 to Colonel Blair, of

Blair, at £20 to Mr. Weir, &c. One of the West Browncastle second-prize pen sold at £33 to Mr. Watt, Blairpark, and another at £21 to Mr. Wilson, Auchencloigh. The Corsebank first prize single shearling went to Mr. J. H. Hunter, Machriebeg, at £54; and a Rankinston sheep, which had been placed fifth, went to an Irish purchaser, Mr. M'Elheron, at £36. The first prize Weston Blackface tup lamb went to Mr. Dunlop, Morriston, at £25, and the Woolfords second prize lamb to Mr. Latta, Kyle, at £21s. 10s., whilst the Greenan first prize Border Leicester shearling sold at £20 to Mr. Kerr Houdston, and the Skerrington Mains first prize Border Leicester tup lamb at £20 10s. to Mr. Crawford, Dowhill.

Dorchester Poundbury.

This, the recognised county fair for Dorset, to which all the best-known breeders of Dorset Horns, as well as Downs, in the county regularly contribute, was held in quite, for the time of the year, torrid weather on Thursday, when the numbers penned showed a decline on the numbers at previous fairs, this being due, many considered, to the exceptionally good prices which have ruled all through the season, and, naturally, has proved a strong inducement to sell earlier in the year. The number penned on the hill totalled about 12,000, and were entrusted for disposal to Messrs. Ensor and Son, Messrs Duke and Son, and Messrs. Symonds and Sampson, the three auctioneering firms who have now for some years been associated with the fair. Although Dorset Horns are one of the chief features of the fair—and here the breed can be seen as at no other fair in England—still there were many Downs, and more especially those of the Dorset Down type, penned at the different sales, and in uniformly excellent condition the sheep undoubtedly were.

One of the great attractions, as for many years past, was the competition for the prizes generously offered by Messrs. Ensor and Son for the best lot of horn ewes penned, the prizes being divided into two classes, one of which was restricted to exhibitors whose flocks do not exceed 400. There has seldom ever been keener competition than this year, the judges—Mr. R. B. White, Herringstone, and Mr. W. Rogers, Chesilborne—having to call in a third person to help them in their deliberations, Mr. C. B. Stiby, of Bradford, readily volunteering to help these judges out of their difficulty. Mr. Douch, of Alton, who entered a grand lot of sheep, was eventually awarded the blue ribbon, taking the three guinea cup, and Mr. C. Hawkins, Waddon, the second prize, Captain Nicholson, Mangerton, and Mr. J. H. Chick, of Wynford, both receiving h.c.'s. In the restricted section Mr. W. E. Riggs, Chilfrome, was awarded first, and Mr. R. C. Bennett, Chesilborne, second, Mr. C. E. Lane, of Kimmeridge, whose sheep were much admired, gaining a h.c.

As regards trade, business in point of sharpness exceeded anything remembered for years, everything selling with a run at prices showing a uniform advance for all classes of sheep of from 7s .to 10s. a head, one lot of ewes which sold at 40s. last year making 15s. this year! Horn ewes (for the best lots) realised 61s. to 69s. each, and others 57s. to 60s; couples, 72s. to 79s.; horn chilver lambs, 43s. to 49s.; horn wether lambs, 30s. to 40s.; grazing ewes, 40s. to 49s. Down sheep made equally good prices, the range for ewes being from 42s. to 56s.; Down chilver lambs, 32s. to 39s.; mixed lambs, 39s. to 42s. 6d.

Driffield.

Close on 700 breeding sheep were offered at Driffield Cattle Market on Wednesday, and they realised fair prices; 29 gimmer shearlings from Mr. Mason Rounding, Fraisthorpe, made 56s. to 58s. 6d. per head, 20 from Mr. I. Burdass, Lowthorpe, 56s. to 61s., 30 from Mr. R. Duggleby, of Cawkell, 57s. to. 60s.; 50 from the flock of Mr. E. F. Jordan, Eastburn, 59s. to 62s.; 30 from the Exors. of the late Mr. James Clark, Tibthorpe, 57s. 6d. to 60s.; 100 from Mr. A. Botterill, Garton, 54s. 6d. to 62s. each; 53 from Mr. B. Crozier, 56s. 6d. to 67s. 6d. each; 30 shearlings from Mr. W. Knapton, Ruston Parva, 55s. 6d. to 58s. 6d.; 24 from Mr. I. Burdass, Lowthorpe, 58s. 6d. to 63s. 6d.: and 20 from Mr. G. Robinson, 58s. to 61s. 6d. each; 12 Lincoln pedigree shearling rams, belonging to Mr. T. D. Robinson, averaged close on £5 each, the highest price being £6 7s. 6d.: four shearling rams of the Lincoln type, belonging to Mr. M. Sellers, Foston-on-the-Wolds, averaged just on £4 per head; whilst four longwool rams belonging to Mr. Charles Longbottom, Nafferton, made £3 5s. to £4 per head.

Ipswich.

The last of the sale of rams at Ipswich for the present season took place on Tuesday, when there were offered consignments from most of the noted breeders of the district, the numbers being larger than at the corresponding sale last year. Buyers were numerous, and attended from a wide area, one representative from Wales securing about a score for crossing with Welsh ewes, whilst three of the best ram lambs were purchased for export to Germany. A brisk trade was experienced throughout at the following prices:—Mr. S. R. Sherwood 6 guineas to 4 guineas, Mr. D. Abbott Green 6½ guineas to 4 guineas, Mr. H. E. Smith 6 guineas to 3¾ guineas, Mr. J. R. Keeble 6¾ guineas to 3¾ guineas, Mr. Thomas Goodchild's averaged over 4 guineas, Mr. G. P. Watkins' to 5½ guineas, Mr. F. H. Roberts to 4¾ guineas, Mr. W. H. Borrett to 5 guineas. A grand lot of twenty-five Lincoln shearling rams sold cheaply at from 6¾ guineas to 5 guineas. The trade for Suffolk ewes was slow, and prices lower.

Lewes.

The famous annual sheep fair at Lewes took place on the 21st inst, and events proved that it has lost none of its popularity, for the supply consisted of about 12,000, the attendance of buyers was good, and so were the prices; in fact, the demand was greater than the supply, a very early clearance being effected. The top prices, both for ewes and lambs, were secured early in the day by Mr. Tompkins, of Angmering, who sold 100 ewes to Mr. Pape, Ninfield, at 60s. The next best price was 51s. Mr. J. R. Thornton disposed of Count Munster's entry of 200 lambs at 45s., whilst Mr. W. T. Wallis also sold 100 at 45s., and a couple of pens went at 44s. and 43s.

The following were the chief sales:—

Ewes.—Mr. Tompkins, Angmering, sold 100 at 60s. to Mr. Pape, Ninfield; Mr. R. R. Verrall, 100 at 51s.; Mr. J. Stacey, 100 at 51s., and 100 at 50s.; Mr. H. Stacey, Firle, 100 at 50s., and 100 at 45s.; Mr. L. Martin, 90 at 50s.; Mr. W. T. Wallis, 100 at 50s.: Mr. Harry Willett, 80 at 49s.; Mr. A. Wadman, 100 at 49s., and 100 at 45s.; Mr. Bray, 150 at 48s.; Mr. J. Kenward 30 at 47s.; Mr. F. Gorringe, 100 at 44s.; Colonel Colin Campbell, 50 at 44s.; Mr. G. Hewitt, 60 at 42s.; Mr. Wyatt, 80 at 36s.

Lambs.—Court Munster sold 200 at 45s.; Mr. W. T. Wallis, 100 at 45s.; Mr. J. E. Moubray, 33 at 44s.; Mr. J. Porter, J.P., 100 at 43s. and 100 at 37s.; Mr. Stubbs, 100 at 38s. and 100 at 34s.; Mr. Cooper, Willingdon, 80 at 38s.; Mr. T. Bannister, 100 at 37s. and 90 at 34s.; Mr. Scrase, 100 at 35s.; Mr. Harry Willett, 40 at 34s. 6d.; Mr. Bray, 250 at 34s.; Mr. H Stacey, Firle, 100 at 30s; Mr. Burtenshaw, 39 at 30s.

Rams.—Mr. J. Kenward, two at 10 guineas; Colonel Campbell, four at 4 guineas.

Ram lambs.—Mr. Ellis, Guildford, one at 7 guineas, one at 6 guineas, two at 7 guineas, one at 6 guineas, one at 7 guineas; Count Munster, one at 7 guineas, one at 6 guineas, and four at £5; Mr. Tompkins sold seventeen at an average of 5 guineas each.

Louth.

There was a large supply of rams and breeding sheep at Louth Ram Fair on Friday, when the highest price realised was 35 guineas, given for one of Mr. E. H. Cartwright's Keddington rams, and another made 15 guineas. Other top prices were 12 guineas for animals the property of Mr. T. H. B. Freshney, South Somercotes; and 11½ guineas, the property of Mr. W. Nainby-Manby, of Thorganby Hall. Drape ewes (forty-five), the property of Mr. H. Odling, Lambcroft, averaged 66s. 6d. per head, the best making 71s.; while shearling ewes, the property of Mr. John Moore, Leicester, realised 60s.; Hampshire Down ram lambs, the property of Mr. W. H. Smyth, made up to 10 guineas; while Mr. R. Botterill's Tathwell rams made up to 13¼ guineas.

Loughborough.

The annual sale of store sheep at Loughborough took place on Wednesday, when over 1,000 sheep were penned on the Athletic Ground. The top price for rams was £6 6s., Mr. E. T. Parker, of Alton, Hants, being the owner. Lincoln theaves sent by Sir Ernest Paget and Mr. J. Burrows, of Wymeswold, realised 67s. each. A pen of ewes sent by Mr. G. Lacey, of Cotes, commanded the best price, namely 60s. 6d. each. The highest figure for lambs was 48s., these being sent by Mr. Barnett, of Burton-on-the-Wolds. This was a record price for lambs at this sale which was a successful one from a seller's point of view.

Malton.

A sale of rams and breeding sheep was held at Malton on Tuesday, and was largely attended, whilst some good prices were realised. Mr. W. S. Fretenby, of Nunnington, sold Lincoln gimmer shearlings at 59s. to 77s. each, and twenty-four made an aggregate of £79 11s.; some Lincoln gimmer shearlings from the flock of Mr. A. J. Cholmley made 50s. to 61s. each; Mr. A. Lamb's Leicester gimmer shearlings fetched 50s. to 56s. each; and Mr. J. Lett's (Bishop Wilton) Masham gimmer shearlings up to 57s. 6d. each. Some excellent rams were put forward, and met a fair demand, but several of the poorer lots were unsold. The highest price paid for a Lincoln Longwool shearling ram was £9 5s. for one from the flock of Mr. Thos. Campion, East Heslerton, who sold two others at £7 15s. and £7 2s. 6d. respectively. Mr. W. S. Fretenby's (Nunnington) Lincoln Longwool rams brought £6 2s. 6d. to £7, and Mr. A. J. Cholmley's Lincoln Longwool shearling rams made £5 2s. 6d. per head.

Market Rasen.

At Market Rasen September Sheep Fair held on Wednesday, there was a large show of gimmers and breeding ewes, and a fairly good trade, but lambs sold slowly. Gimmers made from 40s. to 51s., ewes 33s. 6d. to 49s., lambs 27s. 6d. to 37s. 6d., tup lambs 30s., and tups, 26s. to 50s.

The supply of rams was about the average, but trade was not quite so good as last year, 8¾ guineas was the top price, against 9¼ guineas last year, but the averages were slightly better. A score of the Otby rams (Mr. E. Abraham's) averaged £5 13s. 4¾d. each, with 8¾ guineas as the top price; a dozen of the Walesby rams (Mr. H. Abrahams) averaged £5 19s., with 8 guineas the top; twenty of the Tealby rams averaged £5 1s. 3¾d., Mr. Drake's top figure being 8 guineas, whilst seven of Mr. Marris's Kermington rams averaged £3 14s. 3d., sixteen of Mr. Wright's Risby rams £3 5s. 11½d. A dozen of the Lissington rams (Mr. W. Sengrave's) averaged £3 8s. 9¾d., and half a dozen of Mr. G. A. Bellwood's (Bishop Norton) £5 3s. 5½d., and those entered by Messrs. Atkinson and Son, of North Kelsey, averaged £4 9s. 3d. Mr. Weighman, of Wrayby, had a pen of Hampshire Down rams, and these he sold at £5 to £5 5s. each.

Market Weighton.

At Market Weighton September Fair held on Wednesday there was a good show of ewes, shearlings, lambs, and gimmer shearlings, and an excellent show of rams. Buyers attended in good numbers, and a fair trade was done. A consignment of gimmer shearlings from the St. Williams School, Market Weighton, sold at 40s. to 46s. 6d., wethers from the same school made 37s. 6d. to 41s. 6d. per head, Ewes and rams, the property of Mr. W. B. Walmsey, Park Farm, Londesborough, realised 48s. 6d. to 51s. and 76s. to 84s. respectively, and Mr. J. Lavarack, Everingham, had several pens of shearlings, which made 57s. 6d. to 60s. per head. Twelve rams, the property of Mr. Thompson, Wandby, realised £4 5s. to £6 15s.; twenty-four Lincoln rams, the property of Mr. John Jackson, Etton, Westwood, went at £6 6s. to £12 1s. 6d., and several pens of shearlings, the property of Mr. John Thompson, Holme-on-the-Wolds, realised from 55s. to 57s. 6d.

Newark.

In connection with Newark Cheese Fair held on Wednesday no fewer than 3,500 sheep came under the auctioneers' hammer. Messrs. E. Bailey and Son sold the following, the principal prices being:—Lambs from Colonel Fane up to 55s. 6d.; from Mr. W. Richardson, Ossington, 48s. 6d.; and Mr. W. E. Denison, J.P., Ossington, 44s. 6d. For gimmers the top prices were Mr. Cartwright, Dunham, 79s. (thirty-three averaged 77s. apiece); Mr. J. T. Farrar, Waddington Heath, 71s.; Mr. H. Pate, 70s.; Mr. Abraham, Hawton, 63s.; Mr. Bembridge, 66s.; Mr. Ward, Langford, 64s. 6d.; Mr. Cecil Harmer, 64s.; Mr. Burrows, Leadenham, 65s.; Mr. Christian, Staythorpe, 62s.; Captain Thorpe, 69s.; Mr. Roberts, Beckingham, 67s.; Mr. Cullen, Rolleston, 66s. 6d.; Mr. Storm, Muskham, 61s.; Mr. John Brocklebank, 63s.; Mr. Joseph Brocklebank, 64s.; Mr. E. J. Bullen, 61s.; Mr. F. Blagg, 65s. A number of Lincoln rams were also sold, the principal prices being:—Mr. John Brocklebank, Bassingham, 5½ guineas to 9 guineas; Mr. Joseph Brocklebank, Carlton-le-Moorland, from 6½ guineas to 15 guineas (average 9 guineas); Mr. Storm, 5½ guineas to 18½ guineas (top price).

Pocklington.

At the annual sale of ewes, gimmer shearlings, and rams, held at Pocklington on Monday, about 800 sheep were penned. There was a large company, and prices were well up to the average of previous years. Mr. B. Binnington, Warter, sent five shearling rams, which made up to £6 10s. each. Mr. J. T. Elgey, Kilnwick Percy, sent seventeen rams, which realised from £2 17s. 6d. to £3 17s. 6d. each, whilst rams from the flock of Mr. E. Holtby, Hay Wold, made up to £3 17s. 6d., and thirty Leicester gimmer shearlings from the same breeder averaged 63s. each. Mr. E. Johnson, High Catton, had three pens, which averaged £3 4s. 6d. each. Five pens from Mr. T. Dale, Callis Wold, averaged 3 guineas each. Leicester ewes from the same breeder made up to 52s. each. Lord Nunburnholme, Warter Priory, had six pens of Leicester gimmer shearlings, which made up to 63s. each, and ewes from the same flock fetched 47s. each. Mr. W. Grundon, Grimthorpe, sent seven pens of Lincoln gimmer shearlings, which made 63s. each, whilst 150 gimmer shearlings from Mr. W. Laughton, Little Givendale, fetched 60s. each.

Preston.

At the annual store sale at Preston on Monday nearly 4,000 sheep were penned, and they met a ready trade. With the exception of a few horned sheep a clearance was quickly effected. Half-bred ewes made 40s. to 45s.: half-bred lambs, 21s. 6d. to 30s. 6d.; horned ewes, 20s. to 27s.; and Cheviots, 25s. to 29s.

Robertsbridge.

At the annual sheep and lamb fair, held at Robertsbridge (Sussex) on Wednesday, some 2,500 sheep and lambs were disposed of at wonderfully good prices. There was a large attendance of buyers, and a brisk demand for sheep. One well-known buyer stated that prices were higher than at any fair or sale he had attended during the

year. Kent and cross-bred lambs averaged 31s. 6d.

Stamford.

The fourteenth annual sale of rams from the Newstead flock, the property of Major Pinder, was held in Stamford Cattle Market on Monday, when there were also included in the sale rams from Mr. F. Ward, Quarrington, Sleaford; Mr. James Hornsby, Laxton Park, Stamford; Mr. J. Flower, Chilmark, Salisbury; Mr. G. L. Dean, Homington, Salisbury; and others. There was a large attendance of buyers, and the bidding, especially for the best, was brisk with prices good. The chief sales were as follows:—Major Pinder's Lincoln Longwool shearling rams averaged £5 17s. 2d. for nineteen, Mr. W. Sharpley, Wittering, buying at 8½ guineas and 5 guineas; Mr. J. Berridge, Sawtry, at 8¼ guineas; Mr. G. Hindson, Empingham, at 7¼ guineas, and others up to 7 guineas. Better prices were obtained for the Lincoln shearling rams belonging to Mr. Ward, an average of £11 4s. 10½d. being obtained for twelve. Mr. A. Templeton, Little Casterton, paid 15 guineas; Mr. Cave, 16½ and 13 guineas; Mr. J. G. Jackson, 12 guineas; Mr. S. Arnsby, 12½ guineas; and others up to 10½ guineas. The ten Hampshire Down ram lambs sold by Mr. J. Flower averaged £6 13s. 4d., the best prices being 8½ guineas (Mr. Rylands), and 8 guineas (Mr. Skinner). Mr. G. L. Dean got an average of £5 6s. 9d. for his eighteen Hampshire Down rams, whilst for sixteen rams of the same breed Mr. J. Hornsby got £4 2s. 4d. per head, the best price being 6¼ guineas.

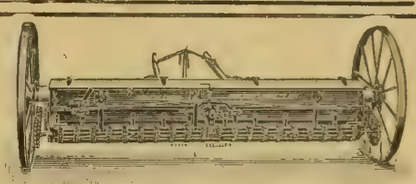
The Lavenham Southdowns.

On Thursday the flock of Southdown sheep formed by the late Mr. Biddell from purchases from the old-established flock of the Marquess of Bristol in 1891, and from Mr. C. Adeane's, the Duke of Hamilton's, and the late Mr. J. J. Colman's well-known flock, was brought under the hammer in consequence of the owner, the Rev. H. Taylor, having given up the farm. The best pen of a score two-shear ewes went at 50s., and three other pens of a similar number made 48s. 6d., 45s. 6d., and 42s. 6d. respectively. A score three-sheers fetched 45s.; a score full-mouthed 48s. 6d, and six score ditto averaged about 42s. Ten broken-mouthed ewes went at 36s. Half a score ewe lambs made 40s., and five score averaged about 36s. A shearling ram fetched 55s., a two-shear 47s. 6d., while two two-shear rams, bred by the Exors. of the late Colonel McCalmont, fetched 70s. and 52s. 6d. respectively, and two four-year-old rams, bred by the Duke of Richmond, went for 62s 6d. and 50s. Of a half-bred flock, a score two-shear ewes made 56s. 6d., nineteen ditto 49s, and two score full-mouthed averaged about 46s.

The Leeds Castle Flock.

Consequent upon the death of Mr. Thomas Powell, who from its foundation managed it, the Leeds Castle registered flock of Kent or Romney Marsh sheep, the property of Mr. C. P. Wykeham-Martin, was entirely dispersed on Wednesday. The Leeds Castle flock was almost entirely founded from the late Mr. Powell's famous old East Lenham flock, and there was a large attendance of buyers anxious to secure the blood. The result was a most successful sale at good prices, as the following summary will show:—102 ewe tegs, ranged from 55s. to 127s., and averaged 73s.; fifty-five one-lamb ewes, 56s. to 81s., average 65s. 4d.; forty-five two-lamb ewes, 60s. to 95s., average 78s. 4d.; sixty-two three-lamb ewes, 52s. to 80s, average 68s.; forty four-lamb ewes, 43s. to 52s., average 46s. 10d.; 126 ewe lambs, 32s. to 51s., average, 34s. 4d.; forty ram tegs, 4½ guineas to 27 guineas, average £9 6s. 10d.; three-year-old rams, 4½ guineas to 13 guineas, average, £8 11s. 6d.; thirty-five rams lambs, 35s. to 67s. 6d., average 46s. Total for 508 heads of breeding stock of all ages £1,744 1s. 6d. In addition seventy-four wether lambs averaged 30s. 3d. per head and brought the grand total up to exactly £1,856. The buyer of the 27 guineas ram teg was Mr. Gordon F. Deedes, of Hythe, and he paid 12 guineas for another. Mr. A. Stevens gave 20 guineas for another, Mr. R. G. E. Locke (Hartlip) 18 guineas and 17 guineas for a pair, and Sir H. Dering, Bart., was a purchaser at 18 guineas. The purchaser of the pen of ewe tegs which made 127s. was Mr. A. Hickman of Egerton; Mr. W. Skinner gave 81s. for a pen of one-lamb ewes, and 95s. for a pen of two-lamb ewes, and Mr. E. Ascherson, of Charing, paid 80s. for some three-lamb ewes.

Wensleydale Longwools.



The Wensleydale Longwool Sheep Breeders' Association's annual show and sale took place on Wednesday, at Northallerton. Up to last year the show and sale was held at Leyburn, which, though more in the heart of the Wensleydale country, was found to be rather inconveniently situated both for buyers from a distance and for the removal of stock sold. And so it was decided to remove to Northallerton. Thus far the change has been attended with every advantage. Last year, for many reasons quite apart, no doubt, the sale was one of the most successful the association has yet held, and though the same anxiety to buy was not

present at last week's sale, yet the pick of the male stock was soon disposed of.

The show sheep were judged by Mr. John Heugh, of Bedale, and Mr. T. Thompson, of Scruton, and in most of the classes the competition was extraordinarily keen. For instance, there were no fewer than thirty-three entries in the ram lamb class, whilst in the class for five shearling rams eighteen pens of excellent sheep were shown.

The following were the awards :—

Aged ram : 1, J. Hargrave, Wath; 2, J. Rhodes, Wetherby ; 3, S. H. Rowlandson, Barton. Five shearling rams : 1, J. Greensit, Holme-on-Swale ; 2, E. K. Cleasby, Carlton Miniott ; 3, S. H. Rowlandson. Shearling ram : 1, W. J. Greensit ; 2, J. Hargrave ; 3, E. K. Cleasby. Ram lamb : 1, T. B. Earle, Aldborough ; 2, H. Dewhurst, Skipton ; 3. J. Thompson, Winston ; 4, E. H. Cleasby, Five shearling ewes : 1, J. O. Trotter, Scruton, Bedale ; 2, J. Rhodes. Three ewe lambs : 1, E. Horseman, Richmond ; 2, F. E. C. Dobson, Stokesley.

At the subsequent sales the highest price fetched was £20, given by Mr. Jackson, Wetherby, for a shearling ram, the best of the winning pen, belonging to Mr. J. W. Greensit, of Holme on-Swale. The other four in the pen averaged about £10. The next best price was £18, given by Mr. Metcalfe, of Spensley, for a shearling ram belonging to Mr. T. W. Bainbridge, of Richmond ; whilst the second prize ram in the shearling class, belonging to Mr. E. K. Cleasby, of Carlton Miniott, realised £16, and was bought by Mr. Wood, of Masham ; a similar figure was got for a shearling ram, the property of Mr. Hargrave, of Wath, knocked down to Mr. Wells, of Melmerby.

York.

In the York cattle market on Thursday several local auctioneers held sales of rams, the total number offered being about 400. There was a fair attendance of buyers, and trade generally was brisk. Five Oxford Down shearling rams, the property of Messrs. H. Overman and Bros, Weasenham, Norfolk, made 4½ to 13 guineas ; twenty-four Oxford Down ram lambs, 4 to 9½ guineas, making on an average a little over 5½ guineas apiece. Fifteen pure-bred Leicester shearling rams from Mr. Cundall's flock, Pallathorpe, made from £4 to £8 apiece ; six pure bred Wensleydale shearling gimmers from the Hon. H. W. Fitzwilliam, Wigganthorpe, York, fetched, in two cases, £17 and £15 10s., the rest making an average of £11 10s. ; eight pure-bred Wensleydale shearling rams from Mr. J. Jackson, Hunsingore, made from £4 10s. to £7 5s., and forty pure bred Wensleydale shearlings from Mr. F. Kirkby, West Huntington, made from £4 to £10 5s. Gimmers made up to 61s. apiece ; lambs, 40s ; gimmer lambs and Masham ewes up to 46s. 6d.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Sept. 24, 1907 :—

| | | |

CATTLE: NOTES AND JOTTINGS

THE nights are rapidly lengthening now, and the sunshine daily becoming shorter, so that in spite of the fine and generally favourable change in the weather the nights have a winterly foretaste that is not pleasant to think about, and the cattle that are intended for the Christmas markets will at any time now be all the better for a comfortable fold-yard and a good feed of dry corn and cake, with a little chop at each end of the day. Late-reared calves should also very shortly be receiving similar treatment, if of weaker food. With milking cattle it is different, or has at least been proven different in many instances where experiments have been tried, and the milk supply has shown itself to be more easily maintained by letting the cows lie out as late in the season as possible.

HARVEST is now being rapidly secured and in very fair condition. There will in most places be an abundance of straw, which will come in very useful, and the higher temperature is causing the mangold crop to gain weight very rapidly. Swedes, on the contrary, are not showing so healthy a lookout as was the case a few weeks back; in many places mildew has made its appearance and is working sad havoc, and the smother fly also is very plentiful in some fields and localities. Either of these pests quickly rob the swedes of a good share of their nutritive properties and render them much less valuable for feeding purposes. There should be a good supply of ripe bullocks for Christmas this year, and it is to be hoped prices will hold up.

AT the sale of Sussex cattle at Hayward's Heath recently fairly good prices were realised, a number of animals realising from 30 up to 38 guineas each. Sir Lindsay Hogg, Bart., presided at the luncheon, and in the course of a speech proposing Mr. Bannister's health, said he hoped before long the councils of the various agricultural shows would give instructions to judges to thin out cattle only fit for fat stock shows, and to give the prizes to animals shown in their natural breeding condition. This is a subject that has been thrashed out many and many a time, and for generations past we may practically say, and without any great results. It is a question that after all the years of debating that have been spent upon it, it is still open to much criticism. There are, in fact, more reasons why the present high feeding should be continued than there are for its being abandoned.

IN favour of the highly conditioned animal in the showyard it must be said, and great emphasis may be used, that if shown in their ordinary home condition many animals would be winning prizes that all the feeder's skill in the world could not condition beyond a certain point, and to breed from such would at once be encouraging a degenerate race of stock. It would also cause our showyards to lose much, very much, of their present attraction to cattle breeders who visit these places for the purpose of seeing which breeds of cattle can be brought out in the greatest perfection, or which strains of blood make the most satisfactory and healthy development as well as the contrary of these points.

TO come to the other side of the question—namely, what would be gained by discontinuing the high pressure feeding? There are two points mainly to be considered—one is the cost of raising this high condition; the other is that in the case of cattle intended for milking purposes the effect of an excess of flesh is to obstruct the milk vessels, especially of the young stock, and render them less useful for the dairy. This may be and is in some cases rather a serious matter, but on the whole is not fraught with as much danger to the milking properties as the passing of leaner animals that would not feed would be to the constitution of young stock bred from them. We often hear it said, too, that many very high-class animals are ruined for breeding purposes by being made excessively fat.

THAT cases of this kind have been known it is useless to deny, but in the majority of such cases, if the animal is very valuable, she may be induced to breed by reducing flesh, or by other means. Whilst upon this subject, the writer recollects a case in which the judges passed over a very highly-conditioned cow in the Royal showyard many years ago, for the reason that they considered her too fat to breed. The herdsman at the time, however, assured the judges that the animal was then in calf, and the singular ending of the case was that the cow brought forth in due time twin calves. It does not seem a practice to be commended for some reasons the taking prize heifers from the Smithfield Show and putting them to breeding purposes, but this has been done very successfully upon many occasions.

THE new slaughterhouses or abattoirs adjoining the Islington Cattle Market, it is expected, will shortly be open to the public. With the general trend of things pointing to an extended, we may almost say exclusively, dead meat trade, it seems rather a pity to have expended so great an outlay upon these premises. There are many reasons that point to an entirely dead meat trade. The increasing traffic of all kinds in the London streets causes the driving of cattle along them at almost any hour of the day or night not only a cruel, but also a dangerous thing. Then, as far as the quality of the meat is concerned, there can be little doubt but that meat freshly killed in the quiet, cool country slaughterhouse is much more wholesome than it would be after railways and marketing alive in London.

ACCORDING to American reports the exports of range cattle from Alberta to England this autumn will be some 24,000 less than for the corresponding period of last year. Though not an alarming decrease, this should tend to create a better demand for home-fed cattle throughout this country, and, generally speaking, throughout America. The supply of fat cattle, especially those of ripe, good quality, appears likely to fall short of requirements. Inferior stock there, as at home, are by far the most plentiful. The falling off in the number of cattle, according to the Board of Trade Returns, ought to have an appreciable bearing upon the scale of prices. There is no doubt, as intimated in a recent issue, the demand for forward stores will have considerable effect on beef prices.

Sale of Shorthorns at Penrith.

A sale of about seventy pure-bred Shorthorns from herds in Cumberland and Westmoreland took place at the Agricultural Hall, Penrith, on the 21st inst. With about three exceptions all the breeders were tenant-farmers, and they put rather high reserves on their animals, with the result that there were fewer sales than if an open market had been given. Lord Brougham had the honour of securing the top price of the sale—viz, 125 guineas, this sum being paid by Mr. W. Thompson, of Moresdale Hall, for the cow Grand Duchess of Oxford cxxxvi. The next best price was but 45 guineas for a female, paid by Mr. G. Harrison, of Gainford Hall, for Mr. W. Jackson's Silver Queen. Other cows and heifers sold up to 37 guineas, whilst the chief prices for bulls were: 48 guineas given by Mr. R. Thompson for Mr. D. Bragg's Magnet, and 34 guineas paid by Mr. J. Robertson Walker for Mr. W. Richardson's Royal Patrick.

Mr. Thornborrow, the auctioneer, explained that it was intended to make the autumn sale an annual one, it being felt that the district was the home of the best class of animals, and buyers could be certain of getting first-class stock.

Jersey Sale in Worcestershire.

The younger portion of Mr. R. Bruce Ward's choicely-bred herd of Jersey cattle were sold by auction on Tuesday at Westwood Park, between Worcester and Droitwich. The herd has been bred from some of the best-known strains of the day, including those of the Marquis of Winchester, Mrs. Mackintosh, and Mr. Miller Hallett. Sir W. Cooke purchased three of the best cows in Salvia at 40 guineas, Silken Fairy 36 guineas, and Silken Nymph 34 guineas, to keep in the county, as well as some of the younger stock. Mr. R. F. Bolitho also secured Silken Fairy for 31 guineas, Orange Girl, whose dam and granddam were both butter-test winners, at 25 guineas, and Orange Silk (28 guineas), to take into Cornwall. Among other purchasers were Lord Rosebery, Mr. Grey, who gave 29 guineas for Moon Daisy, belonging to the Earl of Plymouth, Mr. Keyderdine, and Mr. J. F. Shaw. An average of £25 6s. 9d. was obtained for the thirty lots sold.

Guernseys at Wimborne.

Messrs. T. Ensor and Son held a special sale of pure-bred Guernsey cattle at Wimborne Repository on Tuesday, the catalogue comprising twenty-one registered Guernsey cows, heifers, and four bulls from the Hon. Mrs. Baillie Hamilton, Burley Lodge, Ringwood, and four heifers from Captain Carr Glyn, Woodleaze. There was a good company of buyers present, and good competition ruled for all the best descriptions, in-calf cows from the Burley Lodge herd making up to 11 guineas, yearling heifers to 8 guineas, yearling bulls to 6 guineas; Captain Glyn's heifers made up to 13 guineas; others to 15½ guineas from Mr. Chissell.

Perth Aberdeen-Angus Sale.

Drafts from several herds of Aberdeen-Angus were offered at Perth on the 19th inst. in the presence of an attendance which did not come up to those of the two previous days, either did the prices. Even the best class of animals, with the exception of some half dozen of outstanding breeding, experienced a dull trade, and, contrary to anticipations, prices were on the whole disappointing. There were seven consigners, and their stock only made an average of £19 10s., whilst several were withdrawn. The highest price was 85 guineas, which was realised during the last half-hour for the sale of a seven-year-old cow from the Donavourd herd, the purchaser being Mr. Calder, of Ardargie. Sir G. Macpherson Grant gave 60 guineas for a bull from the same herd, and Mr. Grant, Knockenbuie, gave 61 guineas for a two-year-old heifer belonging to Mr. G. Willsher, whilst at 58 guineas Mr. Stewart Clark, Dundas Castle, bought Epicure, a three-year-old cow, from Woodhill. No others topped the half century, and the sale was certainly disappointing to sellers, but purchasers got some big bargains. The averages of the various consignments were as follows:—Mr. R. W. Hudson, Danesfield, Marlow: 9 cows, £21 2s. 4d.; 2 two-year-old heifers, £20 14s. 9d.; 3 yearling heifers, £21 14s.; 8 calves, £13 14s. 3d.; 1 bull, £32 11s. Mr. G. Willsher, Pitpointie: 6 cows, £17 6s. 6d.; 6 two-year-old heifers, £24 3s.; 2 yearling heifers, £13 2s. 6d.; 6 calves, £9 3s. 9d.; 1 bull, £25 4s. Mr. Chalmers, Aldbar: 7 cows: £24 10s. 6d.; 1 two-year-heifer, £22 1s; 3 yearling heifers, £24 3s.; 2 bulls, £28 7s. Mr. C. Calder, Woodhill: 7 cows, £20 15s. 6d.; 5 calves, £9 13s. 3d.; 1 bull, £27 6s. Mr. M'Ainsh, Congash: 4 heifer calves, £8 2s. 9d.; 1 bull, £22 1s.; and the trustees of the late Mr. W. Maxwell, Donavourd: 16 cows, £26 12s. 2d.; 5 yearling heifers, £22 9s. 5d.; 9 calves, £11 14s. 6d.; 3 bulls, £34 9s. 6d.

Mr. Vergette's Lincolnshire Red Shorthorns.

At the periodical sale of Lincolnshire Red Shorthorns belonging to Mr. T. H. Vergette, which took place at Dogsthorpe, Peterborough, on Wednesday, there was a large attendance of buyers and a good demand. Mr. Wm. Caudwell, of Holbeach Marsh, who bought several important lots, gave the top price—52 guineas—for the stock bull Kirby Middle Marsh 2nd, bred by Mr. John Todd, of Lincoln, while three young bulls made 29 guineas, 29 guineas, and 20 guineas respectively; cows made up to 25 guineas, heifers up to 30 guineas, and calves up to 20½ guineas. The total realised was £2,226 10s. 6d., giving the good average, including the young stock and calves, of £18 11s.

Mr. Rees Keene's Herefords.

The sale of Mr. Rees Keene's herd of sixty-three pedigree Herefords at Llanvihangel Court, Rogiet, near Newport, on Thursday, attracted a large company of buyers, but the prices obtained were only moderate. Whitlen Marksman, a four-year-old bull, bred by the late Mr. R. Green, was purchased by Mr. Fred Carter, of Newport, for 26 guineas; Reform, a two yoar-old, bred by Mr. Keene, was sold to Lord Tredegar at 32 guineas; Rajah, another of Mr. Keene's breeding, was secured by Mr. T. Baker, of Magor, for 22 guineas; and for a similar sum Mr. W. Jones, of Llandowlais, Usk, secured Royal Marksman, a yearling; whilst Mr. Jones, of Court Farm, Dingestow, Chepstow, bought Raffles, a yearling, for 25 guineas; and for a like sum Mr. George, of Bishton, became the owner of Recruit. The best of the cows were undoubtedly San Tan, calved nearly seven years ago at Llanvihangel Court. She was secured by Sir Frederick Cawley for 58 guineas, the top price of the sale. Farewell Fancy, the heifer calve of Fantastic, fetched 22 guineas, Fantastic herself being secured by Mr. J. H. Fursbrook for 25 guineas. Sir W. St. Rouse Boughton became the owner of Butterine for 42 guineas, his other purchases including Fanlight, the heifer calf of Fan Tan, for 22 guineas, and Carmen, the heifer calf of Blush, for 13 guineas. Viscount Tredegar purchased Blanch Rugby, the heifer calf of Blanch Curate, for 50 guineas, and Miss Archer, a yearling heifer, for 19 guineas.

Mr. J. A. Preece's Shorthorns.

Nearly 100 pure-bred Shorthorn cattle, the property of Mr. J. A. Preece, of Drayton Park, Thrapston, were offered for sale by auction on Thursday in the presence of a representative company of breeders, and the sale proved a most satisfactory one, seventy-seven females averaging £46 4s. and eleven bulls £51 1s. 4d. per head, the total result of the sale being £4,118 12s. 6d. for eighty-eight animals. The top figure of the sale was 255 guineas, realised by the bull, Primrose Earl, the purchaser being Sir R. P. Cooper, Bart. As will be seen from the following list of the chief sales other three-figure prices were realised, amongst them being 160 guineas, given by Lord Manvers, for Duchess of Barrington 97th.

Cows and Heifers:—Waterloo Princess, Mr. T. Stokes, Warmington, 66 guineas; Charming Barrington, Mr. F. Jennings, Cockfield, Suffolk, 65 guineas; heifer, Sir R. P. Cooper, 61 guineas; Sherwood Gem, Mr. C. H. Dixon, Uppingham,

(Continued on page 419).

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock, The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S. Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin. Deals with the aspects of outdoor Spring gardening; with wood and border walls, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rockeries, wall garden, bedding, house decoration, &c.

No. 14. Hardy Fruits. By E. Hasler Potter, F.R.H.S. Full instructions for growing all British fruits. Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cooking fruit and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D. Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training, and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2.

Hirings Then and Now.

A SHORT time ago we passed through an old town in a West Country shire on the occasion of the annual hiring fair. All the difference we noticed was a larger number of people than usual standing about the market square, and while many of them had the typical towny look about them one could see from the bronzed faces of others, the slouching gait, and the somewhat awkward fit of their Sunday clothes that they hailed from the country and were out for a day's holiday, if for nothing more. Indeed, just a few had the time-honoured bit of whipcord in their buttonholes to show that they were open for service, and this seemed to be the only real connection between the 'Mops Monday" of then and now. Not quite, however, for standing on the kerbstone and eying with infinite disgust a motor car in the road, was an old man who needed two sticks to support and help him along. He was evidently wound up ready to talk, and began by saying, "I ain't missed a mops for over forty year and sha'nt as long as I can come, but bless you, how things is altered. Why, I've seen this market packed wi' masters and men, hiring and being hired, and I got my first place at this very corner, but now look at 'em, there's hardly a likely looking farm chap in the whole crowd. Fact is, they won't have it; service sounds too much loike hard work, and youths nowadays wants to begin late and leave off early, wi' their footballin' of a Saturday and all the rest of it. Not as they are any better off as I can see, and there's a lot standing about here now in their collars and cuffs as looks as if a good meal 'ud do 'em a power o' good. Dry! well, sir, I could do wi' a cup of cider if there's such a thing to be got in any of these town pubs." We thought the latter offer would be the likeliest means of appeasing the old man, who was sad at heart about the modern and, in his eyes, disastrous changes that have come over the hiring fair.

Harvest Home.

THE profits of farmers have been so reduced of late years that many of the acts of generosity towards those under them, which were common in the old days, have had to be dropped, and, amongst them, the keeping of harvest home is no longer the annual event that it used to be. Still it has not dropped out entirely, and there are farms on which the labourers and their wives and families are invited to a festive gathering at the homestead every year when the harvest is safely gathered in. We need not go into the details of it, the wholesome viands, and the eating and drinking, as only farm men know how to do it, followed by the jollifications in the barn, and the singing of the old-fashioned songs, which are only heard on such occasions, and then rolled out in a manner which at any rate has heartiness to recommend it. What we mostly regard with favour about the harvest home is its tendency to maintain a spirit of sympathy and good fellowship between employer and employed, which we fear is being largely obliterated under modern conditions of labour. It is said that there is no room for sentiment in the business relations of master and man, but we are not so sure of this, and if sentiment is squeezed out altogether it will be all the worse for both. As a matter of fact, it is that spirit of sentiment which binds the two together, and one sees it displayed on the occasion of harvest home.

Photo by FOR THE HARVEST BREAKFAST. [*Clarke and Hyde*]

In Cambridgeshire the rabbits caught and killed by the farm hands during the progress of reaping a cornfield are sold by auction to the highest bidder, and the proceeds are put towards a fund for what is known as "Harvest Breakfast," which takes place when the harvest is finished. Our illustration shows an auction sale in progress.

Gathering Apples.

UNFORTUNATELY there are not many to gather this season, which is all the more reason why the most should be made of them. We have often had to say with regret that the orchard is the most neglected item on many a farm, and this extends even to the harvesting of the fruit. On those farms where apples are grown for sale there is nothing to complain of in the prices this year, and most growers are tempted to dispose of the fruit direct from the trees. But fruit is also wanted for the home supply through the winter in most establishments, and the way in which in many cases it is battered off the trees is simply appalling. To begin with, late apples will not keep in a sound, fresh condition if they are picked too soon, and the test is to lift a fruit from its hanging position to an upright one, and if ready the stalk will be severed without any tugging. Good fruit is worth taking care of; ladders should be fixed in the orchard trees, and in picking the apples they should not be handled roughly or bruised. If the idea is keeping for future use, only sound specimens should be selected, and if placed on the floor of grainery or cheese room, as is often the case, it is best to place the fruit in heaps three or four deep than in single layers, as apples help to preserve each other. A cool, even, and not too dry atmosphere is best for apples.

A Good Idea.

WE learn that it is the custom of the Board of Guardians at Faversham, in Kent, to allow the children in the workhouse to go hop-picking in the season, with the double object of giving them a little relaxation outside the routine of the house, and teaching them to be useful. It need not be asked whether the youngsters enjoy the outing, and, what is equally as much to the point, they have this year earned the substantial sum of £16 7s, but of this amount the guardians have placed £10 to the children's summer outing fund, and each child has had 3s. added to its account in the Post-office savings bank, with a little encouragement in the shape of 6d. to spend. We consider this to be a capital idea, which other guardians might make a note of. Of course, hop-picking can only be done in districts where hops are grown, but in most districts there is work at certain seasons that boys can do, and it would be a welcome change for the union children to get outside the walls of the house for a spell. We know a certain reformatory school where the lads are hired out for different farm operations, and the demand for their services is so great at busy times that the authorities of the school have difficulty in supplying it.

Record-Breaking Rams.

THERE can be no doubt that the Kent or Romney Marsh Sheep Breeders' Association has made itself felt, and the value of the breed which takes its name from the historical Romney Marsh is recognised in the mutton and wool-producing lands on the other side of the world. At the annual sale at Ashford at the close of September as fine a lot of sheep were penned as anyone need wish to see, and buyers from all parts of the world were represented. It was a day of record breaking, and Mr. W. File's ram teg which won the prize for the best woolled ram was bought by Mr. Murray for New Zealand for 150 guineas, and another teg belonging to the same breeder fetched 130 guineas. The previous record price was 120 guineas paid for a ram at last year's sale. Well done Romney Marsh! It is good to know that the old country still has the blood.

Manuring.

THE harvest is now finished, and teams are at liberty, but up to the time of writing there has been no rain, and in many places the land is so hard and baked that ploughing is out of the question. One task, however, may be got on with—namely, that of carting manure out on to the land, and, generally speaking, for this operation there could be no better time than the present. In the first place, the ground is hard, which is very desirable for manure drawing, and in due course we shall be sure to have the rain, which will make a quagmire of the land, while it is possible that we may not have hard frost this side of Christmas. Autumn is a good time for carting manure on to meadow land, as the goodness from it is soaked gently on to the roots with small risk of it being washed off the land. The best time for manuring arable land is a question of conditions. Generally speaking, it may be carted on to the stubble now and ploughed in with advantage, but if the medium happens to be very light there is the danger of the plant food from the dung being washed into the subsoil by winter rains, and to avoid this spring manuring is better in the latter circumstances.

Agricultural Politics.

BY A LOBBYIST.

The Villages and the Anti-Socialist Campaign.

Of course, the landed interest is directly involved in the anti-Socialistic campaign which is now being so vigorously initiated. The nationalisation of the land is one of the most immediate ambitions of the Socialistic crusade. However, there is one consideration which should be present to the minds of those associated with this antagonistic propaganda. They appeal directly and explicitly to the middle-classes, who must, of course, include the farmers. Every section of those middle-classes should, they declare, unite in a continuous exposure of what they regard as the futilities of Socialism—no public occasion should be allowed to pass without couching a lance at the new economy. Well, supposing farmers and the propertied elements of the villages were to do this, what might be the sequel? At present the villages are outside the ken of the Socialist evangelists. They cannot find in those villages a theme even for exploitation at the annual Trades' Union Congress. Once, however, an assault on Socialism were conducted in the villages you would not find your Arcadias any longer neglected. The failure of the village agitation which the Socialists ventured upon a decade ago, was attributable to the fact that the faith was beyond the mental appreciation of the villagers, and the propagandists were not prepared to go in for elementary instructional spade-work. Once, however, assailing debates and discussions were conducted, it would not be long ere intelligent interest was evoked. There never was a fad promulgated since the dawn of day on this globe which did not soon secure for itself recruits and disciples. We are as emotional to-day as when Joanna Southcott lived. In the experience of Socialism attack means growth. At present the villages are outside the Socialist sphere of influence. Is it wise to drag them within the turbulent area?

* * *

Should the Villagers Hold Aloof?

That the leaders in this antagonistic movement think it well to appeal to the counties is apparent. The *Daily Telegraph* is the chief journalistic exponent of anti-Socialism; and I find that it has published news from the remotest market towns—somnolent little centres of rural activity which have hitherto been unmoved by the new eddying political forces that war in the towns—as to how far it is possible to checkmate the red campaign. Buckingham, Chelmsford, Chichester Aylesbury, Kendal, Wilton, Salisbury, and Ashford are among the places in which, apparently, the tocsin is to be sounded. Socialism, however, has no or little influence in either. Why, then, seek to sound there the knell of a faith which really is non-existent? You won't sound the knell at all—you will perform the part of a parent rather than of a gravedigger. You will evoke that spirit of inquiry which is bound to be, in a more or less degree, the preface to sympathy. The villagers are for the moment subjected only to the conventional political faiths. The comprehend the distinction between a Liberal and a Conservative, but they haven't yet sufficient subtlety of appreciation to distinguish between Radicalism of the individualistic school (a very decaying quantity, by the way) and Radicalism of the Socialistic school, or that Radicalism which is Socialism pure and simple. Is it better, as these anti-Socialistic protagonists suggest, to anticipate the evil, and thus to be in a sense its advocate, or to leave the villagers for a while in their present condition of indifference? The Socialists are in a belligerent mood, and if they are assailed in the villages—now almost derided by them—to the villages they will hie.

* * *

Is the Opportunity Being Neglected?

I repeat a question which I have already asked—how far are the organisations which it is assumed look after the weal of the British farmer taking steps with a view to British food-producers reaping an advantage from Mr. John Burns Foods Regulations Act? This measure seeks to kill—and I believe will kill—the trade in the filthy and putrescent cheap food-products, which have been sold in such vast quantities in England to the great physical hurt of the British people. It is a very simple Bill, and wisely so. It gives power to the Local Government Board to impose such regulations as it deems desirable in checking this traffic. It does not in itself impose rigid regulations. If it did, the astute Transatlantic traders would only find in them a subtle invitation to evade them. It gives the Board power to make such regulations as it may deem fit to meet the dodgery of this unhallowed competition. The Board is conceded power to checkmate every counter-more of the heroes of "The Jungle" revelations. I believe that this measure provides an opportunity for the British food-producers such as has not been vouchsafed them for fifty years. The Local Government Board is in itself a great food-consumer. What steps are being taken to derive the advantage of its apparent desire to encourage the consumption of wholesome home-produced foods? How far are the distributors of British food products being encouraged to secure the contracts of the multitude of establishments which are under the final control of the Local Government Board? If this opportunity be lost, then we shall see the very Vendors of this offal-food deriving an advantage from this measure. They will simply conform to the sanitary standard demanded by the Local Government Board—they would even do this rather than lose the trade.

* * *

The Labourer and the Price of his Necessities.

A correspondent of mine in the southern counties propounds an interesting question: "To what extent do you think the agricultural labourers would be induced to vote Tory by the recent rise in the price of the domestic necessities of the poor? Remember that the labourers were chiefly induced to vote Liberal by the cheap-food cry." Well, in all sooth, 'tis a pretty speculation. Coal has gone up, sugar has gone up, and bread is going up. Of course, the Radical will claim that the increase in the price of coal has nought whatever to do—as even the *Times* has admitted—with the Ministerial policy, that the price of sugar is due really to the operation of that Conservative instrument the Brussels Convention, and that the price of bread is due to influences over which no Government, whatever its complexion, could have averted or avoided. There is certainly much in these contentions; but can the rural labourer be expected to examine into their justification? Two contrasting facts confront him. The first is that the Liberals at the general election proclaimed that their return to Parliamentary power was absolutely necessary if the price of the domestic necessities of the poor was not to be heightened. The second is that after nineteen months of Liberal administration the price of three vital necessities of the poor has been heightened. The Liberal explanation of the causes of this increased price has too much of casuistry and subtlety associated with it to be acceptable to the ordinary labourer. The real matter to him is the enhanced price. That slaps him in the face with the pact of a bludgeon. Frankly, I do not personally hold the Government responsible in either instance. Ministers are the victims of unfortunate and unavoidable influences. Still they must suffer the penalty of the dramatic contrast of the present public experience and of their electoral pretensions.

* * *

A Second Means of Inter-Transit.

The prospect of a great railway strike—now, fortunately, less ominous than it was a week since—must once more tend to deepen the revive the canal and river system of anxiety to Great Britain. How far is the Board of Trade in sympathy with the movement? True, it has appointed a committee of inquiry; but to what extent is Mr Lloyd-George prepared to encourage and even to apply a practical scheme? The mere fact that a city like Worcester should have appointed a committee to consider by what means Worcester could be, in the event of a railway strike, secured river and canal communication with Bristol, protrudes into an admirable relief the importance of this matter. The canals and rivers should provide for Great Britain a subsidiary and secondary means of intercommunication. The existence of this secondary means is absolutely a national necessity; and the varying Governments which connived by their indifference and apathy in the death of the canal system—for this is what the purchase of the canals by great railway combinations meant—were guilty of a national crime. A second system of intercommunication would mitigate in a very large degree the paralysing influence which a national railway strike must have on industries like the agricultural industry. If Mr. Lloyd-George has been quickened to an appreciation of this fact we may even have reason to be thankful for the industrial alarums and excursions of the last week or two.

At Peterborough Bridge Fair, held on Wednesday, horses and cattle were in large supply, but the demand was not great, though the best sold readily. Good bullocks made up to £20 15s., but there was most inquiry for store beasts at £11 to £17. Lincoln Reds sold well. Cows in calf made up to £20, and three-year-old Herefords up to £18. Cart horses realised fair prices, useful five-year-old geldings realising £70, vanners £30 to £35, Welsh ponies £7 to £17, Hunters and riding horses £38 to £65, and nags £15 to £25 each. Hampshire and Oxford Down rams made £4 to £7.

DAIRY.

The Dairy Show.

Everyone concerned in the production and distribution of milk and its by-products is represented among the 8,175 exhibits and persons enrolled in the comprehensive classes arranged for the great National Dairy Show at Islington. This popular exhibition begins for the thirty-second successive year at the Agricultural Hall on Tuesday morning, and until Friday evening the building will be the centre of a continual round of contests for the valuable prizes offered, totalling £2,600, by the British Dairy Farmers' Association and other generous donors.

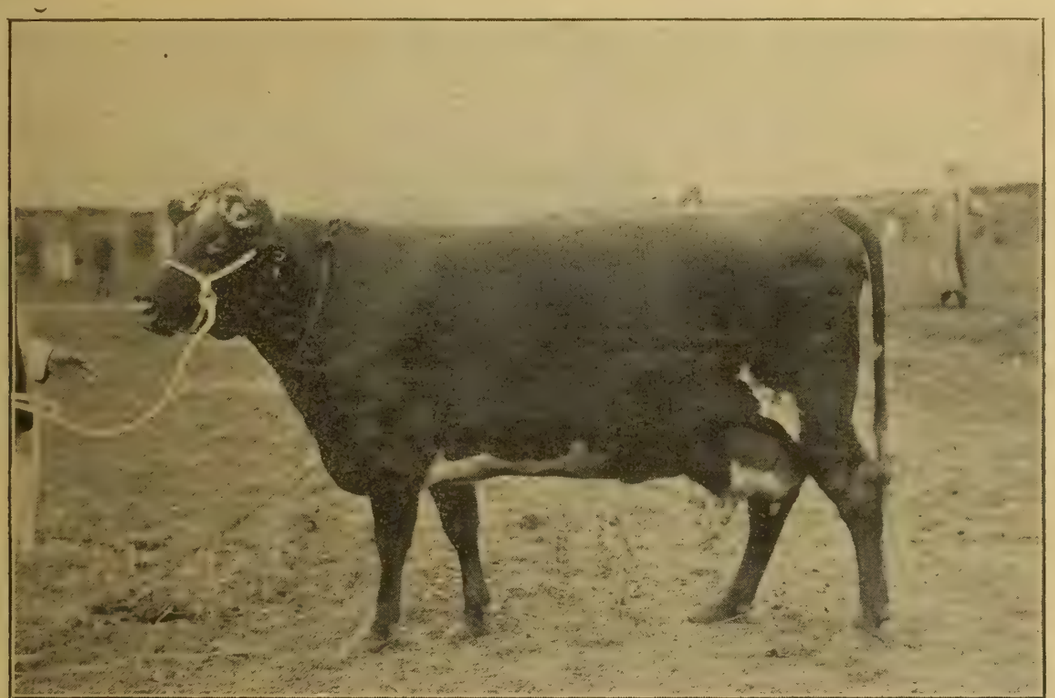
The mayor and Corporation of London contribute six champion cups, Lord Blyth offers a silver bowl, Lord Northbourne provides £30 as rewards for women milkers, and there are numerous other special premiums, such as the Barham and Spencer Challenge Cups (value £50 and 50 guineas respectively), £10 offered by the Shorthorn Society, £19 and medals given by the English Jersey Cattle Society, a cup presented by the English Kerry and Dexter Cattle Society, the British Goat Society's Challenge Cup, the late Baroness Burdett-Coutts' Challenge Cups, medals offered by the Worshipful Company of Poulters, and a number of others.

Cattle to the number of 237 are entered in the classes devoted to Shorthorns, Lincolnshire Red Shorthorns, Jerseys, Guernseys, Red Polls, Ayrshires, Kerries, Dexters, and cows "of any other breed or cross." The latter are to be used for the milkers' contests. A sum of £43 was set aside for South Devon cows, but, unfortunately, only two entries were forthcoming, and the class has been cancelled for want of competition. Most of the animals compete for two sets of prizes: in the first place, those awarded for appearance; and, secondly, for performance—the awards in this case being dependent upon a series of points for the weight of milk produced on Wednesday and Thursday, as well as for the butter fat and other solids it contains.

That there are some cows which, even at the Dairy Show, refuse to yield milk of the quality demanded by the Board of Agriculture, is evident by the provision that certain deductions are to be made for every time the fat is below 3 per cent., or the "solids other than fat" fall below 8·5 per cent. The remarkable growth of interest on the part of farmers in the milking trials and butter tests is a matter of great encouragement to those who have devoted themselves for many years to this method of helping to develop the milking capacity of the different breeds of dairy cows. There is plenty of scope for greater efforts in the same direction. For these very practical trials the entries this year number 245. Incidentally it may be mentioned that all the bulls shown are the direct descendants of dams that have won prizes in previous milking trials or butter tests.

Goats are present in sufficient force to illustrate the different types that are now most in favour, the forty-eight specimens including some very notable ones.

One of the most striking features of this year's exhibition is the exceptionally large display of British cheese, the total being over 50 per cent. greater than the average of former years. This is mainly the result of greater liberalty in the prize money, and the inclusion of one or two additional classes. The work of the judges of Cheddar and Cheshire cheese will be especially onerous, while the fact of one of the City Corporation's prizes being available for Stilton has caused an increased competition among makers of that variety. Other sorts included in the exhibition are Wensleydale, Lancashire, Leicester, Derby, Double Gloster, Single Gloster, Caerphilly, and several kinds of soft cheese. Nearly all these varieties contribute towards the increase in this department. Bacon and hams are shown by more curers than have sent their products to Islington for some years past.



Butter and cream again occupied a considerable portion of the minor hall, the exhibits coming principally from the best-known British dairies, many Irish creameries sending nearly all the "cured" butter except that which comes from the colonies. In deference to the wish of colonial exhibitors, their butter will be judged according to a scale of points for flavour, texture, colour, packing, and (in the case of salt butter) for salting.

Bread and scones mixed with skim milk in lieu of water constitute another section of the show. Apparently the only weak department is that for honey, but this is not surprising when we remember that the past season has been one of the worst experienced by apiarians for many years.

Roots make more than average representation, and are shown to better advantage than formerly, being assigned a more favourable position. The collections of roots, kale, kohl-rabi, and cabbages, for cattle feeding in winter, are specially noticeable, while the information afforded as to the nature of the soil in which exhibit was grown, the name of the seed, and the manurial treatment will be appreciated by other growers.

Always alive to the importance of encouraging perfect cleanliness in every department of the dairy, the authorities of the show have this year offered prizes for milk strainers, or strainers and filters combined, capable of dealing other than by centrifugal force with 100 gallons of milk in an hour. The object is to meet the want of an appliance that will remove all visible sediment in a reasonable time. For these prizes there are ten entries, and in view of their extremely varying character and price (the latter ranging from 7s. 6d. to £6 16s. 6d.) the trials are likely to prove of much interest. Among other inventions relating to the dairy industry may be mentioned a milking machine (to be shown in operation on six cows), a new system of milk distribution, milk and cream receptacles made of wood pulp paper and fluid-proofing material, apparatus for measuring and filling bottles, and several improvements in relation to railway churns, butter churns and cream separators.

Reference remains to be made to the enormous interest which continues to be felt among dairymaids and milkmaids, as well as boy and men milkers, in the competitions reserved for them. For the butter-making competitions there are exactly 200 entries, and for the milkers' contests 135. Both of these will be in progress on each day of the show, and on Friday afternoon, when the Lord Mayor visits the exhibition, the Lady Mayoress has promised to present as many as possible of the prizes. Of milkers, both sexes compete in about equal number, there being sixty-six men and boys, and sixty-nine women and girls. It is noticeable that these are not drawn from the immediate neighbourhood of London, and it is characteristic of the widely-diffused interest in the show generally to find that they come from Scotland, Wales, and as many as thirty English counties, ranging from Durham to Cornwall.

The Shorthorn Dairy Cow Priceless Princess, shown above, won the First Prize for Shorthorn Dairy Cows, in milk, calved previously to or in 1902, and the Dairy Shorthorn Association's Champion Prize for the best animal in the Shorthorn Dairy Cattle Classes at the Royal Agricultural Society's Show at Lincoln this year. She was born February 10, 1902, sire Golden Noble, dam Princess Raglan, and was bred and exhibited by Mr. C. R. W. Adeane, Babraham Hall, Cambridge.

The galleries are occupied with an enormous collection of poultry and pigeons, and of appliances connected with their culture. The assemblage of domestic poultry will be found to be one of the finest, both from a utilitarian and ornamental point of view, that has ever been gathered together. Prominence is given to the Orpingtons, the breed that has gained such a notoriety for excellence of flesh as a table fowl as well as egg-producing qualities. Mention should also be made of the Wyandottes and Plymouth Rocks, of which there are some magnificent specimens.

Amongst the egg-producing races the Leghorns and Minorcas contribute largely to the excellence of the display. Many of the large breeds are to be seen reproduced in miniature in the Bantam room. It is really wonderful what the art and perseverance of breeders have done in presenting in pigmy form the exact type and plumage markings seen in the large races of fowls. Waterfowl, turkeys, and dead poultry for table purposes add to the attractiveness of this department.

The exhibitors include the Duke and Duchess of Devonshire, the Duchess of Newcastle, Marquis of Downshire, Marchioness of Graham, Earl of Radnor, Earl of Mount-Edgcumbe, Earl of Plymouth, Countess of Craven, Countess De la Warr, Countess of Home, Lord Middleton, Lord Portman, Lord Rothschild, Lord Carew, Lady Grant, Lady Evelyn Cotterell, Lady Wantage, Lady Greenall, Lady de Rothschild, Sir Richard Cooper, Bart., Sir Walter Corbet, Bart.

Sir Robert Harvey, Bart., Sir Henry F. Lennard, Bart., Sir Mark J. Stewart, Bart., Sir Julius Wernher, Bart., Hon. Vere Boscawen, Hon. Gerald Hill, Hon. Claud Portman, Hon. Rear-Admiral T. S. Brand, Hon. A. Holland Hibbert, Hon. Rose E. Hubbard, Hon. Mrs. Claud Portman, Hon. Mrs. Murray Smith, Colonel Sandbach, Colonel Colvin, C.B., Major Thurlow, Lieut.-Colonel E. H. Eyre Coote, and over 2,000 others. Lord Kenyon is president for the year.

The attractions to the general public are even more abundant than before. It is true that some contests of milkers will take place before most Londoners are out of their beds—*i.e.*, at half-past seven in the morning, but provision has been made for the afternoon contests to be in full view of onlookers; while the weighing and sampling of the milk of cows competing in the milking trials and butter tests will be in the main hall instead of in one of the annexes. The butter-making competitions will occupy the greater portion of each morning, afternoon, and evening; and there will be illustrations of the making and baking of milk scones, and demonstrations of trussing and preparing poultry for market. The band of H.M. Irish Guards has been again engaged. In extent, variety and popular interest, the present dairy show seems to surpass all exhibitions of the kind. It is obvious that very great efforts have been made to bring about the success that now appears to be assured.

Below is given a comparative statement of entries for six years:—

Comparative Statement of Dairy Show Entries.

	1904.	1905.	1906.	1907.
Cattle	164	182	240	237
Milking and butter tests	167	217	247	245
Goats	46	51	51	48
Poultry	2,678	3,068	3,347	3,081
Pigeons	2,426	2,440	2,573	2,664
Poultry and pigeon appliances	—	—	55	65
British cheese	250	268	255	420

Milkers' contests	55	66	121	135
Total..	7,138	7,677	8,197	8,175

Winter Dairying.

The importance of obtaining a uniform and steady supply of milk and its products all the year round is too evident to need argument. If the natural state of affairs is allowed to hold good, there will be a flush in the supply of milk in the spring and summer, and a falling-off in the quantity during the winter. Yet this will, in a short time, provide a natural remedy. For the short supply in the winter will raise the price of milk and butter. This will make it worth the farmer's while to adopt such changes as will enable him to provide a good supply at this short season of the year, and as a result, both he will be directly benefited by the higher rate he can command for his supply for the market, and the public will also have the advantage of an increased supply at a time of the year when such supply would tend naturally to fall off. In addition to this, the demand for butter and other fatty foods during the cold weather is greater than at any other time of the year. This can easily be explained by simple observation of animal economy.

Animals—and this includes human beings—require more fatty foods in winter in order to produce the increased heat and energy which are necessary in consequence of the diminution in the supply of external heat. The increase in heat-producing foods is necessary to supply the heat which the sun during that part of the year fails to supply in sufficient quantity. The external cold, in fact, necessitates a greater consumption of fuel in the animal body.

Heat Forming Foods.

Hence the extraordinary increase in heat-forming foods in winter. The amount consumed, in fact, by a healthy person in winter is such as would in summer be looked upon with aversion, and which would in many cases produce nausea if it had to be eaten. Yet this is eagerly devoured during the cold season of the year.

Here, then, is an accepted physical fact which offers the dairy farmer an opportunity of advantageously getting rid of an increased quantity of his goods at a higher price than usual, provided that he can supply them at the right moment, that is during the colder months.

This is not the only advantage which follows from the adoption of such a plan. Others can thus be definitely stated:—

1. A higher price can be obtained for butter, and in consequence milk also commands a higher price.

2. The dairy herd can be given more attention, and the cows being better housed and fed, yield a somewhat richer milk even if the quantity does not also increase.

3. The making of the butter can be carried on under more economical conditions since the lower temperature is more favourable for dairy operations. The expenditure upon ice, for example, is definitely reduced.

In attempting to obtain and ensure a good supply of milk during the winter, the first and only really essential step is to regulate the herd so that some cows will calve in the spring and others right on into November. This system of having calves continually dropping is the only one which ensures that both the quantity and the quality of the milk shall be kept up to a steady average. More care will probably be needed in the early rearing of calves dropped late in the year, yet this is a matter which needs but a little attention, and the advantages secured more than repays the little extra care required.

A second point of importance is the regulation of the quantity and quality of the food fed to the cows. Cows that calve in March or April are receiving winter rations, and these will be continued until they are turned out to pasture in (say) May. The succulent grass aids the natural flow of milk, or re establishes it if there has been any falling off, and these animals milk right up till the end of the year.

Feeding Winter Milkers.

The animals that are to be winter milkers require, however, special attention. A well balanced ration containing all the necessary food constituents in right proportion, and yet at the same time giving sufficient bulk to satisfy the craving of the animal, for quantity must be secured.

Hay and roots may be made barely sufficient, but it is a much better plan, and really less expensive in the end, to add a little cake and meal—from 6 to 8 lb. a day is not too much. This will not only keep the animal in better general condition, but will tend to improve the quality of the milk also, which actually ensures a higher price if it is sold, as is frequently the case, by quality at a neighbouring creamery.

The fact that some creameries have to close down owing to shortness of milk supply in winter, is one too evident bad result of a mismanagement which can easily be avoided. The inevitable disorganisation and the lying idle of valuable plant are evils which are sufficiently serious to justify drastic measures being taken in order to avoid such serious loss.

Similar reasoning holds good of the case of the individual farmer. Any system which allows an excess in the supply to exist at a time when conditions tend to cause rapid deterioration in the goods—in this case milk and butter—must be condemned as bad and uneconomical all round.

When this same system also brought it about that the supply shall be lowest at a time when the demand is greatest one cannot but wonder at the persistence with which dairy farmers have clung to such arrangements.

Happily the changes are being made in many districts and on many farms. The advantages are so clear, that once the alteration is introduced, there can be no fear of any relapse into the old, uneconomical, and financially unprofitable arrangements.

LACTISSIMA.

Milk-Sugar and Souring.

Of the many natural chemical changes which are continually going on around us, none perhaps is more important—next to that of combustion—than the decomposition or "going bad" of the various foods after they have been kept for some time. The souring of milk is the one of this class which most concerns the dairyman. He has, on the one hand, to prevent it being set up, since it means the complete unsaleability of the wares he offers. On the other hand, he must have it completely under control, because it is one of the absolutely necessary changes which must be set up in connection with the manufacture of the butter.

The actual process which takes place is the formation in the milk—spontaneously, in so much as no external human agency is required—of an acid substance called lactic acid. This is formed by the breaking up of one of the essential constituents of the milk, milk-sugar or lactose.

It is a substance which is essentially characteristic of milk since it is found naturally nowhere else but in milk. It is present in proportions which show very slight variations normally, and rarely varies outside 4½ to 5 per cent, the average being 4·6. Chemically it belongs to the class known as carbohydrates, which are all composed of carbon, hydrogen, and oxygen, together in its case with some added water. The oxygen present is eight times as great as the hydrogen, the carbon slightly less than seven times. On examining the proportions of these substances, which are present in any one molecule, it is found that each is just four times as great as those present in the substance lactic acid—the substance first mentioned as being the cause of the souring of milk. The conversion of milk-sugar into this acid would therefore seem to be a mere breaking up of one molecule into four others, and this is the usual explanation of the change which takes place. Yet it is more than doubtful whether it is quite so simple, since the formation of lactic acid is very frequently accompanied by the formation of carbonic acid, and often also alcohol is formed at the same time. It is therefore considered as certain that in the case of ordinary lactic fermentation decomposition never takes place so completely and exactly that the milk-sugar is entirely converted into lactic acid and nothing else.

This change in the milk-sugar is produced by bacteria, but not merely by one class of bacteria. It has been conclusively proved that there are at least ten different kinds of bacteria—this number have been isolated—all of which possess the power of breaking down the milk-sugar and causing the formation of the lactic acid from it. Of these ten, several have been identified in milk. Their characteristics differ in other respects in not a few points. One of the commonest—the Bacillus Acidi lactici I. Hueppe, so named after the scientist whose investigations on this point were so exhaustive—practically ceases its growth and development if the temperature of the milk falls below 50 deg. Fahr., develops only feebly at 54 deg., increases rapidly when the temperature rises to 60 deg., and between 96 deg. and 108 deg. its development is still very active. Above the last temperature it rapidly diminishes its activity, and at about 114 deg. Fahr. its activity ceases altogether. The size of this bacillus has been measured, and it is about 1-25,000th of an inch long, and 1-62,500th of an inch broad.

In the case of some of these various lactic-acid-forming bacteria, it is interesting to note that while one group of them may be found to be the principal cause of the souring of milk in one district, quite another may be the cause in another locality. In the case of some of them, one formation of the lactic acid is merely incidental to the formation of other different products. Some of the bacteria, for example, which produce different colours in milk—blue, red, or yellow—produce the lactic acid in addition to effecting the change in the colour.

It has further been shown that if the lactic-acid bacteria are cultivated for some time in a medium which contains no milk-sugar, they lose their power of producing lactic acid at all, even when returned to a medium containing milk-sugar.

It has long been known that though all these groups are capable of producing lactic acid in milk, they are not all equally well adapted to act as the ferments in producing this change; and since the souring of the cream has such a fundamental effect on the quality of the butter produced, attempts have been made to discover and isolate and cultivate in pure cultures, so that they alone would exist—those of the bacteria which are best suited for the souring of cream for butter making.

These experiments have been eminently successful, but though the pure cultures have marked advantages so far as their single character and purity is concerned, the effect on the flavour of the butter has not yet quite come up to the fullest expectations. It is proved, however, to be merely a matter of time and the continuation of the experiments in order that the souring of the cream and the absolute uniformity of the products shall be ensured.

One point in this and other fermentations is of interest. When, by the life action of the bacteria the fermentation has caused the production of a certain degree of acidity, the acid formed becomes fatal to the activity and life of the bacteria forming it, and it and they cease. Thus, in fact, when something over 1 per cent. of lactic acid has been generated, the fermentation ceases, and further production of acid is stopped.

Whitchurch Cheese Fair.

This fair was held on Wednesday, when there was a pitch of 81 tons. Fine lots were especially sought after, and with a good attendance of buyers a clearance was affected at the following prices:—Best, 61s. to 66s.; medium, 56s. to 60s., down to 50s. At the corresponding fair last year the pitch was 52 tons only, and the prices:—Best, 70s. to 75s., with nothing below 60s.

Agricultural Education.—In presenting agricultural diplomas and certificates at Preston, Sir Henry Hibbert (chairman of the Lancashire Education Committee) urged that it was a duty for every commercial community to do all it could to foster the study of agriculture and place it on a scientific basis, so that our farmers could compete with those of other countries. Last year we imported butter, eggs, and cheese to the extent of over £38,000,000, a large proportion of which, under favourable conditions, ought to be produced in this country. Sir Henry stated that the majority of technical students came ill-prepared for the education awaiting them. An enormous amount was spent on elementary education, and it almost seemed that a large proportion was wasted. Personally, he thought this was due to the interregnum between leaving the elementary day school and commencing evening classes.

CATTLE.

Red Polls for Australia.

Four first-class Norfolk Red Poll bulls from the studs of Sir Walter Corbett, of Acton Reynold, Shrewsbury, and the Right Hon. A. E. Fellowes, of Honingham Hall, near Norwich, were recently shipped, per the *Cufic* (White Star Line) by Mr. G. P. Doolette to the order of Capt. Philip Charley, of Belmont Park, Richmond, New South Wales. The animals were shipped in prime condition, being carefully boxed and provided for, so that they should arrive in Australia in equal condition to that in which they left here.

Alake, an illustration of whom appears on our front page, is a bull of great quality, and was the champion of its breed at the Royal Agricultural Society's Show this year, whilst he has won other prizes. The other bull, from Honinghom Hall, was Honingham Archbishop, calved May 15, 1906, by Davyson, 262 H.B. 9288, out of Ardent, H.B. 14469, by The Pope H.B. 4581.

The third bull, Acton Dewstone, bred by Sir Walter Corbett, was calved on November 27, 1905, sire Albert 7789 by The Pope 4581, dam Dewdrop 18977 by Lord Rattler 8977. He took first Royal, and second at the Norfolk shows this year. The fourth bull, Acton Ajax 9655, also bred by Sir Walter Corbett, was calved January 26, 1906, sire Albert 7789 by The Pope 4581, dam Dardy 12175 by Majisline 3600. He also has been exhibited with success, winning first at the Suffolk and Essex shows, and second at the Norfolk show this year.

To Captain Philip Charley belongs the credit of having introduced Red Polled stock into New South Wales; and at his stud farm at Belmont Park, by the stock he is producing, he is maintaining a splendid record for quality and appearance in this Norfolk speciality.

Captain Charley has gained a reputation throughout Australia for the excellency of the horses which he breeds at Belmont Park stud. Some fifteen years ago he started his stud farm for the express purpose of meeting a long-felt want in the way of carriage and coaching horses, and the sires Freedom, Moncrieff Statesman, Lord Derby, and Count Risby, are examples of the very best blood to be found in any part of the world, and in New South Wales, and wherever else they are shown in Australia, they are always amongst the first-prize winners.

Sale of Messrs. C. and E. Robinson's Dairy Herds.

The well-known dairy herds belonging to Messrs. C. and E. Robinson, Poynings Manor, Sussex, was brought under the hammer on Monday. The cattle included many Dutch animals, descended from three exceptionally good imported cows which the firm had had on hand when further importations were prohibited, one of which gave thirty-two quarts of milk per day for several seasons. There was a good attendance of buyers and a ready sale.

In the dispersal of the Perching Sands herd prices ranged from 9 guineas to 29 guineas, the highest amount being secured for a Shorthorn cow, five years old, with calf by side. The total realised for the herd was £957 odd. Bidding was also brisk for the Poynings Manor herd, top prices, 31 guineas, being obtained for two Dutch cows, five years old, with calf by side, while the aggregate for this herd exceeded £1,100. Of the young stock Shorthorn heifers and Dutch heifers averaged 19 to 29 guineas per pair. A few lots of Southdown ewe lambs sold at 47s. and 47s. 6d. per head; wether lambs fetched 15s. to 35s. 6d. per head; and mixed lambs 33s. to 33s. 6d.

National Cattle-Breeders' Association.

The next meeting of the National Cattle-Breeders' Association will be held at the Salisbury Hotel, Salisbury Square, Fleet Street, London, E.C., to-morrow (Tuesday), at 3 p.m., the agenda being as follows:—

1. To read minutes.
2. To receive and consider replies received from the Agents-General for the Australasian colonies to a letter written by direction of the last meeting.
3. To consider the following resolution sent up by the Hereford Herd Book Society (adjourned from the last meeting). "That the attention of the National Cattle-Breeders' Association be drawn to the fact that animals over two years old known to have failed to pass the tuberculine test are being exhibited at the leading agricultural shows in this country, and are thus a great source of damage to any healthy animals coming in contact with them."
4. To consider correspondence received since last meeting.
5. To receive secretary's report.

Mr. F. J. Steward's Shorthorns.

Following the sale of Mr. J. A. Preece's Shorthorns at Drayton Home Farm, Thrapston, Messrs. John Thornton and Co. conducted a similar dispersal at Whiteway Farm, Brigstock, Thrapston, for Mr. F. J. Steward, the stock including some notable prize-winners at local shows. Two years ago Mr. Steward held a similar sale, when the sixty-two head of cattle realised an average of £28 15s. Since that time Mr. Steward has visited Ireland and purchased some cattle from Major Craddock, and has also strengthened his herd from the stock of well-known English breeders. Mr. Steward's success in local shows opened for him a good trade with Continental buyers, but the increase in the herd was so large that in spite of extra acreage of land Mr. Steward felt compelled to part with a portion of them before the coming winter. The cows were shown in good breeding condition, but not forced. The heifers were also well brought out, and comprised nearly the whole of the yearlings; these met a good demand at excellent prices, several being purchased to go to the Continent, and others for South America. A list of the chief sales is appended. The sixty-one cows realised £2,079, an average of £34 1s. 7d. per animal, and ten bulls realised £267 15s., an average of £26 15s. 6d., the total sales realising £2,346 15s., this being an increase of £5 per head on the previous sale:—

Sale of South Devons at Totnes.

At Totnes on Thursday the autumn sale of cattle entered in the South Devon Herd Book took place, and entries were made of animals from some of the most noted herds, the majority being of high quality. Despite the various sales held this season, there was a good demand for the smartest bulls, and the general average of prices was most satisfactory, the cows realising over 31½ guineas, while over 26 guineas was obtained for the bulls under twenty months, and the yearling draft made an average of 22 guineas. The president (Mr. W. E. P. Bastard) gave a cup for the highest priced bull, and this went to Mr. Ben Luscombe, whose Masher's Boy, sixteen months old, sold for 36½ guineas, and a cup given by Mr. E. Windeatt (Totnes) was awarded to Mr. S. S. Horton, who secured for Cherry's Forester, seventeen months old, but half a guinea less than Mr. Luscombe's beast. Saltram, a former winner, of the Devonport Challenge Cup at the Bath and West of England Show, was disposed of among the old bulls. Mr. Ben Luscombe achieved a splendid record for the breed by selling to Mr. J. Mercer Bennetts, of Truro, his bull Lord Masher, not two years old until January, for 80 guineas. This bull won the first prize in its class wherever exhibited this year, and was reserve for the champion cups at the Devon County and Bath and West Shows, and is a grand specimen. The animals sold and purchasers were:—

Cows and heifers.—Mr. H. Bradridge's (Ashburton) Dolly 3rd, 29 guineas, Mr. J. Wood, Totnes, and her bull calf, 11 guineas, Mr. E. Cocks, Plymouth; Mr. J. M. Peeke, junior's (Harbertonford) Dahlia 4th, 27½ guineas, Mr. E. Cocks; Mr. W. S. Harris's (Stoke Gabriel) Dairy 7th, 35 guineas, Mr. Whitley, Paignton, and Blossom 5th, 35 guineas, Mr. J. Shinner, Ashburton.

Bulls not less than 12 or more than 20 months' old on October 1.—Mr. Ben Luscombe (Aveton Gifford), 25½ guineas, Mr. T. Luscombe, Totnes, and Masher's Boy, 36½ guineas, Mr. Sherwell, Fowey; Exors. of the late Mr. Walter Symons (Chillington), Mayflower's Star, 26½ guineas, Mr. Vigers, Saltash; Messrs. F. G. Luscombe and Son's (Crowmhill) Golden King, 16 guineas, Mr. Bradridge, Coryton, and Favourite Boy, 26 guineas, Mr. Pearse, Walkhampton; Mr. J. Wood's Admiral, 17 guineas, Mr. Hannaford, Broadclyst; Mr. J. Luscombe's (Ugborough) Coarswell Masher, 26 guineas, Mr. Weymouth, Salcombe; Mr. J. S. Ford's (Yealmpton) Royalist, 31½ guineas, Mr. J. Wakeham, Yealmpton, and the Earl, 28 guineas, Mr. Bray, St. Stephen's; Mr. S. S. Horton's (Loddiswell) Cherry's Forester, 36 guineas, Mr. J. E. D. Moysey, Rattery; Mr. E. B. Luscombe's (Woodleigh) Sir Thomas, 19 guineas, Mr. Wills, Liskeard; Mr. R. Sergeant's (Charleton) Ajax, 18 guineas, Mr. Gloyn, West Alvington; Mr. E. Cornish's (Kingsbridge) Blue Belle's Champion, 33 guineas, Mr. Truscott, Grampound Road; Messrs. R. H. Luscombe and Sons' (Kingsbridge) Botha 2nd, 17½ guineas, Mr. Tavener, Exeter; and Mr. H. J. Crossing's (Plympton St. Mary) Prime Minister, 34 guineas, Lord Ashcombe, Fallapit, Mounts.

Bulls not less than 8 months or over 12 months old on October 1.—Messrs. J. M. Peeke and Son's (Harbertonford) Jumbo, 25 guineas, Mr. Stancombe, Lamerton, and Napoleon, 25 guineas, Mr. E. H. Hoskins, Liskeard; Mr. W. H. Bowden's (Aveton Gifford), 21 guineas, Messrs. Parr and Son Lustleigh; Mr. H. Bradridge's (Ashburton) 16 guineas, Mr. Nosworthy, Kingsbridge; Messrs. Butland Bros. (Plympton) Famous, 19 guineas, Mr. Valance, Sampford Spiney, and Leigham Hector, 16½ guineas, Mr. Tucker, St. Germans; Mr. T. W. Luscombe's (Totnes) 15½ guineas, Mr. Palk, Ashburton; Mr. N. Boon's (Kingsbridge) Merry Monarch, 22 guineas, Mr. Elliott, Brixham; Mr. E. B. Luscombe's (Woodleigh) Sir John, 30 guineas, Mr. T. Wills, Moretonhampstead, and Bruin, 30 guineas, Mr. Jeffery, Paignton; Mr. Mildmay, M.P.'s (Ivybridge) Lord Devon, 25 guineas, Mr. Batten, Saltash; Mr. E. Cornish's (Kingsbridge) Rattler, 26 guineas, Mr. Rowell, Newton Abbot, and Russell, 15½ guineas, Mr. Luscombe, Wodbury.

Bulls over 20 months old on Oct. 1.—Mr. J. Wood's Saltram, 26 guineas, Mr. C. Lillicrap (Plymouth); and Mr. Twill's Eclipse, 23 guineas, Mr. Wills, Stokenham.

The Late Mr. J. Walter's Lincoln Shorthorns.

The herd of sixty-seven Lincolnshire Red Shorthorns (entered in the Lincolnshire Red Shorthorn Association's Herd Book, vol. I., p. 70), belonging to the trustees of the late Mr. James Walter, of the Old Hall Farm, Hatton, was sold by auction on Monday in presence of a good company. The herd was founded by the late Mr. Walter forty-five years ago, from the herds of the late Mr. James Walter, of Girsby, and others, and since then a careful selection of sires had been made from the herds of many well-known breeders, the result being the establishment of a first-class herd, members of which have distinguished themselves in the showyard. The animals met a good demand, but prices did not rule at all high, the cows making up to 30 guineas, bull calves up to 10½ guineas, she-calves up to 16 guineas, heifers up to 21½ guineas, yearling heifers, 17½ guineas, whilst the bull Red Chief 2nd went at 17 guineas, and the bull Minting Chief at 11 guineas.

The flock of sheep was also sold, gimmers making up to 62s. 6d., two-shear ewes 65s., ewes 61s. 6d., he-lambs 42s. 6d., she-lambs 43s. 6d., and half-bred lambs 45s.

Mr. A. J. Crawley's Lincoln Reds.

The herd of forty-seven pure-bred Lincoln Red Shorthorn cattle, the property of Mr. J. Crawley, Church Lawford, Warwickshire, came under the hammer on Friday, and met a good demand at satisfactory prices. The chief buyers of cows and heifers, which sold as follows, was Mr. Somes, Bedfordshire: Woll Princess 2nd, 20 guineas; Bridesmaid, 25½ guineas; Bride Cake, 28 guineas; Rose Mary, 21 guineas; Cowslip Red 4th and 5th, 25 guineas each; Cowslip Red 9th, 22 guineas; Cowslip Red 10th, 20 guineas; Pearl of Pearls, 20 guineas; Cowslip Red 6th, 31 guineas; Lawford Princess, 30 guineas; Lawford Primrose, 19½ guineas; Well Princess 7th, 20½ guineas.

The principal bull offered was Birks Jewel, bred at Stamford Bridge, Yorkshire, the sire being Holder Jewel, and the dam Wild Rose by Mariner. The bidding for him was brisk, and he was finally knocked down to Mr. W. J. Atkinson, the well-known breeder of Reds, for 91 guineas. Other prices for bulls were:—Crescent Pearl, 22 guineas; Crimson Pearl, 21 guineas; Red Bull, 17 guineas; Cowslip Pearl, 13 guineas. The total for the thirty-seven cows was 763 guineas, and for the ten bulls, 209 guineas.

Sale of Aberdeen-Angus in Essex.

The herd of Aberdeen-Angus cattle belonging to Col. W. N. Tufnell, J.P., of Langleys, was sold by auction at Chatham Hall Farm, Great Waltham, Essex, on Thursday, together with a few animals from Mr. W. Dannatt's herd. The Langleys herd has been in existence for sixteen years, and many prizes have been won at the Essex Agricultural Society's shows and at other exhibitions. There was a good attendance and demand, but prices ruled somewhat low, the top one being only 28 guineas, and this was given by Sir Oswald Mosley, Bart., of Rolleston Hall, Burton-on-Trent, for Mouse,. which won first prize at the Essex Show in 1905 and second in 1906. Messrs. W. H. Brown and Son, of Crimpleshaw, Downham Market, paid a similar price for Mousta of Langleys, calved December 20, 1905, which won first prize at the Essex Show this year. These animals belonged to Colonel Tufnell, Mousta, calved February 6, 1894, which won first prizes at the Essex Shows in 1895 and 1896, only realised 12 guineas, Mr. W. Dannatt being the buyer. The bull, Estimate, belonging to Colonel Tufnell, and calved on June 9, 1903, a first prize winner at the Essex Show in 1905, and a second prize winner this year, realised 22 guineas, Mr. L. W. Campen, of Little Waltham, being the purchaser.

Of Mr. Dannatt's cattle, Sir Oswald Mosley, bought Vagabond of the Hyde, calved December 17, 1904, for 13 guineas, and Mr. G. H. Green, of Norfolk, gave 16 guineas for Vaal, calved March 14, 1900. Beware of the Hyde, calved September 2, 1905, and Valiant of the Hyde, calved December 21, 1905, bulls, were bought by Colonel Tufnell for 16 and 9½ guineas respectively. For thirty-five animals Colonel Tufnell got £522 7s. 6d., whilst Mr. Dannatt's sixteen realised £140 14s.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Ballinasloe Fair, co. Galway, held on October 1, the supply of sheep appeared to be smaller than that of last year; demand moderate for ewes, but rather slow for two-year-old wethers. Almost a complete clearance was effected. One-year-old and over, 1st class, 47s. 6d. to 53s.; 2nd class, 40s. to 43s. 6d.; 3rd class, 33s. to 35s; two-year-old and over, 1st class, 49s. to 60s.; 2nd class, 44s. to 47s.; 3rd class, 36s. to 40s.

At Ballinasloe Fair, co. Galway, held on October 2, there was an average supply of sheep, chiefly first and second class lambs and hoggets. Demand slow, more especially for lambs, and prices all round showed a downward tendency. A considerable number of lambs remained unsold. Lambs, 1st class, 31s. to 35s.; 2nd class, 24s. 6d. to 29s.; 3rd class, 17s. 9d. to 22s. 6d.; one-year-old and over, 1st class, 50s. to 55s.; 2nd class, 40s. to 45s.; 3rd class, 32s. 6d. to 35s.; two-year-old and over, 3rd class, 33s. to 37s. 6d.

Forthcoming Sales.

The Annual Autumn Sale of Lean Stock and Registered Kent Ram Tegs at Sittingbourne will be held by Mr. F. Austen Bensted on Wednesday the 16th inst., when there will be offered 5,000 Kent and half-bred sheep and lambs, including about 70 one and two lamb ewes and 200 three-lamb ewes from the flock of the Right Hon. Lord Harris and 170 registered Kent ram tegs from the well-known flocks of the Right Hon. Lord Harris, Lieut.-Col. Honeyball, Messrs. N. Bensted, Exors. of the late Mr. W. Elvy, B. Gascoyne, R. G. E. Locke, P. P. Manwaring, and W. F. Wood. Catalogues may be obtained from the Auctioneer, The Lawn, Sittingbourne.

Messrs. Belcher, Adkin, and Belcher, will hold a sale of live and dead farm stock to-morrow (Tuesday) at the New Farm, Compton, Berks. The catalogue consists of twelve cart horses with plenty of size and bone, forty well-bred Shorthorn heifers fit for fattening and breeding, and the registered flock of Hampshire Down sheep comprising 600 ewes, 164 ewe lambs, and 544 wether lambs, all in excellent order. There will also be offered eighty-five half-bred Berkshire and Tamworth pigs, 172 head of poultry, also farm implements, machines, wagons, carts, harness, and other usual items which are in thorough order. The sale will commence at 11 o'clock.

SHOWS.

Royal South Bucks.

The King, who is patron of the Royal South Bucks Agricultural Association, gave two prizes for competition at the annual exhibition and ploughing match, held at Datchet, near Slough, on Wednesday. His Majesty presented a handsome silver cup of the value of 20 guineas for the tenant farmer showing the best cultivated root crops generally, and after a keen contest the winner proved to be Mr. T. W. Purser, of Colnbrook. Messrs. Headington Brothers, of Cippenham, Burnham, near Slough, took the second prize, offered by the Maidenhead Committee of the Royal Counties Agricultural Society. The King's other prize consisted of 5 guineas for the best plough man on the field, and this was won by James Tappern, of Gerrard's Cross. Despite Tuesday night's rain, the ground was hard and unfavourable for ploughing.

By the rules of the association, any farmer winning the Royal Cup is debarred from competing for it for the next succeeding two years. Mr. John Kinross holds the distinction of having won the cup four times consecutively in accordance with the rules by which he could compete, namely, in 1897, 1900, 1903, and 1906.

Lord Montagu presided at the luncheon on the ground, and in proposing the toast of "Success to the Royal South Bucks Agricultural Association," said he was one of those who thought that agriculture was going fairly well, and he believed a higher range of prices would be obtained during the next ten or twenty years. The reason for that was that the wheat-eating population was growing faster in proportion than the wheat produced.

Moreton-in-Marsh.

On Tuesday was held the annual show of the Moreton-in-Marsh Shire Horse Society, which has Lord Redesdale as president, and it attracted breeders of Shires from all parts of England, there being a large and good entry. There were both open and tenant farmers' classes, and the latter contained a lot of highly creditable animals, whilst many well-known owners were shown in the open classes, to which the following particulars alone refer.

In the class for colt foal, Sir P. A. Muntz was an outstanding winner with a big bay, which has been first at Leicester, Peterborough, and the Warwickshire show, and was now awarded the champion prize, Mr. W. T. Everard, of Bardon Hall, Leicester, being second. In the filly foal class Buscot Rosemary, shown by Sir A. Henderson, Bart., of Buscot Park, Faringdon, took the first and champion prize, Mr. F. Farnsworth, of Tooley Park, Hinckley, coming second with Ratcliffe Combine.

Yearling fillies made a very strong class, but Sir P. A. Muntz had a somewhat easy win with Dunsmore Quicklime, who beat Bardon Flower of the Forest, exhibited by Mr. W. T. Everard. In the yearling colts Sir P. A. Muntz was again to the fore, taking the first prize with a colt by Dunsmore Jameson, and the second with a colt by Dunsmore Albert Victor, Lady Wantage being third with Lockinge Crown Jewel. The two-year-old colt class also provided another success for Sir P. A. Muntz, who took all the prizes it was possible for him to win with the animals he entered. In the open class for two year-old filly the first prize was awarded to Mr. J. B. Brooks, of Finstall Park, who Bromsgrove, showed the best two-year-old filly in Finstall Marigold; whilst the best mare, three years old and upwards, was Mr. J. B. Brooks's Raby Violet, who was also given the gold medal. Mr. A. W. Fernihough's Lawford Diamond was second and reserve for the gold medal. Some animals of high merit were shown in the non-pedigree classes.

In the afternoon a large gathering watched the judging of the light horses and the jumping and driving competitions. For Polo Ponies Mr. Hargreaves, of Walton, Warwick, was first with Rhona; in the class for best Polo pony, mare, and foal, Mr. F. H. Unwin, of Arle Court, Cheltenham, was first with Zoe; and the Keynsham Stud Company second with the Pheasant. There were nine entries in the class for Hunter mare or gelding, under seven, capable of carrying 14 st. or upwards, and the first prize went to Mr. R. F. K. Gooch, of Swalcliffe, Banbury, for Unexpected. Thirteen were entered in the class for light-weight Hunter mare or gelding, and here Mr. J. L. Walker, of Banbury, was first with Friar.

Dorchester.

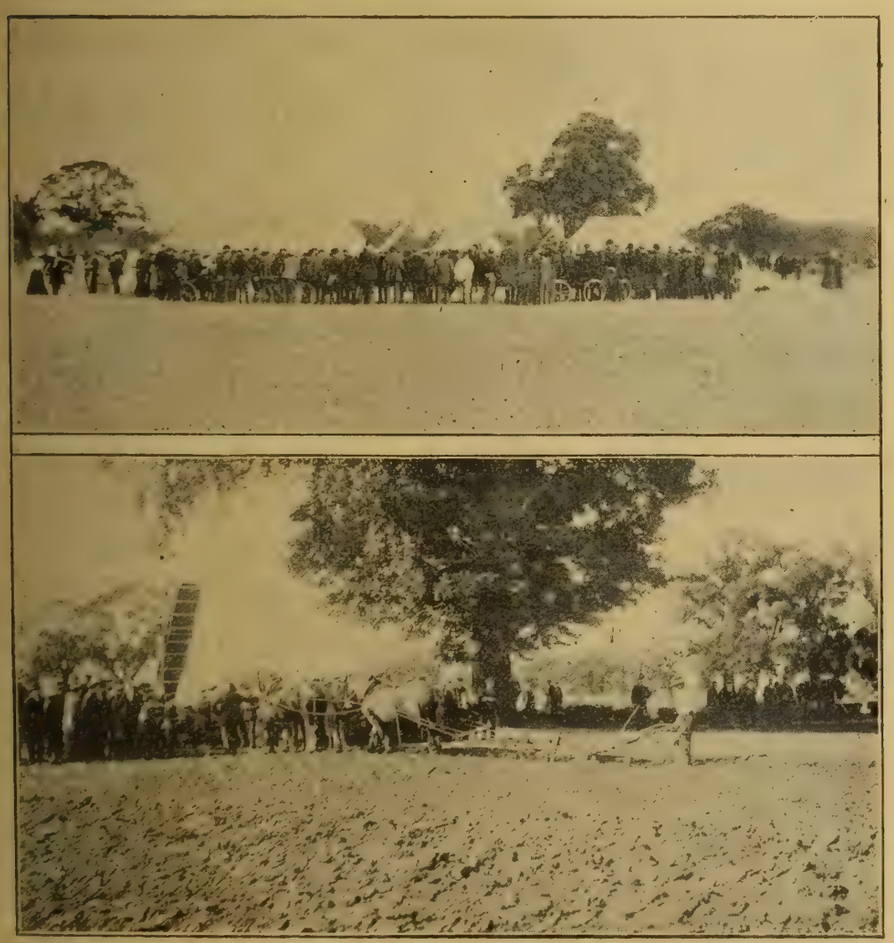
The 66th annual show of the Dorchester (Dorset) Agricultural Society was favoured with fine weather and a large attendance of visitors, but the entries were not quite so numerous as in some previous years, the total being 309 as against 333 last year, 364 in 1905, and 318 in 1904. It was generally agreed, however, that quality all round had never been better. Devon cattle naturally showed to advantage, but two exhibitors shared the first prizes, Lord Portman taking three and two specials, whilst Mr. Chick, Stratton, took the other three firsts. The former exhibitor was also to the fore in the Channel Island classes, in which the other principal owner was Col. Brymer. Shorthorns were not numerous, but good, whilst there was a creditable show of dairy cattle.

The show of sheep was divided into four departments, viz., for Dorset Horns, South Downs, Dorset Downs, and other Down sheep, and each were fairly well patronised. But one expected, in the heart of the homeland of that famous animal, a better show of the Dorset Horn. Pigs were a capital lot, whilst horses were also good, the agricultural classes being particularly strong. As to the butter, the judges were of opinion that in grain it could not have been better, and was superior to that seen at the show for ten or twelve years past. It was of good colour, fine grain, and exquisite flavour; but the judges observed that many of the exhibitors were faulty in making up the butter, doubtless owing to being over-anxious and working it too much after it was churned.

East Berks.

At the annual show of the Royal East Berks Agricultural Association held on Thursday at Shottesbrooke, the show of corn was above the average, while there was a remarkably fine display of roots. Mr. F. A. Horwood, of Bury Court Farm, secured the King's cup, value £21, for the best cultivation of root crops; and Mr. T. C. Horn, Shottesbrooke Farm, was awarded the Prince of Wales's prize, a piece of plate, for the second best cultivation. They also took prizes for roots and corn, Mr. Horn being especially successful in the classes for oats. Lord Desborough's plate for the cultivation of root crops went to Messrs. E. and A. Purser, of Maidenhead. The ploughing championship was won by Thomas Williams, ploughman to Mr. Joseph Gardner, Maidenhead Thicket.

It was suggested by Mr. Horn at a luncheon given by Mr. Guy Oswald Smith, owner of the Shottesbrooke Park Estate, that in future prizes should be offered for milking cows and stock hunters. The proposal was well received, and offers of substantial prizes were made to the hon. secretary of the association.



National Potato Society.

The National Potato Society's annual show and conference took place on Wednesday at Wye College, and with it was associated the annual competition in connection with the courses of instruction upon cottage gardening, poultry rearing, and bee keeping, given through the county by lecturers under the Kent Education Committee. There was a big attendance, and two very fine shows were seen. With regard to the potato show, in which there were entries from England, Ireland, Scotland, and Wales, the exhibits were not quite so numerous as at the last show, probably on account of the disease from which the tubers have this year suffered, and also, no doubt, because of its being somewhat early for the Scotch exhibitors. What little the show lacked numerically, however, was amply made up by the excellence of the exhibits, for a finer lot of tubers than those staged would indeed be difficult to find.

The judges all through had a very hard task set them in differentiating between the entries, and in the competition for the Carter-Findlay cup for the best collection of twelve varieties (nine tubers of each) the competition was very keen. In the end the judges awarded it to Mr. B. Ashton, of Ormskirk (gardener to Earl Lathom), and as he has won it three years in succession the cup (which is valued at £50) becomes his own property. Included in this exhibit was the best dish of white potatoes in the show—of the Carter's Royal variety—and for this Mr. Ashton was awarded a silver medal, while he also won the silver challenge cup presented by Sir John T. D. Llewelyn, Bart., for the best exhibit in the show. The silver medal for the best dish of coloured potatoes in the show went to Mr. A. Lawson, of of King's Kettle, N.B., for a dish of the King Edward VII. variety, which well deserved the honour.

The show in connection with the higher education lectures was held in a marquee in the grounds, and was a most interesting one, going far to prove the value of the instruction given by the county lecturers in the various departments.

Royal South Bucks Ploughing Match.

THE CROWD AT THE FAIR.
THE WINNER, MR. J. TAPPERN, FINISHING.

SHOW GOSSIP.

At a recent meeting of the council of the Scottish Fat Stock Club at Edinburgh it was reported that donations to the prize fund for the forthcoming show amounted to £122, an increase on the amount in hand on the corresponding date last year. At the same meeting Mr. P. P. Campbell, Cartland, Lanark, moved that the judges of live stock, before commencing their duties, should not be supplied with a list of the weights of the stock they were to judge, but might learn, if necessary for any final decision, the weight of any animal or pen of animals. Mr. Campbell said more attention ought to be paid to the characteristics of the animal by the judges. Prizes were very often awarded by weight. Mr. Alexander Guild said there was a feeling that in some instances awards were decided by weight. The motion was withdrawn on the understanding that the council at next meeting would consider the rules relating to judging, with special reference to the point raised by Mr. Campbell.

The Collingham Farmers' Club's sixty-seventh annual ploughing match and agricultural and poultry show, will be held at Collingham, on Thursday, October 31. An attractive prize schedule has been drawn up, and prizes to the value of £150 are offered for competition. The ploughing competitions are perhaps the chief feature of the event, but the classes for horses, cattle, sheep, poultry, butter, and eggs, receive a fair amount of patronage, thus making the fixture an interesting one all round; and seeing that liberal prizes are again offered, the sixty-seventh show should come up to the average. Entries close October 18th, with the secretary, Mr. J. W. Belton, Besthorpe, Newark.

Now that the summer and autumn agricultural exhibitions all over the country are practically over, the stockbreeder, grazier, farmer, and public generally will be turning their attention to the winter fat stock exhibitions, of which the Norwich Fat Cattle Show is as usual the opening event. The thirty-first annual exhibition will be held at the Agricultural Hall, Norwich, on November 21, 22, and 23 next, and entries in all departments should be made on or before October 26, which is the last day of entry.

The Norwich Fat Cattle Show has now so firmly established itself that interest in it extends all over the kingdom, and breeders and graziers always look forward to the annual meeting, as it usually provides a strong competitor for the championship at the Birmingham and Smithfield Shows, sometimes Norwich finding the winner for the triple championship.

Prizes to the value of £773 are offered in the various departments as follows:—

Cattle.—Eighteen classes and eight champion and special prizes; value £506.

Sheep.—Six classes and four special prizes; value £114.

Pigs.—Three classes and one special prize; value £35 5s.

Roots and Grain.—Eight classes (confined to Norfolk); value £14.

Dead Poultry.—Ten classes; value £16.

Butter, Cheese, and Eggs.—Eighteen classes; £38 12s. 6d.

Dinner Table Decorations.—Value £5 15s. 6d.

Root Prizes offered by various seedsmen.—Sixteen classes (confined to Norfolk); value £45.

Total value in prizes.—£773 13s.

The best beast in the show will win the champion prize of £100. The prize money in each class for cattle is:—First, £10; second, £5; and third, £2. In each class for sheep:—First, £8, second, £4; and third £2. And in each class for pigs:—First, £5; second, £3: and third, £2.

Out of a total of twenty-seven classes and thirteen special prizes for cattle, sheep, and pigs twenty classes and eight special prizes are open to the United Kingdom.

The prize list of the New York Show, to be held November 18 to 23, 1907, has come to hand, and a short summary of it may be of interest to English exhibitors. The classes of most interest on this side are the Hackney classes and classes for half-breds. The classes for Hackney stallions practically cover horses of every age and height from yearlings upwards, and the mare classes correspond. There are innumerable harness classes in addition to the classes for appointments, which are more particularly American. The first prize money in the majority of classes is £10. The pony section is very well catered for both in hand and in harness. The numerous championships make a total prize list of over £7,000. We understand that American exhibitors would welcome with cordiality a visit from English horsemen to reciprocate the enterprise shown in connection with the last Olympia Show, and, as there is but slight expense in sending horses to New York, where there is an excellent market, it is hoped that some English exhibitors will be represented. It should be mentioned that the English Hackney Society has offered a £100 gold challenge cup in the harness classes to mark their friendly feeling towards this great American show. Entries close on October 26, and particulars can be obtained from the English Hackney Society, 12, Hanover Square, London, W.

The Markets.

London.

"What a fine thing hope is," says an old Spanish writer, and we are all ready to endorse his words. The indications of last week filled me with hope concerning the immediate future of the market. A steady and apparently strong demand had commenced, with the result that an advance of 15s. to 20s. was established, and business certainly looked promising. But we are now told that the purchases then made by merchants are only for the purpose of supplying their travellers with samples, and that their experience thus far with their customers is by no means encouraging.

Brewers appear to be comparatively indifferent, and if they can be induced to give any orders, they are extremely cautious, and keep their operations within very small limits. We therefore find that the trade has partially subsided, and we can only say to day that the recently advanced prices are upheld with moderate firmness. The main support of values is traceable to the attitude of growers, who are strenuous in their determination to refuse lower bids.

Many, to whom I have spoken, are solid in their intention to hold their produce until they can realise more satisfactory figures. And thus the annual fight begins again, and it remains to be seen which side will win the battle.

From my point of view, which is more or less outside the actual field of contention, I am inclined to favour the sellers, whose claims to better remuneration are absolutely incontestable. The home crop is but small, the supplies from abroad are not likely to be excessive, and one can hardly suppose that consumers can afford to keep out of the market much longer.

Therefore, it would appear that growers are well advised if they sit upon their hops for the present. At the same time, we cannot lose sight of one or two important facts. Brewers are visited daily by Continental travellers, who have been perhaps encouraged to come over to England by the invitations sent to them from this side, to which I referred last week. They are not offering their best hops, but only such as they can sell at prices which are much too low for English growers to compete with. I am not aware that they are doing much business, but their presence is disturbing to our market, and a hindrance to our progress. Possibly, when they find that their efforts are fruitless, they will take return tickets, but at the moment there is no doubt that we are feeling the effects of their insistent competition. Let us hope that it will soon be terminated.

Another feature that tells against us is the poor quality of our own early supplies. It is difficult to get rid of the impression, implanted in the minds of consumers by the low rates at which the market opened (these being fixed by the unsatisfactory samples then offered), that they would be able to buy at their own valuations throughout the season. This impression still remains, and will doubtless continue to influence our trade until these cheap lots are cleared.

Growers should not ignore such considerations, but may, nevertheless, be encouraged to wait for better things. At present there is a healthy tone in the inquiries for choice or coloury samples, and it appears probable that we shall soon hear that such qualities are commanding higher figures. Patience seems, therefore, to be suggested, as the prospect of the realisation of our hopes comes within the range of possibility.

The Continent.

Somewhat similar conditions to our own are referred to in the reports from Nuremberg. The full supplies that are coming forward enable buyers to estimate the value of the crop more correctly. It is found that, while there is not much to complain of as regards richness in lupulin, a large proportion of the hops is very deficient of colour. German brewers attach great importance to this point; therefore, although exceptionally prime samples, which are comparatively scarce, are improving in value, the tone of the market, with respect to the medium and lower sorts, is tending towards reduced quotations.

On the whole some weakness is evident, and my latest information indicates that lower rates are becoming general. A fair amount of export business for England has been done, but the total sales for the week ending September 21 did not exceed 6,500 bales, while the arrivals amounted to 10,000 bales. Comparing the most recent quotations with those of the previous week, we may conclude that values have generally fallen from 5s to 10s.

The Belgian markets are very quiet, and are entirely ruled by the speculations of operators on the Brussels Bourse. Prices rise and fall day by day to the extent of a few francs, in sympathy with the movements of the gamblers. Brewers are not active buyers, but content themselves with such small transactions as meet their immediate requirements. Actual current values are a few points below those of last week.

America.

The "dark horse" is still kept in the background. So contradictory are the reports received that it is almost impossible to satisfy oneself as to the true state of affairs. As far as I can gather the position is not much altered. Dealers are "cracking up" the crop and predicting a low range of prices, and, in order to achieve their desires, are making very few offers. On the other hand growers are generally holding out, and thus between the two opposing forces there is a state of calmness which augurs rather badly for the future. Added to this is the tightness of money, which compels needy growers to realise if they can, and at any price. The outlook is not encouraging, and it is not improbable that a considerable reduction of acreage will take place before the work for the 1908 crop commences.

Agricultural Machinery for Russia.

Mr. A. F. Medhurst, his Majesty's Consul at Rostov-on-Don, in his report for 1906 states that the chief import in machinery is agricultural machinery. It provides employment for a number of people, and the stores in which the machinery is exhibited are the finest in the town.

Fewer steam thresher sets were sold than in 1905, and the sales were mostly for smaller sets than the usual eight horse-power ones. This was accounted for by the orders all coming from districts where only small sets were required. Rostov firms sold, either directly or through their branch establishments, about 320 sets during the year, of which some 80 came from Germany, and the remainder from the United Kingdom. The keen competition causes this trade to become daily more difficult.

As in former years, reapers and binders were imported from the United States in very large numbers. They reach Rostov *via* Novorossisk, and are thence distributed to the Don country, Caucasus, and the vast districts along the Volga. The returns for 1906 comprised 1,300 binders, 8,000 reapers, 4,000 mowers, and 5,000 horse rakes, of which 400 binders, 1,000 reapers, 500 mowers, and 1,000 horse rakes came from Canada.

The sale of these Canadian machines increases steadily, notwithstanding the retail price being somewhat higher than that asked by many of the American makers. Farmers find the binder to be a strong, good machine, well suited to local requirements.

It must be remembered, the Consul adds, that although the total import of this class of machinery attains such great proportions it does not follow that the figures represent actual sales. The Rostov agents, who either place their orders or receive their goods on consignment, distribute them to their sub-agents, with whom they may remain unsold for many months. Nevertheless, this is a good and steadily increasing trade.

The plough trade is entirely in the hands of German makers, who supply many of the "sack" type, and Russian works (especially those in Odessa), who supply cheap ploughs which appear to suit the farmers. British makers cannot compete with the low prices charged by Russian works. An American firm makes strenuous efforts to introduce a new disk plough, but the draught is heavy and the price high, and the Consul does not think this class of plough will ever be popular in his district.

Speaking at a garden produce exhibition at Stafford, the Earl of Dartmouth, Lord-Lieutenant of Staffordshire, said landowners had no desire to oppose small holdings. He had 500 holdings under 40 acres each, but owing to the factory system and emigration to towns the demand for small holdings had gone, and there was a difficulty in finding tenants. The Board of Agriculture might say plenty could be found, but placing unsuitable men on land would be disastrous.

CORRESPONDENCE.

Motor Cars and Farmers.

SIR,—I enclose a cutting from the *Lancashire Daily Post* of yesterday's date, giving particulars of the conduct of a motorist.

The sheep were a shocking sight, most of the six killed being ripped open, and two others are badly injured. I trust you will give prominence to the matter in your next issue; such so-called "accidents" are constantly occurring in one part of the country or another, and show that the speed at which cars travel is altogether too fast for even moderate safety. Motorists of the class in question are not by any means as uncommon as we are asked to believe.

It is impossible to see the numbers on a car at night, and owing to the speed at which they travel and the dust it is often equally impracticable in the daytime.

Can you not, sir, take up the cudgels on behalf of farmers and agriculturists in making a demand for reduced speed and illuminated numbering?

In this county feeling is beginning to run rather high amongst farmers and the country people upon this question.

I do not send this letter for publication, but in the hope that you will advocate rational legislation to regulate motoring.—I am, &c.,

HERBERT H. OWTRAM.

Newland Hall, Ellel, near Lancaster,
September 28, 1907.

*** The following is the report referred to, Mr. Owtram having subsequently agreed to the publication of his letter:—

"The disgraceful behaviour of an unknown motorist near Lancaster, last evening, deserves some publicity. About seven o'clock the flockman of Mr. H. H. Owtram, Newland Hall, Ellel, was driving a flock of sheep along the Lancaster road between Scorton and Bay Horse, when a large light-coloured motor-car coming from Lancaster direction dashed into them.

"The motor was stopped for a moment, and while the man was endeavouring to pull some of the sheep from under the car it dashed on over the remainder, killing six and mutilating others. In the glare of the lights, and in the endeavour to save the sheep, the man was unable to take the number of the car, which proceeded at full speed, and, it was subsequently ascertained, turned off the highway towards Churchtown or Blackpool road. To designate such motorists 'road hogs' is altogether too mild a term."

A correspondent, writing to us on the matter, says:—"So long as a fine is the only penalty for bolting after an accident, it will no doubt remain the popular way of getting out of trouble with a certain section of motorists."

Sunday Labour During Harvest.

SIR,—The correspondence on this subject is decidedly interesting in bringing out different views. "H. L." in his letter appears to take it for granted that the writer of the original "note" does not know what it is to have barley awns chafing between his shirt and his skin for six days, and is therefore not in a position to appreciate to the full the one comfort of a clean shirt and a wash on the seventh. "Lux," in attempting to save his friend a fall, holds forth on the whole question with a pulpit-like oration, in attempting to show how and why work might be done on Sunday without acting "sinfully." What a grand saving clause in this word, if this it is, or the fear of its consequences, which holds labour in check for the one day in seven. The labourer may rest on the Sabbath, not necessarily for his own sake, but for fear his taskmaster should have to suffer in some future state. Though, if work could be squeezed in on that day without being set down in the account as "sinful," "Lux" would have us believe it was alright according to the doctrine he holds.

No, sir. It has taken a woman to look at matters in a fair light, and the protest of "Farmer's Wife" holds the field. And, sir, in spite of "Lux's" excellent sermon, does not the fact remain, that through all seasons, good or bad, during a few hundred years, the farmer himself (with some rare exceptions) has held faith and utterly refrained from harvest labour, let the loss have been what it may? Neither has the suggestion arisen this season from that quarter, that is if we may accept "H. L.'s" hint about the gratification of a small holding and having to live on it. Anyhow, with the small holding do not let us have the Continental conditions of farm work imposed upon us as well. As a class farmers object to Sunday work no matter what the harvest or season. But when "Lux" seeks to justify matters in general, and the writer of the "note" in particular, by assuming that he "thanks God for Sunday the same as we all do," and then remarks that "if Old Sol refused to perform his proper functions, &c.," why, then, he may venture to leave some of us out of those thanks on "the same" bargaining terms. Thanks, in the meantime are due to "Farmer's Wife" for her timely protest against a suggestion to break in upon the day of rest.—Yours, &c. WAMBA.

October 2, 1907.

The Harvest in Cumberland.

SIR,—The period of stocktaking of agricultural products for 1907 must be close upon us, if it has not already arrived, and those parties who are engaged to perform such duties, or voluntarily undertake such duties, may reasonably be expected to record the results of their inquiries and examination. As regards the season as a whole, it will be generally admitted it has been extremely capricious, but, broadly speaking, highly favourable to the production of winter produce for the support of cattle which require it through the cold season.

A very bulky crop of seed grass and meadow hay has been been grown, and nearly the whole of the former and a portion of the latter was secured in the pink of condition and at the least possible cost during the eight or nine days of real summer weather we had in the month of July. The remainder with almost endless labour and considerable depreciation in quality, although loss in colour from the length of time it was exposed, which may probably be accounted for from the extreme cold temperature which prevailed through the latter part of July and the whole of August.

September, however, proved the salvation of farmers, as it enabled the high-lying districts to complete the in gathering of their abundant crops of meadow hay in excellent condition; but hay secured in September is always less nutritive than what is secured in fine weather in the summer months. But to the arable farmers the harvest, although late, has been all that the most sanguine would have wished for; scarcely a drop of rain has fallen, no clogging of reaper wheels, no winds to twist the corn; so that the progress of the reapers was more like a wheeled conveyance on the highways, though less rapid than those abominable motor-cars which are daily killing and maiming the industrious classes, for whose use they were constructed and who are compelled to keep in repair.

Fully one half of the grain has already been carted, and in the earliest districts two-thirds. The oat crop, the chief grain cultivated, has proved quite a record crop, fully one third above an average. Barley, too, is above average, but the superb harvest weather we have had has had a very different effect upon all descriptions of green crops, especially mangels and turnips, which, unless we get rain soon, will be more than one-third below average.

Potatoes, too, are deficient, but the extra price they are commanding will quite compensate the growers; but the deficiency in the turnip crop will seriously increase the cost of feeding cattle and sheep.

Back to the land is the mocking cry of the day by the office-seeking politicians. But by what means?—certainly not by the fanatical cry of small holdings.—Yours, &c., T. B.

September 30, 1907.

What is a Tenant Farmer?

SIR,—I shall be very much obliged if you will give me your opinion on the following objection in Class 50:—For the best tenant farmer's turnout. Exhibitors to reside in Hay Union, and to have owned the whole turnout not less than three months prior to September 20.

The winner of the first prize keeps an hotel, and lives there. He has also buildings, stables, &c., near, and rents a number of acres of land (a few acres arable) in the neighbourhood of Hay. He is objected to on the ground that he has no holding or homestead connected with the land, that the land is accommodation land, and that he is not a tenant farmer.

The favour of a reply per return will be esteemed, as we have a committee meeting on Thursday next, at which the above will be decided. Thanking you in anticipation,—Yours, &c.,

REECE MORRIS,
Secretary Hay Horse Show Society.

*** In our opinion, judging from the particulars you furnish, the objection should be upheld. Our reasons for arriving at this conclusion are principally based upon the fact that the exhibitor in question does not reside at the farm nor does he rent any farmhouse or farm building. The mere fact of him being an hotel keeper and living on the premises would not prevent him from being a tenant farmer, but in your letter you distinctly say he has no holding or homestead and that the land is accommodation, and it is on these grounds that we should say that the exhibitor in question was not a tenant farmer.—ED.

Nettles on Pasture Land.

SIR,—Can you kindly, through the medium of your valuable paper, tell me how best to do away with nettles infesting pasture land?—Yours, &c.,

J. J. S.

*** One method of eradicating nettles from pasture land is to grub out the roots by means of a fork or other implement at this time of the year, and again when growth commences in the spring, but another very simple and also effective way of getting rid of nettles is to wait till they have got well into growth in the spring, then cut the tops close down with a scythe and sprinkle a liberal application of coarse salt over the roots. If the first treatment does not bring about the desired end, repeat it. Generally speaking, nettles grow in patches in meadow and pasture land, and by adopting the above simple remedy, I have been able to completely eradicate the obnoxious vegetation.—RUSTICUS.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

A Tithe Question.

SIR,—In a long-standing tenancy where the occupier has always paid the tithe and has given up the land at Michaelmas, is he liable for the payment of this or any part which became due on October 1? There is nothing in any agreement relating thereto. SUBSCRIBER.

*** The fact that the occupier has paid the tithe does not make him liable to pay it, nor would an agreement with the landlord to that effect, for all such agreements are void. I therefore see nothing to make the occupier liable for the payment of that or any part of it which may become due on October 1.—BARRISTER-AT-LAW.

A Hiring Case.

A case of some interest to farmers was decided at Guisbrough, on Tuesday, when Robert William Stevenson, of Trout Hall, Skelton, a prominent Cleveland agriculturist, sued Stanley Chapman for £3 damages for breach of contract.

It was stated in evidence that the farm servant was engaged at Egton hirings on November 5 of last year, but it was then agreed that his service should not commence until November 23, and that it should end twelve months from that date.

There was no written agreement, and Mr. Hoggett for the defence, argued that according to the Statute of Frauds, Mr. Stevenson could not succeed, as he could not recover damages for breach of contract when the period of service was over a year from the date of the agreement, unless there was a written contract. The Bench upheld this view and dismissed the case.

County Councils and the New Small Holdings Act.

The Board of Agriculture has issued a circular to county councils and county boroughs in England and Wales reminding them that the Small Holdings and Allotments Act, 1907, comes into operation on January 1 next, and advising them in view of the very important and extensive powers which it gives to county councils to consider at an early date what steps should be taken to carry out the provisions of the Act.

The circular explains that the Act provides that county councils may themselves take the initiative in preparing a draft scheme or schemes for the provision of small holdings, and suggests that county councils through their individual members should at once set on foot preliminary inquiries as to the extent of the demand for small holdings in their districts, and as to the possibility of satisfying these demands by the acquisition of land either within or without the county, and further to see that the provisions of the Act are made known to those who are likely to take advantage of it.

The Board states further that the small holdings provided by the County Councils under the Act of 1892 have in no case resulted in any charge being placed on the rates of the county, and where small holdings are provided under the Act of this year the possibility of any such charge arising has been very considerably diminished.

Northern Notes.

HARVESTING is being prolonged by the shortness of the working days, the night dews, and heavy fog, which has made its appearance all too soon this autumn in the Tyne district. Farmers have made as much haste as possible, and the harvest will go down in local history as one of the shortest on record. The rainfall in Yorkshire (where harvesting is not quite finished) was abnormally small during September. While this was a factor favourable to the gathering of the grain crops, the absence of rain has seriously hindered the progress of roots, grass is deficient, and seeds, fields, and fogs are comparatively poor.

A METEOROLOGIST has supplied me with some interesting figures relating to the rainfall at the foot of the wolds. The total fall last month was 0·735 in.; the greatest fall in twenty-four hours being 0·32 in. on the 4th. Rain fell on seven days. The total precipitation for the past nine months was 15·445 in., compared with 17·890 in. in the corresponding period of last year. From the 4th to the 25th September no rain fell; and between the 4th and the 30th only 0·165 in. has fallen. Thirty days with less than thirty points of rain (=0·3 in.) is considered a prolonged drought. A period of twenty-five days with only 0·165 in. had already passed before the advent of October. This is exceptional for the ninth month of the year.

FARMERS could not hurry their leading operations, the same causes hindering them as did their brother-farmers further north. Some of the corn has taken a lot of getting, apart from the tremendous bulk everywhere apparent. A slight deficiency of labour is reported, but there is not much doubt that farmers could have hired more hands if they had cared to run the weather risks. Until the fag-end of harvest was reached there was no stoppage of operations worth mentioning. It has been a remarkable harvest. The hay and clover crops were the largest on record, and recent sales of hay are quoted at 47s. 6d. to 50s., and for clover 60s. The second crop clover is somewhat light. The barley crop is good on the whole, and threshings show a yield in excess of last year's. Prices have already touched 30s. for a crop grown on thin land; and new wheat in dry condition is realising 35s. per qr. Wheat will show to exceptional advantage this year, and farmers are expressing vain regrets that a larger area was not planted with this "staff of life."

LIMITED yard accommodation has compelled resort to the building of stacks in the open fields, an unmistakable sign of an abundant harvest. Will the granaries be of sufficient capacity to shelter all the grain? The agents of landowners are anticipating a year almost entirely free from missives asking favours and remissions. Rent-day this back-end will be anticipated with a greater degree of composure by both parties. But are not Northern landlords among the best in the country?

THE weigh-bridge question at Hull Cattle Market at one time assumed an acute phase. Now the matter has been settled without any breaking of heads or bones. The Holderness Agricultural Club, one of the most powerful organisations of its kind in the whole of England, agitated persistently, and have at length moved the markets committee of the corporation into action. The committee, it is said, moved very cautiously, and some of the members desired to hang up the question for a time. The Club then became impatient, and they have now drawn from the committee an instruction to the city engineers to prepare estimates for the erection of three weighbridges. The committee's caution was due to the probability of the market being enlarged. Now, however, all intentions of extending the area having been abandoned for the present, the committee was morally bound to carry out the wish of the users of the market so clearly expressed at the poll taken for and against the additional weighbridges, which secured a large majority of "ayes."

ONE of the most remarkable surprises of the week is the fall in the price of folding sheep or lambs, dealers have them on their hands in large numbers. At the same time a good trade is being done in breeding sheep, good bred Leicester gimmer shearlings having made well over 60s. a head. The late harvest may have had some slight influence upon the market, but this does not entirely account for the absence of brisk business. A scarcity of grass is a much more likely cause, and the serious backwardness of the turnip crop; also the falling off of pastures. Imports of mutton will hardly account for the situation, as they have not been excessive. Fat sheep, store sheep, and ram sheep all suffer alike, and mutton is a slow trade. Not an unlikely suggestion is that attributing the position to a revolt on the part of farmers against high prices. If that is so, can we discern in it a sign of the effects of co-operation? If farmers band together for the purpose of advancing their mutual interests in the purchase of seed, cake, and implements, why should not their operations be extended to the purchase of holding stock, and in this way preventing artificial inflation of prices? Dealers in this part of the country are very much out of love with the lamb trade at present. The situation is hardly likely to show signs of improvement until roots are further advanced on the way to maturity. The drought succeeding heavy rains has hardened the ground and bulb development was consequently checked. There is no reason why roots, with favouring weather, should not yet make a good show.

CLEANING appears to have gone entirely out of fashion; one reason seems to be that labourers and their families are better off, in these days of cheap food, than they were formerly, and that many of those who happen to be unencumbered with large families would—even if they were harder put to it than they are—despise the gleaners' vocation, and would indignantly resent a suggestion to put on apron and a hood and go into the fields to pick up the leavings of the horse rake. What an immense amount of rakings there is this year, the heaps resemble hay cocks for size!

AT York this week, as well as at other markets of a minor character in Yorkshire, farmers are beginning to say the time has come when the markets ought to be exempted from the very drastic provisions of the regulations governing the movement of swine. The various orders which have been promulgated from time to time have seriously harassed the pig trade in York and district, and have practically prohibited the sale of store pigs in any open market. In one of the markets so affected only 868 pigs were entered from January 1 to September 30 of this year, compared with 15,443 in twelve months twenty years ago! The restrictions affect most of all the class of people whom the present Government seems to have a beaming desire to benefit, viz., cottagers and small holders.

October 3, 1907.

Nottinghamshire Notes.

REFERENCE has frequently been made in these notes as to the yield of wheat in the lace county this season, and this week I have received a most interesting letter from one of the largest farmers in Notts who desires to remain anonymous.

IN the course of his communication he says:—"I threshed 41 qr. of wheat out of a field containing 5a. 2r. 28p. in 1898, which works out an average yield of 7 qr. 1 bushel to the acre. This I sold at 24s. 6d. per qr., the cheque received being one for £50 4s. 6d. This year, however, I threshed the wheat out of the same field recently and obtained 36½ qr., which I sold at 36s., bringing in £65 14s. Therefore, although I had 4½ qr. less grain, I secured £15 9s. 6d. more in money."

"THIS is the first occasion," says my informant, "that I have sold wheat at 1s. per stone, and wool at 1s. per lb. in the same season." The following list was also enclosed, which shows the prices made of the first lot of wheat sold each year since 1894 by my correspondent:—

Year.	Date sold.	Price per qr.
1894	Sept. 1	21s. 0d.
1895	Aug. 31	25s. 0d.
1896	Sept. 26	29s. 0d.
1897	Aug. 24	33s. 6d.
1898	Sept. 10	24s. 6d.
1899	Sept. 2	27s. 0d.
1900	Sept. 15	28s. 6d.
1901	Aug. 23	28s. 0d.
1902	Sept. 20	26s. 9d.
1903	Sept. 11	27s. 6d.
1904	Aug. 12	28s. 6d.
1905	Aug. 16	27s. 6d.
1906	Aug. 23	28s. 6d.
1907	Sept. 14	36s. 0d.

MELTON MOWBRAY September Stilton Cheese Fair proved a record, for there was a pitch numbering 1,057 dozen cheeses against 641 dozen in 1906 and 702 dozen in 1905. There are tremendous quantities of this variety of cheese manufactured in the south of the lace county, and the past summer has proved highly remunerative to our dairy farmers.

KEEPING has been plentiful, and cows have done well, while so far as milk is concerned the yield has been of abnormal dimensions. In addition to these important factors, the season has been an excellent one for the maturing of cheese, and the quality has never been finer. Prices at Melton, however, were somewhat disappointing, the highest quotation in the fair being 9d. per lb., while hundreds changed hands for as low as 5d. per lb. The average quotations were from 7½d. to 8d., and one large cheesemaker informed me that it is thirty years since there was such a glut at the fair.

TOURING around Edwalton, Ruddington, Gotham, Kingston, Ratcliffe-on-Soar, and Clifton, I was somewhat surprised on Tuesday to notice what a tremendous number of mangold crops have run to seed. I endeavoured to obtain an explanation for this remarkable "bolting" from a well-known agriculturist, but he admitted his ignorance as to the exact cause. "Some farmers," he said, "allege that it is due to faulty seed, but this cannot be correct, for it matters little into which part of the district one goes, the same conditions prevail. Personally, I attribute the running to seed as being entirely due to the backward season and the excessive wet, coupled with a lack of sunshine. This made many of the mangolds struggle for their existence. Of course, it means a serious loss to us, for there is nothing, in my opinion, that deteriorates the quality of the roots more than seed bearing, and those that went early will not only be worthless, but, owing to their hard and tough nature, will prove extremely dangerous to cattle."

REGISTRATION of corn samples is a subject which I do not mean to let rest. A few days back I called the attention of Earl Carrington to the question, and I have received a reply from Mr. Walter E. Archer, assistant secretary to the Board of Agriculture. After expressing a wish to be informed of the views of those interested, Mr. Archer says: "It would appear, however, that the matter is one which could be more conveniently arranged between buyers and sellers themselves, without the intervention of Government officials."

PERSONALLY I am not of this opinion, for having spent some months with a corn merchant I can speak with a certain amount of authority. I could cite several cases where blue peas have been thrown up merely because of the fact that prices had fallen several shillings per quarter. But on the other hand I know farmers who deliberately picked all the bleached and worm-eaten peas out of the sample, and also those which had been split in the threshing machine, and then complained not only to the merchant but advised farmers to have nothing to do with him, when the bulk was refused. It is an important question, and I am looking forward with faith that the Lincolnshire Farmers' Union will tackle the matter in the near future, and send a strongly-worded resolution to the officials at St. James's Square.

WHEAT continues to advance in price round about here in sympathy with the markets throughout the world. I honestly believe that at Christmas the price will be £2 per qr. A great outcry will, of course, be made in the halfpenny press, but I ask my readers, where can they find more bread wasted than in the slum and poorer districts of our large towns. A few days ago I was passing a large blouse factory in Nottingham shortly after the workgirls had left, and I was surprised to notice the large number of pieces of bread and butter which had been thrown on to some waste land opposite. If the quartern loaf was sold at 6d. or 6½d., I contend that it would conduce towards reducing the scandalous wastage which is now going on, and the pigs in many of the rural districts would not have the pleasure of devouring so large a number of crusts as at the present time.

GOOSE fair. The words really seem to denote some event of world-wide importance. London newspapers have been telegraphing to their Nottingham correspondents for "good stories," the newsagents have given prominence to the placards bearing such words as "Goose Fair Carnival," "What there is to be seen at Goose Fair," &c., until it really makes the inhabitants of the lace metropolis think that it is after all an important event.

LOOKING at the market-place, which is 7½ acres in extent, it is marvellous where all the people come from. I asked a prominent police official what was his estimate of the number of people around the shows, and was amazed when he declared 40,000. This was at 8.30 p.m., and to attempt to cross from one side of the show-ground to the other in less than twenty minutes would be impossible.

IN the cattle-market from an early hour this morning there were scenes of great animation,

and when the various auctioneers began their task of selling shortly after nine o'clock, there would be fully 7,000 sheep penned. Messrs. Bradwell sold about 2,800, Messrs. Walker, Walton, and Hanson over 1,000, and Mr. Arthur Chonler had nearly the same number.

"IMPROVED trade at higher prices" sums up the result of the fair so far as sheep are concerned. Breeding sheep and lambs sold like ripe cherries, and the supply, though so large, was unequal to the demand. Lambs made from 30s. to 48s. apiece, young breeding ewes from 54s. to 60s., crossbred shearlings 50s. to 62s. For rams there was not such a good demand as expected, Hampshires being most in favour, the highest price so far as I could ascertain being 30½ guineas paid for an Oxford shearling ram from the flock of Mr. Houghton, of Asfordby, Lincolnshire.

STORE beasts met with a good demand, yearlings fetching from £6 10s. to £9; two-year-olds from £10 to £15; and older animals up to £19, which was a good price when the cake necessary for fattening is paid for. For cows and heifers in full profit prices ruled high, up to £24 being paid.

FOR some time I watched Messrs. Walker, Walton, and Hanson's sale, and from a general summary I arrived at the following prices:—Longwool theaves, 58s. to 69s.; Longwool ewes, 48s. to 60s.; cross-bred theaves, 46s. to 56s.; cross-bred ewes, 40s to 48s. The Longwool rams made from 4½ guineas to 9 guineas, and ram lambs 2½ guineas to 5½ guineas. Lambs fetched from 38s. to 46s. The milch beast realised from £18 to £24, and in-calf heifers from £14 10s. to £9 10s. Messrs. Bradwell's sale amounted to £7,029 for the day.

NOTTINGHAM'S Corporation Farm appears to be rather expensive to manage judging from the report of Mr. Mark Mellers, one of the city auditors. He says: "The books are well kept, equal to any of the city accounts, and call for few remarks, except that the farm is a serious expense to the city, involving a loss for the year of £1,416 3s. 4d. The reason for this large expenditure is the disposal of the city sewage. It appears that there are as many as 2,428 head of horses, cattle, sheep, and pigs on the farm, including some of the finest Shire horses in the world. Is it possible that these are retained too long for show?"

THE above is slightly misleading, for in making calculations it should be remembered that millions of gallons of sewage have to be got rid of, which must be a serious handicap to successful farming. R. K.

October 3, 1907.

Midland Notes.

LORD DARTMOUTH'S remarks on Saturday (made at an exhibition of the Stafford County Council evening school garden produce) indicate how widely the conditions of the small holdings problem vary in different districts. He himself, he said, had some 500 holdings under forty acres each, which the Yorkshire weavers used to cultivate. That was in the days of home employment. Now the growth of the factory system has taken these men and their like into the towns, and the demand for his small holdings has gone. To-day the difficulty is to find tenants. Could one have any more striking demonstration of the fallacy of the belief that everywhere men are "hungering for the soil?"

THE guardians of the Worcester Hop Market met on Monday, when they learned officially that the local crop was now expected to exceed early estimates. Anticipation is now for something not quite so big as the 1905 yield, but "very good" in quality. Since September 19 (the annual fair day), 3,444 pockets have been weighed at Worcester, so that the new season has made a good start, while nearly 5,400 pockets (insured for £15,000) are now in the warehouses.

THE large milk-dealing firms are trying hard to reduce the standard prices on new milk contracts. They find their justification in the abnormally large amount of milk now offering in many districts. But there is no ground for assuming that the present state of things will last, and the milk famine of last year is fresh in mind. I understand the Midland Dairy Farmers' Association is hopeful of renewing contracts at the same rates as those prevailing last Michaelmas, *e.g.*, 1s. 8d. and 1s. 3d. per barn gallon for the London market, and 8½d. for the winter at the local factories. The association, which has had meetings lately at Uttoxeter, Hulme End, and Waterhouses, has now a strong hold; its agencies in London, Birmingham, and Manchester have done good work; and the local factors, where they exist, are found not a little helpful in keeping up the price.

SOME two hundred and seventy-five agriculturist and market gardeners have signed the petition to the county council of Worcestershire, asking for compensation in respect to gooseberry bushes which have been or may be destroyed under the recent order of the Board of Agriculture. The number may not seem very large, considering how many people in the Tame, Arron and Bron valleys make a living out of fruit culture; still the signatories represent upwards of 1,000 acres of gooseberry bushes between them.

MY own inquiries tend to indicate that there is small chance of the county council thinking well of the petition. Urban members—and some others—take the view that danger from mildew, like that from any other similar disease, has to be reckoned an ordinary trade risk, with which the community at large has nothing to do. "We might as well be asked to compensate—for the pot-rot in his sheep, or—(the greengrocer) for the plums that went rotten in his shop, or—(a labourer) because he had to send his daughter to the fever hospital." Such was the opinion expressed the other day by a member of the council whom I am not at liberty to name. It would not be surprising, then, if the gooseberry growers are bluntly told that they must either bear the risks incidental to their industry, or insure against them on their own account.

NEVERTHELESS, a rather different aspect is put on the demand by the statement of Mr. W. E. Collinge, read on Monday at the town hall meeting, Evesham. Mr. Collinge, it seems, has come round definitely to the view that the disease known as American gooseberry mildew is by no means so disastrous as was feared when its presence here was first detected. Now that opinion is shared by many practical growers; and it would be hard to deny the fairness of a claim for compensation where a public authority decrees the absolute destruction of bushes on account of the presence of a disease which might be checked by means less drastic. More than that need hardly be said. One is glad to hear that Colonel Long, M.P., will act as one of the growers' delegates. With him to represent them, in conjunction with the Mayor of Evesham and others, and with the precedent of the Colorado beetle compensation to point to, the growers may be sure of making out a strong case.

October 3, 1907.

Agricultural Conference at Northallerton.

The third annual conference of the North-Eastern Agricultural Federation will be held in the Town Hall, Northallerton, on Friday, the 25th inst at 1.30 p.m., when the following resolutions will be considered:—

1. Legislation Affecting Dairy Farmers.—"That sectional legislation promoted by local authorities which touches the interests of farmers be opposed, and that the Government be requested to deal with the milk and meat supply on national and uniform lines at the earliest possible date." Proposed by Mr. C. Marshall, Northumberland and Durham Dairy and Tenant Farmers' Association; seconded by Mr. T. B. Bainbridge, Stockton-on-Tees Chamber of Agriculture.

2. Small Holdings.—"That, whilst giving general approval to the system of allotments and small holdings, this Federation strongly objects to any additional charge being placed upon local rates through the provision of the same, and to any farmer being dispossessed of his land without ample compensation." Proposed by Mr. J. W. Wilkinson, Hexham Farmers' Protection Association; seconded by Mr. W. Parlour, Darlington Chamber of Agriculture.

3. Taxation.—"That agricultural land should be relieved from a large portion of the burthen of local taxation, a burthen which is out of all proportion to the benefits derived by it from the huge and rapidly expanding outlay on sanitation, education, poor, police, roads, and other local purposes." Proposed by Major Hedley, Newcastle Farmers' Club; seconded by Mr. J. T. Wilson, Stockton-on-Tees Chamber of Agriculture.

The Earl Carrington, K.G., President of the Board of Agriculture, has promised to attend the conference and respond to the resolution.

Votes of thanks.

A whirlwind broke over Leaford Farm, in the village of Whatlington, near Battle, on Wednesday night. One side of the house caught the full force of the storm, which broke the windows, disarranged the furniture inside, and swept away chimney pots and roof tiles, whilst a dozen trees were uprooted, and a fowlhouse was lifted up and dropped in a field twenty yards distant. The effects of the storm were not felt at other houses close to the farm.

Fertilisers and Feeding Stuffs.

Over-Production of Potatoes.

The production of potatoes on the Continent has increased in recent years to such an enormous extent that the growers experience great difficulty in using or selling their crops at remunerative prices. In Germany alone there are more than 8,000,000 acres under the crop with a total yield of 50,000,000 tons. (In England we produce less than 4,000,000 tons.)

This unsatisfactory position was discussed at the last International Agricultural Congress at Vienna, and a resolution was adopted that

1. Special efforts should be made to extend the use and consumption of potatoes, and with this object the best method of preserving potatoes should be carefully studied; that lower railway rates should be demanded, and that a duty should be put on imported potatoes and manufactures made from them.

2. The advancement of such industries as employ potatoes as raw material—alcohol and starch.

3. Arrangements should be made for carrying over from one year to another products made from potatoes, so that prices may remain fairly uniform over a series of years, including bad and good seasons. The erection of factories for drying potatoes should be encouraged in every possible way, and the discovery of the best systems encouraged in every possible way by prizes and other inducements.

A great industry is gradually being developed in Germany in the preparation of dried potatoes, a product being obtained which will keep for a considerable time, and is found valuable both as a nourishing food for animals and for household consumption.

It is a subject which should be watched by us, because a good system of drying potatoes and fruit would be a most useful adjunct to farming operations in this country. To see the necessity of it, we have only to look at the plum crop this season, when enormous quantities of fruit are being either sold without any profit or allowed to go to waste.

Importance of Wheat Cultivation.

At the same congress the unprofitable price of wheat was discussed, and a resolution was passed "that in view of the absolute necessity of maintaining the acreage under wheat, from considerations both of a political and industrial character, every means should be adopted to make the growth of this important crop profitable to the grower. A failure to maintain the production of wheat on a large scale would lead to the decline of the prosperity of the empire."

It would be reassuring if more importance were attached to similar considerations in this country.

Potash Salts for Grass Lands.

Winter versus Spring Application.

In order to get the best results from the application of potash salts, especially in the form of kainit, it is essential that the fertiliser should be applied in good time; in the winter, or at any rate some weeks before the crop is sown.

The West of Scotland Agricultural College carried out some experiments to test the relative efficacy of winter versus spring application to the hay crop, and reported:—

(1) That the potash in the manure should be applied in winter rather than in spring, in order to obtain the largest increase of hay seed.

(2) That sulphate of potash is less effective than the other potash manures in producing an increase in the yield.

(3) That of the four potash manures employed in the experiments, kainit was found to be the least beneficial form of potash to the clovers, whether applied in winter or spring.

(4) The best results, especially in the second cutting or aftermath, are obtained from muriate of potash or potash manure salts.

Among the other recommendations in the same report may be mentioned the following:—

That the yield of the hay crop can be largely increased by the use of suitable manure.

That complete manures applied in winter or spring produce as marked increases in the second cutting or aftermath as in the first cutting of the hay crop.

That the employment of farmyard manure applied alone to the hay crop is not an economical practice.

That the yield of hay can be greatly increased by the use of suitable artificial manures.

That farmyard manure is very ineffective in producing an increase in the yield of seed, whether it be applied in winter or in spring.

That the seed grown by farmyard manure is inferior in weight and lightness, as well as in total quantity to that produced by suitable dressings of artificial manures.

Effect of Fertilisers on Lucerne.

The success of the lucerne crop is very dependent on the application of suitable fertilisers. This was illustrated in a striking manner by experiments made by the Department of Agriculture, Cambridge University. The results are worth noting:—

Experiment on Lucerne at Saxmundham (Clay Soil). Crops weighed as Hay. Plots 1-20 acre. Figures per acre.

Plot.	Manure applied each year.	Cost of Manure per Annum.	Saxmundham. Yield 2 cuttings.	Aver. yield 3 years, 6 cuttings.	Average increase or decrease (—) due to Manure.
		s.	cwt.	cwt.	cwt.
1	6 tons farmyard	30	94	67	35
2	3½ cwt. kainit in 1902, 03, 04 4 cwt. bone meal in 1904, 05	9 20	59	40	8
3	2 cwt. nitrate of soda	20	36	31	—1
4	2 cwt. superphosphate	6	92	63	31
5	1 cwt. muriate of potash	9	41	31	—1
6	No manure	—	41	32	—
7	2 cwt. super., 1 cwt. muriate of potash	15	103	70	38
8	2 cwt. nitrate of soda, 1 cwt. muriate of potash	29	38	32	0
9	2 cwt. nitrate of soda, 2 cwt. super	26	90	60	28
10	2 cwt. nitrate of soda, 2 cwt. super, 1 cwt. muriate of potash	35	93	62	30

It brings out the importance of supplying phosphoric acid and potash, as the best results were obtained from a dressing of 2 cwt. superphosphate and 1 cwt. muriate of potash.

The Loss of Fertilising Value in Dung.

Every farmer knows the great value of dung made by animals fed with cotton cake, but an important point to be borne in mind is that such rich dung is much more liable to loss during storage than farmyard manure of a poorer character.

Mr. T. B. Wood, of Cambridge, found the following results:—

Dung made by Animals eating.	Nitrogen per cent. in fresh dung. As ammonia.	As organic compound.	Total.	Percentage of total Nitrogen. As ammonia.	As organic compound.
Roots and hay only	0·028	0·290	0·318	9	91
Roots, hay, and cake	0·203	0·371	0·571	35	65

These figures, observes Mr. Wood, show very strikingly the effect in the composition of the dung from the consumption of a concentrated nitrogenous food such as decorticated cotton cake. The nitrogen, being almost entirely digestible, is excreted in the urine in the form of readily fermentable compounds, which are quickly transformed into ammonia. Of the 42·8 lb. of nitrogen contained in the cake eaten by the two heifers, no less than 23 lb. can be accounted for as increased ammoniacal nitrogen in the dung. It is this quality that causes such dung to have such a marked effect on the crops.

But the presence in the dung of a large percentage of ammonia renders it subject to serious loss during storage. Following Mr. Wood's figures—

	Lbs. Nitrogen in Dung. No Cake Feed.	Cake Feed.
Ammoniacal nitrogen in fresh dung	3·2	25·1
Ammoniacal nitrogen in rotted dung	1·9	10·0
Loss ammoniacal nitrogen storage	1·3	15·1
Percentage loss of ammoniacal nitrogen	25 per cent.	62 per cent.

The dung of the cake-fed animals contains eight times as much ammoniacal nitrogen as the poorer dung, and about two-thirds of this is lost during storage. This great loss of ammonia accounts for 62 per cent. of the total loss during storage in the richer dung, while in the poorer dung only about one-third is lost. There is also a small loss of potash during storage, the quantity reaching the and being only about three-fourths, instead of the whole, and there would also appear to be a loss, though unimportant, of phosphoric acid.

The important point for farmers to consider is how such losses in the valuable manure can be lessened. The best system is to store the liquid separately from the solid manure, by which arrangement the process of fermentation is hindered; but such a plan involves structural expensive arrangements, which are not often possible, and then it would seem that the best plan is to apply the manure to the soil in as fresh a condition as is convenient. The soil will absorb a proportion of the nitrogen and preserve it for the use of the crop.

To Manure at a Profit.

We have pleasure in directing attention to the booklet "To Manure at a Profit—Every Farmer His Own Experimenter"—published at the office of this paper at the small price of 6d. (by post 7½d.). It is a reprint of the series of articles which appeared in these columns some time ago, and attracted a good deal of attention. The writers of the articles combine a thoroughly practical and scientific knowledge of the important subject dealt with, and have succeeded in putting their suggestions and recommendations in simple language capable of being grasped by the reader who is too busy to study the scientific books usually written by scientific men. Every farmer should read the booklet and keep it by him for reference. It can be obtained from the Publisher, 3, Wellington Street, Strand, London, W.C.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in an early issue of each month.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

MOTOR "ACCIDENTS" AND FARMERS.

The increasing antipathy of all country residents to the presence of fast motor cars on our country roads is easily explained by the number of so-called "accidents" which are constantly being recorded in the columns of the daily Press. A particularly bad case is related in another column. Mr. H. H. Owtram, who was the sufferer in this particular instance, wrote asking whether this journal could not take up the cudgels on behalf of the farming industry, and endeavour to obtain some relief by legislation.

Now the difficulty is that unanimity among the various classes affected by the fast motor traffic is impossible. We know that such cases of injury and rapid retreat from the scene of the disaster, such as related by our correspondent, are unhappily by no means rare. Among a certain class of motorists discretion is indeed the better part of valour; and when such inconsiderate drivers and owners as in the case related are brought to justice, something more than a fine is essential if their like are to be prevented from such outrages on peaceful users of our highways.

This question of the limitation of the speed of motors and better means of identification is a very real one; and while we are happy to think that the bulk of motorists are by no means of the type outlined by Mr. Owtram, there are hundreds of irresponsible chauffeurs and owners whom it has become essential should be made to feel the rigour of the law, and be taught once and for all that the roads do not belong to the motor exclusively.

Various plans have been outlined by which such offences could be more easily detected and punished; but it is a subject which well requires consideration, and we should like our readers to place in evidence in our columns their views as to what course legislation should take in this direction.

HURRYING OVER HARVEST.

Perhaps it was the experience of the first part of the summer which caused farmers to have no faith in the clerk of the weather, and when the rain ceased and the sun began to shine in real earnest early in September they could not bring themselves to believe that such conditions could possibly last. Consequently a good many people hurried on with the corn carrying, putting straw and grain into stack before either was dry or ready, and they have lived to repent it. Despite the glorious harvest time, stacks have heated in some cases to the point of firing, and when the time comes for pulling them to pieces for the purpose of threshing the result of being in too great a hurry will be seen in many a stackyard.

One can understand people taking risks with hay in a catchy season, when the work has to be done so many times over, but after corn is cut and set up Nature must do the rest; and what is the good of risking half the value of the crop, or perhaps more, by hauling it to the stack before it is in proper condition?

One looks upon the occupation of gleaning in a cornfield as being something belonging entirely to the past, and the old folks in the country love to tell of the bread they used to bake from the flour made out of the corn gleaned in the harvest fields.

But strange things are always liable to happen, and some districts this year have seen quite a revival of gleaning amongst the cottage folk. The explanation is not far to seek, for crops were so heavy, and in many cases so laid, that the reaper and binder was put out of action, and its work had to be done with scythes or reaping hook. A good many straws were consequently left about to be collected up by the horse rake where the spirit of gleaning was dead,

but where it still remained alive it was quite an old-world sight to see cornfields dotted with women and children engaged in the occupation of Ruth.

In the cases which came before our immediate notice they seemed to quite enjoy it, and the revived experience of gleaning will doubtless be a topic of conversation for some time to come.

Notes of the Week.

Autumn has come quickly on the footsteps of the brilliant close of summer, and our stocks of coal and stores of warm clothes are matters of interest.

"With colour bright the autumn clads the trees,
But men, alas! catch cold and sadly sneeze."

The railway men and the railway companies are engaged in a game of "bluff." There is reason to suppose that a general strike of railway men, which would involve serious consequence, will be averted.

A misunderstanding! The secretary of a Hunt, owing to the large number of puppies this season, advertised for foster mothers, and among the replies was the following:—"Dear Sir,—In reply to your advertisement I beg to offer my services. I am 35 years old; strong, and am fond of children."

Really the prospects of the farming industry look brighter than has been the case for a long time.

Better prices for cereals have come to stay, according to the opinions of those best able to judge, and the autumn sheep sales are very satisfactory.

Three crops in three months must be nearly a record. A farmer in Warwickshire has cut three crops of grass from a four-acre field within that period.

Oxford University is beginning to shake off the dry-as dust conservatism of classical education. A movement is on foot to organise a modern agricultural department, similar to the Department of Agricultural Research so successfully conducted at Cambridge.

We must be careful on the 15th of this month—"Old Moore" says that it will be "an evil day for all things; avoid travelling and visiting."

The enormous crop of plums, a large part of which will be wasted for want of a profitable market, raises again the question of fruit drying or bottling.

On the Continent great progress has been made during recent years in arrangements for drying fruit, and other crops such as potatoes, so that they can be kept for months in good condition.

At an electrical show in America, a number of cows are being milked by an electric arrangement, by which great things in the way of saving labour, cleanliness, &c., are expected.

A casual coincidence. Two men calling themselves A. J. Balfour and John Burns, who have been hop-picking, have applied for admission to the casual ward of Malling Workhouse, Kent. They protest they have given their right names.

The Bishop of London, it is reported, was smothered with kisses by the farmers' wives at Aylmer—where his brother has a farm—in Canada.

And it is added that he managed to give as many kisses as he received. No wonder the poor man showed signs of fatigue.

The German Government stand no nonsense. They recently wanted land for allotments in Posen, so they ex-propriated the Polish landowners.

A landowner, whose woods are infested by nut-pickers, having found the Latin name for hazel nut, has put up the following notice:—"Caution.—All persons entering this wood do so at their own risk. The Corylus avelanna abounds here, as well as equally venomous snakes." The notice has proved efficacious.

The well-known writer, Mr. G. K. Chesterton, is of opinion that it is absurd to make it an objection to brewers that they sell beer. His only objection to many brewers is that they do not, and he has sampled the stuff they sell in a large number of their tied houses.

Growing wheat in France is a prosperous industry. The acreage under the crop in France increased by over 30,000 acres between 1906 and 1907.

The Government are losing no time in acting on their ideas re afforestation. They have made a beginning by buying for £30,000 an estate of 12,000 acres in Scotland for experiments, and to serve as a school for forestry.

Nottingham goose fair maintains its historic importance. It is still opened by the mayor arrayed in all his glory.

Tomato plants stimulated by electricity at the Botanic Gardens are a month in advance of plants left to nature alone.

Berlin is plagued with rats. A society with the title "Rattenvertilgungszweckverband" has been formed for their destruction.

THE FARMERS' DIARY.

TUESDAY, OCTOBER 8.—Islington Dairy Show, first day—Horse Fairs at Hay, Denbigh, and Falkirk—Cattle Fairs at Bingley, Swansea, Birkenhead, Denbigh, Kington, and Falkirk—Hay Pig Fair—Sheep Fairs at Hay and Denbigh—Crewe Autumn Horse Sale, first day—St. Ives Special Autumn Horse Sale—Farm Sales at Maidstone and Lynn—Mayfield Agricultural Sale—Farm and Stock Sale at Cranbrook—Hothersall's Autumn Sale of Horses and Live Stock at Preston—Sale of Lincoln Red Shorthorns at Alford.

WEDNESDAY, OCTOBER 9.—Islington Dairy Show, second day—Worcestershire Shire Horse Society's Show at Worcester—Horse Fairs at Carmarthen and Cockermouth—Cattle Fairs at Worksop, Bolton, and Dewsbury—Sheep Fairs at Cockermouth and Dewsbury—Crewe Sale, second day—Farm Sales at Chatham, Sutton Valence, Nettlestead, and Tunbridge Wells—Richardson's Annual Sale of Fruit and Other Trees at Tunbridge Wells, first day—Special Sale of Lincoln Curly-Coated Pigs at Boston.

THURSDAY, OCTOBER 10.—Islington Dairy Show, third day—Horse Show at Ashby-de-la-Zouche—Cork Agricultural Show, first day—Weyhill Great Agricultural Fair—Looe Cattle Fair—Sheep Fairs at Hadleigh, Pontypool, Lancaster, Leicester, and Mansfield—Crewe Sale, third day—Wrexham Horse Sale—Farm Sales at Harty, Brookland Court, Wadhurst Hall, and Whittlesea—Billington Live Stock and Farm Sale—Sending-in Day for the Coleshill Show.

FRIDAY, OCTOBER 11.—Islington Dairy Show, last day—Cork Agricultural Show, second day—Lichfield Horse Sale—Etchingham Agricultural Sale—Stollery's Cart Horse Sale, The Barbican—Glastonbury Great Fair—Agricultural Fairs at St. Albans, Barnsley, Hull, Malton, Kingsland, Eastbourne, Bishop Stortford, Sittingbourne, Bedale, Tring, Colne, Holbeach, Ashford, and Leyburn—Crewe Sale, fourth day—Lanley (Kent) Farm Sale—Sending-in Day for the Kilmarnock Show.

SATURDAY, OCTOBER 12.—Crewe Sale, last day—Farm Sales at Challock and Canterbury—Perth Sale of Pedigree Cattle—Norwich, Canterbury, Cambridge, Oxford, Peterborough, Aylesbury, Wisbech, and Colchester Markets; first full supplies of new malting barley expected—Agricultural Fairs at Sevenoaks, Warwick, Alston, Carlisle, Rhayader, and Bedford—Redruth Great Fair—Sending-in Day for the Dufton Show.

MONDAY, OCTOBER 14.—Agricultural Fairs at St. Ives, Leominster, Bakewell, Sherborne, Thorne, Croston, and Ludlow—Farm Sales at Poldhurst, Friningham, and Stamford.

West Country Notes.

AT their meeting on Wednesday the Somerset County Agricultural Instruction Committee made choice of Miss Musgrave from the Herefordshire Butter School to take charge of the Somerset School, in succession to Miss E. W. Stubbs, who has resigned on her approaching marriage. The happy event takes place on the day of issue of this paper.

FROM their unfortunate experimental farm at Bickenhall the Somerset Committee saved a sum of £1,520, the result of the sale of stock, &c. The disposal of this sum to other educational purposes than those of agriculture was suggested, but Mr. A. F. Somerville and Mr. R. Neville Grenville and others pointed out that there was experimental work which could be carried out at the cheese school, and in other directions, for which such money might better be used, and it was agreed to hold it in hand for the present with some such object in view.

THE committee also discussed the subject of the remarks made in the MARK LANE EXPRESS of a week or two ago, and agreed that they would continue to publish the details hitherto given of the work at the school. There are some members of the committee who quite agree that the additional details which were suggested in your comments would be very useful information to cheese makers.

THE price of cheese is slightly better again, and more satisfaction is felt at the current prices than has been the case for the past few weeks, so far as some of the farmers are concerned; but reliable information from dealers shows that they have a difficulty in placing the higher-priced dairies, "unless the price comes down to a point that will induce people to eat more cheese, we shall have a difficulty to clear our stocks this year."

THERE are at last distinct signs, as most people had been anticipating, of the craze for sport invading agricultural quarters. The farmers who are at this season changing hands find, particularly amongst the younger hands, a demand that the Saturday afternoons shall be free for football. Cows and other animals need attention on these days as well as others, and it is at present a problem which requires solution as to how the holiday can be granted and yet the necessary work carried out.

WILL the farmer be ultimately obliged to employ men in shifts or relays, as is done in some other competing branches of employment?

ANE old West Countryman has passed over to the majority in the late Mr. E. J. Stanley, who was for about a quarter of a century member of Parliament for the Bridgewater division. He was well known in the agricultural showyard not so long ago for his fine breed of West country cattle, and won numerous prizes at all the leading shows. He was one of the finest types of squire known in the West, spending his money amongst his neighbours and the towns in his vicinity, and in all possible ways upholding the district in which he resided.

HIS popularity was unbounded in consequence, and his success at the Parliamentary contests in which he engaged was largely assured by this local patriotism.

MOREOVER, he was always a keen sportsman, and the freedom with which he assisted at all functions to promote good and deserving objects about him, enhanced the esteem in which he was regarded.

A QUAINT old custom has been followed in Gloucestershire this week, where the sheriff, having received a writ in ancient form from the King, has given notice to hold a court of freeholders of the county to elect a verderer of the Royal Forest of Dean. The only applicant for the appointment at present is Mr. Charles Bathurst, of Redhill Park, Lydney, the son of the late holder of the office. The verderers meet at the Speech House every forty days to transact any business, but the duties are practically nil. Formerly each verderer was allowed two horses, five spears, one javelin, one shield, and 200 shillings annually for his services in protecting and preserving the King's deer. They had also to administer the quaint old forest laws.

AN extraordinary accident to a child has occurred in North Devon, one that would probably be impossible elsewhere. Mrs. Clarke, wife of a J.P. at Fremington, called at Chilcott Farm, in that parish, and the children ran into the passage to play. One of the children, a boy of two and a half years, tripped and fell into a pan of milk which had just been scalded and set out to cool with others. The poor little lad sustained such severe injuries that he died from the shock. All through the district the deepest sympathy is felt with the parents.

IN both Gloucestershire and Somersetshire this week the reports on the school gardens have been presented, and in each case very favourable results have been attained. An extension is contemplated in Somerset, and also a proper course of instruction for teachers. This should be a valuable adjunct to the work already in progress.

October 4, 1907.

SHEEP: NOTES AND JOTTINGS.

THOSE flockmasters who have been strong supporters of the value of registration of sheep's pedigrees and of the work done by sheep breeders' associations, can with every justification point out to the great success that has been secured by the Kent or Romney Marsh Sheep Breeders' Association as a proof of the soundne s of their contention.

THIRTEEN yeirs have e'apsed since this Association was formed, and during that period the interest of the breed has been fostered and pushed to the fore by untiring energy and perseverance, and the result is that within those few short years a breed, which was then looked upon as quite of secondary importance, has secured for itself and its breeders a position pretty nearly equal to the most popular breed of the present d iy.

THE sale report that was given in our last issue indicates how keen the competition was for the best. It is very seldom indeed, outside the Lincoln breed, that any sale more than one, or at the most, two rams exceed the century, but at Ashford, on September 27 last, four rams sold for over 100 guineas, another made 96 guineas, another 90 guineas, another 75 guineas, and yet another, a four-year-old stud ram, 80 guineas, whilst a reference to the average list makes one almost inclined to say that the Kent or Romney Marsh sheep are soon going to equal the Lincoln in this respect, for we find two of the averages exceeding £40, and three exceeding £20, all of which are in excess of those ever before recorded.

File's sheep, was £40 10s. 4d., and the bottom average of the sale—the Earl of Verulam's—was £4 14s. 6d. A striking difference between two consignments, which is still further emphasised when we remark that the strain of blood represented by the two flocks is, to a large extent, identical.

ANOTHER point to which one may refer in connection with this sale is the striking difference of opinion between the purchasers and the judges. For instance, the first four pens in the competition for the Copper Challenge Cup realised the following averages:—The first prize pen £35 9s. 10d., the second prize pen £49 2s. 10d., the rn pen £24 11s. 5d., and the first he pen (Mr. Charles File's) £68 0s. 10d. Whether or not the averages can be taken as a true test of the individual merits of the respective sheep need not be discussed, but it must be clearly patent to all that the marked preference shown by the purchasers for the last mentioned pen indicates that either a mistake was made or that the purchasers, most of which were buyers for export, were very wrong in their es'imation of the merits of the respective sheep.

THIS week's notes have been largely given over to the Ashford Ram Sale, for it is seldom that so well deserved a success is secured as that to which reference has been made.

IT may be that breeders of other varieties may think that too great prominence has been given to this success. It is not so, however, for the success that has been secured by the society mentioned above can be secured by others also. The first essential is elimination of the individual, and the substitution of the general interest.

old associations and upset many arrangements that have been in vogue for perhaps generations. This, however, cannot be helped, for the demand at the present time is that which has to be supplied. The arrangements suitable for twenty, fifty, or a hundred years back are not suitable now, consequently those who desire to secure the attendance of the buyer must supply him with that which he requires.

CAREFUL thought and a full knowledge of the different systems for disposal of registered sheep throughout the country convince those responsible for the management of the Ashford Ram Show and Sale that the one great want in connection with their breed was the establishment of one central sale at which all the best sheep of the breed could be seen and purchased.

THE first sale, which took place eleven years ago, was not a success, and those who were responsible for its institution were anything but popular, in fact, very hot times were promised to them.

THESE have indeed come, for the success of the past two years' sales have given them a very hot time indeed, not in being found fault with, but in receiving the congratulations of those who were the most bitter opponents at the time when these sales were first established.

TO those breeds—and there are many—which have not yet secured the advantage of the combination sale the writer urges them to lose no time in following the example set them by the Kent or Romney Marsh Sheep Breeders' Association, the Lincoln Sheep Breeders' Association, the South Devon Flock Book Association, &c., for depend upon it, once get a start made, and success is assured.

The Wensleydale Ram shown above is the animal with which the Exors. of the late Mr T. Willis won a First Prize and Special at the Royal Lancashire Agricultural Society's Show this year.

MANY valuable and instructive lessons might be drawn from this excellent result, but it will suffice if we mention just a few. The first and foremost is that this success has been secured, simply and solely by reason of the combination of interests having become united and used with one object—*i.e.*, the benefit of the breed. Again, it may be pointed out that the most successful flock at the present sale was Mr. Charles File's, and it is a great satisfaction to those who are believers in pedigree to know that not only does Mr. Charles File individually number his sheep, but that practically the whole of his ewe flock is individually entered in the flock book.

THE success that has followed this system of careful breeding is emphasised in an equally striking manner, by a reference to Mr. J. B. Palmer, who also owns an individually numbered flock, as do also Messrs. F. Neame and A. Amos.

ANOTHER lesson of general interest can be deducted from the result of this successful sale, and that is the marked difference in the receipts received by the vendors for their sheep. The top average, which was secured by Mr. C.

"HOW is it," said a visitor from the Colonies, "that this sale secures regularly so good and general an attendance?" The reply was, "because it is worked for the benefit of the breed as a whole, and not for the individual, the rules governing the society are clear and defined; all sheep offered are for sale without reserve, and those who attend the sale know full well that at the sale there is on offer a larger representation of the different flocks of the breed than at any other fixtures." This is one of the greatest reasons for the success of the sale. Buyers can come, and they do come, from all the different countries in which the breed is known, with full confidence that at the Ashford Ram Sale they will be able to see and compare at one and the same time the representatives of the best flocks of the breed.

THE institution of combination sales of this description takes time, for they affect many

Sale of Lincoln Sheep and Shorthorns.

The flock of Lincoln Long-wool sheep and herd of Lincoln Red Shorthorn cattle, the property of Mr. W. A. Ewbank, of Covenham Manor, near Louth, were recently dispersed by auction. The flock is one of the oldest established in Lincolnshire, and with a large attendance of buyers competition was keen and prices ruled high. The averages were:—Eighty-three shearling ewes, £3 7s 9½d.; fifty-three two shear ewes, £3 8s. 9d; fifty three shear ewes, £3 4s. 9½d.; thirty-four four-shear ewes, £2 6s. 8½d.; 100 shelambs, £2 4s. 4d.; fifty three he-lambs, £1 19s. 11d.; nineteen shearling rams, £7 8s. 8d.; thirty-seven ram lambs, £2 9s. 3d.; thirty cows with calves, £31 16s. 10d.; twelve two-year-old heifers, £22 9s. 9d.; thirteen yearling heifers, £12 2s. 7d.; fifteen yearling steers, £15 7s. 10d.; two stud bulls, £27 19s. 1d.

SALES AND FAIRS.

Blandford.

The October fair at Blandford, Dorset, which is generally looked upon largely as a "cull" fair, was held on Thursday, when the supply totalled between 3,000 and 4,000 at sales held respectively by various auctioneers. The great bulk of the offer comprised Down wether lambs, of which there were some good drafts penned, but was by no means confined to this particular class of sheep. Best Down wether lambs sold from 46s. to 48s. 6d.; others, 35s. to 45s.; Down chilver lambs, 42s. to 44s.; Down mixed lambs, 28s. to 34s.; high condition wether lambs, 51s. to 54s.; Down ewes, 46s. to 53s. A capital clearance was effected, there being a very full attendance of buyers from all parts of the Western counties.

Doncaster.

The first ram sale of the season at Doncaster was held on the 28th inst., when twenty rams belonging to Mr. J. T. Waterhouse, of Braithwell, averaged 7 guineas each; ten belonging to Mr. Ward, of Quarrington, near Sleaford, made £9 10s. per head, and other lots averaged £6 5s., £5 10s., and £5 each.

Mr. C. File's Kent and Romney Marsh Sheep.

On Wednesday there was a large company of breeders present at Elham, near Canterbury, for the sale of a number of ewes and rams from Mr. C. File's well-known flock of Kent and Romney Marsh sheep, and with keen competition a capital sale resulted:—Eighty-five ewe tegs made from 55s. to 95s., twenty four-tooth ewes from 55s. to 87s, five six-tooth ewes 57s. 6d., thirty-seven full-mouth ewes from 60s. to 80s., and twenty-four ram tegs from £5 16s. 6d. to £14 3s. 6d. The ewe tegs thus averaged 72s 6d., the four-tooth ewes, 66s. 10d., the six-tooth ewes 57s. 6d., the full-mouth ewes 67s. 9d., the ram tegs £8 11s. 11½d. Ewes of all ages together averaged 70s. 1d. apiece, and ewes and rams together throughout fetched a grand total of £721 14s, or just over 4 guineas per head. The buyers included Lord Harris, Lord Northbourne, Earl Guilford, Messrs. C. Collard, T. C. Crawford, Cecil Collard, E. J. Goodson, Gordon Brown, A. Miles, Hodgson, G. S. Goodson, G. Setterfield, T. Wotton, F. Greaves, H. Newman, H. J. Smith, R. W. Wood, Gordon Neame, Friend, White, Matthewa, W. Perkins, Palmer, Whittaker, and G. Jekin.

At the same time a number of ewes and rams from the registered flock of Mr. J. File, of Saltwood, were also sold. Sixty shearling ewes realised from 55s. to 62s. 6d., ten, four, and six-tooth ewes made 54s. and of 55 full-mouth ewes, ten made 53s. and the remainder 55s. Six ram tegs fetched from £5 15s. 6d. to £8 8s.

Mr. A. G. Hecks' Dorset Horns.

The registered Dorset Horn breeding flock belonging to Mr. A. G. Hecks, Brimley Farm, Stoke Abbott, was sold by auction on Monday in the presence of a good company, and met with a good demand. The flock comprised 500 ewes and ewe lambs, registered No. 228 in the Dorset Horn Flock Book, and was founded in 1892 from the best West Dorset strains, replenishments having been made during recent years from well-known flocks. The following were the prices made:—Six-teeth ewes: 73s., Mr. R. B. White; 70s., Mr. F. Johnson; 66s. 6d., Mr. J. Davy; 62s., Mr. Cox; 61s., Mr. Masters; 60s., Mr. F. Johnson; 15 cull ewes, 54s., Mr. Woolmington; average, 71s. 6d. Four-teeth ewes: 77s., Mr. F. Johnson; 64s., Mr. Manfield; 63s. (twice), Messrs. G. Mayo and G. Masters; 62s., Mr. W. Chick; 58s., Mr. Marsh; 56s., Mr. J. Frampton; culls to 52s., Mr. Lenthall; average, 60s. 2d. Two-teeth ewes: 57s., Mr. P. Wakeley; 56s., Mr. Bowditch; 55s., Mr. Frampton; 52s., Mr. Frampton; 50s. 6d., Mr. H. Lenthall; average, 54s. 3d. Ewe lambs: 57s., 55s. 6d., and 46s., Mr. R. H. Cooper; 47s., Mr. J. H. Lenthall; 45s. 6d. and 46s. 6d., Mr. R. B. White, down to 40s.; average, 46s.

Mr. H. F. Locke-King's Southdowns.

Mr. H. F. Locke-King, of Okehurst Farm, Okehurst, Billingshurst, Sussex, having let his farms, the whole of the stock was disposed of last week by auction, and included was the well-known flock of Southdown sheep, for which there was a keen demand at good prices. Draft ewes made up to £2 4s.; shearling ewes to £2 15s.; stock ewe lambs, £1 15s. 6d.; wether lambs, £1 17s. 6d.; mixed lambs, £1 14s.; and rams and ram lambs made up to £5 15s. 6d. The average per head worked out as follows:—50 draft ewes, £2; 200 shearling ewes, £2 8s. 9d.; 200 stock ewe lambs, £1 14s. 10½d.; 200 wether lambs, £1 16s. 6d.; 299 mixed lambs, £1 12s. 3d.; 3 rams, £5 18s. 6d.; 13 ram lambs, £3 6s. 3d.

Ripon.

There was a good supply at Ripon October Sheep Fair, held on Thursday, but a very slow trade in all classes except for anything young and good. Best twice crossed lambs made 35s. to 36s., half bred ditto 22s. to 24s, half bred ewes 40s., and shearlings 45s. each. Small show of rams, which were quoted at £3 10s. to £4.

Shrewsbury.

Messrs. Alfred Mansell and Co.'s final sheep sale of the season at Shrewsbury took place on Monday, when there was a large attendance of buyers and satisfactory prices were realised, in fact it was the best clearance that has taken place for some years past. The chief prices, with vendors' names, were as follow:—

Shearling Rams.—Sir Walter O. Corbet, Bt., Acton Reynold, 5½ guineas to 7 guineas; Mr. M. Williams, Whiston, Albrighton, 7 to 9 guineas; Mr. S. F. M. Nevett, Yorton, 4½ to 6 guineas; Mr. P. Everall, Uckington, 5½ to 13 guineas; Mr. T. Jones, Cotwall, Wellington, 5 to 6 guineas; Mr. T. S. Minton, Montford, 8 to 12 guineas; Mr. R. C. Pryce, Broughton, 3½ to 5 guineas; Mr. Frank Bibby, Hardwicke, 6 to 8 guineas; Mr. A. Tanner, Shrawardine, 6 to 14 guineas; Mr. T. G. Juckes, Tern, Wellington, 5½ and 8½ guineas; Mr. C. Blatherwick, the Beam House, Montford, 6 to 8½ guineas; Mr. E. J. Frank, Beslow, Wroxeter, 5 to 6 guineas.

Ram Lambs.—Mr. W. J. Wood, Saredon, Wolverhampton, 2¾ to 2½ guineas; Mr. J. H. N. Walford, Ruyton Towers, 3 to 3½ guineas; Mr. R. C. Pryce, Broughton, 3 to 4¼ guineas; Mr. W. Gregory, Walford, 3 guineas.

Ewes.—Mr. F. Bibby, 55s. to 57s.; Mr. T. Cornes, Lythwood, 44s. to 56s.; Mr. Kent, Eyton, 44s. to 53s.; Mr. Davies, Whitley, 49s. to 51s.; Mr. Jones, The Thresholds, 42s. to 47s.; the Earl of Powis, Powis Castle, Welshpool (ewe lambs), 33s. to 35s.

About 500 Shropshire cross-bred and Clun ewes and wethers made from 40s. to 47s.

Wensleydale Bluefaced Sheep.

The Wensleydale Bluefaced Sheep Breeders' Association and Flock Book Society held their annual show and sale at Hellifield on Tuesday, when the entries were considerably more numerous than last year, and the attendance of breeders and buyers was again satisfactory, but the high rates of last year were not generally sustained, except for the highest class of animal, which was in as much request as ever. The top price was 23½ guineas, given by Mr. R. Procter, of Barkerfield, for the champion ram of the show, Royal Crown, the property of the Exors. of the late Mr. Thomas Willis, of Carperby, the next best price, being £20, paid for the third prize shearling ram (owned by Mr. Thomas Walker, of Grange-over-Sands) by Mr. Morphet, of Dent. Judging occupied the whole morning, and the chief winners, with the prices obtained, were as follows:—

Aged ram.—1, Lord Henry Bentinck's King of Blues, sold to Mr. Smith, of Howden, for £8 15s.; 2, the Exors. of the late R. Ewbank, Lawkland Green, Clapham, Lucky Star, reserved at £4 15s.; 3, T. Woof, Sedbergh, Carperby Prince, £6, to Mr. Bushby, Swinithwaite.

Shearling Rams.—1 and champion sheep in the show, the Exors. of the late T. Willis, of Carperby, Royal Crown, Mr. R. Procter, of Barkerfield, Downham, 23½ guineas; 2, Lord H. Bentinck's Underley Blue, Mr. W. Foster, of Thoresby, £16 15s.; 3, T. Walker, Grange-over-Sands, King Maker, Mr. W. Morphet, of Dent, for £20.

Ram Lambs (class for members who keep more than ten ewes).—1 and reserved for champion, T. Walker, Grange-over-Sands, Mr. W. Graham, Eden Grove, £18 15s.; 2, J. Askew, Skerton, Lancaster, Mr. Coultherd, of Clapham, £6 10s.; 3, R. H. Millner, Mowbrick Farm, Hest Bank, Lancaster, Mr. Robinson, of Strickley, for £6 10s.

Ram Lambs (members with not more than ten ewes).—1 and champion, J. Close, of Carperby, S.O.; 2, T. Kitchen, Tatham Hall, Wray; 3, the Exors. of R. Ewbank, Clapham.

Three Ram Lambs.—1, Lord H. Bentinck, M.P., Underley Hall, Kirkby Lonsdale; 2, Messrs. E. Newhouse and Son, Arncliffe Hall, Slyne, Lancaster; 3, C. Knowles, Ellel, Lancaster.

Ram Lamb (selling class, reserve not to exceed £5).—1 and 2, Lord H. Bentinck; 3, J. Towers, Nether Kellet.

Sheep Dipping.

Although it may seem paradoxical to say so, there are certain cases decided by courts of law that merit consideration more on account of what they do not decide than of what they do, and into this category, we are inclined to think, falls the very recent case of "Bingley *v.* Quest" (1907), reported 71 J. P. 443. In itself the case is only one of a long series of decisions, of which "R. *v.* Hopkins" (1903), 57 J. P. 152, is a good example, on the somewhat technical point that a conviction cannot be supported unless on its face it discloses an offence; but we notice that in certain quarters a fictitious importance has been attached to the case by attributing to it the disclosure of an unpremeditated gap in the legislation for the prevention and eradication of disease in animals. In some newspapers which give prominence to matters connected with agricultural interests it has been claimed for the case that it decides that sheep need not be dipped in accordance with the regulations of the Board of Agriculture and Fisheries, as formulated in the various Sheep Dipping Orders. The case does nothing of the kind, though it was concerned with the escape from a penalty of a person who had declined to comply with such regulations; but such escape was on purely technical grounds connected with the drawing up of the conviction, and had nothing to do with the merits of the case. In view of this unfounded claim, it may be useful to submit both the decision and the general law on the subject of the dipping of sheep to a brief examination, since the subject is one of considerable importance to farmers and sheep graziers, as well as to the authorities and officers engaged in administering the Diseases of Animals Acts.

Sheep scab, as is well known, is an irritating and persistent disease caused by the presence in the skin of a small parasite which is readily transferred from one sheep to another by contact, or even by bits of the detached wool of an infected animal, and in order to keep the disease in check it has, of late years, been found desirable to provide for the compulsory and periodical dipping of sheep in a liquid designed to kill any parasites present on the skin. Accordingly, by Section 1 of the Diseases of Animals Act, 1903, Section 22 of the Diseases of Animals Act, 1894, was amended and extended so as to provide that the Board of Agriculture and Fisheries might make orders for prescribing, regulating, and securing the periodical treatment of all sheep by effective dipping. In exercise of this power the Board have from time to time made various orders, some of general, others of local, application. For our present purpose we need only refer to these orders in so far as they relate to the composition and preparation of dips. The Sheep Scab Order, 1905, provides (Art. 18) that a sheep dip prepared in accordance with any of the prescriptions (which are three in number) specified in the Second Schedule to the Order, shall be deemed to be a sheep dip approved by the Board for sheep scab, and a sheep dip contained in a package or vessel marked with a statement or indication that the sheep dip has been so prepared shall be deemed to be a sheep dip purporting to be approved by the Board for sheep scab. By the Sheep Scab (Compulsory Dipping Areas) Order, 1906, it is provided (Art. 2) that the owner of any sheep in an area where dipping is made compulsory, must cause the sheep to be treated for sheep scab by effective dipping, and may not (Art. 4) expose them for sale or exhibition in any market, &c., unless they have been thoroughly dipped in an efficient sheep dip, which is defined to mean (Art. 16) a sheep dip approved by the Board for sheep scab, or purporting to be so approved.

By the Sheep Dipping (North of England) (Order), 1906 (and orders in similar terms have been made for other parts of the country), a compulsory dipping area was constituted, and it was provided that where sheep were to be dipped under the Order, they should be dipped by a thorough immersion in a sheep dip approved by the Board for sheep scab, or purporting to be so approved; and that (Art. 19) if a sheep was not dipped as required by the Order, the owner and person in charge of the sheep should, each according to and in respect of his own acts and defaults, be deemed guilty of an offence against the Diseases of Animals Act, 1894.

Having thus briefly stated the law as to sheep dipping so far as it relates to the use of an approved dip, we turn to the facts in the case of "Bingley *v.* Quest" (*supra*). The appellant was the owner of certain sheep within the compulsory area constituted by the North of England Order, and it was his duty to dip his sheep between the 15th and 30th of September, 1906. His shepherd duly gave notice to the local authority of his intention to dip the sheep on the 26th of September, and on that day the sheep were dipped in the presence of representatives of the authority. The dip used, however, was not a sheep dip approved or purporting to be approved by the Board of Agriculture and Fisheries, and was used by the appellant with the knowledge that it was not an approved dip, for the evidence showed that he stated to the officers, on the non-compliance with the requirements of the Order being pointed out to him, that in his opinion it was more effectual than the approved dip, and that he should not comply with a notice to dip the sheep in an improved dip. Except by the dipping on September 26, the sheep were not dipped at all between September 15 and 30. On October 3 proceedings were taken against the owner before justices, by whom he was convicted "for that he on September 26, 1906, then being the owner o certain sheep"—we quote from the conviction, which followed the terms of the information and summons—"did not dip the same in a sheep dip approved by the Board of Agriculture and Fisher for sheep scab or purporting to be so approved, contrary to the Sheep Dipping (North of England) Order, 1906, and contrary to the form of the statute in such case made and provided." This conviction was upheld at quarter sessions, subject to a case stated.

A perusal of this conviction will make it clear to our readers that it discloses no offence: the owner was not required to dip on September 26,

TO FARMERS AND POULTRY REARERS.

POULTRY HOUSE on wheels adapted for farmers' use in turning fowls into the stubble after the corn is cut.

Tell us your size and send a P.O. for the amount. We do the rest.

E. BROWN & SON,

The Pioneers in Farm Foot Wear,

313, ARGYLE STREET, GLASGOW.

Price List Free on Application.

but between the 15th and 30th, and to have been in order the conviction should have been for, as was the fact, not dipping between those dates. To get over the difficulty it was ingeniously argued that the conviction must be read in the light of the facts proved, and that as the owner did not and, would not, dip before the expiration of the legal period, he was rightly convicted. But, as the court pointed out, to be rightly convicted on facts is not all that is required: the record of the conviction must be properly drawn up so as to disclose an offence in law, and as this conviction did not show an offence, it must be quashed. That was all the case decided, and it leaves as undoubted law that sheep must be dipped before the end of the prescribed period in a dip approved by the Board. It is greatly to be regretted that the lay Press should so loosely report legal proceedings as they have done in this case, actually going so far as to attribute to one of the judges the statement that the Acts did not make it necessary to use a particular dip, and that not using a dip approved by the Board was not an offence, and leaving out all mention of the important qualification of use within the prescribed period.—*The Justice of the Peace.*

Suffolk Sheep Society.

At the last meeting of the council of the Suffolk Sheep Society the secretary read a letter from Mr. B. H. Hinde, secretary of the International Live Stock Exposition, thanking the Suffolk Sheep Society for the offer of £10 for special awards for Suffolk Sheep at the coming International Live Stock Exposition, and he said he was sure that this offer would be thoroughly appreciated by all of the prominent breeders of Suffolk sheep. The secretary also announced the receipt of a later letter on the same subject from Mr. George W. Franklin, secretary of the American Suffolk Flock Registry Association, who suggested that the best way to popularise the Suffolks in America would be along the lines of getting some of the large importers to bring over good flocks of show Suffolks, and make the circuit of the fairs. These men would do this if they had proper inducement. Showing at fairs seemed to be the best way to get the Suffolks before the people. If some good Suffolks could be sent to the president of the association, that gentleman would be glad to show them, as he would be exhibiting at the International.

Considerable discussion took place on the subject, in the course of which it was generally admitted that it would be advisable to take advantage of the opportunity of sending some choice examples of Suffolk sheep, and eventually it was resolved that Mr. S. R. Sherwood, Mr. Herbert Smith, Mr. Thos. Goodchild, and Mr. J. R. Keeble should form a sub-committee to reply to the communications which had been received. Several gentlemen volunteered to send selections from their several flocks, and the president, Mr. E. G. Pretyman, said he should be glad to help the fund by a donation of 10 guineas.

Flock Competitions.

The secretary announced the flock competitions for 1907 as follows:—

Division I.

Class A (one entry): Mr. Percy Eagle, Risby, 250 ewes.

Class B (two entries): Mr. D. Abbott Green, Fingringhoe Hall, 201 ewes; and Mr. R. L. Barclay, Higham, 203 ewes.

Division II.

Class A (four entries): Mr. Leopold Davies, Herringswell, 303 ewes; Mr. Edwin Giles, Great Clacton, 505 ewes; Mr. F. D. Girling, Thorrington Hall, 305 ewes; and Sir E. Walter Greene, Nether Hall, 362 ewes.

Class B (seven entries): Colonel A. W. Ruggles-Brise, Spains Hall, 220 ewes; Exors. of the late Marquess of Bristol, Ickworth Park, 120 ewes; Mr. W. G. Fairhead, Peldon, 157 ewes; Earl of Onslow, Hannams Hall, 155 ewes; Mr. W. F. Paul, Kirton Lodge, about 200 ewes; Mr. Clement C. Smith, Trimley, 188 ewes.

PRETYMAN CUP (thirteen entries).—Mr. R. L. Barclay, 24 lambs; the late Marquess of Bristol, 12; Mr. F. Leopold Davies, 27; Mr. Spencer Dawson, Stratton Hall, 30; Mr. Percy Eagle, 25; Mr. Edwin Giles, 50; Mr. F. D. Girling, Thorington Hall, 29; Mr. D. Abbott Green, 20; Mr. J. R. Keeble, Brantham Hall, 19; Earl of Onslow, 18; Mr. C. C. Smith, 19; Mr. H. S. Smith, Walton, 18; and ditto, Grimston, 16.

The chairman pointed out that it was satisfactory to know that there were twenty six entries this year, in comparison with twenty-two last year.

Ear Marking.

The chairman read the report of the Editing Committee on the subject of ear-marking, which stated that it was unanimously decided to recommend the council to appoint an official ear-marker for each district, whose services would be available to any member of the society desiring his assistance. The suggested charge for his services to be one penny per sheep marked, with a minimum

1,300 LEICESTER, LINCOLN, and CROSS-BRED GIMMER SHEARLINGS and BREEDING EWES, from the most noted Wold Flocks.

Catalogues of all Sales forwarded free on application to the AUCTIONEERS, Malton, Yorks.

charge of 5s., plus railway fare. The committee also recommended the council to appoint inspectors, preferably members of the council, who would attend sales and examine the registered sheep offered, reporting to the society any cases of incorrect or deficient ear-marking. It was further suggested to circulate the above decisions, if adopted, to all members of the society, at the same time pointing out the importance of correct and careful ear-marking.

On the motion of Mr. J. C Dawson, seconded by Mr. J. R. Grimsey; and Mr. Frank Roberts having pointed out that it was somewhat too late to take action this year, one-third of the returns having been already sent in, it was resolved that the question of the appointment of inspectors should be brought forward at the next meeting, and that the secretary should issue circulars in due time next season with respect to effective ear-marking.

Cheviot Sheep Society.

At the annual meeting of the Cheviot Sheep Society, Mr. Borthwick, of Oxnam Row, was unanimously re-elected president for the ensuing year, and Mr. J. Robson, Newton Bellingham, was reappointed secretary.

At the same meeting a letter from Mr. G. G. Rea, of Middleton, Wooler, with reference to the question of classes for Cheviot sheep at next year's Royal Show at Newcastle, was read. He suggested that they should draw up a list of classes and classification as regards numbers to be exhibited in a pen, which should be sent to the secretary of the Royal Agricultural Society, with an intimation of what they would be prepared to subscribe. As next year's show was so near the Borders, it seemed a particularly fitting occasion to make a special effort to have the breed well represented.

Mr. Robson, secretary, said they should give something to the Royal Society. It was important that they should keep the Cheviot Society before the Royal, and he felt confident that if they did not support them both financially and by showing more than they had been doing, these classes might be taken out of the prize list, which would be a great pity. It was the Royal Show to which most of the foreigners went first, and if they allowed the Cheviot classes to die out there, they would lose any chance of foreign support.

Mr. John Elliot, Hindhope, moved that they ask the Royal Society to give four Cheviot sheep classes—viz., aged tups, dinmonts, ewes, and gimmers. Mr. M'Kerrow, of Boreland of Southwick, seconded, and it was unanimously agreed to.

Mr. Jacob Robson, Byrness, moved that they also suggest that ewes and gimmers be shown singly instead of in threes. Mr. Thomas Elliot, Attonburn, seconded, and the president said he thought it was a very good proposal, although he doubted if the Royal Society would agree to it. Mr. M'Kerrow said they should draw their attention to the fact that this was what the Highland and Agricultural Society had done and it brought out more sheep.

This suggestion was also agreed to.

The president said that as a breed society they should give some financial support to the Royal, and after some discussion, Mr. John Elliot, Hindhope, moved that they give £15, on condition that the Royal Society provided four Cheviot classes, and the motion was agreed to.

Leicester Sheep Society.

A meeting of the council of the Leicester Sheep Breeders' Association was held at the Keys Hotel, Driffield, on Thursday last, Mr. L. Clarkson (Huggate Lodge), vice-president, being in the chair. It was decided to again contribute £18 as a class prize for Leicesters at the Royal Show at Newcastle next year. The council were, however, not entirely agreed as to the principle of contributing to the prize list. At the request of the Stock Prizes Committee of the R.A.S.E., the council nominated six members as competent judges of Leicester sheep, from which a selection will be made for the Newcastle meeting.

Store Stock Sale at Dublin.

Mr. Gavin Low held his second autumn sale of over 900 head of cattle. There was a good attendance of English and Scotch men, but prices were 1s. per cwt. below Mr. Low's last autumn sale. The top live weight was secured by Mr. J. Williamson for a very choice two and a half-year-old Aberdeen-Angus bullock, which was sold for £14 7s. 6d. Mr. J. T. Smith sold a fine lot of three-year-old Aberdeens for 31s. 6d. per cwt. Mr. Nicholson's Hereford yearlings gave rise to considerable competition, and made 30s. 6d per cwt. Lord Clonbrook's cattle were also very fine, and excited keen bidding, comparatively few lots changed hands at less than 27s. per cwt. A good clearance was effected.

THE FUTURE OF HORSE-BREEDING.

Profitable Hunter Breeding—Over-Feeding—The Encouragement of Other Breeds—The Hackney Cross—Cleveland Bays and Coach Horses—The New York Show.

Profitable Hunter Breeding.

LAST week I intimated that Hunters might be bred so as to leave a satisfactory profit if the breeder begins on right lines and does not go to the trouble and expense of breaking in and schooling, which, in a great majority of cases, is done badly, a fact that is patent to everyone who goes amongst horses. That there is less risk of leaming a horse when he is sold at three years old is obvious; for the high-spirited and well-bred horse is far more liable to accident in the hands of a bad horseman than in those of a good one. It may be objected that as dealers do not care to buy until a horse is five years old, the market for a three-year-old will naturally be limited. A moment's consideration of the facts will, I think, show that this will scarcely be the case. A four-year old costs a great deal more than a three-year-old, if he be a good one, and he is still a year off work; whilst in a great majority of cases his education has to be begun all over again. So unless he is a very good one the dealer looks shy at him. But in every important hunting country there are many farmers and a few gentlemen who like to graze a few hunters and who are good customers for likely three-year-olds, which they break themselves and school for a season before passing them on to dealers or others. A three year-o'd, however well he has been done, if he has been done judiciously, leaves plenty of profit at £50 or £60 if his dam has earned her living all the time, which she should have done, and more than done, if one of the right sort.

Our illustration above is of the Hackney Pony Stallion Mickleover Swell, sire Sir Horace, dam Mickleover Mite. Mickleover Swell was bred by Mr. H. E. Ayre, Mickleover, near Derby, who won with him the First Prize for two-year-old Pony Stallions at the Hackney Horse Society's Show this year.

Over-Feeding.

I AM in complete agreement with Mr. Angas about the over-feeding and forcing of young animals. Letting young horses rough it in all weathers, and giving them nothing but what they can find for themselves in the pastures, is one extreme; pampering them with highly nitrogenous foods, oilcake and such-like, is the other. Nothing can be more absurd than putting on fat on purpose to get it off again, and I have heard many trainers inveigh bitterly against the practice which, is not only unnatural but unnecessary. A yearling wants to look like a yearling. Of course, if he has to be raced he must be well done, and by the way, I do not think any foal or yearling is any the worse for a little corn judiciously given. And the same over-feeding that does so much harm to the Thoroughbred does equal harm to other breeds, and many a good horse is ruined in the first two or three years of his life by being forced for show purposes. It is a very singular thing that whilst every man is opposed to this over-feeding in theory, let him once show or have a sale and he at once commences to feed his horses hard, and if some of them are not as fat as bullocks he hastens to apologise for their want of condition and to explain that he has not had time to get them "up." His argument is that if they are not fat neither judges nor the public will look at them. Is he right? I am afraid so. At any rate, I know it requires considerable courage to give a first prize to a good poor horse.

The Encouragement of Other Breeds.

AGAIN I am quite in agreement with Mr. Angas on the question of the encouragement and subsidising of other breeds as well as the Thoroughbred. When the Royal Commission on Horse Breeding was appointed I was examined before it, and I then pointed out that there was urgent need of encouraging other breeds than the Thoroughbred. I pointed out that whilst our country was being depleted of its best Cleveland Bays, Coach Horses, and Hackneys, we were spending our money in buying back what our foreign customers bred from our own stock, and that the time would come when we should sadly feel the want of those horses which were being regularly and in great numbers exported from our shores. That time has come, but it is not too late even yet to recover our position if we make an effort in the right direction.

The Hackney Cross.

MR. ANGAS speaks of a cross between a Hackney and a Yorkshire Coach horse. This cross has been tried considerably, and as a rule high-class harness horses are the result. I can put my hands on many that are bred that way. But I would urge upon Mr. Angas and the gentlemen who are desirous to see the result of this cross or that, that it is of the greatest importance that there should be plenty of pure race to cross from or the foundation will soon be lost. I do not think, however, that such horses as would result from this cross will ever make saddle horses. I had several of them in my time, but I have never seen one any officer would ride as a charger. Their place is a gentleman's carriage—or the plough. Hackney breeding is all right if conducted on proper lines, and there is plenty of money in it. But breeding cross-bred Hackneys, that is, breeding the ordinary ride-and-drive horse, is anything but a lucrative business. The bicycle hit the third-rate Hackney trade very hard, and the motor-car has done its share in injuring it. For instance, doctors have motor-cars, not horses, nowadays.

Cleveland Bays and Coach Horses.

THE want of the Cleveland Bay and Yorkshire Coach Horse is being felt now, when perhaps they are more neglected than at any period of their history. A good Cleveland Bay or Yorkshire Coaching mare is invaluable, as I have shown again and again. Now, alas! the high-class Cleveland Bay or Coaching mare is getting scarcer every day. There are Cleveland Bays and Yorkshire Coaching mares of fine pedigree that are by no means what I mean. I am afraid that in order to meen the fashionable demand for quality breeders have let that predominate, and have in many instances lost type. I would not be misunderstood. Quality in any horse is highly necessary, but equally necessary is the preservation of type. A Cleveland Bay or Yorkshire Coaching mare of the right sort could take her share of the work on a farm, and breed anything—a Hunter or a high-class Harness horse; or if a misfit, a useful vanner or artillery horse or remount. And whilst we have been theorising for thirty years about raising a breed of light horses of general utility, whilst men have talked and written columns upon columns of theory, we have wilfully neglected the valuable material we had to our hands. Is it too late now to make a change in our policy? I think there is yet time myself, but it is getting short.

The New York Show.

JUST as I am closing my article a prize list of the New York Horse Show has come to hand. Hackneys make the most interesting feature of the show to English exhibitors, and both for stallions and mares there are full classes from yearlings upwards, and covering all the varieties of height. Harness classes will also be numerous, and the English Hackney Horse Society is giving a £100 gold challenge cupin the harness classes. It is to be hoped that English exhibitors will avail themselves of the opportunity of returning the visit our American friends paid us last June, and that at any rate they will not come empty away. The show will open on November 18 and close on the 23rd, and entries close on October 26. Mr. Euren, the secretary of the Hackney Horse Society, will be pleased to give any information to intending exhibitors.

THE LOOKER-ON.

Sale of Shires at Peterborough.

A most successful sale of Shire horses was held at Peterborough Repository on Wednesday, the outstanding feature being the good demand for the animals from Mr. R. W. Hudson's stud, which, to the regret of Shire breeders, is being given up, Mr. Hudson having decided to relinquish farming. Mr. Hudson had twenty-seven animals forward, and how good the demand for these was can be imagined when it is stated that the average per head worked out at over £110. No fewer than a dozen of them ran into three figures, the best price being 270 guineas, given by Mr. H. S. Leon for the well-known mare Blythwood Laurel. Lord Rothschild paid the next best price, viz, 260 guineas, for the stallion, Lockinge William II. by Lockinge Forester, whilst Mr. Balderston had to bid 240 guineas before he could secure Danesfield Defiance by Hendre Hydrometer. How the remainder sold, together with purchasers' names, will be seen from the list appended, all the animals mentioned being sent by Mr. Hudson. Numerous other consignments were offered, and realised up to 100 guineas.

Major Cobbold's Suffolks.

In consequence of the farm being let, the stud of Suffolk horses and flock of registered Suffolk sheep, together with other items belonging to Major A. W. Cobbold, were disposed of by auction at the Lodge Farm, Hollesley, on Friday, in the presence of a representative company of breeders, including many members of the Suffolk Horse Society, notably the president, Sir Cuthbert Quilter, Bart., who helped the horse section of the sale considerably by securing some of the high-priced animals. The chief prices for Suffolk horses were as follows:—

Pert, f. 1904, s. Smith's Prince Albert, 50 guineas; Purity, f. 1903, s. Smith's Prince Albert, 46 guineas; Peggy, f. 1902, s. Smith's Prince Albert, 50 guineas; Peerless, f. 1901, s. Sir Cuthbert Quilter's Prince Wedgewood, 49 guineas; Pansy, f. 1901, s. Smith's Wedgewood, 51 guineas; Phyllis, f. 1901, s. Smith's Saturn, 60 guineas; Polly, f. 1900, s. Pratt's Golden Grain, 48 guineas; Promise, f. 1891, s. Wolton's Dauntless, 34 guineas; Smiler, f. 1893, 48 guineas; Procter, f. 1903, 44 guineas; Puck, filly, f. 1905, s. Smith's Prince Albert, 55 guineas; Gelding, f. 1905, s. Rendlesham Star, 36 guineas; Filly, foal, f. 1907, s. Rendlesham Star, 20 guineas.

With respect to the Suffolk sheep, ten two-shear went at 62s each, and a score at 57s. Ten three-shear ewes at 75s., ten more 66s., and a score at 50s. Full-mouthed ewes sold at from 60s., and the young ewe and wether lambs from 36s.

The purchasers of stock included:—Sir Cuthbert Quilter, Bart., Mr. Fred Smith, Sir Cecil S. Benson, Hertford, Mr. R. E Proctor, Langenhoe, Mr. J. Cant, Colchester, Mr. J. A. Hamilton, Kelsale, Mr. E. S. Catchpole, Mr. J. F. Thurston, Fressingfield, Mr. C. I. Pratt, Mr. James Toller, Blaxhall, Mr. Harold Dawson (for Mr. J. D. Cobbold), Mr. Thompson, Mr. Wm Freeman, Mr. Hawes, Mr. Coleman, Mr. Nathan Minter, Mr. Bloss, jun., Mr. Bates, Mr. C. A. Creasey, Mr. Bendall, Mr. Boast, and others.

Show and Sale at the Keynsham Stud.

In view of the lapsing of the annual show and sale of the Compton Stud at Templecombe this year, the Keynsham Stud Company thought it, a fitting opportunity to institute an annual show and sale at their stud, and it was held on Wednesday. There was an entry of thirty-eight, and by no means a bad start, but the prices obtained at the auction sale were disappointing. There was a rather meagre class of Shire foals, the second prize only being awarded to Mr. H. J. Chancellor, Rookery Farm, Norton Malreward, with a very useful bay filly. There was a much larger class of yearlings and two-year-olds, and here the first prize-taker was Silver King, sired by Castern Harold, and shown by Mr. J. Gifford, Chewton Keynsham.

The light horses were better represented. In the class for colt or filly foals suitable for field or road, the first prize went to Dr. W. R. T. Hawkins, Ashley Road, Bristol, with a very smart foal, Ilex, whilst for colt, gelding, or filly suitable for hunting, one and two years old, exceeding 14 hands and 14 hands 1 in. respectively, Mr. G. E. Churchill, West Harptree, was placed first with his shapely filly, Sybil, which has won at Bath and elsewhere this season. There was a rather larger entry of mares and geldings three years old and upwards, exceeding 14 hands 3 in., to be shown in saddle, suitable for hunting. The first prize went to a very useful mare, Mr. G. E. Smart's Lady Dorothy, by Mountain Dew, from Combe Hay Park, Bath. In the harness section for colt, gelding, or filly, one and two years old, any height, Mr. J. Loxton, Queen Charlton, was first with Young Phenomenon, a dark bay colt, and in the harness class, three years old and upwards, Mr. C. B. Brock's six year-old mare, Black Bess, from Portishead, was an easy first. There were also polo classes, which were fairly well supported.

At the sale the Keynsham Stud Company's animals were placed in the ring first. The best price was but 25 guineas made by the pony stallion Rory, bought by Mr. Hargreaves, whilst others sold down to 8½ guineas. Amongst the general animals offered, Mr. G. T. Candy's two-year-old shire filly, Flower, realised 15½ guineas from Mr. Hurditch; Mrs. B. B. Fox's Bessie going to Mr. Carson, at 15 guineas; Mrs. Fox bought Mr. R. G. Hall's harness filly yearling, Bright Light, at 11 guineas; and Mr. Pillers purchased Mr. Stadden's Schoolmate at 26 guineas.

Messrs. Simpson, of Hunmanby, Yorks, have sold a Leicester shearling ram, a gimmer shearling, and two two-shear ewes from their pure-bred flock for exportation to Ireland.

At a well attended meeting of dairy farmers, held at Wellington, Shropshire, on Monday evening, it was unanimously decided to form a local branch of the Midland Farmers' Association.

PIGS.

Sale of Mr. Inman's Berkshire Pigs.

One of the best sales of Berkshire pigs ever held in this country took place on Tuesday at Highmoor Farm, Henley-on-Thames, when Messrs. J. Thornton and Co. sold Mr. G. Talfourd Inman's herd of Berkshires. Breeders were present from all parts of England, and the great average of £11 4s. was obtained for 112 head, or a total of £1,254 15s. being realised. The celebrated boar Highmoor Mikado was reserved, but his son, Highmoor Curio, was purchased by Mr. Colin Campbell for R. W. Hudson, Esq., at 80 guineas; his own sisters, Mimosa and Geisha, going to Mr. Hudson and Sir R. P. Cooper at 35 guineas and 41 guineas respectively.

As will be seen by the sale list below, many high prices were reached, the whole of Mikado's produce selling at good prices. One January boar went to Mr. W. Candy for export at 48 guineas, another to Mr. Sanday at 31 guineas, and a third to Mr. Laurence Currie at 37 guineas. Altogether the sale was a brilliant success, and reflects much credit on Mr. Bryant, who for many years has managed the Highmoor herd.

FARM STOCK SALES.

Earl of Chichester's.

The Earl of Chichester having let Hoddern Farm, Piddinghoe, Sussex, the stock, comprising twelve cart horses and six cross-bred heifers, with a large quantity of agricultural implements and machinery, was dispersed by auction. The horses fetching the highest prices were those bought by Mr. Funnell, who paid £38 17s., £35 14s, and £29 18s. 6d. apiece for three. Prices for the other horses ranged from £28 downwards. In the cattle lots, the highest price paid was £12 5s. for a part Sussex cross-bred heifer, Mr. West being the purchaser.

Mr. H. Harris's.

A large company was present at the sale of farm stock belonging to Mr. H. Harris, Steventon Manor, Hants. Sheep realised good prices, two-tooth ewes 80s., 76s., 74s. (twice), 72s., 69s., 65s., 63s., 61s., &c.; four-tooth ewes, 80s., 68s. (twice), 67s., 66s. (twice), 60s. (twice), 56s. (twice), 55s., &c.; six tooth ewes, 82s., 71s., 66s., 60s. (three times), 59s. (three times), &c.; Chilver lambs, 54s., 51s., 49s. (three times), 48s. (twice), 47s., 45s., 44s. (twice), &c.; wether lambs 48s. and 44s. 6d., and mixed lambs 34s. The horses were keenly bid for, and made up to 50 guineas; the dairy cattle realised up to £19 5s. The swine and the poultry concluded a very successful day's sale.

Mr. F. Warren's.

Some good prices were obtained at the sale of live and dead farming stock belonging to Mr. A. Warren, Great Bathampton Farm, Wyle, Hampshire. There were 180 lots of dead stock which realised good prices as there was the flock of registered Hampshire Down sheep. The 116 four-teeth ewes made up to 67s., average 62s. 6d.; 137 six-teeth ewes to 68s., average 62s. 8d.; 21 full-mouthed ewes, 60s; 205 ewe lambs made up to 48s, average 45s.; and two-teeth rams up to 80s. The cart horses made up to 44 guineas, and the dairy cows to £20 10s., £19 (twice), and £18, averaging £14 10s. per cow.

The late Mr. G. Morrice's.

The extensive old-established Hampshire Down breeding flock, teams of cart horses, pigs, cattle, poultry, and dead stock the property of the Exors. of the late Mr. G. Morrice, Rockbourne Down Farm, were dispersed by auction in the presence of a good company of buyers and a satisfactory sale resulted. The 200 lb. of dead stock were first disposed of at good prices, then followed the pigs, porkers realising up to 52s., sows and pigs to £7 10s., and sows in farrow to £6 7s. 6d. The sheep followed and realised the following prices:—198 two-teeth ewes, 68s. to 58s., average 64s. 8d.; 162 four-teeth ewes, 58s. to 63s., average 64s.; 135 six-teeth ewes, 67s. to 56s, average 65s. 9d.; 49 full-mouthed ewes averaged 58s. 5d.; 225 ewe lambs from 55s. to 39s., average 46s.; 40 cull wether lambs, 41s. 6d.; and 44 ditto, 35s; 14 cart horses from the farm were next offered, and met with keen competition, making up to 51 guineas. The nine cows and heifers also sold at good prices.

Mr. W. C. Keevil's.

The sale of Mr. W. C. Keevil's extensive live and dead farming stock at Teffont Magna, Wilts, attracted a large and representative company of buyers, and the stock met a good demand. The flock of regular Hampshire Down sheep sold as follows:—221 two-teeth ewes, 76s. to 60s., average 65s. 6d.; 215 four-teeth ewes, 70s. to 59s., average 63s. 6d.; 169 six teeth ewes, 68s. to 59s, average 63s.; 13 regular draft ewes made 54s.; 212 ewe lambs, 52s to 44s., average 46s. 6d.; shearling rams, 55s. to 65s.; ram lambs, 58s. to 5 guineas, the average of the whole 839 ewes, lambs, and rams together being 59s. 6d. The cart horses made up to 50 guineas. The horn stock sold as follows:—Heifers and calves, £18 5s. to £13 5s. Springing heifers, £17 singly, and £32 10s. and £27 per pair; four yearling heifers made £34 10s., and three ditto £25.

The Late Mr. W. Flower's.

The sale of the live and dead farm stock of the late Mr. Walter Flower, Coombe Bissett, held on Monday, proved a most satisfactory one. The sale commenced with the dead stock, mostly of a much used description, but which realised full value. Luncheon was next partaken of, the sale being resumed with the registered Hampshire Down flock, which elicited keen competition: 135 two-teeth ewes made from 72s. to 61s., average 68s.; 125 four-teeth ewes, 73s. to 65s., average 68s. 6d.; 120 six-teeth ewes, 72s. to 64s., average 67s. 6d.; 103 full-mouthed (or regular draft) ewes, 66s. to 60s., average 63s.; 194 ewe lambs, 56s. to 46s., average 49s., whilst the seven ram lambs which had been in service made 85s., 75s., 70s., 60s. (thrice), and 50s. The cart horses, which were of a medium-sized tight and active stamp, made up to 48 guineas, whilst the in-calf cows fetched up to £17 10s., the sale concluding with the poultry, which fetched from 2s. per head.

Mr. T. Watson's.

There was a very large attendance of farmers and stockbreeders at Old Salts Farm, Lancing, on Friday, when the live and dead farming stock belonging to Mr. Thomas Watson, who is relinquishing farming on account of failing health, was sold by auction. Mr. Watson has held Old Salts Farm for something like thirty-six years, and it was a matter for regret that indisposition prevented him from being present at the sale. The catalogue included fifteen young pedigree Shire brood mares, fillies, and colts (several being prize winners), and they sold well at prices up to 54 guineas. The herd of Shorthorn dairy cows and heifers numbered fifty-six, and included Ruby, which won second prize at the County Show at Brighton last year, second at Arundel this year, and was first in the dairy class at the Sussex County show at Hastings, and also in the milking trial at the same show. This cow fetched top price, £38, being sold to Mr. Robinson, Lewes. Another prize cow, Duchess, which was first at the County Show at Hastings, was sold for £28, and will go to Guildford, Mr. Kelly being the purchaser. The herd realised over £1,100, and the average price obtained was £19 15s. Some pedigree bulls made up to £28, and the Southdown lambs were disposed of at prices ranging from 38s. to 42s.

CATTON HERD

OF

LARGE BLACK AND MIDDLE WHITE PIGS.

The Property of

J. E. BREEZE,

Edingale, Tamworth.

GILTS AND BOARS ALWAYS ON SALE

At Reasonable Prices.

Lincolnshire Notes.

THE agricultural organisations of Lincolnshire are forming up their battalions for the big fight against railway rates. I do not know what the issue will be. The railway companies have a huge armoury and they are strongly entrenched. But the attacking forces are setting the right way to work. The proposed public meetings in Lincoln and Lincolnshire will publish the farmers' grievance to the world ; the deputation to Mr. Lloyd-George will stir up the powers that be. It is more than possible that justice is going to be done at last. At all events, a measure of justice seems likely to be obtained.

THE first shot was fired on Friday afternoon, when a private consultation was held with Mr. Cohen, of the Board of Trade. The whole case of the Lincs farmers and traders was put before Mr. Cohen, who stated that he was anxious to place a *bona fide* statement before the Board of Trade, and that the matter will be considered in due course.

THE Lincs Agricultural Society has had a good year. Its income has exceeded the expenditure by £200. Arrangements are well in hand for the Sleaford exhibition, for which a site has been selected on the Lincoln Broad.

THE dispersal sale of the Hatton herd of Shorthorns was held on Monday. The herd, which is sixty-seven in number, was founded from the famous stock of the late Mr. John Walker, of Girsby. It has been carefully bred from the sires of the Earl of Yarborough, Messrs. Chatterton, H. E. Cartwright, G. A. Oliver, and others. The animals are deep coloured reds, heavy fleshed, and from good milking strains. The late owner has always found a good market for his young bulls, and has gained honours in the showyard, one of his cows taking third prize at the Lincoln Royal Show. The animals sold well at prices up to 28 guineas.

AT the same sale were also included 400 Long Wool sheep, gimmers making up to 62s, two-shear ewes up to 65s., ewes up to 61s. 6d., he lambs up to 42s. 6d., she-lambs up to 43s. 6d., and half-bred lambs up to 45s.

FIRST amongst the organisations which are working to encourage the breeding of Lincoln Shires is the Louth Shire Horse Society. It is only four years old, but it has done a splendid work. It has produced some notable sires. In its first year it was singularly fortunate in securing Red Lynch Victor Chief 19056, hired from Mr. Bryars, of the Nailstone Stud, near Sheffield. He fathered a grand lot of youngsters. During the past three years sires have been leased from Lord Rothschild's noted Tring stud, and the first animal sent into Lincolnshire from the Tring stud was Girton Charmer 20515, champion at the London Show. Last year the society secured Birdsall Menestrel, also a London winner, with whom Lord Rothschild won the gold cup outright, taking the trophy three years in succession. As a sire Birdsall Menestrel has proved a veritable gold mine, and his progeny this year have practically won all before them, making their bow only to Mr. Samuel Leggate's chesnut by Sargeant VI.

THE society held its annual show on Monday and realised a record entry. The colts found the winner in Mr. J. W. Davy's bay, which was recognised in his class at the Royal Show. In the filly foals there was keen competition, and everybody was surprised to see Mr. E. A. Kirk's bay defeat Mr. W. Bowser's bay, which had not tasted defeat up to a fortnight ago. Mr. Kirk's filly took first at Scunthorpe and at Alford, and she has come on a great deal lately. Among the yearling colts Mr. Gilbert Houlden's black filly, which won at Louth last year, was an easy winner, and Mr. E. H. Cartwright's bay filly easily headed the list of a splendid lot of two-year-olds. She is indeed a beautiful animal, who has taken first and champion wherever she has been shown. In the class for mares and fillies she was again shown, and finished a fine second to Mr. G. H. Upton's Raithby Granite. The silver medal for the best foal went to Mr. E. A. Kirk, and the Shire Horse Society's medal to Mr. G. H. Upton.

A WELL-KNOWN farmer has just passed away in the person of Mr. William Webster. The deceased for the past twenty-three years resided at the Heneage Arms and made a wide circle of friends, being a frequent visitor to the markets in the neighbourhood.

THE question of registration of corn samples is making progress. It is being discussed in farming circles all over the country, and there is a general sentiment in its favour. It only remains for the Farmers' Union to strike the iron when it becomes sufficiently hot, and another of the anomalies which harry the farmers' lot will have disappeared.

THE disposal of the flock of Lincoln Long Wool sheep and Lincoln Red Shorthorn cattle, the property of Mr. W. A. Ewbank, of Covenham Manor, near Louth, took place on Thursday. The flock is one of the oldest established in Lincolnshire, and the prices ruled high. The averages were :—Eighty-three shearling ewes, £3 7s. 9½d. ; fifty-three two-shear ewes, £3 8s. 9d. ; fifty three-shear ewes, £3 4s. 9½d. ; thirty-four four-shear ewes, £2 6s. 8½d. ; 100 she lambs, £2 4s. 4d. ; fifty-three he lambs, £1 19s. 11d. ; nineteen shearling rams, £7 8s. 8d. ; thirty-seven ram lambs, £2 9s. 3d. ; thirty cows with calves, £31 16s. 10d. ; twelve two-year-old heifers, £22 9s. 9d. ; thirteen yearling heifers, £12 2s. 7d. ; fifteen yearling steers, £15 7s. 10d. ; two stud bulls, £27 19s. 1d. The aggregate of the sale was close on £3,000.

MORE wagers. An interesting challenge was decided at Horncastle on Tuesday between two local men named H. Boothby and H. Blenkiron. The question was which could carry a 19 stone bag of beans the greatest distance. The men decided that they should start on the Wharf Road, and carry the bag round the river side between the Wesleyan School Bridge and the Town Bridge, a distance of just over a quarter of a mile. Blenkiron started first and did well, but had to drop his load 20 yards from home, and Boothby succeeded in finishing, and thus won. The match was watched by a number of interested spectators.

SEVERAL Shorthorn bulls from the herd of Messrs. S. E. Dean and Sons, of Dowsby Hall, near Bourne, have been sold for export to Buenos Ayres. Two of the animals have the well-known Scotch-bred bull Imperial Favourite as sire, which Messrs. Dean sold for export to the Argentina at the long price of £1,045.

Essex Notes.

THE anxieties of harvest, so far as we are concerned, are practically over. Now come two questions :—The best time to thrash our produce and the best price ? and, What shall we sow ?

AS to the first question, undoubtedly if corn is thrashed at once there is not much waste, either through vermin, imperfect thatch, bottoms getting damp, or any other of the ills we are liable to.

AS to prices, now that 36s. has been given locally, with cost of carriage but a small amount, many are quickly getting their wheat to the mill, and they certainly seem to be on a firmer footing ; for, with money to go on with and autumn work waiting to be done, they are now more free to cope with future difficulties of weather, &c., should they unfortunately occur.

OF course, prices may still have an upward tendency, for there seem to be several places from whence some of our supplies come which cannot send so much wheat this season. Large millers in and around the Colchester district say, naturally, they cannot tell if more money will be obtained ; us farmers are in the same position.

AFTER last year's prices, we are very pleased to get larger cheques for the same amount of quarters ; and the more so because there is a far better yield.

LET the past die, but last August twelve month I thrashed my wheat and kept it until the end of November for 28s. per qr., in the hope of selling it for more money.

"A RARE year for farmers," said a friend of mine the other day. "Yes," I answered, "but how about last year's prices, and how do you know I have paid last year's rent ?"

THE only other question I can go into this week (we are so busy) is the one in my first paragraph : "What shall we sow ?" This is indeed a far-reaching question. On our light land the answer must soon be given so as to prepare accordingly. Of course, although a fairly good price this year, it does not at all follow that a good return will also be obtainable for next year's produce ; but if a fair proportion of an occupation be given to wheat and oats, there is, as a rule, a fairly good market for them.

IN 1906, according to the Agricultural Returns list I received this week, there were 112,020 acres of wheat grown in Essex ; in 1907, 105,630. This fact has helped up prices somewhat, no doubt.

IN the light land part of Essex, the sooner winter oats are sown the better. This crop, on fairly good land, generally tells a satisfactory tale at the machine—either the threshing or the weighing one.

STORE pigs are not quite so good a market. The restrictions as to moving them about are a general drawback to the trade.

IF shacking is still required to be done, the Board of Agriculture will, I believe, grant special licences for pigs to go to any part of an occupation. I obtained such an order, and also hear that other farmers have since done so.

LINCOLNSHIRE FARMERS' UNION.

A meeting of the Wragby Branch was held on Saturday, the 28th, Mr. C. Turnor presiding, there being also present Messrs. H. A. Mawer, J. D. Blanchard, Varlow, A. and B. Harrison, Dunn, &c.

The secretary (Mr. H. W. Palmer) reported the progress that had been made since the last meeting of the Branch, and this was considered very satisfactory. A resolution was carried supporting the action of the Union with regard to railway rates, also a further resolution urging the Union to press on the matter of insurance.

Mr. Turnor mentioned the unfair railway charges on potatoes, the foreign produce having an advantage of 3s. per ton on the charges on English. Much damage was reported to have been done to the crops of the district by birds, and a farmers' club for the destruction of birds was suggested.

Lord Londonderry on Rural Depopulation.

In the course of a speech at the luncheon held in connection with the Easingwold Agricultural Society's Show, the Marquess of Londonderry referred to the Small Holdings Bill recently passed, and said he thought there was no one there who did not sympathise with the avowed object of that Act, which was to increase the number of people who were living on and cultivating the land, and if it was conducive to maintaining a large agricultural population on the land, he should say it would have a great and good effect. There was no agriculturist who did not deplore the depopulation of the rural districts, and it was no use shutting their eyes to the fact that in recent years the rural population had migrated to the great centres of England. From the rural point of view it was very important that they should endeavour to keep the rural population who had been brought up to recognise agriculture as their great industry, rooted to the soil, if he might use the expression. They had in their industrial districts a great demand for food of all sorts for the population, and surely if they were to meet the demand without having to call in the assistance of the foreigner—whether the Colonies or foreign countries—by importing those commodities they required, it was necessary that they should have an agricultural population to assist them to meet the wants and requirements of the people of the country.

What they wanted to do at the present time was to stem this tide of depopulation of the rural districts, and because he thought it was perhaps giving a chance to agricultural labourers to realise the advantages of living in their own houses, he said nothing whatever against the Act which had been passed ; but, on the contrary, if it was likely to succeed in rooting the people to the land he should be glad to think it had passed the Houses of Parliament.

He was somewhat doubtful as to whether the present Act, as it had passed Parliament, would have the effect which they were all desirous to see, namely, keeping the rural population in the district in which they lived. Whether they approved of it or disapproved of it, it was their duty as loyal citizens to endeavour to make the Act work absolutely satisfactorily, and he was sure he represented the views of the landowner class in the country when he said they were anxious to make the Act work as satisfactorily as they could in the interests of those who were associated with agriculture.

Burton Statute fair was held on Monday, when a considerable amount of hiring was transacted, and there was a very good demand for both men and boys. Lads of sixteen received from £7 to £12 a year, and able-bodied men from £20 to £24. The engagements of servant girls were very few.

MISCELLANEOUS.

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines, Thrashing Machines, &c. second-hand, for Sale, cheap, or to be Let on Hire-purchase Full list free. THE "HUNTER" BUGGY.
National Telephone—1533 South. Telegrams—"Buggies, Glasgow."
Also GOVERNESS CARS.

Woodbridge, Suffolk.
Dear Sir,—I am pleased to be able to say your Buggy fulfils all that you say for it, and it is a most excellent cart, being very light, smart, and a most comfortable ride, particularly down hill, when you get absolutely no jolting. There being plenty of leg room, you can carry much more with you than one would think.
. . . . Yours faithfully, T. G. HEATLEY, M.R.C.V.S

LIST OF
FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d. to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock. The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S. Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No. 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S. Full instructions for growing all British fruits. Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D. Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training, and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2.

No. 23.—To Manure at a Profit. Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

THE FARM.

No. 44.—The Agricultural Annual and "Mark Lane Express" Almanac. The Farmers' Red Book. Brimful of Facts and Figures relating to the Farm and Markets. Compiled by well-known Writers on Agricultural Subjects. Profusely illustrated. 272 pp., 8vo. Price 1s., by post 1s. 4d. Published early in December each year. L.

LIVE STOCK.

No. 47.—Rational Pig-Keeping. To Ensure Profit. - Revised Edition. By W. J. Malden, late Principal Colonial College, Hollesley Bay, Suffolk; Superintendent Royal Agricultural Society's Experimental Farms, Woburn; Professor of Agriculture, Downton College; Agricultural Superintendent, Royal Dublin Society, etc., etc. Illustrated. Dealing with Principal Breeds, Selection of Stock, Housing, Foods, Breeding, Management, etc. In paper, price 1s., by post 1s. 3d.; in cloth, price 2s., by post 2s. 3d. L.

No. 49.—Horse Buying and Management. A Practical Handbook for the Guidance of Amateurs in Buying a Horse, with Illustrations as to its After-management. By Henry E. Fawcus. Illustrated. In paper, price 1s.; by post, 1s. 2d. G.

No. 51.—Diseases of Horses. Their Causes, Symptoms, and Treatment. For the Use of Amateurs. By Hugh Dalziel. In paper, price 1s.; by post, 1s. 2d. Cloth gilt, price 2s.; by post, 2s. 2d. G.

No. 52.—Book of the Pig. The Selection, Breeding, Feeding, and Management of the Pig; the Treatment of its Diseases; the Curing and Preserving of Hams, Bacon, and other Pork Foods; and other information appertaining to Pork Farming. By Professor James Long. Fully illustrated with Portraits of Prize Pigs, Plans of Model Piggeries, &c. New and Revised Edition. In cloth gilt, price 6s. 6d.; by post, 6s. 10d. G.

No. 52d.—Live Stock Handbooks. Illustrated. Cloth gilt, lettered, 3s. 6d. each, post free 3s. 10d.; or the Set of 5 vols., 17s. 6d., carriage free. V

1.—Sheep: Breeds and Management. By John Wrightson M.R.A.C., F.C.S., &c.
2.—Light Horses: Breeds and Management. By W. C. A. Blew, M.A., and others.
3.—Heavy Horses: Breeds and Management. By Dr. George Fleming, C.B., F.R.C.V.S., and others.
4.—Cattle: Breeds and Management. By William Housman.
5.—Pigs: Breeds and Management. By Sanders Spencer.

V

GARDENING.

No. 65.—Multum-in-Parvo Gardening. Or, How to Make One Acre of Land produce £620 a year, by the Cultivation of Fruits and Vegetables; also, How to Grow Flowers in Three Glass Houses, so as to realise £176 per annum clear Profit. By Samuel Wood, Author of "Good Gardening," &c. Sixth Edition, Crown 8vo sewed. 1s. C. L

VEGETABLES AND FRUIT.

No. 70.—Tomato-culture for Amateurs. A Practical and very Complete Manual on the Subject. By B. C. Ravenscroft. New Edition. Illustrated. In paper, price 1s., by post, 1s. 2d. G.

POULTRY.

No. 76.—Paying Poultry. A Handbook for all Interested in Poultry keeping. Illustrated. 164pp. 8vo. In paper, price 1s., by post 1s. 2½d.; in cloth, price 2s. 6d., by post 2s. 9d. L.

No. 77.—Popular Poultry-Keeping. A Practical and Complete Guide to Breeding and Keeping Poultry for Eggs or for the Table. By F. A. Mackenzie. Second Edition, with Additional Matter and Illustrations. In paper, price 1s., by post 1s. 2d. G.

No. 79.—Profitable Poultry Farming. Describing in detail the Methods that give the Best Results and pointing out the Mistakes to be avoided. By J. H. Sutcliffe. Illustrated. In paper, price 1s.; by post, 1s. 2d. G.

BEES.

No. 81.—Book of Bee-Keeping. A very Practical and complete Manual on the Proper Management of Bees, especially written for Beginners and Amateurs who have but a few Hives. By W. B. Webster, First class Expert, B.B.K.A. Fully Illustrated. In paper. Price 1s., by post 1s. 2d.; in cloth, price 1s. 6d.; by post 1s. 8d. G.

FERTILISERS AND FEEDING STUFFS.

No. 84.—Artificial Manures. How to Make, Buy, Value, and Use. A Hand-Book for Agriculturists, Chemical Manure Manufacturers, Gardeners, and others concerned in similar pursuits. By Alfred Sibson, F.C.S., Consulting and Analytical Chemist, Author of "Agricultural Chemistry," "Everyday Chemistry," "Food, Feeding, and Manure," "A Lecture on Superphosphate," &c. Late (for eight years) Assistant Professor of Chemistry in the Royal Agricultural College, Cirencester, and First Assistant in Dr. Voelcker's Private Laboratory. Formerly Student of the Royal College of Chemistry and the Birkbeck Laboratory of University College. Revised and Rewritten by the Author and A. E. Sibson, F.C.S. Third Edition. 143 pp. 8vo. In cloth. Price 1s., by post 1s. 2½d. L.

FODDER.

No. 87.—Fodder Crops. Uses. By C. G. Freer Thonger, M.R.A.C., F.C.S. 53 pp. 8vo. In paper. Price 1s., by post 1s. 1½d. L.

ACCOUNT BOOKS.

No. 106.—Utility Poultry-keepers' Account Book. A very Useful Book for Amateur Poultry-keepers, showing at a glance the Daily, Weekly, Monthly, and Yearly Statement of Profit or Loss Account. By A. Hunt. Second Edition. In stout boards, price 2s., by post 2s. 3d. L.

No. 107.—Jee's Milk Book. An Account Book for Farmers, Dairymen, and Consumers, showing Profit or Loss at the end of each Week; can be used for a period of three years. Price 2s., by post 2s. 3d.

Mark Lane Express Agricultural Journal and Live Stock Record.

Flowers in Dairy Tents.

ON several occasions we have expressed our approval of the growing tendency to make a closer union between the sister arts of agriculture and horticulture by including a floral section at agricultural shows. We are pleased to see that the idea is catching on, and at the recent show at Frome a portion of the dairy tent was utilised for this purpose. Table decorations were introduced for the first time, and it is encouraging to learn that nothing better of the kind has been seen this year in the West of England. We are aware that any suggestion to introduce flowers amongst exhibits of dairy produce would have shocked any farmer's wife of the old school, and she would have condemned it as being a waste of time if her daughters had attempted anything in the way of table decoration, but in this respect things are different to what they used to be. We cannot imagine a more suitable place for a display of flowers than in a butter tent; and whereas every lady who visits this section of a show may not be interested in butter there are few who do not take a delight in flowers, and for tastefully arranging the latter we know that farmers' wives and daughters are quite capable of holding their own.

THE STACKYARD.

Ox-Roasting at Fairs.

AT some of the old-fashioned towns in the Midland and Western Counties, such as Warwick and Stratford-on-Avon for instance, the ancient custom of roasting oxen whole in the streets on the occasion of the annual "mop" day still prevails. We have no evidence to show how it originated, but can imagine that in the old days it served a purpose of usefulness, for then, when the country people went to the mop, and of course everybody went, the majority of them had to walk long distances, and they arrived in the town possessed of a hunger that was no pretence. It was doubtless a novelty to see dinner being prepared in the open street, but when the time came for carving up it was business in real earnest. Years ago public ox-roasting was generally associated with rejoicings and thanksgiving, and had Mafeking been relieved about the same time as Waterloo was won, doubtless many a beast would have been led to the public spit. We may take it perhaps that feelings are more refined, and there is something barbarous about public ox-roasting, and not altogether because the custom originated in barbarous times. At any rate, we hear expressions of opinion that the time has come when the annual mop can be held without having one's dinner roasted wholesale in the public street, and one can hardly look upon it as being a refined form of amusement.

A Link With the Past.

ONLY quite recently the daily papers told the world of the passing away at the ripe old age of ninety, of Lord Brampton, better known perhaps as Mr. Justice Hawkins, the terror of criminals and evil-doers during the greater part of the Victorian era. It is no part of our office to write reminiscences of the lives of great judges but in thinking over the episodes in Lord Brampton's fifty years or more of active service, the mind wanders back to the time when the gallows was a public fixture, placed where everybody could see it, and men were hanged for stealing a sheep. According to some these were the good old times, but speaking for ourselves we are quite contented to live a little bit later in history, when, though punishment is less severe, property is more respected. It is sometimes urged now that our prison system is not severe enough, and that penal servitude has no terrors for the hardened criminal; but however true this may be, it is gratifying for us farmers to know that we can safely leave our sheep in the pastures without fear of their being stolen, which is more than our grandsires could do in the days when hanging was the penalty for this offence.

Dearer Commodities.

AFTER a dismal summer, which made farmers downcast, they have had their spirits cheered by a glorious harvest time and a price for corn which many of them never hoped to get again. All agriculturists rejoice in the improvement, which is having its effect, and faith again is being revived in the plough and land under arable culture. The harvest of 1907 will be remembered, and if another year sees prices of wheat at between 30s. and 40s. a quarter it will be surprising if the plough is not seen on land that in recent years has been put down to grass. The farmer rejoices, and we congratulate him on the season ending much better than it promised; but it is the turn of the man in the street to be gloomy now, for he has to pay more for his bread, coal has gone up somewhat seriously for the purchaser, other commodities show a rising tendency, though generally speaking wages are not increasing in proportion. Much as we rejoice with the farmer in getting a better price for his grain, we can realise that to thousands of struggling workers that extra amount which the baker is asking for his loaves is likely to be a sharp pinch before the winter is over.

The Harvest of Cider Fruit.

PASSING through the apple-growing or cider-making districts in the West of England in October one sees the preparations being made for the harvest of vintage fruit, which this year will be considerably below the average. Fortunately there was an abundance of apples last year, and on the majority of farms every available cask was filled with cider, with the consequence that there is a fair amount of liquor still on hand, so the shortage of fruit will not be felt so much. From some reports we have read it would appear as if the crop was a general failure, but this is not the case, for in some orchards there is a fair sprinkling of fruit, and in due course the cider mill will commence its annual process of grinding. The shortage of crop is more apparent amongst apples than pears, and many trees of varieties suitable for perry-making are well laden with fruit, which hang on the trees till they fall or are blown off, when they are collected and placed in heaps preparatory to grinding. Of course there will be less liquor made this year than usual, and good cider should find sale at remunerative prices.

Night Shelter for Cattle.

THERE is a chilliness about the night air now, with occasional catches of frost, which indicate that the autumn has arrived, and cattle must be treated in accordance with the season. There are some people who have set rules as to the time when cattle shall first be allowed to remain out at night and also when they shall be brought under cover in the evening, but in our opinion this is a matter about which the state of the weather should be the guide, and when weather is unfavourable it is foolish to allow cattle to remain out for the sake of complying with any date on the calendar. Milking cows and young stock are particularly susceptible to cold, and it is not good for them to graze in the early morning on wet grass or herbage that is white with frosty rime. In most cases there is an abundance of fodder, so, except for the little extra trouble, there is no reason why cows should not now have the benefit of the shelter which the sheds afford at night. As a matter of fact, where the care of live stock is concerned it is always better to err on the side of over caution than to take unnecessary risks.

The Hum of the Threshing Machine.

A FAMILIAR sound now that the harvest is over is the hum of the threshing machine at work in neighbouring stackyards, and though, perhaps, a little monotonous, when there is a pinch of frost in the air, the hum of the thresher is not unmusical. A lot of corn has been got together in fine condition this year, and the grain being dry early threshing is quite practicable. In short, the threshing machine is much in demand, and the above is not the only reason, because markets are tempting just now, and many, being loth to trust the future, are anxious to turn grain into money as soon as possible. Big farmers who have a threshing plant of their own are masters of the situation, and can get on as fast as they like, but the majority, perhaps are dependent on the itinerant machine which does its annual round and serves each client in turn The trouble with many would-be threshers just now is that they have everything in readiness, but they cannot get the services of the machine until someone else who spoke for it before has done with it.

Agricultural Politics.

BY A LOBBYIST.

The Premier and Depopulation.

Of course Sir Henry Campbell-Bannerman was, from his political point of view, justified in calling attention to the fact that the population in Wales has not decreased, and that the Principality is also remarkable for the number of its (comparative) small holdings. Hence, he argued that the Principality was in itself an evidence of the wisdom of the Small Holdings Act. Is the analogy quite applicable? Wales is a Principality of small towns. Apart from Cardiff, Swansea, Merthyr, Carmarthen, and Carnarvon, the towns of Wales are really little more than enlarged villages. Hence it is that there is not in the Principality the same attraction that in England seduces the labourer from his native heath. Here in England every county has practically its vivifying capital, whose enjoyment and fascination appeal instinctively to the hind, and which in themselves become a kind of conduit-pipe connecting with the greater towns. I repeat that the Premier was justified in utilising the undeniable illustration which Wales provides; but I insist that, all the same, it was special pleading. The villages of Wales retain their population because in a large measure Wales has no towns. England has a surplus of effervescing towns, and their vigour and vim are an attraction which even a complete and mathematical system of small holdings would never counteract.

* * *

The Government and the Roads.

Is the Roads Improvement Association wisely inspired in suggesting that the State should contribute out of the Imperial Exchequer no less a sum than a million a year towards the maintenance of roads. That the roads are a national concern, I agree; that the national authorities would not be other than antagonised by such a suggestion as this I am persuaded. The State should undeniably contribute, but it should be out of a fund created by the taxation of these self-propelled, road-maiming vehicles. Hence the Roads Improvement Association would be wiser if it vigorously sought that the inevitable increased motor tax should be largely utilised in relieving the cost of the increased maintenance of the roads—an increase in maintenance due absolutely to these machines. Mr. Asquith intends a tax on motors. How is to be applied? Is it simply to recompense the Exchequer—and don't forget that this has been deliberately and deliberately suggested—for the loss of the sugar duties? Is it to be applied, as logic and justice suggest, to the upkeep of the roads which the motors punish and ruin, and to the relief of that local taxation it now does nothing to alleviate? This were a wiser question for the Roads Improvement Association to consider.

* * *

The Villages and Socialism.

"Are you a Socialist? If you are not, why did you open your comments of last week on the anti-Socialist agitation?" Thus writes a correspondent to me. Well, I can place my hand on my heart, and solemnly affirm I am not a Socialist. I can only believe that Socialism—that is exact and scientific Socialism—is possible when you have a humanity from which all the ills that humanity is now heir to has been eradicated I could understand Socialism being applied in an absolutely new and virgin world with an absolutely perfected humanity. All the same, I aver that it will be a mistake and a folly to carry the anti-Socialistic propaganda into the villages. Denunciation of a faith that is unknown means the promulgation of that faith—means the securing of recruits for that faith. If I were a Socialist leader I should desire nothing better than this denunciation. It must breed a spirit of inquiry, and inquiry into Socialism on the part of a labourer who is sensitive to the unpractical and emotional, means the influencing of his mind in a sympathetic direction. "We are equal," quoths the Socialist, "in the eyes of heaven, we are equal before the law; we should thus be equal in opportunities and in possessions." Seek to contradict these sequential assertions, denounce the last phase as atheism, immorality, and theft, and you make converts. This is why I advise that there should be no Socialist propaganda in the villages. My suggestion is in the interest of anti-Socialism.

* * *

The Primate is Mistaken.

Has not the Archbishop of Canterbury permitted himself to paint in too lurid pigments the state of village home-life? It may be that the dramatic element in his Grace's temperament has unconsciously induced him to exaggeration. Be this as it may, it certainly cannot be the fact that village morality has sunk to the deplorable depths his Grace has allowed his imagination to plumb. "No one," said his Grace, "can look without dismay upon accounts such as are given from some of the rural parishes, especially as to the pre-nuptial wrong-doing, and as to the popular opinion which found expression or did not find expression thereupon." "Pre-nuptial wrong-doing"—a dulcet but expressive phrase. Is it, however, justified? I doubt it; I doubt that the pre-nuptial relations of the villages are one whit less exalted than the pre-nuptial relations of the towns. I will go farther and declare that those relations among the class to which his grace, of course, refers are inspired by a tenderer sentiment, a holier intention, and a more moral purpose than those which prevail in the crowded congeries of our life. His Grace has been misled. The town cleric has so many pre-occupations that he does not dwell on the question. The rural cleric has so much leisure that in his letters and reports he gives rein to his romantic visions and educational gifts. The villages are not seething with sexual immorality. Human nature exists there as in the towns, but it is curbed by a wiser conception of decency and responsibility. The Primate is mistaken.

* * *

Who will be the Commissioners?

I find that in political and Parliamentary circles some surprise is being expressed at the delay in the appointment of the three Commissioners under the Small Holdings Act. Why does Lord Carrington hesitate? I am personally aware of his strong anxiety to prevent even the suspicion of nepotism in the appointments, and his desire, while selecting men who are in sympathy with the purpose of the Act, not to let the public imagine he has appointed men because of their partisanism. Several names have been mentioned to me as likely to be offered the position. I have heard the names of Sir George Judd, Mr. Ridley (a well-known Wiltshire farmer) and Mr. Fred Horne. It is probable that when these gentlemen see their names in print this will be to them the first intimation they have received that they have been thought of at all. At all events, the mere fact that they should have been mentioned is a clear indication of the fact that it is appreciated that Lord Carrington is desirous of associating with the position men of practical experience and practical mind. But why the delay? The county councils would prefer to know who are the men to be invested with the powers of coercive authority.

* * *

Mr. Ailwyn Fellowes.

Of course the withdrawal of Mr. Ailwyn Fellowes from the Conservative candidature for North Huntingdonshire cannot assuredly be regarded as a withdrawal from active political life. I do not hesitate to say that this would be a blow to the sane Parliamentary consideration of agricultural problems. Owing to circumstances upon which I will not now dwell, Mr. Ailwyn Fellowes never had a fair chance as the Conservative Minister for Agriculture. He was possessed by a generous legislative design, but he found that design thwarted whenever he desired to give it actual expression. In the field of administration he was sympathetic, practical, receptive, and ever open to suggestion. I rather take his present action to mean that he desires to be untrammelled by any engagement—in other words, that he desires to be free to accept the party candidature in any impending bye-election. If this be so, Mr. Fellowes' party and agriculture will have cause to rejoice.

AGRICULTURAL LAW.

Conveying Land.

SIR,—Will "Barrister" kindly inform me the cheapest way to get the following business settled—viz., to get it conveyed, &c.—and about how much it would cost?

A gentleman has given to A and B a small piece of land 28 ft. wide by 60 ft. long so that they may build a room to hold religious services in. The piece of land is in the corner of one of his fields, and, of course, forms part of the field. Is it necessary to employ a land surveyor to map the ground? It is situated close to the high road.

SUBSCRIBER.

*** You had better instruct a firm of solicitors in this matter. The cost might be arranged with them; it is impossible to give you a definite opinion on the subject. A plan prepared on the conveyance would show the dimensions of the land. The landlord's solicitors would be able to check the dimensions, or it might be that you could employ them, which would be a better course than employing a separate solicitor.—BARRISTER-AT-LAW.

A Successful Claim against Auctioneers.

An interesting case touching upon the rights of auctioneers was heard by Judge Bompas, K.C., at the Otley County Court last week, when Walter Johnson, farmer, Queensbury, sued Messrs. Dacre and Son, auctioneers, of Otley, for £8 14s., which plaintiff alleged he had lost through defendants refusing to sell his cattle at the auction mart on June 17.

It appeared that plaintiff had offered his cattle, and had received a catalogue in which they were announced for sale. On the morning of the sale he was told by defendants that they would not offer his cattle until a certain outstanding account between themselves and him had been paid. In consequence of this plaintiff had been put to the expense of driving the cattle from Queensbury to Otley, keeping them at Otley, and then sending them on to the next auction at Skipton.

For the defence, it was stated that the auctioneers had a right to say whether they would or would not sell any particular cattle, and that the publication of a catalogue was not tantamount to an agreement.

His Honour held that for an auctioneer to accept cattle for sale by publishing them in a catalogue was a contract according to law. He held that defendants had committed a breach of contract, and found for plaintiff.

Judgment was given for £5 5s.

THE DAIRY SHOW.

THE thirty-second Dairy Show, which closed on Friday, has added another to the already long list of successful exhibitions held by the British Dairy Farmers' Association. The various competitions during the week were followed with general interest, but probably none appealed more to visitors than the butter-making contests, the entries for which were well maintained. Closer attention was this year given to the milkers' contests, in all sections of which there were many more competitors than formerly. As is usual on the closing day of the show, a visit was received from the Lord Mayor of London, who, with the Lady Mayoress, spent an instructive hour in the great hall, and distributed the prizes to the winners.

CATTLE.

The entry in this section was within three of last year. The Shorthorn section was as strongly represented as hitherto, but a rougher class of animal was presented, than last year. The inspection prizes, which are the least important, were received by Lord Rothschild for Red Rose III., a six-year-old, Mr. Geo. B. Nelson, of Cockerham Hall, near Garstang, for Comely Maid, a seven-year-old roan, and Mr. Geo. Taylor, of Cranford, Hounslow, for Melody, a red-and-white, twelve years. Lord Rothschild was an easy winner, but some doubt existed as to whether both the second and third were entitled to stand in front of Mr. C. R. W. Adeane's roan cow, Oxford Ada, a fine specimen, which was deserving of some notice. As many as twenty-one animals were exhibited in this class, among them being a couple from Mr. C. R. W. Adeane, of Babraham Hall, Cambridge. Shorthorn heifers, not exceeding three years, and eligible for Coates' Herd Book, totalled eleven. There was good competition, the leading animal being Matchless 69th, owned by Mr. J. T. Hobbs, of Maisey Hampton, Fairford, Gloucester, who came in front of Lord Rothschild, with Aster. Mr. William M. Cazalet, of Fairlawn, Tonbridge, was third with Babraham Wild Eyebright, a roan. The premier Shorthorns in the exhibition were discovered in the class for pair of cows of any breed or cross, the exhibit being in the names of Mr. S. S. Raingill, of Altrincham. The pair were well developed, and having good milking qualities were generally admired.

Lincolnshire Red Shorthorns constituted a small class in comparison with the other Shorthorns,

but the seven animals in the stalls were of good quality, the leading specimens being shown by Mr. John Evens, of Burton, Lincoln, who captured both the first and second prizes with Burton Ruby Spot 2nd and Burton Nancy 3rd.

Jerseys always appear in large numbers at the Dairy Show, and with more than a couple of dozen entered in the cow class, it was no exception to the rule. A nice seven-year-old animal, Mrs. Viola, from Mr. R. Bruce Ward, of Westwood, Droitwich, was the winner, Mr. J. H. Smith-Barry, of Pewsey, coming second with Unaware, a fawn and white six months younger. Lady de Rothschild, though only third with Whitewood 4th, a ten-year-old, nevertheless managed to secure the Blythwood Challenge Bowl, which has been offered for several years by Lord Blyth for the best Jersey cow or heifer bred in Great Britain or Ireland. The Jersey heifers bred in Great Britain or Ireland formed an attractive collection, and a stiff encounter between Mr. J. H. Smith-Barry, of Pewsey, and Mr. Henry P. Smith, of North Hall, Wrentham, led to the judge giving his verdict in favour of Marionette, the animal bred by the first-named gentleman. Sea Swallow, which was Mr. Smith's exhibit, came in front of Waterhen, shown by Lady de Rothschild, who was likewise reserved.

Heifers bred in the Channel Islands were decidedly more numerous than those bred in this country, but the best of their number was the property of Lord Rothschild, who was in other classes taking the leading place. It was a close thing with Mr. John Pallot, of Mont Pelier Farm, Jersey, who was just ahead of another English exhibitor in Mr. Jersey de Knoop, of Calverley Hall, Cheshire. As on other occasions, Mr. E. A. Hambro, of Hayes, Kent, was easily first and second with Jersey cows.

There were a couple of classes for Red Polls. Lord Rothschild took the premier place with a pair of handsome animals, which brought him both the first and second prizes. The winning cow, Atalanta, which is approaching its ninth year, was bred by Mr. J. E. Platt. Sir Walter Corbett, with Desire of Johnstown, a six-year-old, bred by the late Lord Maurice Fitzgerald, came in for the third award, highly commended cards going to Mr. A. J. Smith's seven-year-old, Rendlesham Abigail, and the Earl of Radnor's Ashlyns Rose 2nd, bred by Mrs. A. Morrison.

A dozen heifers appeared, the winner being Sudbourne Princess, a grand animal, nearly three years old, which was one of three entered by Mr. Kenneth M. Clark, of Sudbourne. A son of Mr. Alf. J. Smith, Rendlesham, in Mr. A. Carlyle Smith, of Campsea Ash, who came next to Mr. Kenneth Clark, took a second with Queen Mab, and he therefore had the satisfaction of beating his father.

Ayrshire cows, though few in number, included good specimens. The winner, a five-year-old red-and-white, with a particularly large udder, belonged to Mr. J. Littleton, of Arkleby Hall Farm, Aspatria, Carlisle. Mr. W. Nisbet, of Hinxton, near Saffron Walden, who entered a couple, was reserved.

Dexters were the fancy animals of the show to the ordinary visitor, who lingered long in the vicinity of these handsome black-coated little animals. Ladies owned the best animals, the Countess de la Warr and Lady Greenall being ahead with Kerry cows, and the Hon. Mrs. Claud Portman and the Duchess of Devonshire to the front with Dexters.

The Shorthorn bulls, six in number, were headed by Lord Rothschild's Traveller, a two-year-old roan, which beat Mr. J. T. Hobbs's Royal Plato. Mr. A. Miller Hallet, of Chelsfield, in a good class of eight Jersey bulls, beat Lady de Rothschild's Stormer with Alfriston's Pride, the third being Mr. W. M. Cazalet's Oatland Glory.

The premier bull of any other pure breed came from Burton, near Lincoln, being Mr. John Evens's Burton Hermit II.

MILKING TRIALS.

The best milkers were Shorthorns, and the winner was found among the non-pedigree animals grouped in the second class. She was a seven-year-old roan, belonging to Mr George B. Nelson, of Cockerham Hall, near Garstang who, by virtue of this success, won the three most coveted trophies offered for competition. These comprised the Barham 50 guinea challenge cup, offered by Mr. Titus Barham, son of the newly-elected president, for the cow gaining the greatest number of points in the milking trials; the Spencer 50-guinea challenge cup, presented by Mr. J. F. Spencer, for the cow scoring the highest number of points in the inspection and milking trials, as well as the butter tests; also the Lord Mayor's Champion Cup, for the best Shorthorn in the exhibition. Mr. Nelson's cow gained a total of 158·7 points, her average milk yield being 29·3 for the two mornings of Wednesday and Thursday, and 31·0 in the afternoons of the same days. The reserve animal for all of these three trophies was another seven-year old Shorthorn, entered in the same class by Messrs. R. and E. Brown, of Ripon, Yorkshire. Her total points were 149 7, the average yield of milk being 23·9 in the morning and 31·0 in the afternoon.

The first of the pedigree Shorthorns in the three trials was Broadhooks 3rd, owned by Lord Rothschild, which was unsuccessful on the day of the inspection. Her average yield came out at 34·1 in the morning and 34·7 in the afternoon. Mr. G. B. Nelson's Comely, which was second for the inspection prizes, again took that place in regard to her milk yield, but was bracketed second with Mr. William Nisbet's (Hinxton, Saffron Walden) Red Millicent 3rd. Mr. Nelson's animal gave an average supply of 28·4 and 27·9, while the last-named exhibitor's cow was responsible for an average of 27·9 in the morning and 27·2 in the afternoon.

The best result in the Lincolnshire Shorthorn class was gained by Mr. John Evens, of Barton, whose seven-year-old Nancy 4th gave an average of 27·5 and 23·2. In the pedigree Shorthorn heifer class, Mr. William Nisbet was first with Bendyshe Queen, her yield being an average of 13·3 and 13 1.

In the non-pedigree heifer class there was again another win for Mr. George B. Nelson, the average for his roan Polly working out at 23·6 and 20 7.

In the Jersey cow class the best results were gained by Mr. J. H. Smith Barry's (Pewsey, Wilts) Post Obit, the yield being 21·2 and 18·0 for the mornings and afternoons respectively.

In the Guernsey classes there was a higher yield, the prize going to Mr. E. A. Hambro, of Hayes, Kent, who was also first when his cow, Queen of the Roses, was presented to the judges on the opening day. Her average supply was 24·5 and 23 0

The first of the Red Polled cows was one belonging to Lord Radnor, a five-year-old, bred by the exhibitor, which was only commended on Tuesday. She gave an average quantity of 26·6 in the morning and 25 0 in the afternoon, and won with a total of 103·8 points. In the heifer class Mr. Kenneth M. Clark again won with his first-prize Sudbourne Princess, her total points being 73 8, and her average daily yield being 17·4 for the morning and 16·4 for the afternoon. Mr. A. Carlyle Smith, of Campsea Ashe, who was also second with Queen Mab at the inspection, took a like place in these trials. He totalled 66·9 points, the milk yield being 12 9 and 12·4.

THE BUTTER TESTS.

These were conducted in three classes, and this year a fresh record has been created by an unregistered Shorthorn, with a butter yield of 2 lb. 11¼ oz. from 66 lb. of milk. Mr. J. Sheppy showed third and fourth cows. In the class for cows other than Shorthorns and Jerseys two Lincoln Red Shorthorns come out first and second. Mr. Evens's Burton Nancy 4th gave 2 lb. 8 oz. of butter from 52 lb. milk. Miss K.

Countess De la Warr's Buckhurst Waterville Sapphire	·92	·94	1·78	1·60	91·1	3rd prize.
Countess De la Warr's Buckhurst Peaceful	·75	1·03	1 77	1·80	89·1	Reserve and highly commended.
CLASS XVI.—DEXTER COWS—						
Duchess of Devonshire's Compton Dark Beauty	·77	·81	1·96	1·75	89·9	1st prize.
Hon. Mrs. C. Portman's Buckhurst June	·66	·61	1·97	1·72	87 7	2nd prize.

Carleton's second yielded 1 lb. 11 oz. butter from five gallons milk. A Guernsey of Sir H. F. Lennard's won a prize of £3, as did Sir W. O. Corbet's Red Poll Desiree of Johnstown and Countess De La Warr's Kerry.

CHEESE.

Considering the season, which has been none too favourable to cheese makers, the show of cheese was very creditable. Most widespread interest, as usual, attached to the Cheddar class, where the Scottish and English rivalry is strong. Cheddars have probably been better, so far as quality is concerned, but at the same time little exception could be taken to them in this respect, and number of entries considered, they were one of the best shows seen at this fixture. The class for four cheeses contained almost a hundred lots, and the judges eventually decided on Mr. T. C. Candy's cheese, from Dorset, for leading honours, Mr. R. Stevenson, Ayrshire, who has been prominent at this show in recent years, was second; Mr. A. White, a Somerset maker, was third; and fourth honours fell to the lot of Mr. A. Cross, Ayrshire. Mr. J. Smith, Castle-Douglas, and Mr. D. A. Hood, Kirkbudbright, also participated in the highly commendeds, and Mr. A. Clanachan, Stranraer, was commended for two exhibits.

The truckles class did not draw such a big entry, only two dozen in all, but a very good lot was staged. Mr. J. Candy here won the premier award, and Mr. Stevenson had again to take second and reserve positions, the texture of his cheeses being their stumbling block. He made a very close second here, however, and some would have placed his second lot first on account of its good colour and better condition. A southern exhibitor had third place, but Mr. A. Cross and Mr. Plunkett took he cards to Ayrshire and Mr. W. Hunter to Wigtown.

In the cheese fair class for twenty cheeses, there were fifty-six entries, and these engaged the judges' attention during the afternoon. Eventually both first and second honours went to Messrs. Corey and Portch, Somerset, for well matured cheeses of nice flavour and texture. Mr. Cross, who had third honours, had a very good lot of cheese that wanted more time.

For Stilton, Mr. J. C. Wilford, Tong Clanson, Melton Mowbray, was the winner. There was a nice display of Wensleydale cheese, for which Mr. Anthony Harker, Caperby, was a good first, and Mrs. Stubbs, Swinithwaite, Leybourne, a good second. The large display of Cheshire cheese was a feature of the year, no less than thirty separate exhibits being staged. The first prize for Lancashire cheese was taken by Mr. J. Blundell, Scotforth, Lancashire.

Countess de la Warr's Buckhurst Waterville Sapphire (Kerry)	36 1	2 0½	17·75	32·50	4·2	36·70	£3 Prize

BACON AND HAMS.

The classes for bacon and hams were rather stronger than usual as regards the number of entries. Hillier's Bacon Curing Company won in the smoked class, with Mr. J. Smith, Carlisle, in the unsmoked class. Four classes for hams were well filled. Messrs. Palethorpes, Ltd., Mr. S. J. Wright, and Mr. Joseph Smith were the principal winners, while in the selling class Mr. J. Smith's first prize exhibit made as much as 5s. per lb. when submitted for auction.

BUTTER.

In the butter classes Lord Portman secured two first prizes, and among others to win first places were Mrs. A. A. Beere (Tiverton), Miss E. Masson (Kelso), A. S. Hay (Ware), Mrs. Freed (West Wickham), Miss M. K. Harris (Stalbridge), Mrs. E. Lewis (Carmarthen), Mrs. L. R. Mildon (Morehard Bishop), Mrs. George Adlam (Wookey Hole), Miss M. Dalrymple (St. Boswell's), F. Ricardo (Old Windsor), C. Prideaux (Motcombe). Miss H. M. Trenchard, of Axminster, claimed first prize in two classes for ornamental designs in butter, and the classes for colonial salt and fresh butter were respectively won by the Downs Co-Operative Dairy, Toowoomba, Queensland and N. Wesphalen, Robertstown, South Australia. There were 124 entries in the colonial section, but much of the Australasian makes had distinct traces of that "fishiness," which is so objectionable.

The Jersey Cow shown above is Whitewood 4th, winner of the Blythwood Challenge Bowl for the Best Jersey Cow or Heifer in milk (bred in Great Britain or Ireland) at the Dairy Show last week. She is 10 years 5 months old, is by Nelson out of Whitewood 3rd, and was bred by Mr. J. J. Shepherd, but is the property of Lady de Rothschild Aston Clinton, Bucks.

ROOTS.

The minor hall, wherein was displayed the butter and cream, also contained the roots exhibits, which were of a very high quality. Some of the best samples came from the Channel Islands, their weight in several instances approximating 27 lb.

Roots from the South of England were also of excellent quality, but from the North of England little or nothing was consigned, for the reason that a partial failure is reported Some of the more weighty specimens were not of the best quality, as the use of the knife quickly proved.

JUDGES.

MILKING TRIALS.—Wm Ashcroft, Samuel R Whitley, F J Lloyd, F.C.S.

BUTTER TESTS.—R H Evans.

CATTLE.—Shorthorn Cows and Bulls: J C Robinson. Lincolnshire Red Shorthorn Cows and Shorthorn Heifers: Edward Mason. Jerseys: J T Keddie. Guernseys and Bulls in Class 21: G Titus Barham. Red Polls, Kerries, and Dexters: F N Webb. Ayrshires: Alex Cross. Cows in Classes 17 and 18: W J Hosken.

CHEESE.—Cheddar, J Hugh Mackie and Andrew Mitchell: Stilton, Wensleydale, and Leicester, Joseph Swain; Lancashire, Cheshire, and Derbyshire, W Gunstone; Double and Single Gloucester, Caerphilly, and Soft Cheese, Isaac Bidwell.

COLLECTIONS OF DAIRY PRODUCE.—W Gunstone.

BACON AND HAMS.—Mortimer Webb.

BUTTER. Colonial salt butter, W G Oakey; Colonial fresh butter, Howard F Kingham; Butter, free from salt, Mrs Clement Smith; Butter slightly salted, George Siggs, jun; Butter, commercial classes, H Griffith.

ORNAMENTAL BUTTER AND CREAM.—Miss M Johnstone.

ROOTS, &c.—Geo Fuller.

INVENTIONS.—John Speir, Primrose McConnell.

BUTTER-MAKING CONTESTS.—Miss A R Jenkins, Miss M A Johnstone, C E Walker-Tisdale, W J Grant (Class 99), Professor Carroll (champion contest).

MILKERS.—Edward Mason, W. J. Hosken, Nathaniel Cates jun.

PRIZE LIST.

COWS AND HEIFERS IN MILK.

Class 1. Shorthorn Cows.—1 and 4, Lord Rothschild (Red Rose and Broadhooks 3rd); 2, G B Nelson (Comely Maid); 3 and vhc, G Taylor (Melody and Barrington Cran); c, W Nisbet (Red Millicent 3rd).

Jersey Heifer not exceeding three years, bred in the Channel Islands.—1, Lord Rothschild (Palm Sunday); 2 and hc, J Pallot (Little Beauty and MontPellier Lily); 3, J de Knoop (Miss Sellon); r and hc, F V le Feuvre (Fauvic's Ida); hc, Mrs Eyres Monsell (White Heather); W J Alexander (Pansy 8th, Le Marais, and Dainty Daisy).

Class 9. Guernsey Cows.—1 and 2 E A Hambro (Queen of the Roses and Hayes Express); r and hc and c, Sir H F Lennard (Lady Russell and Lady 88th); hc, Hon Miss R E Hubbard (Flora Dance).

Class 10. Cancelled.

Class 11. Red Polled Cows.—1, 2, and c, Lord Rothschild (Atalanta, Clarissa, and Ethel 3rd); 3, Sir W Corbet (Desirae of Johnstown); r and hc, A J Smith (Rendlesham Abigail); hc and c, Earl of Radnor (Ashlyns Rose 2nd and Mona); c, S Woodiwiss (Beauty).

Class 12. Red Polled Heifers, not exceeding three years.—1 and hc, K M Clark (Sudbourne Princess and Sudbourne Lute 1st); 2, A Carlyle Smith (Queen Mab); 3 and r and hc, Lord Rothschild (Heroine and Cranberry); c, Sir R Cooper (Ashlyns Queen 2nd), A J Smith (Rendlesham Snowdrop), S Woodiwiss (Sedgemere Moselle).

Class 13. Ayrshire Cows.—1, J Littleton (Sally); r, W Nisbet (Dalfibble Daisy Bell).

Class 14. Cancelled.

Class 15. Kerry Cows.—1, 2, and hc, Countess de la Warr (Buckhurst Gem, Buckhurst Peaceful, and Buckhurst Waterville Sapphire); 3, Lady Greenall (Walton Joyous); r and hc and c, Duchess of Newcastle (Killarney 4th and Hardwick Jessie).

Class 16. Dexter Cows.—1, Hon Mrs C Portman (Buckhurst Juno); 2 and 3, Duchess of Devonshire (Compton Dark Beauty and Compton Dooka); r and hc, Sir W. Corbet (Acton Gipsy); c, Hon. Miss R E Hubbard (Acme Big and Compton Dazzle).

Class 17. Pair of Cows, of any breed or cross, in milk.—1, S S Raingill (Faithful and Pansy); 2, G B Nelson (Dot and Daisy); 3, J Evens (Burton Cot Fox 4th and Violet 6th); 4, R E Birch (Llandrill's Lady and Bryneuryn Beauty) 5, J Little on (Molly and Ruth); r, D Kelly (Miriel 2nd and Maud).

Class 18. Single Cow of any breed or cross, in milk. 1, J Wilson; 2, J L Shirley (Minnie); 3, J Evens (Burton Polly 2nd); 4, D Kelly (Running Water); 5, G B Nelson (Buttercup).

BULLS.

Class 19. Shorthorn Bull, twelve months old or over.—1, Lord Rothschild (Traveller); 2, J T Hobbs (Royal Pluto); 3, A B and W G Little (Victory 3rd); r, G W Tysor (Prodigy); vhc, C R W Adeane (Babraham Dairy King).

Class 20. Jersey Bull above one year and not exceeding three years.—1, A Miller Hallett (Alfriston's Pride); 2, Lady de Rothschild (Sparmer); 3, W M Cazalet (Oatland's Glory); r and hc J R Corbett (Edwin); hc, Lieut-Colonel C H Eyre Coote (Mobberley Lad), Lord Rothschild (Oxford Wrangler).

Class 21. Bull of any other pure breed, twelve months old or over.—Silver medal, J Evens (Burton Hermit 2 d).

CHEESE.

Class 22. Cheddar.—1, T C Carely 2, R Stevenson; 3, A White; 4, A Cross; 5, Carey and Portch; r and vhc, R Stevenson; vhc, R H. White; hc, F Portch, J Smith, D A Hood, Carey and Portch, G and C Harding; c, A Clanachan (2) H Travers, E Brake, P H Francis, F W J Crocker, J Candy, E C Sims (2), H Pickford, F Osborne, G Lester.

Class 30. Cheddar Truckles.—1, J Candy; 2, R Stevenson; 3, H Pickford; r and hc, R Stevenson; hc, A Cross, W Hunter, W G Plunkett; c, W W Keel, J Harding.

Class 31. Stilton.—1, J. C. Wilfo d; 2, Tuxford and Nephews; 3, Mrs C Fairbrother; r, H Morris; hc, Mrs A M E Bowmer, W Cowan, H B Wilford.

Class 32. Wensleydale.—1. A Harker; 2, Mrs Stubbs; 3, W Mason; r, Wensleydale Pure Milk Society, Ltd.; hc, Mrs Willis.

Class 33. Cheshire (coloured).—1, W H Hobson; 2, J Dutton; 3, S Dickin; r, W H Hobson; vhc, Mrs Withington, T Parton, Miss A Boffey, H Denson, R Cooper; hc, F Jeffries, C Price, Mrs M A Nunnerley, J H Bourne, S Dutton, J Sadler, J E Jones; c, F Heath, H S Walley, CE Parton.

Class 34. Cheshire (uncoloured).—1, S. Lea; 2, P. Dutton; 3, C. Price; r, T. Parton; vhc, J. Craddock. H. S. Walley, E. H. Lea; hc, C. F. Hobson (2). R. A. Walley; c, J. H. Bourne, S. Charlesworth, S. Dickin, J. Kynaston, F. Jeffries.

Class 35. Lancashire.—1, L. Bailey; 2, J. Bee; r, G. Whitaker; vhc, T. Thexton; hc J. Blundell, G. B. Nelson.

Class 36. Double Gloster.—1, Swepston Dairy Co; 2, R. H. White; 3, J. Sage; r, T. Kent.

Class 37. Single Gloster.—1. G. Prout.

Class 38. Leicester. 1, E Ball; 2, Swepston Dairy Company; 3, J Platt; r, Mrs A M E Bowmer; hc, Warwickshire County Council.

Class 39. Derby.—1, G. W. Lewis; 2, C A Goodwin; r, T Kent; vhc, J Platt; hc, F W Gilbert; c, Croxden Dairy Association.

Class 40. Caerphilly.—1, C Harris and Son; 2, Wilts United Dairies, Ltd.; 3, Wilts United Dairies, Ltd.. r, C and G Prideaux, Cheddar Valley Dairy Company; c, Wilts United Dairy, Ltd.

Class 41. Cream Cheese.—1, Wensleydale Pure Milk Company and Lady de Rothschild; 2, F W Gilbert and C and G Prideaux.

Class 42. Gervais.—1, Wilts United Dairies, Ltd; 2, Wilts United Dairies, Ltd.

Class 43. Unripened Soft Cheese, other than Cream Cheese or Gervais.—1, Miss J Watt White; 2, Miss J Watt White; r, Miss Robson.

Class 44. Ripened Soft Cheese, other than Cream Cheese or Gervais.—1, Miss H J M Taylor; 2, Miss E G Cook; r, Miss J Watt White.

Class 45. Cheddar.—1, Carey and Portch; 2, Carey and Portch; 3, A Cross; 4, R Stevenson; 5, J Whyte; r and vhc, J Whyte; hc, W G Plunkett, J Smith, H Pickford, R Stevenson, T C Candy, G D Templeman; c, A Osborne, F Osborne, J Beer; R E Harding, H Travers, T C Candy, B. R. Brought n.

Class 46. Stilton.—1, H Morris; 2, Scalford Dairy, Ltd r, Miller and Miller.

Class 47. Collection of British Dairy Produce.—1 and gold medal, Aplin and Barrett and the Western Counties Creameries, Ltd.

Class 48.—No entry.

BACON AND HAMS.

Bacon.

Class 49. Smoked.—1, Hillier's Bacon Curing Company; 2, E E. Pigott.

Class 50. Unsmoked.—2, J. Smith.

Hams.

Class 51. Smoked.—1, S J Wright and Co; 2, Palethorpes, Ltd.

Class 52. Unsmoked, under 14 lb.—1, Palethorpes, Ltd; 2, Palethorpes, Ltd.

Class 53. Unsmoked, over 14 lb.—1, Palethorpes, Ltd; 2, J Smith.

Class 54. Selling class for hams, any variety.—1, J Smith; 2, W Mitchell and Sons.

BUTTER.

Class 55. Butter free from salt, the produce of Channel Islands cattle and their crosses.—1, Mrs A A Bere, Miss E Masson, Lord Portman; 2, A F Somerville, Mrs C McIntosh, Mrs L R Mildon; 3, Mrs Evelyn, Lady de Rothschild, Mrs M Custance; hc, Lord Rothschild, A Palmer, Mrs F Ward, Miss M K Harris.

Class 56. Butter slightly salted, the produce of Channel Islands cattle or their crosses.—1, A S Hay, Mrs F Reed, Miss M K Harris; 2, J de Knoop, Hon A Holland Hibbert, Lady de Rothschild; 3, Mrs A A Bere, A Palmer, A Miller Hallett; vhc, Mrs F Ward; hc, Mrs J Blenkley, C A Goodwin, R Underwood, Mrs G Adlam.

Class 57. Butter free from salt, the produce of Shorthorn and other cattle and their crosses.—1, Mrs E Lewis, Mrs L R Mildon, Mrs G Adlam; 2, Mrs A A Bere, Mrs T Down Weeks, Miss A Andrews; 3, J Harrison, Miss S A Cliffe, Miss W. Langdon; vhc, Mrs M Stokes, Lord Portman, F K Ettinger, Miss M K Harris; hc, A S Hay, Mrs J T Dennis, Miss M Dalrymple, Miss E. Masson; c, R Underwood.

Class 58. Butter slightly salted, the produce of Shorthorn and other cattle and their crosses.—1, Miss M. Dalrymple, Lord Portman Mrs G Adlam; 2, Mrs S A Koirby, Mrs Pickup, Miss M K Harris; 3, Mrs H Pendlebury, W Rennie, Miss W Langdon; vhc, Mrs W Webster; hc, Mrs A Cookson, Mrs E Lewis, Mrs J Way, J Darlington, Mrs Williams, Centenary Co-operative Creamery Company, Kiltoghert Co-Operative Agricultural and Dairy Society, Limited, Miss Bowman, Miss I Allan.

Class 59. Butter slightly salted.—1, F Ricardo; 2 Mrs F Ward; 3, J de Knoop; r and vhc, J Hunter; vhc, Miss Roberts; hc, Mrs A A Bere, Kiltoghert Co-operative Agricultural and Dairy Society, Ltd, Killeshandra Co operative Dairy and Agricultural Society, Mrs Smith Neill.

Class 60. Butter made from salted cream only.—1, A C de Rothschild; 2, Mrs A A Bere; 3, Lord Rothschild; vhc, Mrs G Adlam, Mrs J T Harvey; hc, C E Keyser, Mrs F Ward, Mrs Smith Neill, Mrs S Pet le, Mrs Williams, Lady de Rothschild; c, Mrs L R Mildon.

Class 61. Fresh Butter, free from salt, in 24 lb. boxes.—1, C Prideaux; 2, Coagh Co-operative Agricultural and Dairy Society, Ltd; 3, Leckpatrick Co-operative Agricultural and Dairy Society, Ltd; 4, Genwilliam Co-operative Dairy Society, Ltd; 5, Killeshandra Co-operative Dairy and Agricultural Society; vhc, Spamount Co-operative Dairy and Agricultural Society, Ltd, Bellcek Co-operative Dairy Society, Ltd, Newcastle West Co-operative Agricultural and Dairy Society, Ltd; hc, Drumcliffe Co-operative Dairy Society, Keltoghert Co-operative Agricultural and Dairy Society, Ltd, Drumholme Co-operative Agricultural and Dairy Society, Ballymote Co-operative Agricultural and Dairy Society; c, Phillips and Son.

Class 62 Mild cured butter in 24 lb. boxes.—1, Solohead Co-operative Dairy Society; 2, Leckpatrick Co-operative Agricultural and Dairy Society; 3, Kiltoghert Co-operative Agricultural and Dairy Society; 4, Moneymore Co-operative Dairy Society, Ltd.; 5, Newcastle West Co-operative Agricultural and Dairy Society; r, Ardagh Co-operative Dairy Society; hc, Omagh Co-operative Agricultural and Dairy Society.

Class 63. Cured butter, not less than 28 lb., slightly salted.—1, Tamnaskenny Co-operative Agricultural and Dairy Society; 2, Rose Bower Dairy Company; 3, C Prideaux; 4, Moneymore Co-operative Dairy Society; 5, Glenwilliam Co-operative Dairy society; vhc, Solohead Co-operative Dairy Society, Newcastle West Co-operative Agricultural and Dairy Society; hc, Spamount Co-operative Dairy and Agricultural Society.

Class 64. Cured Butter, 56 lb.—1, Tammaskenny Co-operative Agricultural and Dairy Society, Ltd; 2, C Prideaux; 3, Newcastle West Co-operative Agricultural and Dairy Society; 4, Glenwilliam Co-operative Dairy Society; 5, Centenary Co-operative Creamery Company; vhc, Rose Bower Dairy Company, Solohead Co-operative Dairy Society, Ltd, Gramagh Co-operative Dairy Society, Ltd.

Class 65. Fancy or ornamental design in Butter, with foliage or other extraneous decoration.—1, Miss H M Trenchard; 2, Miss B M G Dare; r and vhc, Mrs J Holloway.

Class 66. Fancy or Ornamental Design in Butter, without extraneous decoration adapted for table use.—1, Miss H M Trenchard; 2, Mrs Custance; r and vhc, Miss B M G Dare; hc, Miss L Page.

COLONIAL BUTTER.

Class 67. Salt Butter. One box containing not less than 56 lb.—1, Downs Co-operative Dairy Company; 2, Framlingham Butter Factory; 3, North Coast Co-operative Company, Ltd; r and vhc, Warrnambool Butter Factory; vhc, Tyers Butter Factory, Cowarr Butter Factory, Echuca Co-operative Butter Factory; hc, Cambridge Co-operative Dairy Company; Bairnsdale Butter Factory, Milawa Co-operative Dairy Company, Eurva Butter and Ice Factory, J L Frederich—Killarney Valley Butter Factory, Samson Vale Butter Factory, Melrose Buttor and Produce Company, Ltd, Alexandra Dairy Company, Benal'a Dairy Company.

Class 68. Fresh Butter. One box containing not less than 56 lb. 1, N Westphalen; 2, Warrnambool Butter Factory; 3, A W Sandeford and Co; hc, Du Kaparing Cheese, Butter, and Produce Company, Benalla Dairy Co; c, Norsewood Co-operative Dairy Company, Ltd; Baddaginnie Butter Factory, Newstead Butter Factory.

CREAM.

Class 69. Clotted Cream.—1, Mrs L R Mildon; 2, Miss E G Everest; r and vhc, W Boer; vhc, F and H Hornby; c, J Dolbear, J Pepperell, C Prideaux, Mid-Sussex Dairy Company, Ltd.

Class 70. Cream other than Clotted.—1, Mrs L R Mildon; 2, A A Wilmott; r and vhc, Glynde Creameries, Ltd; vhc, C Prideaux; hc, Miss E G Everest; c, C and G Prideaux, F and H Hornby, F W Gilbert.

ROOTS.

Class 87. Six specimens of Long Mangolds.—1, P le Feuvre; 2, Lady Wantage; 3, T W Purser; r and c, C Tough.

Class 88. Six specimens of Globe Mangolds.—1, J Bowden; 2, Lady Wantage; 3, L J Smith; r and hc, C Tough; c, T Chettle.

Class 89. Six specimens of Tankard or intermediate Mangolds.—1, P Le Feuvre; 2, J B Le Feuvre; 3, J Bowden; r and hc, L J Smith; c, Lady Wantage.

Class 90. Six Specimens of Swedes.—1, H Bulford; 2, Mrs Dring; 3, Mrs Dring; r and hc, Mrs. McIntosh; hc, Mrs McIntosh; c, Lady Wantage, E Mead, Sir R G Harvey.

Class 91. Collection of Roots.—1, Mrs McIntosh; 2, Lady Wantage; 3, Mrs McIntosh; r and hc, T Doult; c, P E Mead, F Hoone

BUTTER-MAKING CONTESTS.

Class 94. Section A, Butter-making contest, open to those who have never won a prize at any show, wherever held.—1, Miss M Kavanagh; 2, Miss J Cassidy; 3, Miss A Jones; r, O D Carter; hc, Miss A Roberts; c, Miss H G Forman, Miss A L Smith.

Class 94. Section B, Butter-making contest, open to those who have never won a prize at any show, wherever held.—1, Miss E McEntogart; 2, Miss H Cadwallerder; 3, Miss J O'Hanlan; r, Miss G A Nicholas; hc, Miss G Hopkin; c, Miss D J Dudeney, Miss E M Masson.

Class 95. Butter-making contest, open to students who have attended classes at the British Dairy Institute for not less than one month during the past two years.—1, Miss J L Bull; 2, Miss H J M Taylor; 3, Miss E Morris; r, Miss G H Mason; hc, Miss A Jones.

Class 96 Section A, Butter-making contest open to women only.—1, Mrs N Comer; 2, Miss M P Comer; 3, Miss J Cassidy; r, Miss E E James; hc, Miss A Jones, Mrs W Watts; c, Miss E M Herbert.

Class 96. Section B. Butter-making contest, open to women only.—1, Miss E W Williams; 2, Miss M Jenkins; 3, Miss M Matthews; hc, Miss M Dalrymple, Miss J O'Hanlan; c, Miss L White.

Class 96. Section C, Butter-making contest, open to women only.—1, Miss M James; 2, Miss E M Powell; 3, Miss L K Perrett; r, Miss A Jones; hc, Miss S Sapsed, Miss G F White; c, Miss E A Jones, Miss M S Wild, Mrs T B Cross, Miss J Watt White.

Class 97. Section A, Butter-making contest, open to men and women.—1, Miss I White; 2, T A Burridge; 3, Miss R Goodwin; r, Miss F M Underwood; hc, Miss E Dunn, Miss A Furse; c, Miss S Jenkins.

Class 97. Section B, Butter-making contest, open to men and women.—1, Miss J Garbutt; 2 Mrs A Roberts; 3, Miss J Cassidy; r, Miss M P Comer; hc, Miss R Davies; c, Miss G W Welden, O D Carter.

Class 97 Section C, Butter-making contest, open to men and women.—1, Miss H J M Taylor; 2, Miss M Matthews; 3, Miss S Sapseed; r, Miss L Cook; hc, Miss M Dalrymple, H S Briggs; c, Miss E Tansley.

Class 98. Butter-making contest, open for first-prize Dairy Show winners of 1907.—1, Miss J Garbutt; 2, Mrs N Comer; 3, Miss E W Williams; r, Miss J L Bull; vhc, Miss M Kavanagh, Miss E MacEntogart, Miss M James, Miss J White, Miss H J M Taylor.

Class 99. Champion Butter-making contest, open to winners of first prizes in the preceding classes or at the Dairy Show of 1903, champions of any year excepted.—1, Miss E W Williams; 2, Mrs N C mer; 3, Miss M Kavanagh; r, Miss E McEntogart; vhc, Miss J L Bull, Miss H M Trinchard, Miss M James, Miss I White, Miss J Garbutt, Miss H J M Taylor, Miss A Garrard.

MILKERS' CONTEST.

Class 101. Milking contest, open to men over 18.—1, J D Tooood-Parsons; 2, W A Chapp ll; 3 G B Nelson; vhc, D Watt White, W J Hallett, F Ormesby; hc, F G Hamphire, G M Kirk; c, A Adler, R Haynes.

Class 102. Milking Contest, open to boys under 18.—1 F Hampshire; r and vhc, G R Nelson, jun; vhc, A H Vigar; hc, R P Clark, W Brown; c, S R Hook.

Class 103. Milking Contest, open to women over 18.—1, Miss J M Collins; 2, Mrs Askew; 3, Miss E Masson; 4, Mrs J Nisbet, Miss H Young. Mrs W H Purnell, Miss M E Nelson; vhc, Miss J Thompson, Miss H G Forman, Miss M Dalrymple, Miss E Nicholas, Mrs M Potts; hc, Miss A R Turney, Miss J Nesbit, Mrs M Jones, Miss A Furse, Miss A George, Mrs M Milner.

Class 104. Milking Contest, open to girls under 18.—1 Miss S Nelson; 2, Miss M L Nisbet; 3, Miss R J Masson.

CHAMPIONS.

The Blithwood Challenge Bowl for the best Jersey Cow or Heifer in milk in any of the Jersey classes bred in Great Britain or Ireland, to be awarded by inspection.—Lady de Rothschild's Whitewood 4th; r, A Miller Hallett's Carol.

Champion Cup, value £5 5s, for the best Stilton.—Mr J C Wilford.

The Barham Challenge Cup, value £50, for the cow gaining the greatest number of points in the Milking Trials.—Mr. G. B. Nelson's Shorthorn cow Daisy, 158·7 points; r, Messrs R and E Brown's Shorthorn cow Perfection, 149·7 points.

The Spencer Challenge Cup, value 50 guineas, for the best dairy cow in the show gaining the greatest number of points

by inspection, milking trial and butter test.—Mr G B Nelson's Shorthorn cow Daisy. Points: Milking 158·7, butter 64·4, inspection 40·0, total 263·1; r, Mr J Wilson's Shorthorn cow—Points: milking 146·0, butter 43·2, inspection 35·0, total 224·2.

Champion Cup, value £5 5s, for the best Shorthorn in the milking trials (Classes 1 and 2).—Equal firsts, Mr. G. Taylor's Melody (milking 4, inspection 2, total 6 points) and Mr G B Nelson's Comely Maid (milking 3, inspection 3, total 6 points).

B.D.F.A. ANNUAL MEETING.

The annual meeting of the association was held on Wednesday, the president, Lord Kenyon, in the chair.

The chairman, in moving the adoption of the annual report, said he would like to draw attention to the circumstance that the exhibition was undoubtedly one of the largest that had been held. He was glad to notice that the Cheshire cheese entries had more than trebled. He hoped the interest taken in the show by the Cheshire cheese makers would be maintained, and he hoped as a result there would be a greater sale for that kind of cheese in London. For some years past Cheshire cheese had hardly been seen in London, and it was in the North of England where the trade had been done.

Mr. Thomas Carrick proposed the election of Sir George Barham as the new president.

Sir George Barham said he appreciated the honour of being the first member of the council to be elected to the position of president.

Lord Rothschild's Red Polled Cow Atalanta, winner of First Prize, by inspection, at the Dairy Show last week. She is just over 8 years 8 months old, and has produced five calves. She is by Caistor Minotaur out of Rich Lady, and was bred by Mr. J. E. Platt.

Twelve members of the council were elected, as under:—Mr. A. L. Alexander, Mr. W. Ashcroft, Capt. R. O. Bellairs, Mr. W. C. Brown, Mr. R. Carr, Mr. T. Carrick, Prof. F. Carroll, Mr. S. P. Page, Mr. G. Taylor, Mr. S. R. Whitley, Mr. J. C. Robinson, and Mr. J. Sadler.

Mr. Stapleton brought forward a resolution in which he recommended the appointment of a deputation to wait upon the Board of Agriculture, with a view of showing that the agricultural interests of the country, including those of the dairy farmers, had suffered very seriously through the exportation of meal and offal, upon which he advocated a tax should be levied. He ventured to urge the Government to impose a tax on the exportation of meals and millers' offals and other cattle foods.

The resolution was not accepted.

Mr. Kelly, who asked for the introduction of the dual system of judging, also suggested that a class for first-cross cows should again be included in the catalogue. Most farmers considered it the best dairy cow, and seeing twenty-two were exhibited at the last exhibition, he could not understand why it had been deleted, especially when they considered the few entries in the Lincolnshire Red Shorthorn, the Ayrshire, and other classes.

NATIONAL DIPLOMA IN DAIRYING

The twelfth annual exhibition for the National Diploma in the Science and Practice of Dairying was held by the National Agricultural Examination Board, at the Midland Agricultural and Dairy College, Kingston, Derby, for English students from the 21st to the 27th ult., and at the Dairy School for Scotland, Kilmarnock, for Scottish students from September 30 to the 4th inst. Fifty-nine candidates entered for the examination, twenty-nine at the English centre and thirty at the Scottish centre.

As the result of the examination, the following thirty-eight candidates succeeded in satisfying the examiners, and have thus become entitled receive the National Diploma in Dairying:—

English Centre.—Tom. Clark, Miss Helen G. Forman, Miss Ivy G. Fuller, Pandit Ram Gopal, Miss Jean Jones, Patrick Lee, A. S. Llewellyn, Miss Grace Heather Mason, Miss Ethel Morris, Miss Jennie Shemwell, George F. Slinger, William Thompson, Mrs. Toussaint, Stanley S. Trevor, Miss Margaret S. Wild, Miss Emma Evans, Watkin S. Jones.

Scottish Centre.—Miss Gwen Bagnall, James McCulloch Brown, Thomas R. D. Carruthers, Alexander F. Cumming, Miss Jeannie Currie, Reginald Grant, Miss M A. Irons, John Goodwin Lucas, Miss Mary Jane McKerrow, Miss Elspeth M. Martin, Miss Jeanie Morrison, William Paterson, William Paton. Alexander V. D. Rintoul, Miss Ella Wyllie Stevenson, William Murray Denny, Miss Constance M. Emmerson, James P. Cow, William Hunter, Miss Winifred E. Love, Allister Ogilvy.

NEW APPLIANCES AT THE DAIRY SHOW.

Two classes were provided for new inventions and improved machinery for use in connection with dairy work, and a number of medals were given by the society.

INVENTIONS, &c.

Class 92 was for a milk strainer, or strainer and filter combined, capable of effectively dealing, other than by centrifugal force, with at least 100 gallons of milk in an hour.

The first prize of a gold medal was awarded to the Dairy Outfit Company, Ltd., for their exhibits of milk filter for country use, price £4 10s., and milk filter with refrigerator pan, price £6 2s. 6d.

A silver medal went to Burmeister and Wain, Ltd., for their Perfect milk strainer and filter combined, to strain 100 gallons of milk per hour; price, 18s. 6d.

A bronze medal was won by Thomas Grayson for a milk strainer and filter combined; price 7s. 6d.

Class 93 was for any other new invention relating to the dairy industry, or one showing distinct and practical improvement, not eligible for competition in any other class, and not previously exhibited at the Dairy Show.

A silver medal was won by the Dairy Supply Co., Ltd., for Dr. N. Gerber's Sal Butyrometer. It shows simply, quickly, and with perfect accuracy, the percentage of butter fat in any sample of milk, and possesses two great improvements over the apparatus hitherto sold:—1. No acid is required, the use of which is objectionable to many persons, and may be dangerous if carelessly handled. 2. Centrifugal apparatus of new design, entirely enclosed to prevent accidents, fitted with speed indicator and brake. To make eight tests at one operation. Price, £6 15s.

A bronze medal to the Dairy Supply Company, Ltd., for Swiftsure bottle-filling machine. Automatically receives bottles, fills and delivers them as fast as they can be removed by one man. Bottles of various sizes filled at the same time, absolutely accurate measure. A great labour-saving appliance for dairies having a large sale of milk in bottles. Price, £35.

A bronze medal to H. Bartram for the L. K. G. milking machine, to milk two cows at one time. Price, £25.

A bronze medal to Mono Service Vessels, Ltd., for Taylor's hygienic Milkups and Creamugs. Made of wood pulp paper and fluid proofing material. Prize, 2s. to 7s.

A silver medal to Robert Bobey, Ltd., for Garbutt's improved patent Two Minute butter churn. Price, £3 15s.

A silver medal to Burmeister and Wain, Ltd., for new Perfect hand separator; capacity, 75 gallons per hour. Price, £18.

A bronze medal to Blackstone and Co., Ltd., Stamford, for their improved swath turner and collector.

A bronze medal to W. Hopkins, Stadacona, Morena Park Road, Cheltenham, for a churn lid fastener, suitable for any size or make of churn. Price, 7s. 6d. to 10s.

Bronze medal to John Blackburn, Oarside Dairy Farm, Liscard, Wallasey, Cheshire, for apparatus for measuring and filling bottles. £7 10s.

The exhibit of the Dairy Supply Company, Ltd., Museum Street, London, W.C., included many novelties, which are new since the gathering at Islington twelve months ago, and some are now exhibited for the first time at any show. This company are sole agents for Dr. N. Gerber's patent process for testing milk and milk products, which is the best known and almost universally used throughout Europe. In this apparatus it has hitherto been necessary to use an acid, which is mixed with the milk in order to break up the casein and liberate the fat, so that it may be readily separated and the quantity read in a graduated tube. The use of the acid is unpleasant to many people, and there is no doubt, in the hands of careless people, it may be a source of danger, and likely to involve injury to fingers or clothes. Dr. Gerber has now, after many years' careful research and great experiment, perfected an apparatus which gives thoroughly reliable results without the use of any acids at all. It is distinguished as the Sal Butyrometer. In place of the acid a special chemical preparation is used, which is entirely free from any acid reaction or other objections and yet equally effective in operation. This is shown in connection with a new pattern centrifugal apparatus, the whole of which is entirely closed to prevent accidents, and which is fitted with a speed indicator to show when the correct speed is obtained, and a brake to avoid the waste of time caused by waiting whilst the machine runs down. The price of this complete to make eight tests at one operation is £6 15s.

Waide and Sons, Ltd., of Crown Point Road, Leeds, have patented and placed on the market an improved method of securing the lids of end-over-end churns, by dispensing with all screws. Since the invention of end-over-end churns the lids have been made with screws and lugs, to fasten down and effect a tight joint between the lid and churn. By this patented improvement all screws are dispensed with The lid is secured by two or more levers, according to the size of the churn, and are worked into position in one movement, which makes a complete air-tight joint. Waide and Sons, Ltd., are the original inventors and patentees of the end-over-end churn, and they were granted Royal Letters Patent for the same in the year 1897, and which churn is known throughout the world as the Victoria, and has been more successful than any other churn on the market. It was awarded £10 and silver medal in 1880 by the British Dairy Farmers' Association, being the largest prize ever given to any churn.

We had the opportunity at last week's Dairy Show of a talk with Mr. H. Bartram, who, as sole agent for the Midlands and South of England, was showing the L.K.G. cow-milker, which, being in actual operation, attracted a good deal of attention. It would seem, after careful inquiry, that this machine continues to give satisfaction to many farmers in this country, and we were introduced to the daughters of Mr. Graham, of Willow Farm, Wickham Market, who had loaned four of the six cows for use at Islington. These ladies informed us that the installation has been used on their Suffolk farm some four or five months for use on thirty cows daily, and, as an indication of the saving of milk by its use referred to the fact that recently, through one of the lamp machines accidentally not working, they had to resort to hand-milking, which, on one meal's milking, resulted in a shortage of four gallons. As to simplicity and ease of working Mr. G. Kaddatz, of Vince Mackay, Queensland, says, two of his boys, one aged twelve and the other nine, milked their cows with two machines in less time than six adults could do by hand-milking.

At a meeting of the National Fruit Growers' Federation, held on Monday, a discussion took place on the question of compensation to growers whose bushes were compulsorily destroyed owing to gooseberry mildew, and it was unanimously resolved: "That justice and expediency require the giving of some compensation for gooseberry bushes destroyed by order of the County Council under the Destructive Insects Act, 1907, and that this is indispensable to the efficient carrying out of the Act and the stamping out of the disease." The secretary was asked to forward copies of the resolution to the county councils.

SHOW GOSSIP.

At a meeting of the council of the Essex Agricultural Society, held on Monday, the secretary, Mr. Taylor, presented the accounts of the Jubilee Show at Chelmsford this year, and was in the happy position of being able to report a profit of £500, thus making their deposit up to £900. Mr. Taylor, however, remarked that if they went back to the time when they had a fairly substantial balance in hand, they would find that their reserve was not yet equal to what it was then. The secretary said the successful financial results were due to the fine weather they had on each day of the show, a circumstance which led to an increase in the admission money from £827 to £1,154. The amount received from entries had also increased—namely, from £510 to £853. There were increases under practically every heading on the receipt side of the accounts, the total amount of the receipts being £4,883.

The council, in accepting the accounts, thanked Mr. Taylor for the great interest he had displayed in the exhibition, and also agreed, on the motion of Mr. Whitlock, to make Mr. Taylor a special grant of £25.

When the question of where to hold next year's show came under discussion, Mr. T. Goodchild said that, as theirs was probably the most important of all the county shows in England, they must see that they did not allow their exhibition to go behind in any one particular. He thought they should conduct the next and all future shows on exactly the same lines as that held at Chelmsford; there should be no reduction either in the classes or in the prize money. That meant they would have to give up the idea of going to small towns, where it was impossible to get all the money they desired, and where the accommodation was too limited for a large show, as that of the Essex Society had now become. As there were only a few large towns in the county, and as his idea would lead to their visiting these more often, then they must rely more upon their own efforts, and expect less in the way of subscriptions than they had done in the past from the own they visited. They wanted to get to their exhibition the colonial and foreign visitors who came to this country for the Royal Agricultural Show, and also to buy pedigree stock. They would only come so long as the Essex Show remained the premier county exhibition, and so long as the place where it was held was easy of access. It was for that, among other reasons, he made the suggestion he had done. Mr. Goodchild concluded his observations by suggesting that he thought Colchester would be glad to entertain the society next year.

It was pointed out by both the chairman and the secretary that the society was not now getting the assistance they used to from the towns visited. Formerly, Chelmsford gave them a sum of between £800 and £900, but this year it only amounted to £325, and the society—contrary to previous arrangements—had to defray the show ground expenses.

The chairman agreed with Mr. Goodchild that it would be undesirable to in any way interfere with the prize list, which should remain the same as this year. It was only by having many classes and handsome prizes that they could expect to gain exhibits from all parts of the country.

The question of the date of the show being next raised, Mr. Vero Taylor said, being the premier county show, they should fix their dates without regard to what other societies were doing. Hitherto they had scrambled out of other people's way, but he did not think they should do it again. He agreed that a convenient day between the Derby and Ascot would be most acceptable. A small committee, comprising the Chairman, Mr. Parker, and the secretary, were appointed to interview the Mayor of Colchester, and it was left to them to provisionally fix the day of the show.

The Newcastle Royal Show.

At a meeting of the local executive committee having charge of the arrangements for the Royal Agricultural Show to be held in Newcastle next year, held on Friday, the subscription committee reported that subscriptions had been promised amounting to £1,910 10s., including the following:—Duke of Northumberland, £250; Lord Ridley, £100; Lord Allendale, £75; North Eastern Railway, £500; Mr. J. C. Straker, £100; Messrs. Bainbridge and Co., £100; Messrs. Lambton and Co., £105; Messrs. Barclay and Co., £105; Messrs. Newcastle Breweries Company, Ltd., £105; Messrs. W. B. Reid and Co., £105; Northumberland Agricultural Society, £100; Sir B. C. Browne, £56; Messrs. Hindhaugh and Co. (per Sir Joseph Ellis), £52 10s.; Mr. R. C. Swan, £50, &c.

Mr. Bolam, secretary of the Northumberland Agricultural Society, intimated that the Northumberland Society proposed holding a one-day show of their own inside the Royal Show Ground. Towards their own show they proposed to give £300 in prizes, and they would also give £150 in special prizes towards classes arranged by the Royal Society. They were also giving a subscription of £100 towards the local funds.

It was agreed that prizes should be given by the Newcastle Local Committee to a total value of not exceeding £2,000.

It was suggested that a dog and pigeon show be held in conjunction with the Royal Show, and the proposal will be discussed at the council meeting on November 6.

A public appeal, accompanied by preliminary subscription lists, will shortly be issued, and it is proposed that each subscriber of £1 be granted one season-ticket, and subscribers of £5 and upwards two season-tickets.

Dairy Shorthorn Society.

The Dairy Shorthorn (Coates's Herd Book) Association's second annual general meeting was held on Wednesday, the second day of the dairy show, at the Royal Agricultural Hall. Mr. Richardson Carr in the chair.

Lord Northbrook was elected president for the next year, Lord Crewe vice-president, and Messrs. C. R. W. Adeane, Richardson Carr, R. W. Hobbs, and G. Taylor were re-elected on the council, and Messrs. John Thornton and Co. auditors. The report of the council and statement of accounts were received and adopted.

It was decided to offer £100 in prizes for pedigree dairy Shorthorn cows and heifers to the following societies:—The Royal Show, the Bath and West of England Show, the Royal Dublin, the Royal Counties, the Oxfordshire, the Royal Lancashire, the Great Yorkshire, and the Tring.

A hearty vote of thanks was unanimously passed to Lord Crewe for his services as president.

The next council meeting was fixed to be held in London during the Smithfield Club Show week.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended October 5, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (12,372), 8,776; sheep and lambs (5,039), 1,306; horses (332), 481.

Fresh meat:—Beef (113,876 cwts.), 109,520; mutton (71,283), 82,353; pork (11,724), 12,522.

Salted or preserved meat:—Bacon (106,732 cwt.), 84,022; beef (3,518), 1,964; hams (17,949), 17,361; pork (3,445), 4,139; meat (14,592), fresh, 10,468; salted 1,701; meat, preserved (5,614), 6,948.

Dairy produce and substitutes:—Butter (85,071 cwt.), 66,127; margarine (22,636), 13,955; cheese (66,766), 40,243; milk, fresh in cans or drums (31), —; cream (64), 88; milk, condensed (20,457), 20,236; milk, preserved, other kinds (290), 49.

Eggs (great hundreds):—(399,638), 364,695; poultry (value £1,813), £4,293; game (value £3,325), £3,240; rabbits, dead (not tinned), (34,560 cwt.), 43,713; lard (44,870 cwt.), 28,815.

Corn, grain, meal, and flour:—Wheat (1,368,100 cwt.), 1,806,000; wheat meal and flour (346,700), 332,700; barley (508,800), 474,400; oats (184,200), 147,100; peas (84,660), 51,830; beans (38,240) 37,880; maize or Indian corn (692,700), 878,200.

Fruit (raw):—Apples (86,461 cwt.), 61,767; grapes (74,505 cwt.), 55,358; pears (21,382 cwt.), 29,530; plums (33,197 cwt.), 3,340.

Hay (2,739 tons), 1,384; straw (1,076 tons), 1,924; moss litter (1,392 tons), 1,208; hops (4,071 cwt.), 4,394; locust beans (48,920 cwt.), 12,900.

Vegetables (raw):—Onions (210,091 bushels), 278,493; potatoes (22,863 cwt.), 89,845; tomatoes (12,339), 22,419.

Molassine Meal £25 Competition was met with very great interest by agriculturists throughout the United Kingdom, but with the usual up-to-dateness which characterises the methods of the Molassine Company, they were able to certify the result on the 2nd of this month, which proved the winner to be Mr. John Foster, of 72 and 73, Port Street, Bengeworth, Evesham, to whom a cheque for £25 has been sent. Mr. Foster's original acknowledgment of the £25, we notice, was this week exhibited at the Molassine Company's stand at the Dairy Show. We understand that the company propose to continue this competition, particulars of which can be obtained from the Molassine Company (1907), Ltd., 36, Mark Lane, E.C., and all corn merchants.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.

KENNEL CLUB'S DOG SHOW, to be held at the CRYSTAL PALACE, OCTOBER 22 to 24, 1907 The London and North Western Railway Company will make arrangements for Through Vans for the conveyance of Dogs to be run to the Crystal Palace on Monday, October 21. Consignments from the Branch Lines, and from Nottingham, Peterboro', Oxford, Cambridge, &c., will be placed in these Vans at the various Junctions. Conveyance Rates can be obtained at the various Stations on the Line. Arrangements will also be made for the return of the Traffic in Through Vans at the close of the Show, and Exhibitors are requested to order their Consignments "per London and North Western Railway." The Company's representatives will be at the Show to answer enquiries with regard to the arrangements for the return journey. All information can be obtained of Mr. ROBERT TURNBULL, Superintendent of the Line, Euston Station, London; the Company's District Superintendent, Mr. H. A. WALKER, Euston Station, London; or Mr. I. T. WILLIAMS, Broad Street Station, London, E.C.

FREDERICK HARRISON,
General Manager.

West Country Notes.

THE price of Cheddar cheese has in the Western markets shown a still further recovery of 1s. to 1s. 6d., and the top price now quoted is 64s. 6d. This, though not up to last year, is about a fair average, but there being more buyers there is likely to be some further advance, even if it is not much.

RECENTLY allusion was made to a certain show having a record gate on a wet day. A police officer from the district in Cornwall where this occurred gives a hint as to the reason, though it may be supposed to cut rather the other way. Passing along his beat he noticed a farmer—rather more noted than some of his fellows for his saving propensity—busy at work in his field, though the rain was descending pretty heavily. A passing greeting and an inquiry how it was he was still at work in such weather, elicited the reply that he did not care about the weather so long as he was earning or saving a little money.

ANOTHER instance showing that the Welch of the Horn, as they were called of old, may be credited with as great a care of the coppers as their distant brethren of North Britain. A neighbour of the man alluded to last went five miles or so to get a pig removal license to find that owing to the absence of a particular form he could not take it back with him. "It is not worth your while to come in again so far for it," said the obliging officer, "leave me the post address and I will send it on to you to-night." "That's all right, but who is to pay the postage?" asked the farmer. "Oh," said the officer, "you will pay that, of course." "Not I; if you can't pay the postage I'll walk in to-morrow and get it," was the astonishing reply, and walk the nine or ten miles he did.

A CURIOUS string of occurrences led to the death of an aged farm labourer at Bishopsnympton in Devon a few days ago. He was picking up a load amongst the stubble, when a wasp stung the pony he was driving. The pony bolted, and the old man was knocked down as he jumped to the animal's head. He sustained a broken leg and such internal injuries that he succumbed to the shock.

TIVERTON Fair, though it has fallen on days of a similar character to those of other fairs which have been knocked out by the auctioneer, is still proclaimed in ancient form at Michaelmas. The ceremony dates back for close upon 300 years. The Town Council assemble at the Town Hall, and walk to a certain pool of water in the road, known as Coggan's Well, and according to an account that reaches me through a Devonshire friend, a police officer there reads a quaintly-worded notice, warning all foreigners and strangers having wares of merchandise to sell that they can do so during the fair, but not afterwards. Returning to the hall, "Success to the Fair" is drunk with all solemnity."

THERE was a great amount of practical experience about a speech which a Devonshire farmer delivered at a harvest home gathering, a few days since, on the Small Holdings Act. Coming from a parish—Clayhidon—where the majority of the holdings came within the definition of "small" according to the Act, he pointed out that he would not put too much trust in the effect of the Act being to bring people back on the land, because the small holdings were decreasing for want of fair play on the part of the authorities, not because they were not to be obtained from the landlords.

PERHAPS, he said, they would be surprised if they were to look over the parish books he had at home, to see how the authorities treated the small holder. The small holder paid about 2s. 6d. per acre in the way of rates, and in one case it was 3s. 2½d. On top of this came the land tax of 1s., so that the small holder had to pay 3s. 6d. to 4s. 6d. in this way per acre. Did not that, he asked, seem a strange way to try to get the people on to the land? It seemed to him that instead of bringing people on to the land it was going to kill out those who were there.

IF there had been a fair chance for the small holder there would not have been the need for the Act—the number of small holders would have grown naturally, was his argument.

DORSET and Devon are rejoicing in many places over rain. There has been a shortage in the ponds, and on the land the plough has been held up by the hardened state of the soil. Curiously enough, in many places where the haymaking has been most hindered by the wet, the ponds are dry, and hauling of water has had to go on up to the present time.

HALBERTON rejoices in a veteran farmer who has occupied his holding, Pitt Farm, for four years over the half-century. Mr. Frank Smith, the gentleman in question, declares that though seventy-eight years of age he is not afraid to face a day's work with anyone.

A VERY large number of stock sales are taking place in the West, and as a rule prices are holding up very satisfactorily. One of the best flock sales held took place this week at Ashton, near Dorchester, where Messrs. Ensor dispersed the flock of Dorset horns belonging to Mr. J. D. Symonds. Over 800 sheep were offered, and the six-tooths made up to 119s. apiece, averaging 78s. 6d.; four-tooths made up to 110s., averaging 77s. 8d.; the two-tooths up to 165s. in one case, and the average working out at 78s. 6d.; while the chilver lambs worked out at 48s., with a top figure of 56s. This is considered the record price for Dorset horns.

THE Board of Agriculture and Fisheries have again been sending an inspector to make inquiries into a scourge which effects serious loss to the farmers in some parts of the West—the art of scouring land. There are many peculiarities in this condition of things. Whether it be in the soil, in the herbage, or in atmospheric conditions, there are, in certain very well-defined areas, fields which, all at the same time, affect cattle with a kind of irritant poisoning, setting up diarrhœa. remove them, perhaps, only to the next field, and they are cured as rapidly as they went back. For years various bodies have been tinkering at the subject, but the Board which looks after the interests of the farmers cannot find £10 or so to start a preliminary investigation on scientific lines into the actual character of the disorder. This the people, who suffer the loss, consider the first step to ascertaining remedies. Surely for such an important body of men as the British agricultural community, it ought to be possible for Parliament to give the Department some margin not earmarked so absolutely as to preclude them from undertaking so important an investigation.

FARM.

Crops and Live Stock in Ireland.

The agricultural statistics for Ireland showing the acreage under crops and the numbers of live stock in each county and province for 1906-7 have now been issued by the Department of Agriculture and Technical Instruction, and they show a decrease of 14,392 acres in the area under corn crops, of 30,772 acres under green crops, 48,753 under hay, and 37,675 acres of barren mountain and bog, &c., when compared with the preceding year. On the other hand, there was an increase of 124,350 acres of pasture and grazed mountain, and of 4,466 acres under flax cultivation. The total net decrease in the area under corn and green crops and flax in 1907, as compared with 1906, amounts to 40,698 acres, or 1·7 per cent. of the total area under these crops.

This decrease has taken place chiefly in Ulster—the province which has the largest tillage area—and in Connaught, the province having the smallest tillage area. The decrease in Ulster amounts to 25,139 acres, or 2·6 per cent. of the area under corn and green crops and flax in that province; the decrease in Connaught to 11,296 acres, or 3·9 per cent. In Leinster and in Munster the net change in crops is small. In Leinster there is an increase of 167 acres in corn crops, and a decrease of 2,631 acres in green crops, giving a net decrease of 2,464 acres in corn and green crops. In Munster there is an increase of 2,825 acres in corn crops, and a decrease of 4,624 acres in green crops, giving a net decrease of 1,799 acres.

The area under flax in Ulster shows an increase of 4,426 acres. The wet unfavourable season, especially in the north and west, has affected adversely the area under tillage, while the shortage of grass in many districts has increased the area grazed at the expense of the area of hay.

The decrease of 5,729 acres under wheat amounts to 13 per cent. of the total area under wheat in 1906. It has taken place in each of the four provinces, but chiefly in Ulster, Munster, and Connaught, where the decreases amount to 2,786 acres, 1,472 acres, and 1,315 acres respectively. In Leinster the decrease was 156 acres.

In oats the decrease of 937 acres is equal to 0·1 per cent. of the total area under oats in 1906. There were increases of 5,173 and 5,942 acres in Leinster and Munster respectively; but a decrease of 10,682 acres in Ulster, and of 1,370 acres in Connaught.

The decrease of 6,194 acres amounts to 3·5 per cent. of the total area under barley in 1906. It has taken place in Leinster, Munster, and Connaught, more especially in Leinster and Munster, in which provinces 95 per cent. of the barley in Ireland is grown. The decrease in Leinster and Munster amounted to 5,144 acres and 1,494 acres respectively. There was an increase of 830 acres in Ulster, and a decrease of 386 acres in Connaught.

The decrease of 25,134 acres under potatoes is equal to 4·1 per cent. of the total area in 1906. There is a decrease in each of the four provinces, but chiefly in Ulster, where it amounts to 13,006 acres. The decrease in the other provinces is as follows:—Leinster, 3,478 acres; Munster, 2,924 acres; and Connaught, 5,726 acres.

Live Stock.

During the year there has been an increase in cattle, sheep, pigs, and poultry, and a decrease in horses, mules, asses, and goats. The total number of horses has decreased by 8,389. There is a decrease in Leinster of 988, in Munster of 2,506, in Ulster of 2,841, and in Connaught of 2,054. The number of mules and jennets has decreased by 1,168. The number of asses shows a decrease of 5,288, the number in Munster having decreased by 2,315, and in Leinster and Ulster by 1,017 and 2,207 respectively.

The total number of cattle shows an increase of 35,910. There is an increase in Leinster, Munster, and Connaught of 15,714, 16,445, and 19,756 respectively, and in Ulster a decrease of 15,005. The number of milch cows, including heifers in calf, is 1,580,801, showing an increase of 64,517, as compared with 1906.

The total number of sheep has increased by 101,163. There is an increase in Leinster of 59,126, in Munster of 10,763, in Ulster of 23,683, and in Connaught of 7,591.

The number of pigs shows an increase of 72,536, the number in Leinster, Munster, and Connaught having increased, and in Ulster decreased. Leinster, Munster, and Connaught have increased by 25,780, 47,227, and 11,757 respectively, and Ulster has increased by 12,228.

The number of poultry returned in 1907 amounts to a total of 24,318,752. The number in Leinster is 5,095,885, in Munster 5,568,818, in Ulster 9,265,988, and in Connaught 4,388,861. These figures show a great increase, especially in Ulster and Munster, as compared with 1906. It is probable that this increase is, in a great measure, due to a more complete record of young birds having been made in 1907.

CORRESPONDENCE.

Bottling Fruit.

SIR,—On page 399 the writer of Northern Notes observes: "One reason why the poorer classes do not make jam is because of the outlay required in sugar. In bottling fresh fruit no sugar is required, nor any preservatives. The fruit retains its freshness and flavour." Just so; but will your correspondent kindly inform us what bottles he would suggest that the poorer classes should use? I do not ask the question out of any desire to criticise, but I am prompted by a genuine desire to know.

So far as I am aware the bottles chiefly employed for bottling fruit are fitted with a screw stopper and rubber band, or some other specially designed lid, and on account of a particular kind of bottle being required poor people are prohibited from doing much fruit bottling on account of the receptacles. If your correspondent can furnish readers of the MARK LANE EXPRESS with particulars of a device by which fruit can be effectually bottled without having to go to the expense of specially made receptacles, he will indicate a means by which cottage-folk can adopt this method of preserving fruit.

If one has to lay out money to begin with in the purchase of specially made bottles the process is of little use to the cottager, and, as I see it, the expense is greater than the purchase of sugar for jam. Perhaps your correspondent will kindly furnish us with information on this point, as it seems useless to advocate fruit-bottling in preference to jam-making, if the process entails what to the cottager is an initial heavy outlay for bottles. —Yours, &c. COUNTRYMAN.

Does it Pay to Grow Wheat?

SIR,—Your Lincolnshire correspondent asks the above question on page 394, and then proceeds to answer it by giving a calculation presented by an agricultural contemporary based on experience in the above county. What interested me most was the item for rent, viz., £2 10s. per acre, much the biggest item.

By getting 4 qrs. to the acre and selling at 30s., not to say 35s. to 40s., the farmer can make a small margin of profit; but if these figures be correct what a glorious time farmers on the Cotswolds, in Wilts, and other places must have who rent land that will grow good corn and pay from 7s. 6d. to 10s. per acre for it.

They can allow for growing less and yet show a good profit on the estimate of expenditure given. If it is not asking too much, perhaps one of your readers who pays, say, 10s. per acre for his land will say whether expenditure and profits work out anything like the tables presented by your Lincolnshire correspondent.—Yours, &c.,

October 9, 1907. INQUISITIVE.

Sunday Labour During Harvest.

SIR,—All that is wanted now is for "my friend," as "Wamba" puts it (though I have never seen him), the writer of Lincolnshire Notes, to defend his paragraph which appeared on September 16, and let us know whether I or your other correspondents misunderstood his meaning. I thank the playful "Wamba" (is not this the name of a jester in the olden times?) for his congratulations on what he is pleased to call my sermon, because I didn't know that I had the capacity for preaching before.

However, to return to the argument, "Wamba" says, "Does not the fact remain that through all seasons, good or bad, during a few hundred years, the farmer himself (with some rare exceptions) has held faith and utterly refrained from harvest labour"—on Sundays? (The last two words are mine). Just so, and it is the exceptions I am defending, the cases where, in a summer like the past, the picking up of hay on Sunday was the means of saving it, and leaving it, because the day was Sunday, meant its ruin.

"Wamba" seems to suggest that a farmer who asks his men to work on Sunday in a case of emergency would do so without paying them, as he enlarges on the hardships that the latter would suffer.

Not a bit of it; and if he did I should condemn him at once; but if he had a cow ailing on a Sunday he would if necessary send for the vet. and pay him for the sake of saving the animal. Surely by the same argument he would be justified in paying his men to save a field of hay from ruin on a Sunday. On railways and other big concerns emergency work is done on Sundays to save upsetting the weekday routine and organisation, and surely the saving of a crop is a matter of even greater importance to the farmer.

I say, in spite of "Wamba's" misconstruction, that I protest against any proposal to turn Sunday into a general working day; but there are cases of emergency when a farmer is justified in employing (and paying for) labour to save a crop in harvest time, and I understand that these were the instances which the writer of the note that created the controversy had in mind.—Yours, &c., LUX.

October 8, 1907.

Whirlwind near Battle.

SIR,—Referring to your note on this subject in your issue of the 7th inst., it may be of interest to remark that on that Wednesday afternoon, when I was on the beach at Kemp Town, Brighton, I saw a waterspout. A funnel-shaped protuberance gradually descended from a bank of clouds to the southward to within a short distance of the water, which seemed to rise towards it, and was as gradually withdrawn, the phenomenon lasting about half an hour.

Perhaps this subsequently descended as a whirlwind at Battle, as the wind was S.W.—Yours, &c.,

HASTINGS C. DENT.

The Homestead, South Godstone, Surrey,
October 9, 1907.

Artificials to Use.

SIR,—About six acres of land that had been laid down for five years was dug last winter and potatoes planted in the spring. But the ground evidently did not suit them, as a large number only came to seed size. The ground is a mixture of chalk, clay, and loam. In some parts chalk predominates, in others clay. It is proposed to sow oats and barley next spring on the same ground.

Another part of the same field, now grass, is to be prepared for potatoes. This is a heavy loam soil, with a chalk subsoil.

What artificials do you advise for the cereals, and what for the tubers, also quantities? There is a fair amount of town manure available for the latter.—Yours, &c., A. E. B.

October 8 1907.

Legislation against Motors.

SIR,—Seeing an invitation in your valuable paper for your readers to give in your columns their views as to what course legislation should take in respect of motor traction, here are a few remarks from one who has been travelling about the country for nearly eighty years. Motors are not only killing man and beast, but they are spoiling the pleasure of thousands of people who go out for a walk or take a tour on the King's highway, having to pass through a cloud of dust and smoke so thick that they cannot see through owing to the fearful speed at which they travel. They are also causing expense to and grumbling by the ratepayers throughout the length and breadth of the land, and not without cause.

I have now in my mind, and have had for a long time, what would stop the unpleasantness and the mischief they are doing—that is, limit their speed to ten miles per hour, and if they exceed that speed let the law be rigidly enforced. Instead of letting the drivers off with a paltry fine, which they snap their fingers at, it would be better for all parties, I should think, if the authorities would enforce such a law, for that would put things right again. It would save many lives, and make it pleasant for people to travel about the country again without being blinded by dust. It would prevent the roads from being torn up, and many accidents which are happening to-day would thus be averted.

I have given my views on the subject of limiting the speed, because I think it is a great danger.—Yours, &c., A RATEPAYER.

October 10, 1907.

Worksop October Fair was held on Wednesday, when the attendance was larger than for some years. There was a good show of fair class horses. Among them were several well-bred Irish yearlings and two-year-old Hackneys, which made up to 20 guineas each. Useful nags varied from 8 to 22½ guineas. Over 3,000 sheep were penned, and trade was good. There was a good supply of store beasts, which made £8 to £12 10s. each; store lambs, 25s. to 38s. each; and gimmers, up to 56s. each. A fair supply of Oxford and Lincolnshire rams, the former making 50s. to 90s., and the latter about 3½ guineas each.

At a meeting of agriculturists, held at Kirkmichael, Isle of Man, on Wednesday, to consider the question of the importation of foreign and frozen meat, the disadvantage under which farmers and stock dealers laboured from foreign competition was emphasised, and it was contended that foreign meat should be labelled the same as margarine, and that the Manx Government should legislate in advance of the Imperial Government, as hitherto. A strong committee from all parts of the island was appointed to prepare a scheme for presentation to the Governor with a view to legislation.

Essex Notes.

WE have had three or four very wet days since my last week's Notes were written. Roots wanted the rain very badly; it was also good for any trifolium lately planted.

BUT for seed clover it is quite a different matter. Of course, it is not yet cut, so much the better; but, unless the mower soon gets to work on it, there are two things to consider. How much longer can it be left before the heads will come off? and will the wheat be got in in fairly good time?

SOME prefer spring oats to late-planted wheat: but, like all questions, there are two sides:—1, Too many oats in proportion to the occupation, to the exclusion of wheat; 2, the awkwardness of not having any or only a little wheat.

A LARGE or small number of horses to be kept on a farm all winter without any wheat chaff is a great drawback, as a rule, to their well-doing.

AND how about next year's hay and stover to be thatched?

OAT straw (cut up, of course) for horses will do for a makeshift, perhaps, for chaff; but there is a great risk of death by stoppage. So that, even at the risk of wheat being at a lower figure next year than it is this, there is no doubt it is the best plan by far to grow some. For thatching, too, wheat straw is, of course, by far the best, if water is to be safely kept out; and as to cottages, barns, sheds, &c., if reeds cannot be conveniently bought, wheat straw is the next best. I have two cottages on my farm so thatched; the tenants like them too, because they are cool in summer and warm in winter.

BUT there is no question about it: wheat at the price I quoted mine sold at last year is far too low to do us farmers any good; in fact, it has been the other way about. Even at 40s. per quarter many growers say they do not care particularly about growing it, because, always a whole-year crop and so many drawbacks as to plant and lots of other difficulties, the "pudding is hardly worth the boiling," they say.

BUT if the "pudding" is made in the way of the land being ready, it is the best plan to try again, but not on the condition of the commandment of old—to make bricks without straw. The land must be talked to if you want it to answer you again at thrashing time.

TO simply keep turning over land time after time, perhaps always ploughing the same way of the field (a very improper system to work it on), can anyone expect a crop—except of weeds?

ENERGY and a proper sum of money are required in farming as in any other business. If we take land where one blade of good grass has usually grown, we must at once see if we cannot make two grow next time. J. B. M.

October 11, 1907.

Famous Clydesdale Dead.—Mr. William Smith, Eastlands Farm, Crosby, Maryport, has had the great misfortune to lose by death the famous Clydesdale mare, Royal Rose, for which at the sale of the Blacon Point Stud last year he gave 515 guineas, a record price for a sixteen-year-old cart mare. Royal Rose was a most successful breeder, several of her offspring realising big prices, and being most successful show animals. In April the mare gave birth to a fine colt foal, which did not long survive. The mare was found dead in a field, a post-mortem examination showing death to be due to rupture.

At the quarterly meeting of the Somerset County Agricultural Instruction Committee, Colonel Blake presented the report of the Cheese School Sub-committee, showing that the school was going on very satisfactorily. A discussion arose as to whether the reports of the school should be published as hitherto, together with the names of the purchasers of the school cheese; but, on a division, it was agreed to follow the original course. Reports were presented by the agricultural, the gardening, and the poultry instructors, but provoked no discussion.

The great damson fair of the year was held at Market Drayton, Shropshire, on Wednesday, when for several hours the streets of the ancient market town were practically blocked with the numerous vehicles conveying fruit from the outside districts. The railway companies consigned close upon a hundred tons of damsons to various parts of Lancashire, Yorkshire, and Staffordshire, principally for preserving purposes. The trade was brisk. The prices obtained varied from 5s. to 6s. 6d. per pot or measure of 90 lb. weight.

Lincolnshire Notes.

WILL that Aisby stack get thrashed this year? It is now thirty years old, and its owner is under a vow never to sell it under £3 per quarter. He is an old man, and I am afraid if he does not strike his bargain this year he never will. The stack looks pretty dilapidated, but it will probably outlive its owner.

THE better news of the potato harvest is being steadily confirmed. The best results are said to be coming from Royal Kidneys, but British Queens and King Edwards are also doing well. The yield is also fair generally, whilst prices are more than satisfactory, for buyers are very active. What a profitable farmers' year it has been.

PROFITABLE, indeed! And only a short time back we were comparing the season with the black years of 1860 and 1879. How true it is that the slightest caprice of Nature may make or mar the harvest. How little we realise that one slight mistake may starve the world to death. But the old dame seems to know her business. She seems to delight in showing us how little we know about her.

IT has been a late harvest. Presuming that it is now well over, which is scarcely the fact, it has been one of the latest finishes of the last twenty years, and absolutely one of the latest to start. Some interesting figures on the subject are contributed to the *Spalding Free Press* by Mr. James Robinson, of Pinchbeck, Spalding. From these it seems that on only two occasions during the period covered by the record has a start been made later than August 22. This was in 1879, when harvest was not completed until October 18, and in 1902, when with twenty-four acres less to lead, it lasted from August 25 to October 16, so that this season has been more favourable than these. In 1892, operations began two days earlier and finished on September 29.

THE record for an early start is held by 1868—July 15. Five times only during the period has August witnessed the end of the ingathering—1870, 1874, 1887, 1893, and 1896, and in three of these years the date was the same—August 26. The year 1887 furnishes the only instance of a harvest begun (August 1) and completed (August 31) in the same month; but in 1876 the duration was shorter, a period of twenty-six days covering the whole operation. In 1880, on the other hand, harvest occupied nearly two months. These calculations give the commencement of the harvest this year as August 22 and its conclusion as October 3.

THE greatest interest is being manifested in the recent challenge between breeders of Lincolnshire Curly Coats and the Yorkshire White pigs. The result will have a tremendous effect in the general estimation of the value of the two breeds. But a correspondent who has recently written to the Press suggests that the conditions are not sufficiently comprehensive. He writes: "One of the most important points in connection with the respective values of the two breeds appears to be entirely lost sight of—*i.e.*, the market value of the pork made. Everyone who has given the least study to the question knows how much more valuable is the pound of meat from one breed, or even from one carcase of a similar breed as compared with the meat from another breed or specimen. I would ask of what practical value would a trial between Southdown and Long-woolled sheep made, say, in Staffordshire, be in the determination of the question of the profitable manufacture of meat, or, as in the instance referred to, the mere production of a certain weight of meat from an uncertain quantity of food?"

GEORGE SHEPHERD, late huntsman to the Earl of Hampton's hounds, was a Lincolnshire man, and though it is many years since he left the county, he will have not a few mourners amongst the followers of the hunt in this part of the world.

ANOTHER dispersal sale. On Monday the herd of Red Shorthorns, bred by the late Mr. George Laughton, of Belchford, near Horncastle, came under the hammer. Prices all round were good. The sale totalled 776 guineas, the average for cows and calves, heifers and calves, and yearling heifers being £23 5s. 7d. The highest price was 48 guineas for a heifer calved in 1905 by Norbury Cato, which won third prize at the Lincoln Royal Show.

GOOD prices were obtained at Sleaford horse and foal sale on Thursday, when prizes were awarded by Mr. William Dicken, of Thorpe Latimer, as follows:—Cart colt foal, 1 and 2, Mr. James Rickett, Little Hale. Cart filly foal, 1, Mr. S. Garton, Billingborough; 2, Mr. James Rickett; 3, Mr. Henry Cooper, Swaton. The winner of the second prize in the cart colt foals made 16 guineas, being half-a-guinea more than was given for the colt which took first prize. Nag and harness horses made up to 30 guineas, and cart horses up to 42 guineas.

Photo by A COW AND GANDER AS COMPANIONS. [*Jackson, Spalding*

LINCOLNSHIRE is a grand place to live in. At any rate, so says the Irish harvester who has been unburdening himself to the representative of a North Lincolnshire paper. It finds him work, it finds him something to take home to pay his rent; he finds the people kind and all well off, well off, that is, in comparison with his own poverty-stricken native land. Ireland is alright, but there is no work to do. And so far as he is concerned he is going to stop in England as long as he can, for there is nobody wanting him at home. They cannot afford him.

EVERY Lincolnshire farmer knew Mr. Charles Clarke, who has just died at Bath—suddenly, but at the ripe old age of seventy-nine years. One of the old school of Yeomen, Mr. Clarke was a famous breeder of stock and a veteran hunter Residing for sixty-five years at Ashby-de-la-Launde, Sleaford, he increased the fame of the splendid flock of sheep which he inherited, and he achieved an almost world-wide reputation as a breeder of rams. He was one of the founders of the Lincolnshire Longwool Sheepbreeders' Association, and one of the founders of the flock book, a strong supporter of the Lincolnshire Agricultural Society, and a breeder of Hunters. Though one of the old generation, the late Mr. Clarke will have many genuine mourners amongst the agriculturists of Lincolnshire to-day.

AN important sale of Lincolnshire Reds took place at Weston, near Spalding, on Wednesday. There were eighty six head of cattle belonging to Mr. W. J. Atkinson, and they included some Royal Show winners. The aggregate realised at the sale was 2,019 guineas. The highest individual price was 52 guineas, paid by Mr. T. Watkinson, of Stamford, for Nonpareil 16th, a heifer with service. Amongst the cows, 45 guineas was paid by Mr. Robert Clayton for Keddington Enderby 3rd, and the same amount was paid by Mr. Wiseman, Weston, for a heifer calf, Choice Jug. In other cases figures reached between 30 and 40 guineas Amongst cows for service the top price was 44 guineas, paid by Mr. T. H. Vergette, Borough Fen, for Keddington Baroness. Amongst heifers with service Mr. Vergette bought Surfleet Royal Lady for 45 guineas, whilst Weston Pink, a Royal prize winner, was purchased by Mr. C. Hensman, Fulletby, near Louth, for 41 guineas. Yearling heifers made up to 29 guineas, which was paid by Mr. Eggleston, Weston Hills, and bulls made up to 38 guineas, given by Mr. James Rawlinson, Pinchbeck, for Weston Victor.

THERE is a strong disinclination to disregard the Sheep Dipping Order. But it has got to be obeyed.

AT Lincoln last week Alfred Wipp (Skellingthorpe), Charles Albans (Thorpe-on-the-Hill), David Renshaw (North Hykeham), and John Green (Branston), were summoned for failing to have their sheep dipped in compliance with the Sheep Dipping (England) Order, 1907. The cattle inspector for Kesteven said out of 2,000 flock owners in the county only seven had not complied with the regulations. The order was made for the purpose of eradicating sheep scab and the cases were brought before the bench for the purpose of showing them that they must do their duty and loyally co-operate with the large flock owners and the local authorities. The defendants, who pleaded ignorance of the order, and said that their sheep had now been dipped, were fined 3s. 6d. each.

SOME notable purchases were made at a sale of Lincolnshire Red Shorthorns at Church Lawford Grange, near Rugby. The Rev. W. Hopkinson, of Wansford, Notts, gave 40 guineas for Ladylike, a cow by Royal Blood, having Thurlby Princess as dam. Mr. Atkinson, of Weston, near Lincoln, paid 91 guineas for a fine bull named Berks Jewel, eighteen months old, by Holker Jewel, out of Wild Rose. He is entered in Coates' Herd Book, his pedigree running back to the famous blood of the Bates' tribe. At the recent Warwickshire Agricultural Society's show he carried off the Shorthorn Society's medal.

LINCOLNSHIRE was represented at the Dairy Show principally by Mr. John Evens, of Burton. In the class for Lincolnshire red Shorthorn cows, entered in or eligible for the Herd Book of the Lincolnshire Red Shorthorn Association, the first prize of £10 went to Mr. Evens's Burton Ruby, spot red, six years and three months, sire Red Rover, dam Burton Ruby spot, by Professor, and the second prize of £5 to his Burton Nancy 3rd, red, aged four years and two months, sire Burton Rex, dam Burton Nancy, by Burton Snow. Mr. Evens also obtained the silver medal for his bull Burton Hermit 2nd, dam Saltfleet Favourite, by Grandad. Saltfleet Favourite won a second prize in the milking trials. Mr. F. Scorer, Bracebridge, obtained the reserve card in Lincolnshire red Shorthorn cows with Bracebridge No. 3b.

October 11, 1907.

A Cow and Gander as Companions.

A novel companionship, which is exciting a great deal of interest at Holbeach, Lincolnshire, is illustrated in the photograph which we reproduce on this page.

The view shows a Lincoln Red Shorthorn cow and a gander, belonging to Mr. George Hix, farmer, of Holbeach, which have formed a remarkable friendship. The cow and the gander may be seen in company passing through Holbeach town every morning and evening.

The gander accompanies the cow when it goes to be milked at Mr. Hix's premises on the Spalding Road, and also goes with it to the cricket field at Holbeach, where both cow and gander remain during the day. In the middle of the day and in the evening the two may be seen lying down together, the bird always making a point of lying down at the same time as the cow.

The gander sleeps with the cow, and also remains with it whilst being milked, and the strange thing is that although Mr. Hix has other ganders on his premises, this one refuses to make

a companion of any of them, or to associate with them, and closely attaches itself to the cow.

The men who take the cows down to the cricket field have tried to drive the gander back, but it refuses to go, and the only way to keep it from being near its favourite is to detach it by setting the dog on it, and lock it up, which is not an easy matter; and then, when released, it at once seeks out its companion. The cow also seems to show as much affection for the gander as the bird does for it.

The gander is a last year's bird, and came out of Norfolk, being purchased by Mr. Hix in Spalding market. It was to have been killed for dinner last Sunday, but in view of the novel companionship, and the great interest manifested in the case by the public, the bird has been spared, and it is likely that, when the time for dispersal comes, both cow and gander will have to be sold together.

Thorough inquiry has been made, but no explanation of the strange friendship is forthcoming, and it is regarded as one of the most remarkable cases which has ever been known.

Northern Notes.

THE past fortnight has seen a pretty heavy drop in the prices of breeding sheep, except for the best sorts; and in the grazing lamb trade prices are reduced, except again for tip-toppers, which realise (for white-faced Leicesters or half-bred Lincolns) anything up to 42s. or 43s. per head. Farmers must have the stock to fold on turnips and enrich the land for the following crops; otherwise it seems an impossibility, where cake has to be given as well, that a remunerative return can be expected when these same lambs are marketed between January and April and sold as mutton. For ordinary North-country lambs the trade is in a very queer state, and dealers are exercising the greatest caution in their operations. It is certain they are not able to tap the sources of origin and bring them into Yorkshire with a great margin of profit. Big transactions and quick returns alone seem to pay.

THE outlook for roots is the one fly in the ointment. The variety of reports as to the prospects are almost incredible. One farmer tells you his roots "look well," while another two or three miles off says his are "very poor." It is a matter of certainty that the same number of sheep will not be wintered on the arable farms of Yorkshire as was the case last season. One farmer tells me his grazing flock will number hundreds less than in the previous year, and there are others in the same predicament. A speaker at a harvest festival voiced the opinion of others recently when he said they had had a good harvest, with plenty of barley and oats, but that there was a scarcity of turnips. These are not ready for receiving the sheep, and farmers with lambs recently purchased for carrying over the winter are turning them among the stubbles just to put time on a bit. But the grand results of the cereal harvest have put the agriculturist into splendid feather. There is a near prospect of a much more liberal circulation of money.

SEVERAL of the Leicester flockmasters are dissatisfied with the sale results this year. Their sheep were exposed at a fair where large numbers of other breeds were also on offer; and as four auctioneers were all selling at the same time, buyers who would have preferred to see the whole of the 300 rams sold had to make their choice of a ring. It is obvious that under such conditions vendors would not feel satisfied. The averages went down a trifle; but as the rams this year were better than ever, much higher prices were expected.

THE Leicester has been developed in size of late years, the result of judicious mating. The Leicester men have not made the excellences of their sheep sufficiently well known to the outside world, and, as is the case with the Lincolns, comparatively few venture into the prize-ring. The flockowners must revert to their former practice, and hold a yearly sale on their own account. This step would, perhaps, give greater publicity to the Leicester breed.

THE North-Eastern Agricultural Federation Conference, a programme of which was given in the last issue of this journal, promises to be of unusual interest. It wil be held, for one thing, almost on the eve of the coming into operation of the Small Holdings Act; and Lord Carrington, who has promised to attend the gathering, may add something of interest to the discussion on that subject. We may be quite sure the debate will not be altogether a one-sided affair. Some of the delegates will wish to know how the interests of old established tenants are to be safeguarded—the tenants whose land may be acquired for cutting up into smaller holdings. Many sore feelings, it is feared, may be engendered by the operation of the Act in some districts where large farmers are makig a living and will not wish to part with even a few acres of their holdings. Lord Carrington may be able to shed a ray of light over prospective troubles. At any rate, his visit is anticipated with pleasure. He is the fountain head of the Department, and if his lordship's utterances do not always carry with them the hoped-for consolation to the farming interest, his optimism is a valuable asset. His inspiriting language begets enthusiasm — or ought to.

THESE federations are capable of great usefulness. Mutual support among farmers is so very desirable that every agricultural centre ought to have its organisation of tenants, where they can talk freely over their individual interests —in case of necessity—as well as their combined interests, and the interests of agriculture in a national sense. The North-Eastern Federation and the Yorkshire Union of Agricultural Clubs are exercising a desirable leaven upon the whole farming community. Their importance might be vastly increased by large additions to the membership of affiliated clubs. The ranks ought at least to be doubled in strength.

A WHOLESALE and retail grocer tells me that buttermaking is declining in volume in these parts; that his regular customers' wants he cannot supply, and the consequence is he imports "fresh" butter from the South of England. The demand for the home-made article is always in excess of the supply, and has been for years. Farmers find it more advantageous to sell their milk direct to retailers.

ONE cannot but think that buttermaking, with so keen a demand, would pay better if farmers—or their wives, who have very often the financial result of the weekly churning for their pin-money—would stand out for higher prices. I am told that rarely does the average price work out at more than 1s. per lb. the year round. This is a poor price for an article of such domestic value, and is below the average of Danish. I know an English dairy—in Yorkshire—which commands 1s. 6d. per lb. for its butter all the year round. Why should the price fluctuate? The makers of good butter could rule their prices and "set the market" standard if they went the right way about it.

October 11, 1907.

SOCIETIES.

Cleveland Chamber.

At the annual meeting of the Cleveland Chamber of Agriculture, held on Tuesday, the subject of a separate agricultural party in the House of Commons was discussed. Mr. Middleton, the hon. secretary, said he did not anticipate that the movement in this direction would be very successful, for he did not think that any party of that kind with any great weight behind it could be formed. The best method to adopt towards having agricultural interests attended to properly by Parliament was to strengthen the power of the Central Chamber, and thus increase the influence it could exert.

The president, Mr. J. W. Clarke, agreed that much more could be done for agriculture if farmers acted more unitedly.

Mr. J. W. Clarke said that nearly everybody but the agriculturists were represented in the House of Commons. He was the person above all others that each party tried to humbug with a view to getting their votes. The time had come when they should cease to be the catspaw of the political parties.

It was ultimately agreed to defer consideration of the subject.

The Chamber decided to approve of the amended Larceny Bill, and decided to call the attention of the Central Chamber to the state of the law regarding oral contracts between farmers and their servants.

The annual financial statement showed that the income was £70 3s. 3d., and that after meeting all expenses there remained a balance of £17 2s. 2d. Sir Alfred E. Pease, Bart., was unanimously elected president, in succession to the Marquis of Zetland; and Colonel R. G. Chaloner, and Mr. R. B. Turton were re-elected vice-presidents.

The Yorkshire Union.

The next general meeting of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture, will be held at the Agricultural Club House, Pavement, York, on Thursday, November 7, at 2.30 p.m., when the agenda will be as follows:—

1. General business.
2. Communications.
3. Address by Captain Mark Sykes on "Agriculture and the State."
4. The sheep dipping regulations. To be introduced by Mr. Edward Robinson.

[Return railway tickets at a single fare and a quarter (minimum 1s.) will be issued from any station on the North Eastern Railway to any member of the Union desiring to attend the above meeting, upon production of a voucher which can be obtained from the secretary. Early application for vouchers is requested.

Cornwall Farmers' Union.

A largely attended meeting was held under the auspices of the Cornwall County Farmers' Union at Wadebridge on Wednesday, the chief topic of discussion being the Small Holdings and Allotments Act, which comes into force on January 1 next. As the result of the discussion, the following resolution was carried:—"That the Cornwall County Farmers' Union approves of the Small Holdings Act being carried out on sound economic lines, but is of opinion that the matter being of national importance, all expenses should be made a national charge."

Other matters dealt with were elementary education and local taxation, and the following resolutions were passed:—

"That the Cornwall County Farmers' Union is strongly of the opinion that the present system of education in our elementary schools tends to unfit children for rural pursuits; that the education should be varied for the country and the town; and this union is of opinion that education being a matter of national importance should be paid for out of Imperial taxation, and that the Departmental Council formed by Lord Carrington should inquire into both elementary and secondary education, and that care should be taken to appoint teachers who are qualified to instruct in agricultural subjects."

"That this council is strongly of opinion that urgent legislation is necessary for the removal of those injustices and inequalities which, under the existing antiquated system of local taxation, rest upon agriculture: 1, by a Valuation Bill on the lines recommended by the Central and Associated Chambers of Agriculture; 2, by placing a far larger proportion of those charges said to be onerous rather than beneficial to a locality upon the Imperial Exchequer; 3, by placing the owners of property under direct contribution of local charges."

The question of auctioneers' charges also came up, but this matter was deferred for a settlement to the next meeting.

Lincolnshire.

At a meeting of the council of the Lincolnshire Agricultural Society held on the 4th inst., the finance committee reported that the income for the year had exceeded the expenditure by about £200, and submitted a report of the year's proceedings, which was adopted for presentation at the annual meeting of members to be held on the 25th inst. A draft prize list for next year's Sleaford exhibition was considered and adopted, and the stewards reported that arrangements had been made for the use of a suitable show ground on the Lincoln Road, over the railway, and also announced that water adjoining the ground would be supplied by the local authorities free of cost.

The Scottish Agricultural Conference.

The annual meeting and conference of the Scottish Chamber of Agriculture and Associated Societies will take place in the hall of the Christian Institute, 70, Bothwell Street, Glasgow, on Wednesday, the 23rd inst. The annual meeting will take place at 10.30 a.m., Mr. John Craig, president, in the chair, and the election of the various officers having been accomplished, there will be a discussion on the resolution, proposed by the Renfrewshire Agricultural Society, that associated societies with a large membership should be allowed to appoint directors to the Chamber as hitherto. Lord Rosebery has been nominated honorary president, and it is expected that his lordship will be present at both the meeting and the conference.

At the conference Mr. J. S. Ainsworth, M.P., honorary president, will preside, but, as was intimated some time ago, Lord Carrington, President of the Board of Agriculture, will not be present. The following resolutions will, however, be moved and discussed:—

Consolidation of Agricultural Holdings (Scotland) Acts.—That H.M. Government be respectfully urged to introduce a Bill early next session for the purpose of consolidating the Agricultural Holdings (Scotland) Acts.

Sheep Stock Valuations, &c.—That the Agricultural Holdings Act, 1906, should forthwith be amended so as to exclude from sub-section 2 of section 1 all away-going valuations, including especially sheep stock valuations.

Expenses in Milk Prosecutions.—Resolve to again impress on the Board of Agriculture the justice of the claim by successful defenders in milk prosecutions to be repaid their expenses incurred in rebutting a presumption of guilt created against them by statute, and urge that legislation should

be introduced for this purpose without further delay.

Sale and Consumption of Milk—Tuberculosis Commission Report.—That, in any measures that may be introduced into Parliament to give effect to the conclusions which the Royal Commission on Tuberculosis have reached regarding the sale and consumption of milk, due provision ought to be made for the payment of compensation to individuals who may suffer loss thereby in the public interest, and that the Board of Agriculture be respectfully urged to give this matter their particular attention in order to safeguard the interests of agriculturists.

Fiars Courts and Prices.—That the Board of Agriculture be respectfully urged to appoint a Departmental Committee to consider and report as to what alterations should be made on the present antiquated procedure for striking fiars prices in Scotland in order to bring such procedure into conformity with modern requirements and conditions.

Agricultural Education.—That, recognising the value of agricultural education, this conference is of opinion that the subject should be included in the curriculum of all our day schools in rural districts, and remits to the directors to take the necessary steps with a view to attaining this object; further, resolves that the Board of Agriculture be respectfully requested to appoint a Departmental Committee to inquire into the present condition of agricultural education and research in Scotland on lines similar to those of the inquiry presently proceeding in England.

Damage by Rats and Birds.—That the attention of the Board of Agriculture be directed to the importance of taking legislative or other steps without delay, with a view to the destruction of rats and birds, from which agriculturists suffer serious loss every year.

There will be an adjournment for luncheon, and the conference will be resumed at 2.30 p.m., when the following resolutions will be considered.

Small Landholders (Scotland) Bill.—That H.M. Government be strongly urged before reintroducing the Small Landholders (Scotland) Bill to amend it (1) on a purchase basis, (2) by constituting a Scottish Agricultural Council subordinate to the present Board of Agriculture, and otherwise on lines which would not involve the separation of Scotland from that Board, together with needless disturbance of the existing conditions under which Scottish agriculture has been an outstanding success, and loss of support from the classes directly interested in the prosperity of agriculture.

Traction Engine Traffic.—That the statutory requirement for three men being in attendance on traction engines on public roads should be repealed.

Railway Rates on Perishable Goods.

Manure and Fertiliser Rings.—That the operation of manure and fertiliser rings by tending unfairly to enhance prices and to exclude legitimate competition is seriously prejudicial to the interests of agriculture, and that, with a view to providing a remedy, the Board of Agriculture should appoint a Departmental Committee to inquire into the matter.

There were very heavy consignments of store cattle at Leicester October Fair on Friday, and the bulk of the stock came to hand in very good condition. Buyers and dealers were well represented, and trade ruled active, the whole of the lots changing hands at slightly firmer prices. Choice milch cows sold freely at £20 to £22, good lots £18 to £19, secondary £14 to £15, Shorthorn bullocks £12 10s. to £15, Irish cattle £13 10s. to £16, Welsh bullocks, £9 to £14 10s., heifers £8 to to £13 10s., young stock £5 to £8, and calves 20s. to 35s. per head.

Fertilisers and Feeding Stuffs.

Fertilisers for the Wheat Crop.

The prospect of more satisfactory prices for wheat will induce many farmers, should the autumn weather be favourable, to devote more land to the crop, and to be more liberal in the use of fertilisers so as to obtain a big yield.

The principal requirement of wheat, as with other cereals, is for fertilisers of a nitrogenous character, applied as a top dressing in the spring, and when farmers have wanted to spare money in view of the very low price of the product, the application of phosphates has very often been dispensed with; but there is no doubt that a dressing of superphosphate in the autumn is a help to the crop. During the winter months the roots are not idle, but are gathering strength for the subsequent growth of the crop, and a supply of phosphoric acid is of assistance to them at the early stage of their development.

On the Continent it is almost the universal practice to apply to the autumn-sown wheats a mixture of superphosphate and sulphate of ammonia, with results that are quite satisfactory. The sulphate of ammonia is not lost, as during the cold weather and frost it is not converted into nitrate, and therefore remains in the soil ready to be transformed into assimilable food directly the warmer weather of spring sets in, and to be at the disposal of the young plants just when required. Perhaps the winters in this country are not uniformly sufficiently cold to make the autumn application of ammonia a prudent measure, but the autumn application of 3 cwt. per acre of superphosphate can certainly be recommended.

On the usual heavy class of wheat lands it is not necessary to apply potash, but on light land the crop should be given the benefit of 3 cwt. kainit applied with the superphosphate in the autumn.

When superphosphate is not applied in the autumn, the crop should have a dressing of 3 to 4 cwt. of dissolved Peruvian guano quite early in the spring.

As regards a nitrogenous top dressing in the spring, nitrate of soda may be considered as the best for wheat, but in view of the relatively cheaper price of sulphate of ammonia, farmers can be recommended to use the latter to a certain extent. The top dressing should be divided, say 1 cwt. of ammonia applied quite early directly the plant shows above the ground, and then, if at all backward, in about a month's time ½ cwt. of nitrate of soda. Both the sulphate of ammonia and nitrate of soda should be well mixed with sand or dry earth to enable it to be evenly spread over the field.

Fertilisers for Celery.

In a special bulletin on the growing of celery, the United States Department of Agriculture recommend that manure be freely used, as much as from ten to twenty tons per acre per year, lime and salt also being suggested. The bulletin also states that one to two tons of high-grade fertiliser to the acre may be profitably applied on most soils in addition to the stable manure and lime. As a rule, the quick-acting fertilisers are used, and a mixture suitable for growing celery should contain about 6 per cent. of nitrogen, 5 per cent. of available phosphoric acid, and 10 per cent of potash. An excellent plan is to drill a part of the fertiliser into the land by means of the fertiliser attachment of a grain drill, and then scatter the remainder in the rows and work it into the soil by means of a harrow or cultivator. In the preparation of the rows for growing the home supply of celery, it will be sufficient to apply between two and three quarts of high-grade fertiliser to every rod of row to be planted, working the fertiliser into a strip of soil 12 to 18 in. in width. After the celery plants have become well established their growth may be hastened by making frequent light applications of nitrate of soda to the surface of the soil before cultivation.

Prices of Fertilisers.

There is now a brisk demand for fertilisers required for autumn application, particularly for basic slag, superphosphate and potash salts, while we hear of contracts also being made for nitrate of soda and guano for Spring delivery.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	12	0	0
Peruvian guano	according to analysis		
Superphosphate, 26 per cent.	2	10	0
,, 35 ,,	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.	9	10	0
Fish guano, first quality, scarce & dear	7	10	0
Kainit	2	7	6
Sulphate of potash	10	0	0
Muriate of potash	9	0	0

Manuring Meadows.

In order to get the best results from the application of fertilisers to meadows, they should be applied in the autumn, and phosphate of lime and potash are the fertilisers that should be used.

It is assumed that the meadow land contains a sufficient supply of lime, otherwise no manuring will be effective. Lime is the first essential, but with sufficient lime in the soil the application of phosphate and potash is most advantageous, not only as regards the quantity of the crop produced, but especially as regards its quality. The most nourishing plants, particularly the clovers, are developed, and the value of the fodder increased proportionately.

So much being generally recognised, the question remains: What is the best time and what the most suitable manures to apply?

The best time is the autumn, and the best fertilisers superphosphate, basic slag, and kainit.

According to the table given in "Aikman's Manures and Manuring" a crop of 1½ tons of hay take from the soil in mineral constituents 51 lb. of potash and 12 lb. of phosphoric acid, and to replace this deficiency it would be necessary to apply, say 3½ cwt. of kainit and 1 cwt. of superphosphate, or an equivalent proportion of basic slag per acre.

As a matter of experience, in order that the roots of the grass may have a plentiful supply of phosphoric acid, it is found necessary to apply 2 to 3 cwt. of superphosphate, or equivalent of basic slag, to produce the best results.

With kainit it appears to be different, and 3 to 3½ cwt. per acre satisfies all the requirements of the crop; in fact, experiments have demonstrated that extra supplies of potash are no good.

The point we would like to impress on our readers is the advantage of the combined dressing of potash and phosphates, thus in some trials:—

	lb. per acre.
Unmanured the crop was	1,900
Manured with kainit	2,100
Or with kainit and phosphate	3,700

proving that in the absence of the phosphoric acid the potash could not exercise its influence, even although theoretically the crop requires potash more than phosphoric acid.

What form of phosphate of lime is the best? On well drained meadows the choice should be superphosphate, but on all poverty-stricken meadows, and meadows containing moss or generally out of condition, the best form of phosphate is undoubtedly basic slag.

The manures should be applied in the autumn. Both kainit and basic slag produce far better results on meadows applied in autumn than if put on in the spring. The roots of the grass are getting the nourishment during the winter, and are then ready to start in strong vigorous growth in the spring.

If necessary in the spring to give the meadows a little stimulus, a slight dressing of nitrate of soda or sulphate of ammonia will have the desired effect.

Condition of Plant Food.

It is not merely the amount of this or that plant food present in the soil which must be taken into account, but also their mode of combination; the fertilising substances may be present in the soil and soluble in the acid used for analysis, but yet beyond the reach of the plant, in a locked-up or dormant condition. The plant can only obtain substances which have been previously dissolved in the water contained by soils in the field, hence plant food in the soil is only available for the plant in so far as it can pass into solution. The apparent paradox of a soil being poor or impoverished while yet containing enough plant food to furnish a hundred crops or more, is thus explained by the comparative insolubility of these reserves, which can only become available to the plant by passing into solution. To use an illustration, the plant food in the soil may be represented by the capital a man may have locked up in a particular business, the available plant food will correspond to the cash in hand, which may often run dangerously short, however great the capital involved. Similarly a good many of the operations of cultivation have for their end the bringing of the capital of the soil into a circulating form as rapidly as possible, and the realisation of a profit from it.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, in the paper.

Horse-Chestnuts as Food for Stock.

The principal use of chestnuts seems to be to serve as "conkers," and a lad who is the proud possessor of the toughest nut is regarded as a "conkering" hero. It is probable that the nuts, when plentiful in a district, might be put to a more profitable use.

In Turkey, when ground and mixed with ordinary provender, they are given to horses, and for this purpose are regularly collected.

The *Journal d'Agriculture Pratique* points out that the harmless nature of chestnuts has been known for more than a century. Numerous experiments have served to demonstrate that 1 to 2 lb. can be given to sheep per day, and as much as 10 lb. to oxen, without any ill effects, and that they are considered to be a remedy for broken wind in horses.

For smaller animals they are not suitable; thus it has been found that a couple of ounces will suffice to kill a duck.

Analysis shows that the chestnut contains about—

39	per cent.	of water.
5	,,	,, proteins.
46	,,	,, carbohydrates.
2	,,	,, ash.

From experiments recorded by Professor Gay it would appear that 1 lb. of cooked chestnuts affords as much nourishment as 3 lb. of beet roots.

Rations which contained cooked chestnuts produced an increase of weight in sheep of 32 lb., while the same quantity of chestnuts given in a raw condition only by 6 lb., proving the advantage of having them cooked.

It was found by Professor Gay that 10 lb. of cooked chestnuts could be given to a cow per day without exercising any adverse change either in the flavour or richness of the milk. The quantity of the milk seemed to be somewhat reduced, but this was remedied by adding more roots containing a large proportion of water. Pigs have a natural dislike for raw chestnuts, but when shelled, cooked, and ground, ¼lb per pig can be given with advantage.

It may be mentioned that a flock of 250 sheep at Noisy-le-Roi were given for several years about 60 tons of chestnuts, collected in the parks of Versailles and Saint Cloud.

The object of cooking the chestnuts is to remove the bitter taste and to make them more digestible.

A German agricultural paper has an article on the same subject. According to it chestnuts have considerable value as food, almost equal to that of rape and wheat, but it points out that they should always be cooked. They should be boiled in their shells till quite soft, and then the bitter water poured off. Afterwards they should be well boiled again in fresh water; the water then has a sweet taste, while the chestnuts have the aromatic flavour of sweet chestnuts.

It is said that they are also useful in horticulture, and especially in pot-culture as a means of getting rid of worms and grubs. For this purpose they should be soaked in water, and the bitter water poured over the soil in the pots, when the worms will soon come to the surface and can be collected.

Success of Basic Slag.

The immense success of basic slag has, in the opinion of Mr. Hall, of Rothamsted, been mainly due to its special power of improving a particular class of poor grass lands on clay. The soils of these clays are lacking in both phosphoric acid and carbonate of lime, and when they have been long down to grass they become covered with a thin, poor herbage of bent grass, which creeps along the surface in straggling tufts and affords very poor grazing for any kind of stock. Farmyard manure, and almost any form of nitrogenous fertiliser, have no good effects, often an injurious one; but the summer following a dressing of basic slag, the whole pasture becomes covered with white clover, small plants of which have previously been living stunted beneath the "bents." Stock now graze the land with great relish and the vegetation improves year by year, the bent grass giving place to clovers and other grasses of better character.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in an early issue of each month.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Fertilisers and Pastures.

Farmers in America and Canada are being urged to devote more attention to the cultivation of their grass lands, just as much as they are in this old country.

A considerable improvement, writes the *Fertiliser Journal*, can be made on most poor pastures by suitable manurial treatment where there is no deficiency in the supply of moisture.

The principle of improvement consists in altering the character of the herbage by rendering the chemical condition of the soil favourable to the growth of white clover and plants of the same natural order.

The growth of such plants, among other effects, increases the soil's supply of nitrogenous material, and in old land hay diminishes the demand for direct nitrogenous manuring. Direct nitrogenous manuring, and the manurial residues from the feeding of grain to the grazing stock, are usually unprofitable and ineffective in the early stages of pasture improvement.

Abundant supplies of available phosphate, potash and lime are necessary to promote the growth of clover. The seed must be sown if the plant is totally absent, and there are no dormant seeds in the soil.

The cheapest combination of available phosphate and lime is furnished in basic slag, and this manure has, in general, been demonstrated to be the most profitable form in which to supply these ingredients. The application of lime alone has been uniformly unprofitable. Ground lime and superphosphate make a more costly combination, and though an improvement is effected in pastures, it has not been proved equally profitable.

Potash is especially necessary for leguminous herbage, and the addition of kainit to the phosphatic dressing has been proved to be profitable on a considerable range of soils from the beginning. It is probable, even on those clay soils which are at present regarded as exceptions, that after the first year the soil's supply of available potash will require to be supplemented in order to maintain suitable conditions for the production of a nutritious and well-mixed herbage.

To Manure at a Profit.

We have pleasure in directing attention to the booklet "To Manure at a Profit—Every Farmer His Own Experimenter"—published at the office of this paper at the small price of 6d. (by post 7½d.). It is a reprint of the series of articles which appeared in these columns some time ago, and attracted a good deal of attention. The writers of the articles combine a thoroughly practical and scientific knowledge of the important subject dealt with, and have succeeded in putting their suggestions and recommendations in simple language capable of being grasped by the reader who is too busy to study the scientific books usually written by scientific men. Every farmer should read the booklet and keep it by him for reference. It can be obtained from the Publisher, 3, Wellington Street, Strand, London, W.C.

Basic Superphosphate.

We have received one or two inquiries as to the nature of this fertiliser. It is prepared from superphosphate and slaked lime, so that the acid character of the superphosphate is neutralised, the result being a phosphoric fertiliser free from acidity. Basic superphosphate thus occupies a position half way between ordinary superphosphate and basic slag. It is said by makers to be quicker in action than basic slag, and free from the objections to the use of superphosphate on soils deficient in lime.

It contains 26 per cent. phosphate of lime in an available condition. There is also about 34 per cent of lime in it, against the quantity of about 23 per cent. in ordinary superphosphate.

To Meet the **6,000,000** *Gallons of Yearly Increase in the Milk Consumption of Great Britain,*

USE SILCOCK'S DAIRY CAKES AND MEALS.

These are the figures officially published by the Board of Agriculture. They disclose a

GREAT OPPORTUNITY FOR THE ENTERPRISING FARMER.

A FEW VITAL QUESTIONS:—

1. **How are you equipped to meet this opportunity.**
2. **Is your herd of Cows almost wholly composed of first-class Milkers; or is there a large proportion of doubtfuls?**
3. **Does the individual production of each Cow bear its proper relation to the cost of its feed?**
4. **Are you satisfied with your present output of Milk?**
5. **Are you QUITE SURE that the Feeding Stuffs you are at present employing give the best possible results?**
6. **Does your present financial overturn constitute the high-water mark of attainment?**

If you neglect to answer these queries in a practical way, your opponents will answer them for you.

You doubtless have the RIGHT COW, therefore read on—

After many years of careful study and experimenting we believe that the answers to these Food Questions are to be found in CONCRETE FORM in . . .

SILCOCK'S DAIRY CAKES AND MEALS.

FOR, BY THE USE OF OUR PRODUCTS { **A Poor Milker is made better.** **A Fair Milker is made a Good Milker.** **A Good Milker is transformed into a Great Pail Filler.**

Provided the necessary simple conditions are followed—FOR INSTANCE,

One Cow fed on SILCOCK'S DAIRY MEAL produced no less than

3 tons, 16 cwts., 3qrs., and 7½ lbs. of Milk in six months.

These results are required to meet economically the 6,000,000 GALLONS OF YEARLY INCREASE, and we can assist you in obtaining them.

We await your instructions. May we send a Sample Lot to-day? Agents Everywhere.

Head Office: R. SILCOCK & SONS, Stanley Hall, Union Street, LIVERPOOL.

ABSORBINE (YOUNG'S)

will reduce inflamed, swollen Joints, Bruises, Soft Bunches, Cure Boils, Fistula, or any unhealthy sore quickly; pleasant to use; does not blister under bandage or remove the hair, and you can work the horse. 8s. 3d. per bottle, delivered. Book 7-C free.

ABSORBINE, JR., for mankind, 4s. 6d. per bottle. Cures Varicose Veins, Varicocele, Hydrocele, Strains, Bruises, Stops Pain and Inflammation. W. F. Young, P.D.F., Springfield, Mass., U.S.A. Sole Agents for United Kingdom: Tho. Christy & Co., 4, Old Swan Lane, London, E.C.

NO CURE! NO PAY!!

(Registered Trade Mark.)

G. F. DAWES'

is the only Guaranteed Cure for FOOT ROT.

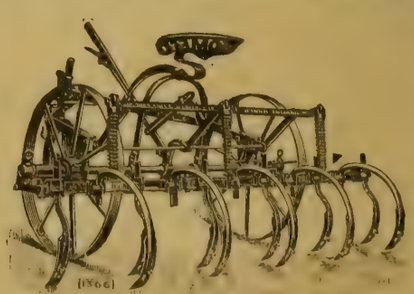
Leaves the hoof and foot soft and healthy Price 3s. and 1s. 6d. In Brown Pots only sufficient to dress 80 Sheep and 40 Sheep. Trial Pot Free from the Manufactory.

Requires no Reduction in Price to Sell it.

G. F. DAWES,
BURY ST. EDMUNDS, Suffolk.

SEED POTATOES.

Every leading Variety grown expressly for Seed from vigorous pedigree stocks, both in Scotland and England. Lowest prices on application to—

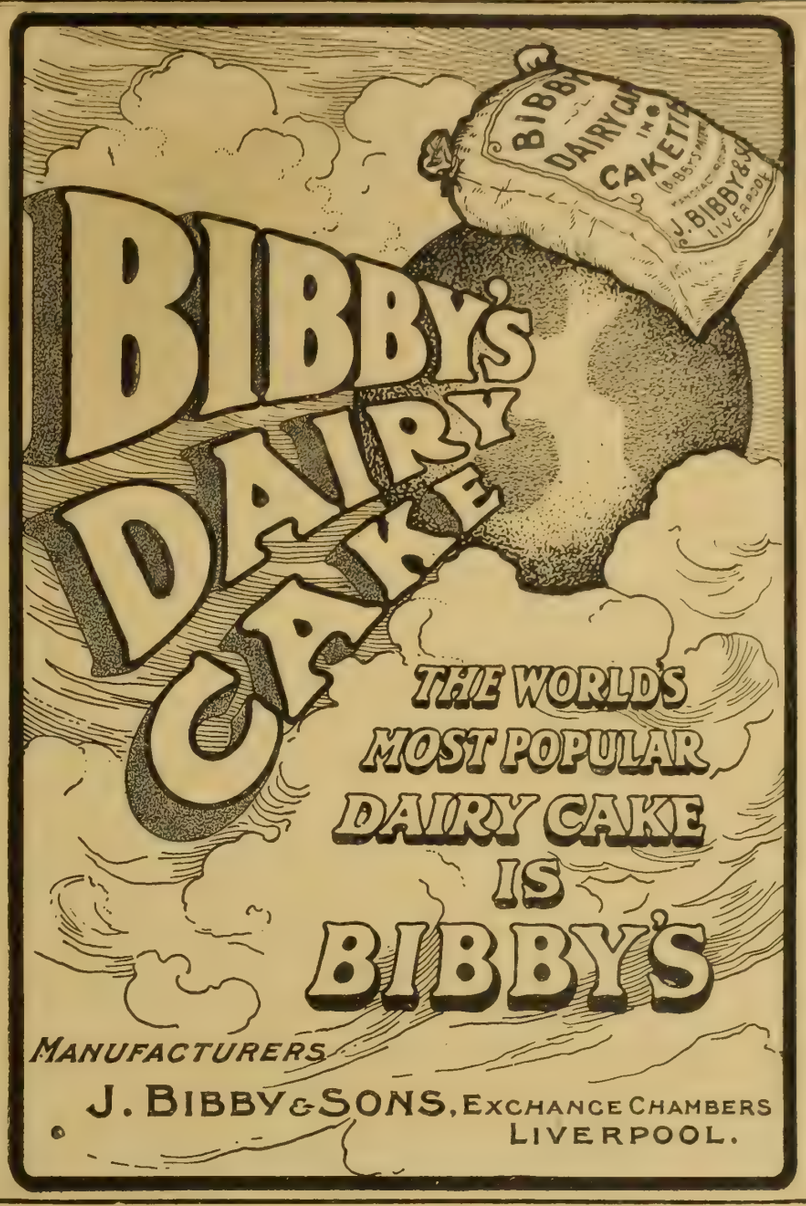


R. W. GREEN,
Seed Potato Grower,
WISBECH.

Appointed by Royal Warrant Manufacturers of Agricultural and Horticultural Machinery to His Majesty King Edward VII.

PLOUGHS AND CULTIVATORS

TO SUIT EVERY REQUIREMENT.



ECONOMICAL AND EFFICIENT.

Complete Illustrated Price Lists free on application to—

RANSOMES, SIMS & JEFFERIES, LIMITED, ORWELL WORKS, IPSWICH.

CORRUGATED IRON SHEETS.
SPECIAL OFFER of 400 Tons of Seconds at bargain prices for immediate deliveries only; suitable for Sheds and Fences. Full details free. NEW HAY BARNS from £22 each. Full Catalogues. Dept. 3, JOHN A. REEVE, Stony Stratford.

THE DAIRY SHOW.

The annual show of the British Dairy Farmers' Association which took place during the whole of the last week has added one more to the already long list of successful dairy exhibitions held in the Agricultural Hall. The father happy thought of calling it the National Dairy Show is one that deserves continuance, for the exhibition of last week was truly national in the right sense of the word.

The show of cattle was a large one, and there were representatives present of most of the dairy breeds with which we are familiar. The bulk of the animals were of Shorthorn or Channel Island blood. It is a pity that Scottish breeders do not support the show more, and send down some of their first-class Ayrshire cows. This breed has never done itself justice at the Dairy Show.

There seems to be quite a boom in cheese-making and the entry obtained this year was a record one. The Cheddar prizes this year, we are pleased to see, went to West country makers, the Scotch dairies with one or two exceptions only being able to secure the minor cards. Possibly the season has had something to do with the superiority of the English Cheddar, for the farther north one goes the more the inclemency of such a season as we have experienced this year is felt. Again, of Cheshire cheese there was a remarkable increase, and this variety seems to be making great headway in the metropolis and other large towns.

Of butter the display was an excellent one, whilst the other items which the Dairy Show takes under its wing made the usual interesting collections, and the popularity of the show seems to increase year by year. We do not know what the official figures of admission are, but there can be no doubt that the gate receipts were on a large and satisfactory scale. We hope that such results will encourage the society to go on with the good work which it is doing on behalf of the dairy farmers of this country.

RAM BREEDING.

The ram sales of the past fortnight show clearly the over-supply of second-grade rams. For the best sheep a higher range of price had been secured than ever before, but at the same time a lower range of price is being made than has been the case for some few years.

This result is not confined to any particular breed, and it is one of the problems that want taking up and dealing with. Unquestionably this over supply of rams arises mainly by reason of the increased number of registered flocks.

Strange though it may appear, no sooner does a breeder own a registered flock than he starts doing that which he never dreamt of before—*i.e.*, breeding rams. The result, as a great number of them know to their cost, is disappointment. Whether or not steps should be taken by the different breed societies to in some way limit the number of registered rams that a breeder should offer, or whether or not a standard of merit and quality should be fixed by each society, to be complied with before an animal could be accepted for registration, are points worthy of consideration.

So far as regards the home flocks, there is no fear of harm resulting from the over-supply of lower-grade registered rams. The home breeder will take good care that he will only use for stud purposes such rams as are typical and good specimens of the breed.

With regard, however, to the export demand, great damage to the best interests of the different breeds will assuredly arise if the present

large supply of lower-grade registered rams be allowed to continue. Most of the importing countries now make it a condition that animals imported for stud purposes must be animals duly registered in their respective flock books, but this condition being complied with, there is none other as to whether or not the animal in question is a really good and typical specimen of its breed, or whether it is one suitable for the purposes for which it it imported.

This matter should be carefully and fully considered by all those who are responsible for the management and control of the different sheep breed societies of this country, for the question is one that affects every breeder of sheep.

It is not one that applies to either the home trade or the export trade only, but to both, and there can be no doubt that it would be greatly to the interest of the mutton producer at home if a higher and better class of rams were more generally used in our home flocks.

ONION FAIRS.

"What's in a name?" asked the Bard of Avon, and echo answers what indeed, when the name of a commodity is given as a descriptive title to a fair at which the article is represented, and that is about all that can be said for it.

We do not suppose that the well-known Birmingham Onion Fair will ever die out—that is to say, the name part of it, and judging from the character of the display posters on the railway which recently announced the event, one might have expected to find the busy Midland town redolent with the smell of onions. But it was not so, and if the fair had depended on onions there would have been no fair to speak of. There were some onions from Bedfordshire, but, tell it not in Gath, most of the trade done was in onions from Valentia, Holland, and Belgium.

Another lost industry! and no proper explanation why. Here we have a commodity, quite indispensable, and very largely consumed in the country, and hundreds of acres of land that under proper tillage would grow onions well, yet for the main supply of this vegetable the million is absolutely dependent on foreign countries.

The specimens of foreign onions which come in show that the conditions under which they are grown are suitable, in fact more suitable than our own may be; but the way they are selected, packed, and shipped has more than a little to do with the foreigner's monopoly of the onion trade in this country.

As a matter of fact foreign onion growers have got a wholesale market in Great Britain, and they set out to supply it in a wholesale way.

Notes of the Week.

The thirty-second annual meeting of the British Daity Farmers' Association at the Agricultural Hall, Islington, was the event of the week.

The Hall was converted for the occasion into a regular farmyard, and attracted a large number of visitors. It was altogether a great success.

Some of the cows ought to be prosecuted; they produced milk below the legal standard.

The dairymaids, rosy of face and neat of dress, were a great attraction.

Dairy farmers continue to protest against the preference given to butter substitutes in the matter of moisture.

It is equivalent to licensing the sale of water added to butter, and is a blot on an otherwise good bill.

A number of poor women are to be invited next week to inspect Mrs. Wiggs' celebrated cabbage patch. The idea is that it will give them fresh views on husbandry.

Harvest festivals are now the order of the day on Sundays.

They serve a useful purpose as a medium for charity, and also to remind town people that agriculture is not extinct in this country.

Harvest weddings seem to be popular this year. At a village church in Cambridgeshire the banns of no fewer than fifteen couples were published on one Sunday.

So many unions is said to be the result of an excellent harvest in the district.

On the return of our old Irish servant from church last Sunday she told us that the clergyman had preached a sermon against marriage with a wife's diseased sister. She could not understand why any man should want to marry the diseased sister.

There are 23,000 miles of rails in the United Kingdom. If the much-talked-of strike takes place, there will be much more "railing," and many of the railway men will be "shunted."

The Utility Poultry Club is organising an egg-laying competition to last for a whole year. Egg-laying in the winter months is the development to be aimed at.

Such a competition is useful, but what good object can there be in a cock crowing competition? In a competition of this sort at a place in Devonshire the winning bird crowed fifty times in fifteen minutes.

Farmers in Wiltshire should encourage the consumption of pigeon pie, as the birds in that county are so numerous that they have become a regular plague.

"The old grey mare" is the name given to a motor omnibus in London, because it breaks down so often. The epithet is a libel on the mare.

October is ushered in with the usual winds and rains. The old adage,

"And he that will to bed go sober
Falls with the leaf still in October,"

points to other times and other manners.

Tiverton Corporation keeps green the memory of their old, now-extinct Michaelmas fair, which dates from 1615, by going in state through the principal streets to the Town Hall and drinking in solemn silence "Success to the fair."

British farmers may note that the crops over a wide district of India are a failure. This means less imports to compete against home-grown produce.

The cry of the countryside against reckless motorists is growing louder and louder.

The numbers of the cars should be made more conspicuous in some way. At present they often evade responsibility by simply going off as quickly as possible.

Two million pounds saved by bees. Professor Hunter, of Kansas University, is said to have discovered a bee which multiplies faster than the wheat bug and destroys it. He supplied 12,000 boxes of bees to the farmers in the Western States, and so saved the year's wheat crop from the bug plague.

His Majesty's Cup—The 20 guinea cup graciously presented by H.M. the King for the best root crops generally in the Royal South Bucks Agricultural Association has again been won by one of Messrs. Webbs' customers, viz.:—Mr. T. W. Purser, Tan House, Colnbrook, Slough, whose crops include swedes and mangels grown from Webbs' seeds.

The last remaining windmill at Great Yarmouth was sold by auction last week for demolition, and the structure, with sails and stones, realised the small sum of £7. At one time Yarmouth resembled a Dutch town from its number of windmills. This last mill dated from 1796, and had been bodily removed from its original site, in consequence of the growth of the town, to a remote position on the Denes. Once more building developments have overtaken it, and, having been purchased by the corporation, it was doomed to demolition to make room for Yarmouth's garden suburb.

THE FARMERS' DIARY.

TUESDAY, OCTOBER 15.—Mr. Jesse Collings, M.P., addresses the South Devon Chamber of Agriculture on Small Holdings—Frittenden Farm Sale—Farningham Fair and Open Sheep Sale—Agricultural Fairs at Macclesfield, Carmarthen, March, and Thrapston—Chester Dairy Show, first day—Horse Sale at Preston.

WEDNESDAY, OCTOBER 16.—Chester Dairy Show, second day—Shorthorn Sale at York—Nettleshead and Horsemonden Farm Sales—Penshurst Farm Sale—Special Cattle Market at Orpington—Raynbird's Sale of Live Stock at Basingstoke—Wadhurst Open Sale for Store Stock—Shoreham (Kent) Farm Sale—Agricultural Fairs at Thorne, Edenbridge, Brentwood, and Hereford—Ram and Sheep Sale at Sittingbourne—Horsham Great Market.

THURSDAY, OCTOBER 17.—Thornton's Sale of Kerry Cattle at Tetsworth, Oxfordshire—Great Sale of Pure-bred Devon Cattle at Taunton—Maidstone Fair—Fairs at Lynn, Brentwood, St. Neots, and Chester.

FRIDAY, OCTOBER 18.—Worcester Shire Horse Show at Droitwich—Doncaster Horse Sale, first day—Kintyre Dairy Show at Campbelltown—Sale of Shorthorns at Oundle—Sale of Jersey Cattle at Bletchley—Smarden and Yalding Farm Sales—Important Farm Sales at Sevenoaks—Fairs at Newnham, Lampeter, Lincoln, and Market Harborough.

SATURDAY, OCTOBER 19.—Opening of the Brewers' and Barley Exhibition at Islington—Slindon Special Sale of Underwood at the Newburgh Arms, 2 p.m.—Special Sale of Horses and Welsh Colts at Canterbury—Fairs at Canterbury and Colchester—Doncaster Horse Sale, second day—Sending-in Day for Implements, &c., for the Birmingham Fat Stock Show.

MONDAY, OCTOBER 21.—Brewers' and Barley Exhibition at Islington, second day—Addington Farm Sale—Fairs at Sleaford, Luton, Olney, and Belper—Sale of Pedigree Dexters at Pulborough—Pulborough Market.

Dr. Fream Memorial.

Lord Jersey presided over a meeting of the General Committee of the Dr. Fream Memorial Fund on Tuesday last at the Agricultural Hall, Islington. The honorary secretary said that they were called together to confirm the following resolution passed at a recent meeting and accepted by the Board of Agriculture and Fisheries:—

"That the Fream Memorial Fund shall be invested in the name of the Board of Agriculture and Fisheries or of an official trustee selected by the Board, and shall be administered by the Board of Agriculture and Fisheries, and that the income shall be applied by way of a Fream memorial prize of books to be competed for in each year by students in the science of agriculture, and so that as long as an examination is held by the National Agricultural Examination Board for the national diploma in agriculture the prize shall be awarded to the person who obtains the highest marks in such examination."

The secretary stated that Professor Hendrick, of the Aberdeen Agricultural College, had written taking exception to the words "science of agriculture" in the resolution.

Professor Hendrick said that the teaching of agriculture involved the study of many sciences, and he proposed that the Dr. Fream prize should be given for one science only, and he suggested entomology. Professor Sheldon said that Botany was Dr. Fream's favourite science, and if any alteration was made it would be a bigger compliment to their late friend if his favourite study was honoured.

Sir George Barham, the hon. treasurer, said the list was still open, if any admirers of Dr. Fream desired to send in subscriptions.

The sale of Mr. W. C. Keevil's extensive live and dead farming stock on his Swallowcliffe Farm, Hants, which he is giving up, attracted a large company of buyers, and a satisfactory sale resulted on Thursday last. About 200 lots of implements, &c., were first quickly disposed of at good prices, then followed the registered Hampshire Down flock of about 850 ewes and lambs. These sold well; 220 two-teeth ewes making from 68s. to 55s, average 63s.; 194 four-teeth ewes 72s. to 57s., average 65s.; 181 six-teeth ewes, 73s. to 55s., average 64s.; 220 ewe lambs, 57s. to 45s, average 50s.; whilst rams and ram lambs made from 65s. downwards. The cart horses made up to 47 guineas, and the dairy stock up to £22 5s.

HORSES.

A Critical Time—Pampering and Neglect—A State of Nature—Are Young Horses far from Profit?—Treatment of Young Horses—Exercise—Shelter—Food.

A Critical Time.

THE weather may now fairly be said to have broken. True, we have had no heavy rain as yet, and the sun has shone with summer warmth in the afternoons almost up to the time of writing. But there is a watery glimmer in the sunshine as I write, a wild and cold wind is blowing, and the blackening of the celery tops tells that frost has been sharp on more than one occasion. It is a critical time with young horses, and much of their future value depends upon their management during the fall of the year. Foals especially require careful looking to at this time of the year, a fact which is so self-evident that one would think it unnecessary to draw attention to it were it not that one sees, as one rides about the country, so many farms at which provision for the winter comfort of the young horses is conspicuous by its absence; and the case of yearlings and two-year-olds, and even of three-year-olds, is equally urgent.

Pampering and Neglect.

IT is a curious thing that young horses suffer so much either from pampering or neglect, and that the happy medium seems so difficult to hit. There seems no reason why this happy medium should not be hit, but before going into the question let us just for a moment inquire into the reasons for the pampering and the neglect to which I have referred. The reason for the pampering and overfeeding is not difficult to find. Condition for the spring shows is the object of the man who overfeeds and keeps his colt too warm; and his reward is filled joints, humour, and not infrequently some defect in the respiratory organs. The reason for neglect would seem to be that the colts are a long way off profit, and that the time will come after a while when they will be "got up" for sale. In the meantime, you are told, they are being kept in a natural condition.

A State of Nature.

THE excuse for carelessness, that the young horses are kept in a state of nature, will not bear examination for a moment. The modern horse, be he Shire or Hackney, Hunter or Coach horse, is never in a state of nature. He is, indeed, a highly artificial product, and his life is to all intents and purposes an artificial one from the day of his birth till he finds his way to the kennels or to the artificial manure manufacturer. Such being the case, it is imperative, if a man would make the most of his horses, that they should be kept in a nice growing state, not overgrown and loaded with unnecessary fat, but well fleshed, putting on muscle and growing bone regularly. I am quite certain that horses would pay well enough if they were taken as much care of, and if as much intelligent interest was taken in them in their early years, as is taken in that part of the farm stock which comes quicker to profit.

Are Young Horses far from Profit?

BUT are the young horses on a farm the farthest from profit of any of the stock? I very much question it, for if young horses are in a nice, healthy, growing state there is generally some one wanting them, provided, that is, that they are of fairly good class. At least, such is my experience. I have given as much as £40 for a foal before to-day, and I should like to know what stock the farmer I bought him from had that left him as much profit as that foal, for his dam worked regularly on the farm. Nor was he dear, for I had £10 profit bid on him within a week of his being delivered. I have also sold yearlings for as much as 100 guineas, and two-year-olds and three-year-olds at good prices. And though the horse trade is not so good as it was—more's the pity!—I occasionally hear of big prices being given for young horses in these days. But one thing is certain; no one will give a good price or even look at a walking skeleton that gives the idea of having lost his growth.

Treatment of Young Horses.

YOUNG horses need generous food, shelter from the cold, and plenty of exercise. What they too frequently get is a bit of indifferent hay to pick amongst, some oat straw or chopped straw, perhaps now and again some chop with a little corn in it; and they are frequently left out altogether till the snow comes, with perhaps the chance of a hovel to run into, which may or may not afford them protection from the bitterest and coldest winds. Or else they are shut up in a dark building where they stand on hot manure—a state of things which is not calculated to improve their feet—or are turned into a fold yard amongst a lot of cattle, in which case it is by no means unlikely that the weakest will go to the wall.

Exercise.

EXERCISE is of the greatest importance to young horses, and they should be turned out every day for an hour or two, except perhaps in very heavy rain or snow, when going out can do them no good. But they are all the better for facing ordinary rough weather. Of course, when days are still fairly long they can remain out the whole of the day—that is, from about eight o'clock in the morning till evening. Later in the year, when days are shorter and colder, two or three hours in the middle of the day will be long enough provided the young horses have roomy yards, as they ought to have. My own plan was to turn them out at eleven o'clock and bring them in about three or half-past. If the ground is very hard from frost some discretion has to be used about turning out, as a horse may easily slip and lame himself even if he is not shod.

Shelter.

WHEN possible young horses are best wintered in roomy yards which have plenty of straw in them, so that the hot manure can have no bad effect on their feet. Care, however, should be taken not to put too many horses in one yard, and they should be carefully watched lest one should overrun the others or one should be shut out from the manger by them, a by no means infrequent occurrence. When it happens the poor victim gets more and more bullied every day, till he becomes a pitiable object indeed, if the mischief has not been found out and remedied. Now, very frequently the bullying has gone a long way and considerable harm been done before it is discovered. This should not be; a careful and observant man will notice what is going on before it has been going on long enough to do any serious harm, and will have the bullied one removed at once and kept by himself till he has got him fed up and strong again. Then he may be put back amongst his fellows, but he should be carefully watched lest the bullying should break out again.

Food.

PEOPLE differ in their opinions as to the best ration to give young, growing horses; but I think there can only be one opinion as to the quality of the ration—it should be of the best. A foal at weaning time needs a great deal of care to prevent him losing condition, and it is indeed a critical period of a horse's life, for growth lost at this age may never be recovered. I once bought a yearling that had been none too well done at weaning time. He seemed to lose a year's

Photo by [W. H. Pearsons.

The Shire Stallion shown above is Moors Regent, with whom Mr. E. Green, The Moors, Welshpool, won First Prize for Stallions 10 years old and upwards at the Shire Horse Society's Show this year. Its sire was Regent II., dam Bertha by Carbon, and it was bred by Messrs. E. Jones and Sons, The Bank, Pool Quay, Welshpool.

growth, and, do as I would, I could never get him to develop as he should do. He got what is called in Yorkshire "set in," and the good food he got put him into splendid condition, but did not make him grow out. I sold him at three years old, when he looked like a backward two-year-old, and someone got a cheap horse. He was a rare bred one—a stallion—and would have been cheap at £100 more than I got for him if he had not been stunted in his growth. So foals should be generously fed when they are first taken from their dams. Crushed oats, a little sweet chop mixed with them, sweet hay-clover—hay for choice—and mashes every other day make a good ration for them. When they are turned out again they do not require so much hand food, but they always should have a little corn. When they are brought in at night is the best time to give it, and I need scarcely say that after foals are weaned they should never lay out. I always found it a good plan to feed young horses lightly in the morning. If they are well fed, then they never do anything but hang about the gates, and neither attempt to graze nor take any exercise. If they are well fed when they come in, there will be no trouble in getting them housed. The plan I adopted was to have the feed for them to come in to, and then to feed them again about eight o'clock, and only give them a bit of hay in the morning. It answered very well. Twice a week, at least, I used to give them mashes made of bran, a few crushed oats, and a handful of linseed cake. A swede turnip was generally given them once a day, and they appreciated it. My young horses were never fat, but they were always fit to be seen and were soon got ready when wanted. And depend upon it, if a horse is not worth caring for and feeding generously, you are better without him.

THE LOOKER ON.

Sale of Brookfield Stud Hackneys.

As was only to be expected, there was a large company present at the sale of about 100 Hackneys from Mr. Burdett Coutts's famous Brookfield stud at Howden, Yorks, on Tuesday.

It was at first intended that this sale should be a dispersal of the whole of the Brookfield stud. The calls on the owner's time, which have greatly increased during the past year, render the personal attention he has always devoted to the stud no longer possible, and to conduct the enterprise through other hands would be, from his point of view, an unsatisfactory change. But two difficulties arose. First, it would not have been possible to disperse the stud in a single day's sale, and a two-days' sale, or two successive sales at the same time of year in Yorkshire would be inconvenient; secondly, after nearly twenty-five years of careful breeding and selection, which have secured to the stud the world-wide position it occupies, the owner viewed with poignant regret the prospect of its final exit from the theatre of horse-breeding.

The first consideration will involve another sale, which will probably take place early next year, and for which the three-year-old and four-year-old geldings (except in two or three cases explained under the lots), and a few young stock, are reserved. The second induced the owner to retain a very small stud, so limited in numbers that he will be able in the future, as he has done in the past, to personally control its breeding interests. For this purpose the Metham Farm will be kept on. Purseley Farm in Hertfordshire has been let. The Brookfield Stables, the London establishment of the Harness Department, remain—for the present.

At Tuesday's sale most of the valuable young stock (for breeding or use), all the yearlings and two-year-old geldings, and about a dozen fine harness horses were offered, and the fact that it included some sixteen of the get of Polonius; the family of Nelly II., full sister to Danegelt, and dam of the first Anconeus; that of Lady Lyons, dam of Matchless and Beau Lyons; of Maggie Stewart, dam of Polly Stewart; and of the three Lady Fireaways; as well as full brothers and sisters to such horses as Riot, the recent Dublin champion; Chieftain, the well-known show horse; to Nunnery and Pollinaris, and to many other prize-winners and very high-priced harness horses, is a proof of the character of the sale.

As will be seen from the appended list of the chief lots sold, purchases, &c., some good prices were realised, no fewer than nine three-figure sums being obtained, whilst many other prices near that high value mark were recorded. Undoubtedly the pick of the sale was the Hackney stallion Polichinello, which has been used in the stud with such success, and for him there was keen competition, and it was not until Mr. J. Morton bid 230 guineas that he was able to secure this splendid specimen of the breed. The other chief prices are given below:—

		Gs.
Polly Vane, two-year-old filly	Mr Whitworth	110
Lemuel, three-year-old filly	Mr Anderson	150
Sprunt's Delight, Hackney mare (harness), f 1901	Mr R Edwards	50
Victoria Flirt, roadster mare, f 1902	Mr Whitworth	72
Fragility's colt foal	Mr Clitheroe	100
Re-Coin, roadster gelding, f 1903	Mr R Edwards	60
Fiamma, four-year-old mare	Mr Whitworth	92
Riot III., four-year-old gelding,	Mr Anderson	92
Phosphite, two-year old filly	Mr Catslow	50
Victor Sylvia II., roadster gelding (harness), f 1901	Mr Brandt	100
Victoria Sylvia, roadster mare, f 1903	Mr Whitworth	72
Maybe, Hackney harness and brood mare, f 1902	Mr Matheson	51
Victor Viva, roadster gelding, f 1901	Mr R Edwards	56
Leopard, Hackney stallion, f 1904	Mr Burnell Tubbs	120
Leopardess, two-year-old filly, f 1905	Mr Brandt	115
Faustus, Hackney gelding, f 1901	Mr Whitworth	90
Gold Thread, two-year-old filly	Mr Burnell Tubbs	80
Fosconia, brood mare, f 1893	Mr Anderson	88
Fostonella, two year-old-filly	Mr Baggerley	60
Fortunata, yearling filly	Mr Miller	70
Sweet Nell, brood mare, f 1900	Mr Vaughan	125
Polichinello, stallion, f 1902	Mr J Morton	230
Propice, four-year-old mare	Mr Anderson	100
Fusion, roadster mare, f 1903	M Longueville (Paris)	90
Reflector, roadster gelding, f 1093	Mr Catalou	96
Leopoldina, three year old filly	Mr Anderson	77
Last Trick, Hackney gelding, f 1902	M Longueville	77

Hackney Horse Society.

A joint meeting of the Show and Finance Committees of the Hackney Horse Society was held at 12, Hanover Square, W., on Wednesday (Mr. A. E. Evans in the chair), when a detailed report was prepared for presentation to the council in November concerning the best means by which the society may benefit by the enlargement of the accommodation at the Agricultural Hall, the arrangement of stabling and seating stands, the hours of judging, the popularity of the afternoon performances, &c.

It was resolved to again take the opinion of the council on the advisability of engaging a good band to play on the first three afternoons of the show, the committee considering that the time is more propitious for such an innovation as a large proportion of the horses will now be stabled in the new annexe, which will be quite distinct from the large hall and the main ring.

The question of submitting the harness classes to the same stringent veterinary examination as the breeding section was considered at great length, and it was agred to submit the following suggestion to the council for their discussion:—

"The judges will select such animals in each of the harness classes as they consider eligible for prizes or commendation, and when they deem a veterinary examination necessary, such examination will be made before the prizes are awarded."

The sale register and other show details were agreed upon, and the appointment of separate harness judges was discussed.

Prize Schedule.

The classes in the prize list were thoroughly revised, and a large number of prizes were added throughout. It was determined to retain all the classes in this year's schedule, and to add thereto two fresh classes for Tandems under 15 hands and 15 hands and over, with a champion gold medal for the best of any height. To allow for the judging of the most important classes early in the afternoon of the Tuesday, the numbering of the stallion classes was re-arranged so that the older horses will be taken immediately after the three-year-olds.

Permission was granted to Mr. Euren to proceed to New York Show to represent there the interests of the Hackney Society and the International Horse Show. It was reported that the gold cup to be offered by the English Society at the New York Show had been dispatched, and that a pressing invitation had been received from the show authorities for English exhibitors of Hackneys and Harness horses to send specimens of their studs in competition, and assuring them of a warm and hospitable welcome.

Mr. Burdett Coutts on Motor Cars and Horse Breeding.

Some interesting remarks concerning horse breeding and motor cars were made by Mr. Burdett Coutts, M.P., at the sale of his horses at Howden on Tuesday. He said that he was still no enemy of motor cars; he admitted their utility and necessity, and was in no way surprised at the great increase in their number and use. And he was still of opinion that horses, harness horses, would always be wanted, and that if we gave up our horses and lost all the fine blood for which Yorkshire and the North had been famous, the demand for them would go elsewhere—probably to other countries. Leaving for a moment the question of high-class Harness horses, and coming to utility horses, there was this one thing to be said—that while motors had enormously increased in numbers they had not correspondingly decreased in expense; and undoubtedly they would have to face a new charge. He would say nothing of their misuse, of the terrible roll of accidents that seemed to increase every day, or of the danger and discomfort they caused to the great mass of the humbler users of the King's highway—largely due, in his opinion to an unwarrantable assumption on the part of motor drivers, that they, and they alone, ought to be considered, that the roads were made for them, and that everyone else ought to get out of the way, and then go down on their knees and thank God they had been spry enough to do so. What he did say was that the roads were not made for motors, and were not maintained in any due proportion by the people who enjoyed the use of motors. The latter then would either have to make roads for themselves, as railways had done, or they would have to be taxed, and taxed heavily—perhaps in the shape of high licences—for the maintenance of the public roads they used and wore out, leaving to the ordinary ratepayer the double burden of personal discomfort and expense of road-making and road-repairing.

There would, added Mr. Coutts, always be a large number of people of different classes and varied means who would want horses for use, for the work they could get out of them in harness and saddle. Would there be none who would want them for pleasure, for beauty, for price in something which their fathers and forefathers, and they themselves till yesterday, loved and were proud of? Had all sentiment, all sportsmanlike instinct, all love of the beautiful for its own sake, left us and gone to the Americans? "For, mark you," he continued, "no matter how many motors they have, the Americans are holding on to their horses. They take pride and pleasure in them, and are willing to spend money on them, as we saw at Olympia, and as will be seen at the great New York Show next month.

"Is it true that we in England are going to become suddenly Chicagoised in mind and taste, while the nation that gave us that term usurps our place in the pure love of horses for their own sake?" That was the proposition presented to the gentlefolk and the wealthy classes of England. "Oh," but they exclaimed, "we have our racing and our hunting. As long as we keep that up it doesn't matter about your harness horses and hacks." Yes, but why should racing remain? Brooklands, the great motor racing track, would supplant Newmarket. A motor could go much faster, and further than a thoroughbred. And a motor was much more useful—and just as uncertain to bet on. Speed, distance, and utility are the sole criteria now, and if you add gambling, you've got the thing perfect.

And what of hunting? How did we know that any day someone—a Mr. Mercedes or Daimler or Fiat—would not invent a motor hunter that would gallop and jump by machinery and gallop much faster and jump much bigger than the horse. A new manufacturing industry for England. We owe to be told that it was only because no foreigner had yet brought us such an invention, that the gentlemen of England still hunted on the horse? Yet that was exactly what we were told to infer with regard to Harness horses and Hacks, and he claimed that the analogy was a close one, since hunting was pleasure, pure and simple.

As for the Harness horse, it could not be denied that he was more useful than the Hunter. But he too, was generous, beautiful, and of old English origin. Were we to be told that there was no place left for him in the affections of the well-to-do classes in this country, and that all pleasure and pride in the horse was to disappear in presence of a mechanical invention, of great utility, it was true, but not appealing to one single generous æsthetic, traditional, or national instinct of Englishmen? He did not believe it.

Nantwich Cheese Fair.

At the Nantwich Cheese Fair on Thursday the pitch was 70 tons. There was a large and representative attendance of buyers. Trade was fairly brisk at the opening of the fair. A clearance was effected at the following prices:—Finest qualities from 62s. to 67s., medium from 62s. to 67s., medium from 57s. to 61s., and lower grades from 54s. per cwt.

At Bingley Autumn Fair, held on Tuesday, sheep were penned in larger numbers than ever before, and there was a fairly steady trade, the best call being for good lambs. Half-bred ewes made 40s. to 50s., lonk ewes 30s. to 36s., and half-bred lambs 25s. to 30s.; Scotch sheep 20s. to 30s. each. Cattle were of about the usual number, and the demand was good for animals of any quality. Calving cows, which were comparatively few, made £16 to £22, laying off cows, which were good to sell, £16 to £20, and gold beasts £8 to £12 per head. Horses were, as generally is the case, mainly of indifferent quality.

SHEEP.

Notes and Jottings.

MENTION was made a few weeks back that the South Devon sheep had secured the patronage of some New Zealand breeders who were over on a visit to this country.

THE details of this most important selection, for it is without question the largest selection of this breed that has ever left these shores for either New Zealand or any other destination, are as follows:—From Mr. J. Stooke ten ewes are taken, five by Mr. Chambers, and five by Mr. W. C. Birch, and with them goes a handsome ram bred by Mr. E. Stooke, and owned by Mr. J. Stooke. The same two purchasers have also taken nine ewes and a ram lamb from Mr. J. S. Hallett's flock, and a similar consignment from the flock owned by Mr. William Tippett, making their joint selection to number thirty-one head.

IN addition to the above, another stud ram of the same breed has been selected on behalf of the New Zealand Loan and Mercantile Agency for export to New Zealand. This ram is known as Hoskins No. 3 of 1906, and he was bred by Mr. E. H. Hoskin and purchased and used this year as a stud ram by Mr. A. E. Stidston at Thurlestone.

FOR a consignment of thirty-two sheep of any breed to be despatched to any new destination is an event of considerable importance. The reason of this importance is that upon the result that follows the importation of these sheep to New Zealand largely depends the future demand for this breed from the colony.

IF this initial shipment proves satisfactory, other orders will follow, but should (which is not at all expected, for the sheep selected are high-class specimens of their breed) the contrary be the case, it will be unfortunate for the best interests of the breed.

THE foregoing paragraph brings out in clear prominence how much depends upon the right class and kind of animals being selected for export.

ONE cannot too often emphasise this, neither can it be too strongly stated that each stud animal that is exported goes from this country as representative of its breed, and that the future demand for such breed depends, to a very large extent indeed, upon the result of each and every importation.

AS we have mentioned in previous notes, the increased competition from the mutton producers abroad continues to increase, practically without ceasing, for we find that during the past nine months we have imported from abroad 3,689,575 cwt. of mutton, or 10·14 per cent. more than during the same period of the previous year.

TO meet this increased competition our home breeders must produce the best quality of mutton, and also the most perfectly formed carcase. It is essential that the home mutton should be of the highest quality, but it is still more important that each and every carcase should be of that description of which there is the larger proportion of the more valuable parts, and the lesser of the cheaper parts.

TO produce and to breed the sheep that will grow up with the carcases and quality of mutton indicated above, it is necessary that only the best and most typical specimens of the different breeds should be used for stud purposes.

AMONGST the items in the Trade and Navigation Returns that are worthy of note in respect to the mutton supply, is the rapid increase in the supply received from Uruguay. During the first nine months of the current year that country has supplied us with 58,809 cwt. of mutton as against 24,000 cwt. in the same period of 1906, and 48,000 cwt. in the same period of the year 1905.

THIS is but one example of how the mutton supply from abroad continues to increase. Uruguay has been, during the past two or three years, a large purchaser of stud sheep, and the number sent this year shows an increase, and consequently still larger supplies in the near future will be doubtless received from that country.

The Pen of Three Shropshire Ewe Lambs shown above is that with which the Right Hon. Victor Cavendish, M.P., won a First Prize at the Royal Lancashire Agricultural Society's Show this year.

SALES AND FAIRS.

Ashford.

The forty-sixth annual sale of ram tegs from the Westbroke flock of Kentish sheep, belonging to Mr. Arthur Finn, was held at Ashford Market on Tuesday. The consignment were a wonderfully level lot of beautiful quality, and with a range of prices of from 6½ guineas to 21 guineas averaged £10 11s. 8d. per head, as against an average last year of £9 5s. 6d. At the same market several other sales were effected at good prices, the averages ranging up to £8 15s. 6d.

Corby.

The old-established fair at Corby, which formerly ranked as one of the largest sheep fairs in Lincolnshire, was held on Monday, when, although the show of sheep was not so large as it used to be, several thousand were penned. Lambs were a good trade, at from 40s. to 46s. per head, and these prices were fully from 4s. to 5s. dearer than they were last year. Of the breeding sheep, theaves realised from 55s. to 65s., and ewes from 50s. to 55s. The season is getting rather advanced for the ram trade, but several breeders sold animals at satisfactory figures.

Leicester.

At Leicester October Fair, held on Thursday, the supply of sheep was the largest for many years; buyers were well represented, and trade ruled very active at high prices. The outstanding feature was the very marked preference for fine short-woolled breeding sheep, which were 2s. to 3s. per head dearer than last year for ewes, while short-woolled rams were 21s. to 42s. per head higher, with very keen competition. Choice long-wool rams made £7 7s. to £11 11s., and secondary sorts £4 4s. to £6 6s. each. Shropshire rams sold better than for many years, the best making £10 10s. to £14 14s. per head; ram lambs, £4 4s. to £7 15s.; Hampshire rams, £5 5s. to £11 11s.; Oxford rams, £3 6s. to £10 10s.; and ram lambs, £3 3s. to £7 10s. Breeding ewes were in active demand at 40s. to 60s., theaves 48s. to 68s., and lamb hoggs 28s. to 42s. per head. Agricultural horses were only a moderate supply, and made good prices.

Leyburn.

At Leyburn October Sheep Fair held on Friday trade was slow, with the exception of that for breeding sheep. Prices:—Good-bred tups, £4 to £10; good-bred tup lambs, £2 10s. to £7; good-bred sheep, 55s. to 60s.; good-bred gimmer lambs, 50s. to 60s.; good-bred shearling gimmers, 60s. to 70s.; twice-crossed lambs, 30s. to 40s.; half-bred ewes, 35s. to 60s.; half-bred shearlings, 42s. to 50s.; half-bred lambs, 18s. to 28s.; Scotch ewes, 14s. to 20s. each.

Malton.

At Malton Michaelmas Fair on Friday there was a big show of rams and ram lambs, as well as breeding sheep. Trade for tups was rather sluggish at the opening, and no big prices were made. Entries included Leicesters, Lincoln Longwools, Wensleydales, and Oxford and Hampshire Downs. Some first-class Lincolns from Mr. F. Coverdale, Hagg House, Pickering, made £7 to £13 each, thirteen making a total of £102 15s. Mr. Thomas Campion's (East Heslerton) lot made £6 to £10 10s. each, eighteen realising £141 7s. 6d. Some good Leicester shearlings from Mr. T. Dawnay Lodge, made up to £11 10s. each, and some of Mr. W. D. Megginson, of Towthorpe Manor, 5 guineas to 9 guineas. Mr. A. J. Cholmley's long-wool Lincoln shearlings made up to £8 2s. 6d., and Mr. Henry Foster's (Filey) Lincoln ram lambs £4 10s. to £5 10s. per head. Mr. J. J. Stamper's Leicesters made up to £8 15s. each, ten totalling about £75. Some good prices were obtained for Lincoln ram lambs, as much as £5 7s. 6d. being paid. In the open markets some good two-shear sheep sold up to £15. Breeding ewes and gimmers made up to 58s.

each, being, if anything, rather easier than last year.

Strood.

At Messrs. Cobb's annual sale of stock at Strood, Kent, there were penned about 3,500 Kent, Hampshire Down, and half-bred sheep and lambs, besides 93 pure-bred Kent ram tegs from the well-known registered flocks of Messrs. Baker, C. J. G. Hulkes, J. Robinson, and R. G. E. Locke; 11 Kent rams and ram tegs, the property of Mrs. B. Tuff; and 28 pure-bred Hampshire Down ram lambs, contributed by Mr. G. F. Hohler, the Earl of Darnley, and Messrs. R. and G. French. Both sheep and lambs throughout were a remarkably fine lot, and exceptionally good prices were given, the bidding from a large attendance being exceedingly brisk. Kent ram tegs averaged £4 16s. per head; and Hampshire Down ram lambs £3 13s; Kent ewes ranged from 33s. to 34s.; Kent turnmarks from 23s. to 36s.; Kent ewe tegs from 37s. to 62s.; Kent wether tegs from 35s. to 45s.; Kent ewe and wether lambs from 22s. to 38s.; Hampshire Down ewe and wether lambs, 34s. 6d. to 42s.; and Half-bred ewe and wether lambs from 19s. to 39s. Hampshire Down ewes averaged 53s.

The Preston Court Southdowns.

The flock of Southdown sheep, comprising 742 ewes in ages, and 200 stock lambs and rams, belonging to Mr. J. Stacey, Preston Court Farm, Beddingham, was sold by auction on Thursday. The flock (No. 316 in the Flock Book) was established in 1890 with ewes from Mr. J. Stacey's Rodmell flock and then Firle flock. Ewes were also introduced from the late Mr. A. W. Hodson's flock, which had its home at Preston Court. Rams were used from the flocks of Lord Leconfield, Messrs. Botting, Bushby, Ellis, Hammond, Heasman, Stanford, and Tompkins. There was a representative attendance of flockmasters, and bidding was brisk, the result being a quick sale at good prices:—174 full-mouthed ewes averaged 49s. 6d., 193 six-tooths 52s., 180 four-tooths 59s. 6d., 201 two-tooths 60s., and 196 stock ewe lambs 38s.

Forthcoming Sales.

Newingreen annual sheep and bullock sale will be held on Wednesday and Friday next, when Messrs. W. and B. Hobbs will offer 3,500 Kent sheep, rams and lambs, and 600 home-bred beasts will be sold. The sheep consist of 1,454 one, two, and three lamb ewes, 1,687 Kent ewe and wether and half-bred tegs, 293 Kent ewe and wether and half-bred lambs, and 62 rams and ram tegs. The cattle will consist of 150 yearlings, 75 18-months old steers and heifers, 292 2 and 3-year-old fatting beasts, and one barren cow, 68 cows and heifers in and with calves, 7 bulls, 7 calves.

1,300 Irish store cattle will be sold by Mr. Gavin Low at his auction mart, 50, Prussia Street, Dublin, on Thursday next. The sale will consist of Polly bullocks, Aberdeen-Angus crosses, Hereford crosses, Shorthorn bullocks and heifers, many with age, and all in good condition; also a number of young cattle.

Mr. F. Austin Bensted will hold his annual sale of lean stock and Kent rams on Wednesday next, at Sittingbourne. The catalogue consists of 6,000 Kent and half-bred sheep and lambs, 152 registered Kent ram tegs from the flocks of many well-known breeders, 5 two and three years old rams, 12 Kent ram tegs, and 7 pure bred Southdown ram tegs, the property of Mr. R. Blenkarn, also 50 store beasts.

English Jersey Cattle Society.

A council meeting of this society was held at 7, Princes Street, Hanover Square, London, on the 7th inst. Colonel Willan, president, in the chair.

Mr. Ernest Matthews, on behalf of the General Purposes Committee, reported that they had examined the statement of funds. The balance at the bank amounted to £293 9s. 9d., which compared favourably with that of the corresponding period of last year.

Letters were read from the secretaries of the Royal Agricultural Society and the Bath and West Society applying for prizes for competition at their shows in 1908. It was agreed to offer virtually the same amounts at these shows as in 1907.

A discussion arose as to the practicability of carrying out dairy tests at breeders' own farms on the same principle as adopted in Denmark. It was pointed out that the main difficulty was the great distance which divided dairy herds in this country compared with those on the Continent, where they were in close proximity.

The annual October fair for the sale of horses and cattle in the Alnwick district was held on the Market Hill, Alnwick, on Monday, when the attendance of farmers and dealers was numerous, but trade throughout was very slow and dragging. Cattle were freely shown, nice Irish grazing heifers made up to £12 per head, and smaller cattle from £6 to £7 10s. per head. Milch cows sold to £16. Keeping pigs met a partial clearance at prices ranging from 18s. to 25s. each.

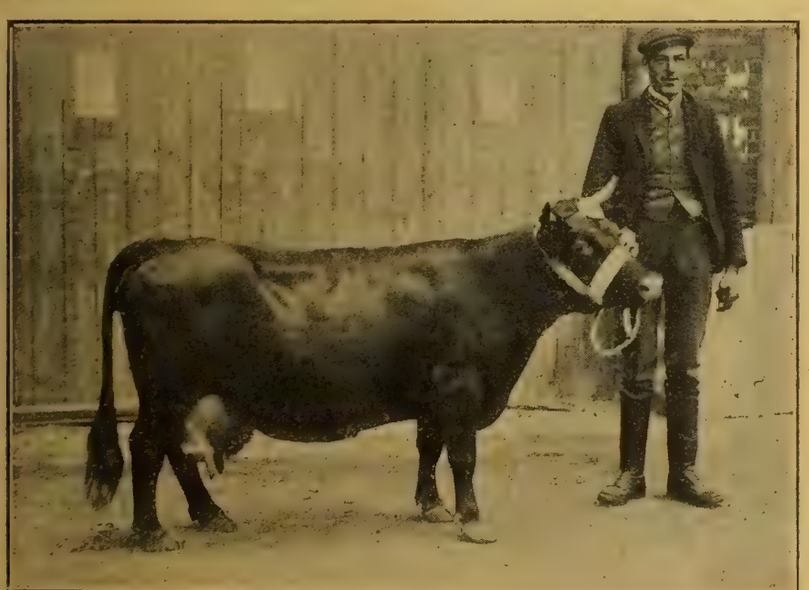
Breeder of Pure Lincoln Long Wool Sheep. Lustrous Fleeces. Good Constitutions.



SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

CATTLE.

Notes and Jottings.

THE season of 1907 bids fair to be memorable for a long time to come amongst all cattle breeders on account of the extreme foreign demand which has prevailed, and which has in a more or less degree affected most of the leading breeds. It is very satisfactory, too, to find that in spite of a few irregularities in connection with the tuberculin test that for a time created some scare, the foreigner is as keen on buying our best animals to-day, in the face of winter storms and rough voyages which are now due, as he was at mid-summer when the seas were smooth and glassy and all things favourable to export. It is certainly an increased mark of the great esteem in which British stock are held by the foreigner, and proves that he will have our best cattle, in spite of what conditions and prices have been enforced upon him.

THE Red, White, and Roan has been far the most prominent breed throughout the season up to the present time, and shows no sign of being neglected as the season advances. Both so far as numbers and prices are concerned, this breed must have experienced quite a phenomenal season, and it must be very pleasant reading for breeders where they find that that well-known exporter, Mr. Donald M'Clennan, has recently been favoured with one of the most successful auctions of the year at Buenos Ayres, where every one of his forty lots found purchasers at the respectable average of £360 per head. The highest price upon this occasion was paid for the beautiful bull Shenley Victor, which ran the sand out at £1,487 18s., English money. The breed has also been making long prices for some individual specimens to be shipped to the Antipodes and other places.

The Hon. Mrs. C. Portman's Dexter Cow Buckhurst Juno, winner of First Prize by Inspection, and Second Prize in the Milking Trials, at the Dairy Show last week. Buckhurst Juno who is 6 years 3 months 2 weeks old, is by Buckhurst Omega, dam Venus, and was bred by Countess de la Warr.

THE Hereford breed has been next in importance both as to numbers and prices, and what may be called vast herds of these what may be called beef-producing white faces have been shipped from time to time to the Argentine, feeders in that country speaking in the highest terms of the results obtained under the warm climate and alfalfa pastures of the Argentine. So far as we read in the various papers, the Hereford breed has been peculiarly fortunate with respect to the tuberculin test. At a recent sale in Monmouthshire (a draft sale), prices did not reach quite such a high level as might have been anticipated, for which, doubtless, there were reasons sufficient, as there is apparently no diminution in the foreign demand, and new herds are frequently being founded at home.

THERE appears during the last few weeks to be a greater demand for milking breeds than has probably ever been experienced, and though all milking breeds are sharing in this demand, the Jersey from the Channel Islands bearing that name. From an island of so small an area it is indeed surprising how these cattle can be produced in such numbers. Very recently a single consignment, numbering 550, was shipped to Denmark, a country that has also taken previous shipments during the season, and is still requiring more; coming to North America, many private buyers from the States have been making purchases of from fifty to more than 100 head of stock, and for most of these animals remunerative prices have been paid, and in some cases even fancy figures have prevailed. Some exporters appear to have found their estimate of the animals' value according to its general appearance before them, whilst others prefer purchasing tested animals.

AT the English sales Aberdeen Angus have not experienced any too satisfactory a demand, but in some of the northern herds very good figures have resulted, and a good many animals appear to have been changing hands privately, some for adding to home herds and some for shipment across the Atlantic. Crosses of this breed and the Shorthorn for feeding purposes must have been a fairly remunerative business to their producers, prices for young stores being altogether out of proportion to the rates obtaining for the same cross when ready for the butcher. In the north of England, and in many other parts of the country too, the Galloway and Shorthorn cross appear to be running the Angus crosses very closely. The almost universal colour that prevails in the Galloway and Shorthorn cross is in itself a great attraction, then the animals, even in their store state, are clothed with a wealth of hair and flesh that is most pleasing to see.

THE Red Poll breed does not appear at present to have caught on well in South America, or if it has, reports are somewhat silent on the subject. In the dairy countries, however, the breed there is no doubt is making headway, and as more attention becomes paid to milk, so will it bring increased attention to the Red Poll. In New South Wales this East Anglian breed appears to be making itself quite a home, but then dairying is quite an important feature in that country, some of the butter shipped thence to this country being of a most creditable quality. The Red Poll is a dual purpose breed, too, though not to the same extent on the beef side of the question as the Shorthorn, yet it makes very handy weights of a quality of beef that is always saleable, and where farms are of a greater extent than is wanted for the dairy, and a certain amount of beef feeding is practised, it is manifestly a great advantage to have a breed like the Red Poll.

AT the London Dairy Show last week the Ayrshire breed was once more very disappointing; our Scottish neighbours, for some reason or other, appear to be determined that we English people shall not know what a good Ayrshire is, or what results she is capable of yielding. One would think it would be highly profitable to the north country farmer to exhibit some few of these cattle of the better class at this time of the year; October is a month when good dairy cattle are invariably in great request at high prices, and there is no doubt that many an Ayrshire breeder would, by exhibiting some first-rate cows at the Dairy Show find customers for the whole of his drafts year by year. There are few dairy breeds that are more eye-filling than a first-rate Ayrshire, when shown in good condition at this time of the year, their capacious and beautifully square udders are a treat to see, and it is well known that from the practical side of the question they will bear strict investigation.

Mr. R. Stratton's Shorthorns.

A large and representative gathering of Shorthorn breeders assembled at the sale of a draft from Mr. Richard Stratton's well-known herd of pure-bred Shorthorns at The Duffryn, near Newport, Monmouth. The draft consisted chiefly of the younger portion, and included thirty-five in-calf heifers, remarkably true to the type with which the herd has long been associated. Competition was pretty keen, but no big prices were realised, the best being 95 guineas, given by Viscount Tredegar for Scarlet Runner, a daughter of First Favour and Roving Maid, calved in 1905. Waterloo Cranford, a representative of the old Bates' Waterloos, was purchased by Mr. G. C. Williams, of Llanrumney Hall, Cardiff, for 85 guineas; while Trill, a heifer calf of great promise for showing, and which has already won prizes at Llanelly, Aberystwith, and Carmarthen, was secured by Mr. J. A. Preece, of Thrapston, Northants, for 70 guineas. Altogether fifty-five animals were sold at an average per head of £36 2s. 5d., the chief sales being as follows:—

Mr. W. J. Atkinson's Lincoln Red Shorthorns.

A most successful sale of Lincolnshire Red Shorthorns, the property of Mr. W. J. Atkinson, Weston, near Spalding, took place on Wednesday. The prices were not particularly high, but the excellent average of £34 was obtained for 63 head. Keddington Enderby went to Mr. R. Clayton at 41 guineas, while her heifer calf, Weston Keddington, was sold to Mr. R. Chatterton at 34 guineas, another heifer calf, Choice Jap, being knocked down to Mr. A. Wiseman at 45 guineas. Keddington Baroness was sold to Mr. T. H. Vergette at 44 guineas, who also paid 45 guineas for Surfleet Royal Lady White, whilst Nonpariel 16th made 52 guineas to Mr. T. W. R. Atkinson. The two-year-old heifer, Weston Pink, first prize winner at the Royal Show, went to Mr. C. Hensman at 41 guineas, a decided bargain.

Shorthorn Sales in Scotland.

The first of the week's sale of Shorthorns held in Scotland annually in the autumn by Messrs. Macdonald, Fraser and Co., Limited, took place on Tuesday, with as usual, the sale of drafts from the famous Collynie and Uppermill herds, the respective property of Mr. Duthie and Mr. Marr. Last year Mr. Duthie secured the splendid average of £304 per head for eighteen calves, and it was generally considered that high water mark had been reached. That such, however, was not the case, was quickly proved by the excellent demand at Tuesday's sale; so keen, in fact, was the competition for Mr. Duthie's animals that no fewer than

three animals made over 700 guineas each, and the average for the seventeen sold worked out at no less than £409 16s. 3d., a truly remarkable testimony to the high value placed upon the Collynie herd.

Mr. Marr's consignment met with a good demand, but his top price was 220 guineas, and the average for four bull calves £105. Appended is a complete sale list :—

Sale at Aberdeen.

On Wednesday Kittybrewster Mart Buildings, Aberdeen, was the scene of the sale, and the stock offered comprised drafts from various herds, the total number of animals offered being 168. There was again an excellent company of buyers present, and though the high prices of the previous day were not repeated, the sale proved a satisfactory one, 120 head being sold at an average of £49 13s. 10d. The top price of the sale was 500 guineas, paid by Mr. Scot, Stow-on-the Mold, for a rich roan eleven-months-old heifer calf from the Saphock herd and of the famous Broadbooks family, which has won such renown in the possession of Lord Lovat. This is a calf of great substance, full of flesh and hair, and was favoured by Mr. Casares, the well-known Argentine exporter, but Mr. Scot stayed the longest. In cows, Mr. Duthie paid the leading price, 200 guineas, for Linksfie'd Regina, a dark roan of Colonel Johnstone's breeding, owned by Mr. A. T. Gordon, Combcaussway, who also had the honour of heading the prices in two-year-old heifers, Mr. Cameron, Balnakyle, paying 180 guineas for a stylish red of the Myrtle family, bred in Forfarshire. The leading figure in bull calves, 120 guineas, was secured by Mr. Gordon, of Newton, for Newton Peer, a very pretty red of the Jenny Lind strain, Mr. Gravins being the purchaser.

The principal results were as follow :—Pirriesmill (11 head), averaged, £34 11s. 7d. ; Combscauseway (25 head), £48 0s. 11d. ; West Fingask (13 head), £24 17s. 6d. ; Saphock (10 head), £94 3s. 8d. ; Whiteside (15 head), £29 8s. ; Harthill (5 head), £46 4s. ; Heatherwick (8 head), £70 1s. 9d. ; Jackston (6 head), £55 13s. ; Newton (6 head), £71 15s. ; Tillygreig (5 head), £55 13s.

On Thursday the third sale was held at Aberdeen under the auspices of the North-Eastern Shorthorn Association, who offered prizes. There was another good attendance of buyers and further satisfactory sales, ninety-six head realising an average of £38 10s. 1d. each. A considerable proportion of the Reds and Roans were taken out for South America, but the most of the good-coloured animals remain, for the time being, at least, in this country. The winning yearling heifer, Mr. G. Hill's Jilt 45th, fetched the top price of the day—300 guineas from Mr. Cornelius, Cheshire, second last in the bidding being Mr. Jolliffe. The first prize two-year-old, Mr. J. Morrison's Dora 6th, was also secured by Mr. Cornelius at the handsome price of 260 guineas, the runner up being Mr. Martinez de Hoz, who, however, got the second prize heifer at 120 guineas. Mr. W. Connon's Crown Jewel won the first prize for bull calves, and was sold at 81 guineas to Mr. Locke, but the second prize bull calf, Mr. A. Watson's Red Chief, ran up to 160 guineas before being knocked down to Mr. G. Harrison. The above were the only three figure prices of the sale, the principal herd results being as follows :—Gordon Castle, eighteen head, averaged £56 9s. 8d. ; Fingask House, four, £50 8s. ; Phingask, seven, £75 9s. ; Nether Coullie, eight, £47 7s. 7d. ; Bruceland, seven, £52 1s. ; Wardes, four, £53 5s. 9d. ; Little Haddo, three, £140 14s.

Mr. J. Crawley's Lincoln Reds.

Close on fifty head of pure-bred Lincolnshire Red Shorthorns, the property of Mr. J. Crawley, Lawford Grange, near Rugby, were sold by auction on the 4th inst. in the presence of a large company of breeders. The cows were a splendid lot of short legged cattle, and they made good prices, Mr. H. Stokes giving 51 guineas for Sea Gem, and the Rev. H. Hopkinson, of Wansford, 40 guineas for Ladylike. Two-year-old heifers made from 18½ guineas to 22 guineas, yearling heifers from 13 guineas to 20½ guineas, and this year's calves up to 20 guineas. Nine bulls were sold, including Birks Jewel, the winner of the Shorthorn Society's prize at the Warwickshire Agricultural Society show, who, after spirited competition, was sold to Mr. Atkinson, of Weston, Lincoln, for 91 guineas. Yearling bulls made from 17 guineas to 22 guineas, and bull calves from 6 guineas to 13 guineas.

The Strubby Manor Herd of Lincoln Reds.

Just over 100 animals from Messrs. J. W. Farrow and Sons' well-known Strubby Manor Herd were offered for sale by auction in the presence of a large and representative attendance of breeders, and the result was a most satisfactory sale, thirty-six cows with calves averaging £39 14s. 4d. ; thirteen two-year-old bulled heifers, £27 17s. 4d. ; fourteen yearling heifers, £20 8s. 9d. ; and four bulls, £25 6s. 8d. The top figure for the cows was 42 guineas, given by Mr. J. Drewery, Donington, for Ivory Horn 2nd, whilst at two guineas less Mr. J. Wells, Withern, secured Ivory Horn, and Mr. B. Rowland, Wainfleet, bought Strubby Red Lady 2nd. Ivory Horn 3rd made the top price of the two-year-old bulled heifers, being knocked down to Mr. A. Turner, Leicester, for 35 guineas, this gentleman also paying the top price for yearling heifers, viz., 40 guineas for Lady Cardiff 4th. The bulls made up to 30 guineas, paid by Mr. L. Coppin, Willoughby, for Strubby Under Porter 2nd.

The Late Mr. G. Laughton's Lincoln Reds.

On Monday the herd of Lincolnshire Red Shorthorns (Lincolnshire Red Shorthorn Society's Herd Book, Vol. II., p. 37), bred by the late Mr. George Laughton, of Belchford, near Horncastle, was dispersed by auction at Belchford, and there was a good attendance of buyers, whilst some excellent prices were realised, the average per head for thirty-five cows and calves and heifers being £23 5s 1d. The heifer which won the third prize at the Royal Show at Lincoln this year was purchased by Messrs. Hensman and Sons, Fulletby, for 46 guineas ; another heifer went to Mr. Atkinson, Weston, for 27 guineas ; and another, calved in 1904, was sold to Mr. G. Laughton, jun., Belchford, for 31 guineas. The cow Ruby 4th realised 38 guineas from Mr. J. Marriott, Cropwell Butler, Notts, and another cow went to Mr. Crawley, Hemington, Oundle, for 25 guineas. The bull calves made up to 20 guineas, and yearling heifers from 10 guineas to 16¾ guineas.

Mr. J. Langham's Lincoln Reds.

A sale of a choice selection of Lincolnshire Red Shorthorns from the herd of Mr. John Langham, of Brandon Grange, near Grantham, and Newark, took place on Thursday. There was only a very small attendance, and the animals were sold at relatively very low prices, for they were of beautiful type and character. The handsome two-year-old heifer Brandon Beauty by Brandon—Christmas Gift, was sold to Mr. F. Taylor, Nether Broughton, at 50 guineas, and all the calves sold well. The pick of the yearling heifers was Brandon Ruby Nonpareil by Brandon—Christmas Gift, from Nonpareil 9th of Keddington descent, and was bought by Mr. R. Chatterton, Stenniggt, at 52 guineas, the same gentleman also paying 48 guineas for Brandon Nonpareil Ruby by Brandon—Lord Chief Justice, from Nonpareil 5th. Mr. W. J. Atkinson, Weston, gave 38 guineas for Brandon Faith, and Mr. F. Taylor 35 guineas for Brandon Alice 2nd, both yearling heifers. The 65 head realised £1,506, and averaged £23 3s. 7d., the eleven cows and calves averaging £32 11s., twenty-four heifers £23 11s., twenty-six yearling heifers £20, and the four bull calves £15 5s. 7d.

Sale of Mr. Tudge's Herefords.

One of the most successful sales of Hereford cattle held this year took place on Thursday, when Mr. J. Tudge's well-known Duxmoor herd was dispersed. Animals from this herd have been exhibited with success at many shows, and are of the highest breeding, being of the same strains of blood as in the old Leinthall and Adforton herds. In one of the bulls for instance, in Wonder, there was a combination of the three best Adforton strains—the Darlings, the Ladies, and the Beauties. Mr. John Tudge managed the Adforton herd for nine or ten years before its dispersal, and in his first year's management that herd took three firsts and one third at the Royal Show at Leicester, and in his second year four firsts and one second at Manchester with five animals. He started his own herd with a selection from the old herd, and for some time afterwards made a point of purchasing as many examples of the strains used by his father as possible. Some hundreds of prizes and many championships at the Royal and other shows have been taken by the herd, a number of them for groups of cattle. For two years Mr. Tudge was the largest prize-winner for Herefords, and amongst other successes was breeder of the champion at the Park Royal at Sydney, Australia, 1903, 1904, and 1905. All cows of this herd are good breeders and are noted as excellent milkers, one sold to Mr. White, of Zeals, Wilts, producing no less than seven gallons of milk per day. Mr. Tudge stated at the sale that he had always had the sires tested before using them.

Despite inclement weather there was a large company of breeders present at the sale, and also buyers from America and Australia, in fact, three of the best animals were sold to go to the latter country. Mr. Christisson, Lammermoor Queensland, giving 100 guineas for Royal Shot by Royal Rupert, whilst double that sum was paid by Mr. Jonas Webb for the bull Wonder for exportation to New South Wales ; 200 guineas was also obtained for the bull His Majesty by Royal Shot, the purchaser in this instance being Captain Braga, of Uruguay. These three prices were far in advance of any others, for the nearest approach was 70 guineas, given by Mr. D. Rowlands, Bromyard, for the bull calf Marvel by Wonder Girl. A good sale was experienced all through, with the result that an average of close on £42 per head was obtained. The following were the sales at 30 guineas and over.

NOTE.—The figures for the current year are approximate only.

How is the Trade Moving?

London.

The disappointing and unsatisfactory condition of business in the Borough makes one rather disposed to exclaim with old Ben Jonson, "Trade, I will cashier thee till to-morrow." I do not wish to imply from this remark that we are not doing business, for hops are being sold day by day, but growers, whose interests I have most at heart, are disgusted at the prices they are able to obtain, and many of them are losing confidence, and are now much more willing to accept bids that they have hitherto refused. A large number of them thronged our High Street on Wednesday; their depression was too evident, and the necessary consequences followed.

Merchants believed that they had control of the position, and the previous demand, except for choice coloury samples, fell off. Since then business has been comparatively quiet, and although growers have to-day wisely remained at home, there is a dull tone in the market, which does not augur well for the future. As far as I can ascertain, by inquiries from factors and merchants, there may be some hope for planters who are holding the best qualities, and for such I am inclined to believe that higher figures may be realised. But as the lower and medium qualities are now neglected by buyers, the tendency for these sorts is rather downward. It is quite clear that nothing can be gained by holders pressing the sale of their produce, and too much crowding round the factors' offices will certainly defeat the object we have in view, viz., to improve the tone of the market.

There is much talk just now of further and somewhat extensive "grubbing" if the outlook is not speedily brighter, and it appears, not only from English but also from American experience, that this is likely to come about. It is generally acknowledged that, owing to the decreased consumption of beer and the accompanying smaller requirements for hops, the world produces more hops than the consumption justifies. The only remedy is reduced acreage, and it is the opinion of many, in which I share, that we shall not see our hop markets in a sound, healthy condition until this is effected by general consent. In the meantime our growers must be content to struggle on and meet the circumstances they have to contend with in the best possible manner.

Our eminent merchants, Messrs. Cattley, Gridley and Co., in their annual report, just issued, say:—"The London market is fairly supplied, but growers are inclined to hold their better qualities for more remunerative prices than can be obtained at present. It remains to be seen how far they will succeed in the face of surplus abroad for export, though there is no doubt present currency is again seriously unremunerative to English producers." This is a fair statement of the position, and our growers must carefully watch the progress of events if they would protect themselves from more acute disappointment.

America.

A recent letter from my Washington correspondents gives their views as follows:—"As we indicated in our cable, the crop of the U.S.A. on account of mould and low prices will come down much lighter than expected. Harvesting is completed in all sections, and we think a conservative estimate of the American crop may be taken at 300,000 bales (about 550,000 cwt.). Adding 50,000 bales of 1906's and a probable importation from Germany of 40,000 bales, will give us 390,000, which will leave a very large surplus. Owing to a little manipulation our market is firmer, and "bluff" offers are being made of 9 cents.

"The general opinion here is that the market will recede rapidly, and everyone expects to buy hops at 5 cents, or even less. The quality in this country will fall far below expectation, and we will again be burdened with a large lot of inferior stuff, which will force down the value of good hops. The outlook to-day is certainly very discouraging from the standpoint of the grower. As we have written you before, there seems to be but one hope for the future of the hop industry, and that is a large general decrease in acreage. This is being advocated on this side, and we believe it would be to the advantage of your growers if they followed along the same lines."

Nuremberg.

There has been of late a marked dulness in the trade here, which is expressed by falling prices. It is true that buyers for export, and especially to England, have taken about 1,000 bales, the principal transactions in this business being in poor coloured Hallerdaus at 40s. to 58s., and Wurtembergs at 45s. to 53s., but this trade has not sufficed to relieve the market, which is overburdened by very heavy arrivals, coming in considerable quantities by rail from Hallertau, Wurtemberg, and Alsace. Most of these hops are deficient in colour, despite the favourable weather that prevailed during the picking, and the prices realised for them hardly compensate the growers.

Local brewers will only look at the good green qualities produced in our own districts, the lower sorts being bought daily at 45s. to 50s., and the choice samples realising as much as 82s. Common market hops are offered from 30s. to 40s., but such qualities are generally neglected. Holders are almost universally disposed to offer considerable concessions in price, consequently depression is at present the ruling feature of the trade The arrivals for the week ending October 2 were 7,300 bales, and as the sales for the same period did not exceed 4,400 bales, the addition to stocks was very substantial. Latest advices report further reductions to the extent of 3s. to 5s.

Dijon (Burgundy).

Business has been fairly active since the conclusion of the harvest, but growers are much disappointed by the low prices they are getting for their small crops. Burgundy hops, which have previously realised as much as those grown in Alsace, are hardly worth to-day more than the growths in the north of France and Belgium. At the recent fairs at Dijon and Beire-le-Chatel planters were willing to sell at whatever prices they were offered, which varied from 50 francs for mediums, to 60 francs for the best samples. These figures represent 40s. to 48s. English.

Alsace

There has been good demand for choice coloury samples, but not more than 45s. to 50s. have been made of them. Lower qualities are offered at 36s. to 40s., and even at these prices buyers are very slow to operate.

Brussels.

The current quotations on the Bourse are about 45 francs for Alosts, and 35 francs for Poperinghes. These are equal to about 36s. and 28s. respectively. Local brewers are buying freely, but the demand for export is exceedingly quiet, and, generally speaking, offers are in excess of inquiries.

It will be seen from the above reports, which I have endeavoured to make as correctly as possible, that the world's hop trade is not encouraging to sellers, and the conditions are such, that unless an alteration takes place soon, we may look for lower prices in every direction.

The Veterinary Profession and Agriculture.

In the course of his introductory lecture at the reopening of the Royal Veterinary College, Professor G. D Lander said that he thought the power of the motor as a source of injury to the veterinary profession in general was overstated, certainly so from time to time in papers, where one read of really astonishing effects already worked. Newspaper inaccuracy in general was very harmless. This type could not harm the existing practitioner, but it might injure a veterinary college, acting as a possible deterrent to those contemplating the profession, and not possessed of independent reliable information, and on this account it was to be deplored.

But apart from the horse practice, there were other established and prospective avenues before them. There still remained the farm and other domesticated animals. The revival of agriculture as a main asset was always in the air. Whether progress were maintained by means of small holdings, by means of better railway freight charges, or rapid motor conveyance of produce, or by any other means, agricultural improvement implied the improvement of veterinary prospects. For the agriculturist must advance side by side with the veterinarian, who should alone be his guide and preceptor in the care of his stock, and for the present, at any rate, no mechanical contrivance appeared possible to supply them with beef, butter, and milk.

The sale of the live and dead farming stock and a few lots of household furniture, by order of the executors of the late Mr. W. Whitlock, Winterslow, Wilts, took place on Monday, in the presence of a large company of buyers. The farm implements, which were all old and much worn, made full value. The breeding flock (not registered) sold as follows:—100 four-teeth ewes, 58s. (twice), 57s., 54s., 53s., and 51s; 96 six-teeth ewes, 60s., 57s., 55s., 54s., and 51s.; draft ewes, 48s. to 40s.; grazing ewes, 41s. and 35s.; ewe lambs, 45s., 44s., 43s. (twice), 39s., and 30s for the cull pen; 50 wether lambs, 47s. 6d.; 40 ditto, 43s., and the culls 36s.; rams and ram lambs, £2 to £2 12s. 6d.

POULTRY.

The Poultry Farmer's Medicine Chest.

(*Concluded from page 395.*)

Troubles of the Egg Organs.

The only articles likely to be required in cases of egg-binding are the castor oil and the olive oil (or "sweet" oil) already referred to, the former to be given internally as a physic, and the latter to be used by the medium of a feather for lubricating the egg-passage (which must be done with the utmost care).

Perhaps we ought to mention also the trouble known as "laying soft eggs"—*i.e*, eggs not supplied with the proper coating of shell. This is a complaint due either to general debility or to fright; if the latter it does not keep recurring, if the former it does, and the best remedy for it is the liver treatment already described, plus a reduced food allowance, except in regard to greenstuffs, which may be given *ad lib.*

Feather and Skin Disorders.

For slow feathering give a good tonic. The best general tonic for poultry is chemical food—the red syrup known as "Parrish's." Keep a bottle of this on hand, therefore, and when needed add a teaspoonful of it to a pint of drinking water, and let the birds dose themselves, which they will do quite readily. For the moulting season, needless to say, it is very valuable.

Passing on to the other feather troubles (due to vermin, probably) and to such skin disorders as white comb (a form of eczema) and scrofulous eruptions, the poultry-keeper needs two remedies to enable him to deal successfully with these various matters (scaly-leg we include with the others). Ointments are most convenient, but the permanganate lotion can often be used to advantage as a preliminary.

Get a strong carbolic ointment—carbolised vaseline will answer very well, but see that you are supplied by your chemist with the full strength. That can be used where stringent measures are needed; for the rest (and, in many circumstances, to follow the other) we need a milder ointment altogether. A mixture of two parts of plain vaseline to one part of zinc ointment will answer the second purpose well.

Sulphur ointment might be substituted for the latter also; and, indeed, dealing with such a matter as scaly-leg there is no remedy better than sulphur ointment, applied, that is to say, after the legs have been dressed with some sort of strong liniment such as has been described above under "cramp" A thorough saturation with the liniment (after the legs have been well scrubbed in hot water), and then a dressing with sulphur ointment, will often result in a complete cure of very bad cases.

Remedy for Wasting Disease.

Consumption in one form or other is responsible for a great deal of mortality amongst poultry, and of all the diseases for which provision ought to be made by a poultry-keeper none calls more loudly for notice. We have already referred to chemical food—that is, one specific; but alone it will not suffice to cure the wasting of the tissues which causes the weakened, emaciated condition of the birds affected by this complaint.

Cod-liver oil is supposed to be the best thing to give; it tends to repair the wastage referred to. Given in conjunction with the chemical food, it will often work wonders—given, that is, in capsules, whilst the food is added to the drinking-water. In many cases capsules of cod-liver oil with a little quinine added have a beneficial effect. They can be obtained in small tins from any good veterinary chemist, specially prepared of the right strength for poultry, and they are very easy to give to ailing birds.

Another good strengthening remedy is a pill made of sulphate of iron—one grain in each pill—which any chemist will prepare at very little cost. A dozen other tonics might be mentioned, but these will suffice. And now, to conclude, let me give a recipe for

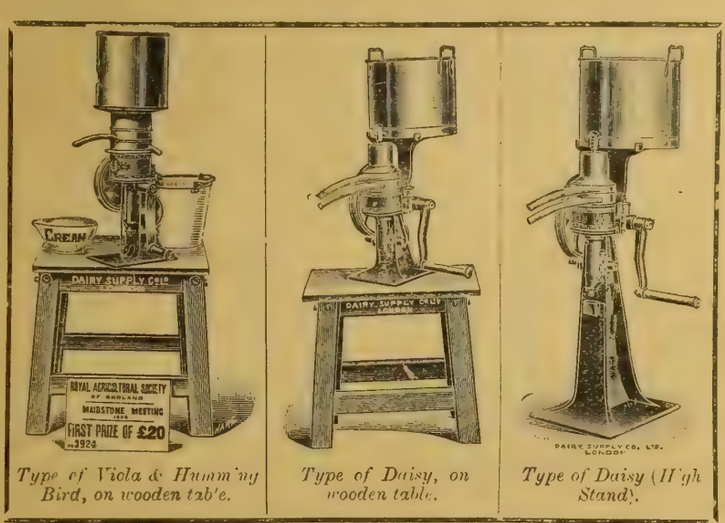
A Good All-round Poultry Powder.

Many poultry-keepers like to have one general physic in the form of a powder which they can mix in the food, and which will act as an alterative and a stimulant at one and the same time. This is the right plan to go upon; but let me warn all concerned against the use of pungent spices, which do not give warmth, but merely irritate the lining of the passages and retard the process of digestion instead of encouraging it (which is a most essential thing in egg-production).

Here, then, is a recipe. Take of Epsom salts, dried in a hot oven, 1 oz.; sulphur in "flowers," 1 oz.; fenugreek powder, 6 oz.; aniseed powder, 2 oz.; carraway powder, 2 oz.; fine sharps, flour, or any other innocuous powder, 22 oz. Mix all together. The product is, of course, 2 lb. in weight. Give of this a heaped-up tablespoonful to about twenty fowls once or twice a week.

"ALFA-LAVAL"

CREAM SEPARATORS.



NEW MODEL. NEW MODEL.

Guaranteed to turn easier, produce more butter, and wear longer than any other machine.

Embody the experience gained in making 655,000 Cream Separators—more than all other kinds put together.

Specially designed for lasting wear, and so that all wearing parts are low in price and easily replaced.

Favourable allowances given for old machines of any make, so that it pays every Separator user to be up-to-date with the best type.

Type of Viola & Humming Bird, on wooden table. *Type of Daisy, on wooden table.* *Type of Daisy (High Stand).*

Turn like a sewing machine. By far the lightest running Separator upon the market.

It is an oft-proved fact that five cows and an "Alfa-Laval" produce more butter than six cows and no Separator.

The last word in Separator construction. Includes every invention and idea that is of practical value in a Cream Separator.

Correct in design, perfect in finish, runs at a low speed and with adequate yet economic lubrication.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock. The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin. Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S. Full instructions for growing all British fruits.—Preparation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the benefit of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training, and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.
Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit. Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24.—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

THE FARM.

No. 44.—The Agricultural Annual and "Mark Lane Express" Almanac. The Farmers' Red Book. Brimful of Facts and Figures relating to the Farm and Markets. Compiled by well-known Writers on Agricultural Subjects. Profusely illustrated. 272 pp., 8vo. Price 1s., by post 1s. 4d. Published early in December each year. L.

WIREWORM
Robs you of your profits.
VAPORITE
Doubles them.

Soil full of wireworm and other pests never pays. Soil treated with VAPORITE always pays, because no harmful worm or insect can live where VAPORITE is used. It is a simple, inexpensive, certain destroyer. It doubles the farmer's profits. Just spread lightly on the soil, and plough or dig it in. It is perfectly harmless to plants. *Send for Booklet No. 13a.*

Seasonable Topics.

October Rains.

WITHOUT having anything that could be called a deluge, a considerable amount of rain has fallen since the harvest weather broke, and, as is usual with the rains of the autumn, it has come down in real earnest. In late corn districts farmers would have been glad if the Indian summer had lasted a bit longer, but with these exceptions agriculturists were ready for the moisture. In a few cases early ploughing matches had to be postponed because the land was too dry and hard; but there is no need to fear any further delay for this reason, and look which way you will, teams may be seen in the fields and stubble is giving place to brown crumbling earth on the surface. The rain, too, has had its effect on the grass, and rarely have we had more keep so late in October. At the end of September roots began to look as if they were coming to a standstill, but the moisture has freshened them up, and they are still growing. In short, the autumn rains have done their work, and farmers have reasons to be satisfied with the climatic conditions of the close of the season.

The Farmer Smiles.

WELL he may, for having got a fixed idea into his head that corn-growing was played out in the old country, and that he could never hope to make 30s. a quarter of wheat again, the sudden rise this autumn has come as a pleasant shock to him, and in every place where farmers most do congregate this is the absorbing topic of conversation. Will it last? Shall I sell now or wait? Will the prices rise to 40s. a quarter? These are a few of the questions debated, and future events must of course settle them. Some of the smiles are tinged with regret that more wheat was not sown, but who was to know that for various reasons the wheat crops would be short in those parts of the world where our main supplies come from? Ah well, the man in the street may express his regrets, but it is an ill wind that blows nobody any good, and it is time the wheel of fortune turned a little bit in favour of the British farmer, who when congratulated on the year may justly refer to prices in the past few seasons, and outstanding accounts that he may have to settle out of the better returns of 1907.

Ploughing Matches.

EVERYTHING in its season, and during October reports come freely to hand of ploughing matches arranged in different parts of the country by local farmers' clubs and agricultural societies. Very interesting, exceedingly useful, and highly educational are these competitions, because when everything has been said in favour of scientific teaching and its effect on farming, it is useless without the skill of the craftsman. Ploughing matches are old institutions, and interest in them is fairly well maintained, but in many cases the enthusiasm in connection with these gatherings is not so keen as we should like to see it. It is good to see the local champions turn up year after year and pit their skill against each other, but we should like to see more lads and youths training and bidding for championship honours. Except in instances where there is a certain amount of whipping up, they seem slow to come forward, and one would like to see a keener desire to excel in this important branch of agricultural labour. Surely it is to the credit of either a young farmer or a young labourer to be an expert ploughman.

Breaking Records.

TO the British mind there is something fascinating about making a record and still more so about breaking one that is established. We see motorists risking life and limb in a senseless manner. What for? To break records. And we do not know how many men have tried to swim the Channel and break the record established years ago by the late Captain Webb. Farmers are not without this love for record making and breaking, and the performance of any prodigious feat of labour never fails to arouse local interest and a desire on the part of someone to excel it. We have a newspaper cutting before us telling of a farmer who recently cut a field of corn, carried it, threshed it, and sold it in one day, thus creating a record of which the man is presumably proud, and it would appear as if the person who goes one better will have to have it ground into flour within the day. Various agricultural operations lend themselves to record making, and it is interesting to observe how extraordinary feats live in local history long after other matters of greater importance are forgotten.

Mangolds Going to Seed.

A CORRESPONDENT in these pages recently made some reference to the large number of mangolds that have gone to seed this season in a certain part of the country which he named. From what we have heard and seen the complaint is general, and in many cases the percentage of "bolted" roots is so large that the value of the crop is reduced considerably. Various explanations are given for this disappointing behaviour of the mangolds, and complaints being too general to attach the blame to the seedsman it is saddled on to the broad shoulders of the clerk of the weather. Nor do we think that the charge is misplaced, because we have noticed the same tendency to "bolt" in beetroot, carrots, and onions, but not to similar extent No doubt it was the check which the plants suffered at a critical stage, through the cold and the lack of sunshine, that was responsible for the trouble, for though a few bolters are generally seen every season, the percentage is invariably small when growth is steady and regular from the seedling stage to the time of maturity. The unfortunate part is that "bolting" reduces the feeding quality of the roots.

A RURAL CANAL SCENE.

Motor Car Lights and Numbers.

IT is quite evident that if nothing is done to deal effectually with the dust trouble, or check the speed at which motor cars travel on the public roads, it will be essential to adopt different methods of lighting and numbering cars. It is the "road hog" who is the nuisance, and at present the only means of effecting his capture after he has done some damage, providing his car is uninjured, is to take his number. Easier said than done, for except at very close quarters the number plate at the back of the car is hidden from view by the dust in the daytime, and at night the light that is carried to show up the number is more often than not useless for the purpose of detection. Headlights, too, are not what they should be. We grant that a motorist should be furnished with good lights for the sake of the safety of the public as much as himself, but we frequently pass cars at night which have very powerful acetylene lamps and

these so dazzle the eyes of a passer-by that when the motor has gone the black darkness in front is confusing and risks are run of collisions and accidents.

Implements After Harvest.

HARVEST for the year is over, and there are implements used solely in the item of the annual routine that will not be required for some time to come. What shall be done with these things in the meantime—the reaper, mower, raker, swath turner and so forth? Sometimes you see one or more of the above standing out in an open stack-yard, or perhaps given the shelter of a cart-shed to remain until required again just as it came in from the field. Surely this is not good farming, and if implements are drawn temporarily under cover while the pressure of harvest work is on, there are days later on when time may be profitably spent in overhauling machines, oiling, cleaning and putting them away in the dry for the winter. We met a farmer the other day taking his mowing machine to be repaired. Experience had taught him wisdom, for once before his machine had gone wrong at the close of the season and he neglected to have it overhauled till it was nearly time for mowing again. The usual thing happened, the local smith was bunged up with repairing work, the man had to wait, and his haymaking operations were delayed. Moral: Avoid any possibilities of this by having machines overhauled at the close, not at the beginning of harvest.

Wasting Time.

WE heard a good story the other day of a farmer who called on a neighbour about mid-day with the object of buying some calves. Not being able to get them at his own price he lingered during the afternoon till it was getting late in the evening, where at last a bargain was struck, and, on wishing his friend good-night, he said he would come again some day when he was not busy, and spend an hour or two with him. This, by the way, is by no means an exaggerated case, and, in the transaction of agricultural business, a good deal of valuable time is wasted. In his buying and selling the farmer seems to possess a natural propensity for taking his time about it, and it would often be a surprise to him if he knew how much of that valuable commodity he wasted over a transaction. Weekly markets are responsible for a good deal of wasted time, and if a return could be given of the instances in which a whole day is spent in transacting business that could be done in an hour or two, the figures would be startling. It may be urged that farmers are their own masters, and can do what they like with their own. Quite so, but we would point out in reply that wasting time in the above and other ways has brought more than one practitioner on to the rocks of adversity.

Competitive Milking.

NOT long ago a writer in a daily paper informed his readers that one more vocation was doomed—that of the milk-maid—and that her place would soon be taken by the machine which extracts the milk from the udder of the cow. Of course, we know that an apparatus of this character is used successfully, but one might as well say that the unmusical "Milk-oh" of the London milkman will soon be heard no more because the Grosvenor Dairies' Company in Westminster have penny-in-the-slot contrivances at their depôts where you can go and drop in your coin and get your pennyworth of milk without asking questions. No, the vocation of the human milker is not dead yet. Indeed, it is very much alive, and there never was a greater demand for quick and expert milkers. In the old days it was not important that the milking should be completed at a given time, night and morning, but now that it has to be coo'ed and run to the station in time to catch a certain train, there must be no delay about getting through the milking. In short, the dairy-farmer of to-day must have good milkers, male and female, and not the least interesting feature of the recent London Dairy Show was the milking contests in which men and boys and women and girls from all parts of the country competed with each other for honours in milking. These contests are both interesting and useful, for though milking is not a fine art, there are milkers and milkers, and there is something to be learnt from watching an expert manipulator of teats.

Agricultural Politics.

BY A LOBBYIST.

Earl Carrington's Commissioners.

There can be no doubt whatever that Earl Carrington has, by his first two appointments of commissioners under the Small Holdings Act, absolutely redeemed Mr. L. Harcourt's promise to the House of Commons Committee that the nominations should be of a non-partisan and non-political character. No objection can be logically directed against the appointment of Mr. Edwin John Cheney and Mr. Matthew Talbot Baines. If it be urged by those not friendly to the principle of small holdings that both will come to their work with minds sympathetically biassed—(Mr. Cheney is, of course, the chairman of the Eastern Counties Farmers' Co-operative Association, and Mr. Baines has had the management of something like three thousand allotments, on the estates which have recently been under his control)—I reply that to ask Lord Carrington and Mr. Harcourt to appoint men who would regard their purpose with tepid zeal, and have no past experience in its working, would in itself have meant suspecting them of insincerity in their professed design. The Ministers had a wide area from which to make their selection—an area in which dwelt practically-equipped men, who had placed the Liberal Party under some obligations by their personal zealotry. Had, however, appointments been made from the ranks of these politicians they might have antagonised many of the county councils and not an unimportant section of the landlord element already rendered sensitive and restless by the criticisms and attacks indulged in during the passage of the Bill through the House of Commons. These appointments are rather an heroic act of self-restraint on the part of the Ministers in view of the growth of the idea that in politics the spoils should go to the victors. However, it must have its reward in the fact that it will as its first fruit breed the conviction that there is no malice behind the new policy, and that it will be inspired by a dispassionate and practical appreciation of the necessities of local areas. The appointments are in every sense admirable.

Mr. Collings Demands a Rural Party

So Mr. Jesse Collings is now among the *sans culottes*—Mr. Collings is among those who declare that we need an agrarian party to combat, or rather to restrain, the growing arrogance and assertiveness of the commercial and industrial elements in Parliament. This has long been my conviction, and I have been strengthened in it by the experience of the last two sessions. It may be urged that the very legislative achievements of those sessions in the interest of agriculture—the Dogs Act, the Butter Act, the Fertilisers Act, and the Foods Regulations Act—illustrate the ungenerosity of my contention. They do nothing of the kind. These measures were passed because of the fact that their assumed innocuity rendered them beneath the notice of the urban Parliamentarians, absorbed as they are in so many turgid and ambitious designs. They were passed, because the men who hit their head against the sublime stars have no perception for lesser things. It may be urged, too, that the Small Holdings Act is a revelation of a greater Parliamentary friendliness to agriculture. It is nothing of the kind. The Small Holdings Act had so powerful an urban sympathy behind it, because, first of all, it induced the thought that it would probably relieve the congestion of population in the great towns, and next, because it in a sense gave expression to the rather undisciplined anxieties as to the future disposition of the land which possess so many sections of those urbanites. This Parliament is willing to indulge in further experiments with the land, but only in so far as the financial milking of it may provide funds for the realisation of the new economic and social purposes, for the benefit of the towns. This is, in so far as its main inspirations go, an urban Parliament. Its thoughts are mostly centred in commercial designs or upon the conditions of the seething masses of the crowded congeries of our life. It epitomises more distinctly and emphatically than any of its predecessors the legislative ambitions of commercialism and industrialism. We want an independence and self assertion equal to that which possesses those two sections.

Liberalism and Land Purchase.

Mr. Jesse Collings may as well relinquish any immediate hope of the realisation of his prophecy that the English farmer will yet be given the same opportunity as the Irish farmer of becoming—as a sequel to the advance of money by the State—his own landlord. I mean he should relinquish it if he believe in his own prophecy that the next General Election will mean the return of the Liberal Government to power. Liberalism may be willing to secure the expropriation of the present race of landlords, but it is not willing to establish another race of landlords in its place, even though that race be of the farming-class. It may, speaking generally, be willing to utilise the finances of the State in carrying out the policy of expropriation, but that policy must be on the lines of State-nationalisation. If the Government proceeded on the lines of individual ownership, it would array against it the whole forces of Radicalism, Socialism, and Labour—it would build up for itself a heritage of woe and contumely before the prospect of which its cheek might well blanch. Entire security of tenure, complete security for personal investment, entire freedom of culture, and the occasional revision of rents by scientifically-manned courts—all these things Liberalism, that is, unofficial Liberalism, would probably even at this moment offer, But individual ownership—no. Individual ownership would mean the building up of a multitude of barriers to the nationalising ideal. So, Mr. Collings, you had better save your breath—at least at this moment—for an ambition having a more roseate prospect.

* * *

The Future of Rural Education.

It is one of the piquancies of our politics that a treasured purpose of so inflexible an anti-Liberal as Mr. Jesse Collings—that is, anti-Liberalism in its present guise—should have associated with it a possibility of realisation at the hands of a Liberal Government. It is also in its way pathetic that this ambition—the association of a really practical system of rural education with rural schools, a system under which the children would be taught the elements of farming—should have elicited so little sympathy from official Conservatism. Mr. Collings' Bill had associated with it some of the most honoured figures in in territorial Conservatism; but it never elicited anything more than a wan smile from the leaders—the chieftains, that is, of the avowed and self-proclaimed rural party. Why should not this purpose be associated with the forthcoming Education Bill? I can understand relentless Tories saying they would give no countenance to anything which would peril the present system of religious teaching, or weaken the authority of the Church of England cleric. They would thus vote against the Bill under all and any conditions and at every opportunity. Well, all the same, to me such an attitude as this would mean the lending of a character of fantastic extremism to party zeal. Mr. Collings' purpose might be realised in a special clause, to which general consent might be given. Let us not forget that there were non-debatable points both in the Government's last Bill and in the preceding Conservative measure. To adopt such a provision as this by general consent would, too, render it less possible to relinquish the Bill in its entirety because of the amendments of the House of Lords. But why do I think there is a possibility of the Government accepting Mr. Collings's idea? Well, in the framing of the next Education Bill Dr. Macnamara, the Secretary of the Local Government Board, will be an inevitable influence. He is the educational expert of the Government. Dr. Macnamara again and again in the days of his non-official youth advocated such a method of practical education as that of which Mr. Collings has been the unfaltering advocate.

An important new department of economic biology has been formed at Bristol University College, with a view to placing gratuitously at the disposal of farmers, fruit-growers, and those engaged in fisheries in the western counties the resources of scientific knowledge and research. It has the approval of the county councils and the Board of Agriculture, and at a largely attended conference, held on Thursday, Mr. Middleton, representing the Board of Agriculture, said that his department welcomed such assistance, and he hoped that the time was coming when it would be able to do more financially for applied science than it now did. Such work was not subsidising a class, but benefiting the whole, all being consumers.

BARLEY AND HOPS AT THE BREWERS' EXHIBITION.

MALTING BARLEY.

English barley this year has had to take a secondary position at the Brewers' Exhibition in competition for the handsome prizes offered for malting samples. The world's champion prize, which is offered for the finest bushel of malting barley of any growth from any country or colony, was won by a sample of Austro-Hungarian corn exhibited by Messrs. Liebmann Bros.

The reserve number, however, went to a Somersetshire Chevalier barley grown and exhibited by Mr. Thomas Rawle, of Porlock, who has on many previous occasions figured in the prize list at the Brewers' Exhibition. This barley was grown on stonebrash with a subsoil of gravel, and the two preceding crops were ley and wheat. The seed was E. W. King's Chevalier, and the crop was sown on March 15 and the crop cut on August 21. This sample also won the first prize in the class for British-grown Chevalier, the second prize went to a Kentish barley grown by Mr. S. Champion, while third position was again won by Mr. T. Rawle.

For Goldthorpe, or any variety of barley except Chevalier, first prize went to a Shropshire barley shown by Mr. R Preece, while second was Mr. T. E. James, Minehead, Somerset, and third Mr. W. H. Laverack, Knapton, Yorks.

Speaking on behalf of the barley judges at the inaugural luncheon on Saturday, Mr. S. N. Thompson, of Smethwick, drew attention to several items in connection with the present show of barley. English barley, although defeated for the championship, owes its secondary position entirely to the peculiar weather of the past season. On the continent there has been far more sun and less climatic changes than we have experienced. The variable season in this country has resulted in abundance at the expense of quality.

British barley this year is generally not equal to the average, and this is due to the fact that the season has favoured the growth of the straw, with the result that much of the barley is not up to the malting standard and is weather-stained to a great extent. One noticeable improvement, largely due to the barley classes at the Brewers' Exhibition, is the greater attention paid to the threshing of the samples. Formerly it was quite common to see samples that had been passed through a too-closely-set machine; but of late years there has been a consistent improvement in this respect, and the quality of the corn for malting purposes has grown enormously.

It is still strange, however, that barley growers are so apathetic in their support of the barley classes. There are this year 195 entries of British-grown entries; this number, it may be judged, is fairly representative one, and fully up to the average. Such is the case, but growers are not taking full advantage of their opportunities. Some excellent malting barley is grown in Yorkshire, but from the whole of this large county there are but eight samples of Goldthorpe, grown by seven farmers, and one solitary sample of Chevalier. Surely this is not a representative display for the county of broad acres. Again, take Shropshire, where some of the finest malting barley comes from; of Chevalier there is one sample; of Goldthorpe six.

These are only two instances from many, and growers would do well to support the classes to a greater extent. Many farmers frequently complain that they cannot get top malting prices for their produce, and cannot understand why it is. They should bear in mind that maltsters require a particular type of barley, threshed in the most perfect manner possible. Instead of lamenting, the British grower would do far better in personally seeing the sort of barley that an independent and an impartial board of judges consider the best for malting purposes, and in the following year sending up their produce for adjudication at the same hands.

Below will be found the prize list as far as it was decided on Saturday. The full list including the winners of diplomas for seed barley, will appear in our next issue:—

JUDGES.

Frank Flinn, chairman, Maltster, Bishops Stortford, Dullingham and Newmarket.

S. N. Thompson, vice-chairman, Maltster (S. Thompson and Sons), Smethwick.

W. H. Cox, 128, High Street, Burton-on-Trent.

James Grant, F.I.C., F.C.S, Manchester Brewing School.

Edward R. Hill (Messrs. F. and G. Smith, Ltd., East Dereham.)

C. Howard-Tripp, Managing Director, Ind, Coope and Co., Ltd., Burton-on-Trent and Romford.

C. R. Jolliffe (A. Milnthorp, Maltster, Town Maltings, Thirsk.)

H. Mackeson, Brewer and Maltster, Hythe.

Lewis J. Meakin, Maltster (L. and G. Meakin, Ltd.), Burton-on-Trent.

J. W. Rogerson, Esq. (Director, Meux's Brewery Co, Ltd., London W.)

PRIZE LIST.

WORLD'S CHAMPION PRIZE.

Catalogue No.

209. Austrian-Hungarian barley: Messrs. Liebmann, Bros., Hop Exchange, S.E.

106. (Reserve) Somerset barley: Mr. T. Rawle, Court Place, Porlock.

CLASS I.—CHEVALIER (British Grown).

106. First prize, Somerset barley: Mr. T. Rawle, Court Place, Porlock.

44. Second prize, Kentish barley: Mr. S. Champion, The Elms, Sarre, Isle of Thanet.

108. Third prize, Somerset barley: Mr. T. Rawle, Court Place, Porlock.

14. Very highly commended, Bucks barley: Mr. R. E. Horwood, Upper Farm, Drayton Beauchamp, Tring.

25. Highly commended, Essex barley: Mr. M. G. Bacon, Lower Marsh Farm, Brightlingsea.

CLASS II.—GOLDTHORPE (British Grown).

182. First prize, Salop barley: Mr. R. Preece, Cressage House, Cressage, Shrewsbury.

183. Second prize, Somerset barley: Mr. T. E. James, Lower Farm, Minehead.

193. Third prize, Yorkshire barley: Mr. W. H. Laverack, The Grange, Knapton.

HOP COMPETITION.

The entries this year are considerably in excess of the two previous years, the whole of the samples being well appreciated by the following gentlemen who acted as judges:—

CHAIRMAN.—Burnett Tabrum, J.P., Tabrum and Son, London (chairman, London Hop Trade Association).

FACTORS.—D. H. Gaskain (D. H. Gaskain and Co.), London; H. E. Jones (Wests', Jones and Co.), London; Stuart Neame (Wild, Neame and Co.), London; Bertram Noakes (J. T. Noakes and Co.), London.

MERCHANTS.—C. Oscar Gridley, J.P. (Cattley, Gridley and Co.), London; Lionel H. Hanbury (Wood, Field and Hanbury), London; J. Hopkins Meredith (J. Hopkins Meredith and Co.), Worcester; Basil E. Richardson (Wigan, Richardson and Co.), London.

The list includes 97 entries, divided as follows:—

Class 1.—East Kents, pale ales, 19 entries.

Class 2.—Mid Kents, pale ales, 9 entries.

Class 3.—East and Mid Kents, ordinary beers, 15 entries.

Class 4.—Wealds and Bastard East Kents, pale ales, 7 entries.

Class 5.—Wealds and Bastard East Kents, ordinary beers, 11 entries.

Class 6.—Sussex, pale ales, 6 entries.

Class 7.—Sussex, ordinary beers, 3 entries.

Class 8.—Worcester and Hereford, pale ales, 10 entries.

Class 9.—Worcester and Hereford, ordinary beers, 8 entries.

Class 10.—Farnhams and Country Farnhams, pale ales, 6 entries.

Class 11.—Farnhams and Country Farnhams, ordinary beers, 3 entries.

The following are the prizes offered, and the awards in reference thereto, by the directors of the exhibition:—

AWARDS.

A champion prize (gold medal) and silver and bronze medals, with diplomas, for the best, second and third best samples of any growth from any district:—

Champion, gold medal, Mr. G. Mount, Canterbury.

Silver medal, Messrs. E. A. White, Ltd., Paddock Wood.

Bronze medal, Mr. W. F. Pudge, Bishops Froome.

In each and every class, £3, £2, and £1 with diplomas.

Class 1.—1st, Mr. G. Mount, Canterbury; 2nd, Mr. T. Minter, Faversham: 3rd, Mr. G. Mount, Canterbury.

Class 2.—1st, Messrs. E. A. White, Ltd.; 2nd, Mr. W. Rogers, Horton Kirby; 3rd, Mr. F. D. Thomas, Loose, Maidstone.

Class 3.—1st, Mr. H. Wellband, Otford Castle; 2nd, Mr. W. Rogers, Horton Kirby; 3rd, Mr. G. Mount, Canterbury.

Class 4.—1st, Mr. E. Wickham, Goudhurst; 2nd, Mr. J. D. Large, Goudhurst; 3rd, Mr. W. J. Noakes, Trottenden.

Class 5.—1st, Mr. J. D. Large, Goudhurst; 2nd, Messrs. J. Body and Son, Whittersham; 3rd, Mr. E. Mannington, Benenden.

Class 6.—1st, Mr. C Brissenden, Wadhurst 2nd, Mr. J. Taylor, Hadlow; 3rd, Mr. H B. Simes, Mayfield, Burwash.

Class 7.—1st, Mr. H. Ashby, Withyham.

Class 8.—1st, Mr. E. G. Shew, Bosbury, Ledbury; 2nd, Mr. W. H. Gabb, Beauchamp Court, Worcester; 3rd, Mr. W. F. Pudge, Bishop's Froome.

Class 9.—1st, Mr. W. F. Pudge, Bishop's Froome, Worcester.

Class 10.—1st, Mr. L. G. Bonham-Carter, Buriton, Petersfield; 2nd, Mr. G. W. Duncan, Bentley, Hants; 3rd, Mr. H. Lillywhite, Bentley, Farnham.

Class 11.—1st, Messrs. Candy and Baigent, Froyle, Alton.

The prizes offered by Messrs. Fisons, Ipswich, were awarded to Mr. Thomas Minter and Mr. J. D. Large.

Messrs. Webb and Sons, Wordsley, offered prizes of £10 and £5 for hops grown with their special manure, both in the Southern and the Midland districts, these being awarded as follows:—

Southern districts.—1st, Mr. H. Lillywhite, Bentley, Farnham; 2nd, Mr. W. Lillywhite Thanington, Canterbury.

Midland districts.—1st, Mr. E. G. Shew, Bosbury, Ledbury; 2nd, Mr. W. H. Gabb, Beauchamp Court, Powick.

Messrs. E. A. White's prizes of £10, £5, and £3, were awarded as under:—

1st, Mr. G. Mount, Canterbury.

2nd, Mr. W. F. Pudge, Bishops Frome.

3rd, Mr. G. Mount, Canterbury.

The Sheppy Glue and Chemical Works Company's prizes of £10 and £5 went to Mr. G. Mount, Canterbury, and Messrs. E. A. White, Paddock Wood, and the prize of £10 offered by the Anglo-Continental Guano Works, was taken by Messrs. E A. White, Ltd., Paddock Wood.

We reserve our examination of, and criticism upon, the hop exhibits until next week, as they were not arranged in time for our present issue.

Dorset County Show at Dorchester.

Under the auspices of the United Farmers' Clubs of Dorset, Dorchester, Winfrith, Wareham and Blandford, a successful exhibition was held at the Corn Exchange, Dorchester, on Saturday, when £100 was offered in prizes, one of the classes for malting barley being open to the world. As usual, the exhibition excited very keen interest amongst the agriculturists of the county, and more especially amongst those who, from the adaptability of their soils, make a feature of growing barley especially suitable for the brewer. The entries scarcely came up to those of some previous years, the responsibility for which is attributed largely to the continuous wet weather which has prevailed for the past fortnight, which has completely put a stop to threshing operations, and another factor that also had some effect in lessening the entries is that many

WHERE AND HOW THE PRIZE BARLEYS WERE GROWN.

CLASS I.—CHEVALIER

			Soil.	Subsoil.	Two Preceding Crops.		Seed Sown.	Peck per Acre.	Manure Used.	Date Sown.	Cut.	Quantity Grown Qr.	Cleaning Machinery.
1st	Ed. Rawle	Somerset	Stonebrash	Gravel	Ley	Wheat	E. W. King's	9	Fison and Co.	March 15	August 21	7	Penny's.
2nd	S. Champion	Kent	Light	Chalk	Oats	Ley	Webb's Kinver	9	None	March 5	August 14	6	Boby's.
3rd	Ed. Rawle	Somerset	Stonebrash	Gravel	Turnips	Wheat	J. K. King's	8	Fison and Co.	March 8	August 16	6	Penny's.
v.h.c.	R. E. Horwood	Bucks	Chalk	Ragstone	Wheat	Sainfoin	Carter's	8	Sulphate of Ammonia.	April	September 1	7	Boby's.
h.c.	M. G. Bacon	Essex	Light	Mixed	Mangolds	Oats and barley	E. W. King's	8	—	February	August	4½	Wood's.

CLASS II.—GOLDTHORPE.

1st	R. Preece	Shropshire	Light	Gravel	Wheat	Roots	Burton Malting	10	Webb's	March	August	7	Boby's.
2nd	T. E. James	Somerset	Black	Red gravel	Grass	Grass	Carter's	9	Fison & Co.s	March 26	August 12	7	Boby's.
3rd	W. H. Laverack	Yorkshire	Sand	Gravel & sand	Swedes	Fallow	Standwell	12	None	March	August 20	3	Sawney's.

farmers were not anxious to bring their barleys to market just yet, believing that by holding their stocks over there is the probability of getting a better return for their grain a little later on.

After making due allowance for the unfavourable character of the summer this year for barley growing, the quality of the barley was distinctly disappointing. Much of the barley was more or less discoloured, and the odour in some of the samples shown was the reverse of sweet, the result probably of the sweating the corn was undergoing. Although there was by no means an absence of chipped ends, still the dreising showed signs of distinct improvement on what we have seen at previous shows, and it is to be hoped this will be continued. The championship prize, as well as the first prize in the leading class (50 qr.), fell to Mr. C. Duke, of Woodsford, with a very nice sample of Hallett's, which scaled 56 lb. per bushel. Mr. G. Mitchell, Rogers Hill, won premier honours in the second class (30 qr.), with a good sample of the Champion Chevalier, weighing 56 lb.; and in the class for 20 qr. Mr. W. J. Foot, Stourpaine, secured the blue ribbon with a sample, scaling 56 lb. per bushel of Carter's Prolific, which, to judge by the sample exhibited, is no misnomer.

Wheat, although lacking the plumpness and good colour often seen at the show, was, on the whole, quite up to what had been expected in such an adverse season. The champion prize for wheat was awarded to Mr. T. B. Sprake, Knowle Hill, with a decent sample of red, known as Master's Squarehead, with which he also took first prize in Class 5, whilst for red wheat Sir R. Baker was first with a very fair sample of the variety known as Ambrose Standup.

Oats, as had been generally anticipated, made a very creditable display, the only drawback being the careless manner in which many of the samples had been dressed, which detracted greatly from the merit of what otherwise would have been an excellent class. Sir R. Baker secured the first prize with a capital sample of white oats which scaled 45 lb. to the bushel—by far the heaviest weight amongst all the exhibits.

We subjoin a complete list of the awards, the judges were:—Barley, Mr. M. A. K. Bailey (Frome), and Mr. F. Flinn (Bishop's Stortford); wheat, Mr. J. Bradfield, Stoke, Wareham; oats, Mr. T. H. Webb, Blandford.

BARLEY.—Championship prize of £8:—1st, Mr. T. C. Duke, Woodsford; 2nd, Mr. J. Foot, Stourpaine, Blandford. Class 1: Best exhibits malting barley (from bulk sample of 50 qr.).—1st, £6, Mr. T. C. Duke; 2nd, £4, Mr. F. Johnson, Affpiddle; 3rd, £2, Messrs. Bedford and Dwight, Bere Regis; r, Mr. W. J. Foot. Class 2: from bulk sample of 30 qr.—1st, £5, Mr. G. Mitchell, Rogers Hill; 2nd, £3, Mr. G. Wood, Homer, Bardolf Manor; 3rd, £1 10s., Mr. F. J. Johnson; r, Mr. C. Trowbridge, Iwerne Minster. Class 3: From the bulk sample of 20 qr.—1st, £4, Mr. W. J. Foot; 2nd, £2, Mr. G. Wood Horner; r, Mr. F. J. Johnson. Threshing and dressing corn (awarded to engine driver and threshing machine feeder jointly), for best meshed and dressed barley exhibited in Classes 1, 2, or 3, £1, Mr. Johnson's men; 2nd, 10s., Mr. T. C. Duke's men.

WHEAT—Class 4.—Best exhibits white wheat (from bulk sample of 25 qr.):—£4, Sir R. Baker, Bart., Rauston, Blandford. Class 5—Best exhibits red wheat (from bulk sample of 25 qr.):—1st, £4, Mr. T. B. Sprake, Knowle Hill; 2nd, £2, Mr. T. B. Sprake; 3rd, £1, Mr. R. W. Shepard, Long Crichel; r, Mr. J. Shepard, Long Crichel. For best threshed and dressed wheat exhibited either in Classes 4 or 5:—1st, £1 10s., Mr. J. Shepard's men.

OATS.—Class 6.—For best exhibit of spring oats (from bulk sample of 25 qr.): 1, £3, Sir R. Baker; 2, £2, Mr. W. H. Stokes, Delcombe, Blandford; r, Mr. C. Trowbridge.

The arrangements for the show were efficiently carried out by Mr. J. E. Tory, of Dorchester, the hon sec.

Afterwards there was a luncheon at the King's Arms Hotel, under the presidency of Colonel Brymer, a large company being present. The speeches generally were of a practical character, and dealt principally with the character of the exhibits and the condition in which they came under the notice of the judges, who, whilst generally agreeing that the quality of the grain compared unfavourably with that of previous shows—the result almost entirely of bad harvest weather—pointed out that this might have been minimised in a measure if only proper care had been bestowed in the preparation of the corn for market, which was sadly lacking, as evidenced by so much broken and chipped corn found in most of the samples. The popularity of oats with growers was instanced by the fact that over 2,000 acres more were grown in the county this year than on any previous occasion. Mr. Tory made an earnest appeal to agriculturists for more competition, and pointed out that if only this were done, enhanced values for their malting barleys and other corn would inevitably be the result.

HARVEST RESULTS.

Dorset.

Notwithstanding the low temperature and the absence of sunshine which were such noticeable features in the past summer, it is now generally admitted that on the whole the year 1907 is the best for farmers that they have had for many years.

Hay was a bulky crop, although about half the crop was more or less damaged by rain Roots are fairly plentiful, and are now growing fast.

Threshing Results.

All crops of corn showed plenty of straw, and the results of threshing are generally satisfactory. The oat crop is a record one, crops of 10 and 12 qr. and over being very general.

The Markets.

All kinds of corn are selling well with an upward tendency in price. Sheep are unusually dear, Dorset horn flocks making 80s. a head. Mutton has been dear all the year. Milking cows sell well.

Good Demand for Farms.

Farms are letting readily at existing rents, and good tenants can be obtained. There are men willing to take farms at increased rents, but it is wise to accept a good tenant without an increase. G. R.

October 17, 1907.

Durham (East).

Agricultural prospects in this, as in other northern counties, were greatly improved during September in regard to all grain crops, wheat, barley, and oats being then estimated at nearly average crops, and the quality much better than at one time anticipated; but fog and rain this month have seriously delayed the completion of harvest, and some farmers, unfortunately, have many acres of wheat, and oats more particularly, still to stack.

The Root Crops.

The rain was not in time to help roots much; they made little progress during September. Potatoes, though as yet free from disease, are a short crop, and turnips are below last year. Hay was a heavy crop, but some of it was not secured in the best condition. Pastures are deficient, and fogs comparatively poor. S. R.

October 17, 1907.

Kent.

With the exception of hops, farming prospects in Kent are more flourishing than they have been for many years.

A Good Corn Harvest.

Wheat seems to be the crop of the season, the general yield coming out 5 up to even 8 quarters per acre, and at the present prices it pays more than it has since 1898. Oats, too, turn out a heavy crop in most parts. Barley does not come out so well either in quantity or quality.

Potato Disease.

Potatoes dig up a bulky crop, but a great many of them have disease, and at present the price is not good; but no dout this will improve later on. Mangolds are fairly heavy, probably averaging 20 tons to the acre.

Pastures

look well since the heavy rains this month, and will afford all stock a good bite this winter. All that is wanted now is fair weather for getting up the potatoes and mangolds, and for wheat season.

The Price of Hops.

The heavy blow to Kent is the price of hops, which means a great loss to all growers on the small crop that was picked this year—possibly 7 to 8 cwt.; it is also the more disappointing after the short yield of last year. Unless something unforeseen happens, the hop industry is about ruined. No doubt thousands of acres will be grubbed up this year, 100 being doomed in a small parish near here.

Farmers cannot possibly continue growing these at a cost of £40 per acre, and selling them, as some have been sold this year, at £2 per cwt. It does not end with the grower. The loss, too, will be most severe to the hop-dryer, labourer, and the London pickers. W. S.

October 16, 1907.

Lancashire (North).

The crops have been housed in good condition, and the fall of the year has made up for the black summer. Corn is yielding well, barley fairly well, and wheat has not been a big crop here.

Grazing bullocks have got away earlier this year than I have known before. Sheep trade has slipped back suddenly, three or four shillings per head. I feel sure it will regain itself in a few weeks. The calving cow trade is improving.

Lancashire cheese is selling, choice lots, 7d. per lb. wholesale. The season is finishing above expectations. B.

Sussex (West).

The long-looked-for rains have fallen, and the land is just in good condition for wheat ploughing; very little wheat has been sown as yet, but with fine weather a lot will be got in in a short time.

Work on the Land

is not quite as forward as usual, owing to the long harvest and the fine September having encouraged many people to clean a foul stubble.

Live Stock and Keep.

Keep of all descriptions is very plentiful; the only trouble is to buy the stock at a reasonable price to feed it off. Beasts are not quite so dear as sheep, but breeders will not be able to complain of prices this year.

Yields of Corn.

Wheat is yielding better than was anticipated, and, given fine weather, plenty will be threshed so as to take advantage of the recent rise in prices. Oats yield very fairly well on the whole, but the barley crop is indifferent, both as to yield and quality. Peas are the worst crop for many years.

Labour is plentiful, but wages are still at the old level. H. W. D.

October 16, 1907.

South Oxon and North Berks.

September proving such a splendid month for harvest operations, most of the corn has been carried in very fair condition. The threshing that has been done, which is very little, has given very satisfactory results, and as prices are much better there appears every indication at last that this year may be a more favourable one for the agricultural world.

The Crops.

Wheat is almost an average crop; barley quite an average; oats more than an average; beans an average; peas hardly an average; potatoes very variable—in some instances quite an average crop and very little disease, in other places they are very bad and full of disease. Roots are a good average crop, especially mangels, for they took especial advantage of the fine weather in September.

Michaelmas Sales.

The Michaelmas sales have gone off well, and show most decidedly how very few sheep there are in the country. Horses, too, have changed hands at very remunerative prices. Cattle also sell well. Pigs are too cheap according to the price of bacon; no wonder they are getting scarce; who can fat pigs at the price of feeding stuffs at 9s. per score? Mutton sells well. Labour seems plentiful.

October 16, 1907. T. L.

Aberdeenshire.

In the earlier districts along the coast cutting is now far advanced, if not almost finished, but in the inland regions reaping is little more than half done. Owing to foggy nights, often ending in rain in the morning, the forenoons are practically lost, so on that account progress is remarkably slow.

As a general rule the crop is stocking well, but it is noticeable that there are many greens to be seen, which it is to be feared will spoil the appearance of the samples of grain. Fortunately fodder will be plentiful, and this is a good job, as much of it is required in this county, where stock keeping is practised so extensively.

Barley Threshing Complaints.

As regards threshing there are numerous complaints of barley turning out badly. The weight also is wretched, being from 3 to 4 lb. per bushel under the weight current during the past three seasons. Where early trials have been made by distillers there are numerous complaints of the grain germinating badly. It is to be feared that a large quantity of Aberdeenshire barley will only be fit for feeding purposes this season. But then it may command a better price than might be expected, as all kinds of feeding stuffs are dear, and this should not be without an effect on the value of feeding barley.

The Outlook for Oats.

In regard to oats, it is generally anticipated that they will thresh well. The ear seems fairly prolific, giving every indication of a good threshing crop. In several of the later districts there are, unfortunately, numerous complaints of injury from frost.

Early and Late Districts.

It is noticeable that farmers who have been brought up in these late inland regions are taking opportunities as they occur of leaving for earlier districts. This is no wonder when one thinks of it, inasmuch as it costs quite as much to produce a quarter of grain in a late region as an early, and the chances of a favourable harvest are certainly greater in the early districts. J. B.

October 11, 1907.

CORRESPONDENCE.

Motors and the Public.

SIR,—I have read with interest your letters *re* motors and legislation, but the subject does not appear to be taken up very enthusiastically. With regard to legislation, if we impose too drastic measures it may prove eventually that we are harassing our best friend, as was the case with many of the towns and villages at the advent of the railways. Many to-day are sorry for the action of their ancestors in forcing the railways to take another course, while others rejoice that the railway was forced upon them.

The motor trade is yet in its infancy, but in case of a railway strike to-day, what could reach our outlying districts like a good service of commercial motors?

We all regret to hear of cases like the one near Lancaster, but a thought arises, Was the shepherd civil? Many men would leave a cantankerous man to care for himself when they would disdain to shirk what would be their duty. I only mention this in the hope that those who may be again in a like position will think more about the number plate than the sheep, and remember civility costs nothing, but sometimes wins a lot. I am not saying the shepherd did anything wrong, but I know with most of us in a case like this words are apt to flow rather too freely.—Yours, &c.,

October 17, 1907. FARMER.

Legislation Against Motors.

SIR,—I can hardly say how much I respect the feelings of your correspondent, "A Ratepayer," who has been travelling about the country for nearly eighty years and has lived to see the roads practically monopolised by the machines which, as he says, kill man and beast (and now and then even a motorist) and spoil the pleasure of thousands of people with the dust and smoke and stench they kick up as they rush along.

While sympathising with all your correspondent says and allowing something for the not unnatural prejudice of his age, I am afraid the ten-miles-an-hour speed limit is an unpractical suggestion.

Why, even the modest cyclist can do twelve or fourteen comfortably, and no one says him nay, though one remembers the time when cyclists were fined for furious riding even with the old-fashioned big wheel and a little one. Again, if a ten mile an hour speed limit were enforced we should have to make every able-bodied man serve a term of years in the police force, the same as they do in the army in Germany, because we should want a man in blue with a stop watch at every turn in the road and a bench of magistrates at every village to impose fines.

We must realise, I think, that the motor has come to stay, and if the ingenuity of man could devise something to abate the dust nuisance a part of our troubles would be over. We should still have the danger through reckless driving and excessive speed, but I fancy this would be reduced if, when charges were proved, instead of inflicting useless fines, the road hogs should be given time for reflection in the cheerful occupation of oakum picking.

Further, if a man were charged more than a certain number of times with furious or reckless driving, I would stop his motoring by taking away his licence and not letting him have it back again.

More severe punishment is what is wanted to bring reckless motorists to their senses, but I think they have been allowed to drive fast too long to bring down the speed to ten miles an hour.—Yours, &c.,

A YOUNGER READER AND RATEPAYER.

October 17, 1907.

Artificials to Use.

SIR,—In reply to the question put by A. E. B. on p. 450, I am not sure whether the light crop of potatoes he has obtained is due entirely to the ground not suiting them. The fact of a large number only coming to seed size seems to suggest that the tubers planted were affected with the all-too-common "leaf curl" disease, the symptoms of which are a want of vigour in the growth—thin wiry stems, leaves blotched and crimped and curled at the edges, and when the crop is lifted one invariably finds the old seed tuber undecayed, and as hard and firm as it was when planted, with a few small tubers clustering round the stalks. If A. E. B. observed these symptoms, he may be sure that the partial failure of the crop was not altogether the fault of the ground. Let me advise your correspondent to get his seed tubers from Scotland for planting next spring. If the part of the field, now grass, which is being broken up for potatoes is old turf, it ought to grow a good crop without any artificials the first year, particularly as there is town manure available; but if your correspondent prefers to use a concentrated fertiliser, I would suggest a dressing of 3 cwt. superphosphate, 1 cwt. sulphate of potash, and 1 cwt. sulphate of ammonia mixed together and applied in the drills at the time of planting. For the oats a dressing of 2 cwt. of superphosphate to the acre with the seed may be used, and if in the spring the crop looks as if it needs a little stimulant, give a top dressing of 1 cwt. nitrate of soda to the acre. Generally speaking, barley responds well to a complete fertiliser, which may be obtained by mixing together 3 cwt. superphosphate, 2 cwt. of kainit, and ½ cwt. sulphate of ammonia to the acre, and applying it with the seed.—Yours, &c.,

RUSTICUS.

Barley Prices.

SIR,—In the MARK LANE EXPRESS this week you return all barley, if I remember rightly, at 24s. per qr. This I can hardly accept, seeing in your price lists (B. and F.) of this grain there are

A Remarkable Tree, age 170 years, height 32½ metres (nearly 100 feet), circumference over 3 metres.

thirteen different grades, prices from 37s. to 24s., and yet the average price of that sold is only 7s. above the lowest quotation.

In speaking of oats you rather condemn the growers for thrashing so freely. Surely the farmer knows best how he is situated and what pays him best. The crop is a big one, making 9 to 10 qr., and to-day 40 lb. new oats made 20s.—Yours, &c.,

W. FOOKES.

North Wilts Club, Devizes, October 17, 1907.

Mark Lane Prices.

SIR,—I take up your paper this morning, for I am a grower of wheat, to find out the latest price yesterday at Mark Lane. I also take up the *Daily Telegraph*, and if you will refer to same, you will find there is a 4s. difference in the price of wheats. Which is right? Early last week we were selling new red wheat at 39s. per qr. in Essex, and the market has stiffened since then.—Yours, &c.,

October 15, 1907. R. J. SUTER.

*** Mr. Suter has omitted to read our late note, "Close of the Market," though, as the latest news, it is printed in capitals. This makes the difference 3s. and not 4s. The figures which he refers to are, with this exception, quite correct; we give prices made and not prices asked, or, as in the case of some dealers, prices imagined. We will return to the subject next week.—ED.

Nettles on Pasture Land.

SIR,—If these are mown in spring when about 10 in. high, and repeated as often as they grow again before any blossom appears, they will die out in about two years. Cow stock will eat them when they have been mown a day or two.

J. H. B.

Afforestation.

SIR,—I never think of your journal but the memory of my dear friend who wrote so much in the columns of the MARK LANE EXPRESS—the late Dr. W. A. Hunter, M.P.—occurs to me. I know the sincere interest he felt in agricultural and kindred subjects—forestry included; and my first feeling on my return from a *voyage d'étude* in the north of France is to send you, herewith, copy of a letter—in an English dress—which I addressed to the Paris *Rappel* as a sort of poor return, I fear—a *lettre de digestion*, as they call it over there—for the generous hospitality and ready access on all moot points so warmly vouchsafed to me. Perhaps it may be of interest to your sylvicultural readers.—Yours, &c.,

CHARLES HANCOCK, B.L.
(Member of the Royal Scottish Arboricultural Society).

Reform Club, S.W., October 11, 1907.

Subjoined is the letter in question:—

SIR,—On my return from a short excursion through the Northern forests, where I was warmly welcomed by the French inspectors, and among them Messrs. Gibert (of Villers-Cotterets), Peiffer (of Compiègne), Pintiau (of the Mormal Forest, near Le Quesnoy), and others, I believe it may be of interest to dwell upon the more striking points dealt with in a recently-published pamphlet from the able pen of Mr. Léon Pardé (of Beauvais), the well-known forest inspector in the large district yonder.

The author gives, in a very concise manner, his views regarding the reafforestation of fallow lands and the methods most suitable to further its development. The system advocated by Mr. Pardé offers, to quote his own words, two principal advantages:—"It does away with any excessive curting up or capricious changes on the part of private owners, and it supplies the necessary funds for carrying out the reafforestation of waste lands."

I will not mention here the methods to be adopted by the State, the Communes and other legally recognised bodies, but will examine briefly the principles which, in his opinion, should guide private persons in regard to forestal questions. Mr. Pardé's advice is to authorise and to facilitate the purchase of lands for reafforestation purposes—and also to create "protective areas," as is done at present in Switzerland—such areas to be placed, in his view, under a special *réyime*, in accordance with which the owners of uncultivated lands should be compelled to replant trees; the State, on its part, granting subventions for this purpose. But, Sir, is this not leaving too much for the State to do? I think that Mr. Pardé is better inspired when, with a view to popularising forestal questions, he advocates a series of very interesting means easy of execution. The first is the theoretical and chiefly practical teaching of forestry in all schools—even in barracks. And allow me to mention here, Sir, that a start I find has already been made in that direction, at least as regards agriculture, lectures being given to the soldier on rural questions.

Mr. Pardé proposes forestry excursions and lectures which might be promoted by the forestry expert officials of the State. This could, indeed, be undertaken with useful results. And it seems to me that geographical societies, of which there are now a fair number, as well in your country as in my own—could easily induce their excursionist-members to visit these magnificent forests of France, providing for them at the same time frequent lectures on suitable subjects connected therewith.

Everybody knows how charming are these "Sylvan festivities" (*fêtes de l'arbre*) which Belgium and the United States know so well how to organise.

The distinguished Beauvais inspector named wishes these "festivities" to increase in number, and there is no commune near a wood where a celebration of this kind could not take place with complete success.

The French people at all times have been prone to planting trees commemorative of Libe ty. The reafforestation of a country is important enough also to justify the planting of commemorative trees, such as the noble oak of 400 years' growth which M. Peiffer, of Compiègne, drove me out to see. These would in due time soon create places of public resort.

Encouragement should also be given—either in money, seeds, or plants—to private individuals desirous of reafforesting their fallow lands.

In short, it seems to me that Mr. Pardé wants to keep an eye—a very alert eye—on the future! The methods he advocates are many and most carefully thought out, and one can but desire to see in all countries men as devoted to forestry as himself, willing and ready to advance these

methods with steady application and without undue delay.—Yours, &c.,

CHARLES HANCOCK, of London, B.L.
(of the Royal Scottish Arboricultural Society).

The Hop Outlook.

SIR,—U.S. official returns show in year ended June 30 last 58,546,111 barrels beer paid excise, 3,894,474 barrels more than in 1905-6. At only 1 lb. hops per barrel America's consumption is 522,733 cwt., and increases 7 per cent. a year; its total 1907 crop is estimated by bears 500,000, by bulls 400,000 cwt. With all its reserves, America has nothing to export, and may have to import.

Europe's crop and reserves are short of its wants.

Present prices are absurd, and cannot but go up. The lack in quality of this year's world's crop is an additional cause of rise; for a like quantity of beer, more weak than strong hops are wanted.

Short sellers' reasonings are peculiar. They make America's consumption 430,000 cwt. only, and add to its supply at present visible 70,000 cwt. which they say America will this season import from Germany. So they arrive at an American surplus for export.—Yours, &c.,

Antwerp, VAN WINT AND CO.
October 11, 1907.

Sunday Labour During Harvest.

SIR,—With your permission I would say, good "Lux," I like thy parrying, which falls as pleasant as thy preaching. And, as thou perceivest, I fall not under either, causing thee to call on thy friend to pick up his quarter staff. For "friend" let me repeat, and parley not. Who doubts friendship of a quality that takes up his neighbour's cause valiantly?—though, alack, such a cause!

The ailing cow, or the ancient ox in the pit on the Sabbath? Does the older similitude suffer most from use or abuse, as excuse for labour of a very different type? Wise men recognise their weakness, as it is told, and thou would weight thy argument with the force of a railway company.

Yet I would judge thee more at home in the forest than in a director's chair on dividend day. So thy company, fearful of upsetting the weekly routine (and dividends, perchance) scarcely takes us in argument. Matched with steam, physical endurance finds its limit, and then, good "Lux," other things get upset.

But i' faith art thou with me in principle, and seek only to defend thy exceptions, for Sunday harvesting.

Hearken, then, how in Barnsdale rumour telleth of a magistrate and a lawyer who, labouring not on other days, set themselves carrying corn on Sunday—leaving the farm hands to rest on that day. And from the Lincolnshire of thy friend comes the tale of a holy clerk who needs must secure his crops on Sunday in wet times.

Yet, alack, for the example to the flock, so boldly set. For the wheels stuck, and failed to perform their proper office—held by the evil one as 'twas said—though, perchance, by the sodden wet furrows of the glebe. These and such exceptions are fully granted to "Lux." Let the Lincolnshire writer of "Notes" also carry his precepts by his own practical example before he suggest that others should harvest on Sunday. For, "Lux," I doubt whether even thou would support him in practice as valiantly as thou hast attempted to defend his precepts.

For beshrew me, I could like thy parrying, and had I the ales of Newark or eau-de-vie of Dublin (dost remember a certain camp at Lincoln Show?) thy cup should measure to thine inclination, while we wait in this glade, for that writer of precepts.

Yet why wait, since "Farmer's Wife" interpreted his precepts at the outset?—Yours, &c.,

WAMBA.

Socialism in the Villages.

SIR,—Your remarks on the folly of the Anti-Socialist going into the villages are not only opportune, but deserving of careful consideration from those responsible for the silly move. The Socialists here are highly elated over the want of diplomacy shown by their opponents. It is only this year that they—the Socialists—made their first attempt to open up the country places, and the lack of interest shown by the rustics was not too encouraging.

Now, although the rural population do not show any appreciation of Socialism at present, the doctrine only needs to be systematically preached to be readily swallowed. Agricultural labourers may not be cute, but they have enough sense to know that their life's work is not honestly rewarded. They know, too, that Liberalism and Toryism have each failed to raise a labourer's wage very far from starvation point. This being so—once the labourers are interested—any *new* party is sure to be given a trial.

That Socialism must be fought most now know; the difficulties of the situation are, however, more than ordinary, and deserve more thought than the Anti-Socialist League has given to the subject. No doubt you have noticed that the Socialists now in Parliament were not returned because their constituents had become Socialists; they simply made a point of drawing special attention to the need for certain reforms which affect commercial life more than the religious or educational. "Old Age Pensions," "Living Wage," "Unemployment," &c., were debated, not Socialism as such.

Once a few of these reforms are made law—provided the job is not put off too long—the Socialists will not have a peg upon which to hang their arguments.

Make the labourers more happy. For the propagation of Socialism the best field is a discontented mind.

The reforms just mentioned must become law soon. Why, then, does not the Tory or Liberal manfully tackle these matters?

After a life of hard work it surely is not right for a labourer to be compelled to finish up in the workhouse. The best way to fight Socialism is to remedy these faults of our present system.

I should like to see further notes from you on this important matter.—Yours, &c.,

October 17, 1907. TIMELY REFORM.

West Country Notes.

THE success which attended the horses ridden by a West Countryman at Olympia in the summer caused a change of hands of the champion jumper at a substantial figure, as will be remembered. The good stroke of business rendered it necessary that the stud should be replenished, and Mr. Glencross has set out on a journey "down under" to see if the champion can be matched in the land of its nativity.

THE same issue of the Melbourne papers which gives an account and views of their own Royal Show gives a spirited reproduction of the Olympian win at the high jump.

THIS is not the only item of interest to West countrymen connected with our antipodean friends. It is evident that they have a very poor idea of our cidermen's methods. They state, on the authority of a London correspondent, that the French cider makers can afford to buy apples in Somerset, as English growers, though they have the best of fruit, fail to make a good use of it. This is news indeed. There are, no doubt, some cases in which old-fashioned methods prevail, and a lot of cider is made for local use according to ideas which the more expert makers would not approve of, and the medical fraternity would condemn.

THE real facts of the case are that the most expert cider makers readily buy up all the fruit obtainable in ordinary years, and convert it into a luscious drink on the most sanitary lines, and with the utmost cleanliness.

THE report goes on to say that many of the English cider makers pay too little heed to cleanliness in their work, and none to uniformity of product, which is essential to success in all industries. There is a sub-stratum of truth in this, but it is no more the whole truth than the former statement. Plenty of men pay the closest attention to all the details of production, and to securing as far as possible the uniformity which is an absolute necessity to them to fill their contracts and maintain their trade.

THEIR Continental rivals, we are further told, use good fruit, handle it carefully, and produce a satisfactory beverage, which they sell at good profit either in their own country or in England. Proper attention in their own interests would even now prevent English orchardists from running the risk of losing a source of income which the foreigner may otherwise take from them.

EVIDENTLY the writer of the report which has been quoted is not aware of the splendid work which has been going on for many years in the Butleigh homestead, for which the French Government has awarded special honours, and later in the National Fruit and Cider Institute at Long Ashton, from which has developed a great advance in every particular in cider-making. Throughout the Western Counties, and wherever in the kingdom cider is made, this influence is felt; and one result already secured is the settling of the vexed question as to what is cider, and the declaration of a court of justice that cider is the juice of the apple.

THE step thus taken must be followed up by others, and the Conference on educational work in the agricultural world, which includes cider production, which takes place at Bristol this week, and the forthcoming Cider Makers' Conference at Shepton Mallet, will probably indicate lines on which advances can be made.

IT is a coincidence that concurrently with the arrival of the papers with the unfriendly criticism of English cider methods, an effort was being made to establish friendly relations with cider makers from "down under," and an exchange of views and productions. A Hereford native who, having settled in Australia and done splendid service for the empire, is now in his native land trying to serve Colonial interests in commercial ways, will, it is hoped, be at the cider makers conference referred to, and will be able not only to give some account of what is being done in Australia, but also carry back a correct opinion on the state of affairs in England. If the opportunity occurs, he may be able to supplement our scanty crop of English apples by importations of those which his own colony can produce. New South Wales has sent some cider samples to England.

POLICE sergeants are not all saints—some of them were never built that way—but here and there one can be found who is really all round an estimable fellow. When we hear one of this sort declaring with a woe-begone air that the "marriage licences for pigs" are rapidly driving him to the nether regions, and hear the corresponding remarks of the farmers who have been awaiting his return from a beat of fourteen to twenty miles afoot, one wonders how much longer the office-boy regulations are to prevail.

SURELY the present absurd conditions were never drafted by anyone who had the least idea of country police work. In a town the police office has always its occupant. In the country it is mostly locked up. The conditions of the two places are totally dissimilar. The regulations which would work well in the one place are impossible to carry out in the other without a maximum of loss and annoyance all round. It is to be hoped that farmers will unite in impressing as strongly as possible upon those in authority the necessity for a thorough revision of the present regulations which, as I have before pointed out, are unnecessary, because the same end can be secured by other methods.

I AM pleased to hear that the Somerset County authorities are practically unanimous in demanding that the restrictions should be withdrawn. If other counties interested, Cornwall and Devon, follow suit, there is some hope of a modification. It will only be by continuous pressure that such a thing can occur. It is not proposed to open the markets.

DEVON is still exercised over the young hounds. Somerset has cut the Gordian knot by adding a clause to their exceptions, which places "hounds of any age already marked for the purpose of identification" on the same level as those already in the pack as regards collars. There is a difference of opinion outside on how far this is wise, and many would gladly see these mischievous youngsters kept under stricter control, instead of the control being relaxed!

SMALL holdings return for Somerset shows that there is practically no demand in nineteen districts (eight rural and eleven urban), a partial demand in six rural, a demand but insufficient land in five districts (one rural, four urban), no available land in one urban, and no returns from eight districts (two rural, six urban).

AT the meeting of the county council on Wednesday the Right Hon. Henry Hobhouse counselled the exercise of great tact in putting the Act into operation. It was a delicate thing to take land from a man who valued his land and did not wish to give it up, and give it to a man who was anxious to take it. It was comparatively easy for Parliament to pass an Act of the sort, but it was exceedingly difficult for those who had to administer it; and he advised proceeding very cautiously and discreetly with the experiment.

A GOOD old West of England parson has passed away in the Rev. E. B. C. Spurway, whom old competitors at the Bath and West found a formidable opponent in the cider classes. He had attained the good age of eighty-two.

October 18, 1907.

The Wem and District Agricultural Association's annual ploughing matches and hedging and ditching competitions will take place on Friday next, the 25th inst, on the farm occupied by Mr. J. Parker, English Frankton. There will be five ploughing matches, with prizes ranging up to £2, whilst there are several specials. The hedging and ditching competitions are divided into three classes, with prizes of the value of 30s. to 5s., the latter being the fifth prize in each class. Entries close to-day (Monday) with the secretary, Mr. Philip Lee, Wem, Shropshire.

DAIRY.

Variations in Quality of Milk.

The importance of recognising the variations in the quality of milk which are natural ones cannot be over-rated. The fact that a definite legal standard has been fixed, below which milk may not be sold, is only one phase of the matter. It is in the interest of the farmer to know accurately what variations take place from time to time in the quality of the milk given both by individual cows and by the herd as a whole. With this knowledge at hand he can take steps to remove or modify the circumstances which tend to lower the quality, or, at least, he knows which circumstances causing the variations can be safely ignored, and which need immediate attention in the interest both of the milk and of the cow and of his own pocket.

Of the factors which tend to produce such variations, the period of lactation—that is, the length of time since calving took place—is one over which no control can be exercised. The loss of milking time owing to calving is, on an average, from six to eight weeks. This leaves, roughly, the usual 300 days as the length of the milking period. One investigator has expressed the variation in the quality of milk during this period by dividing it into three equal periods. He finds that during the second period the milk was 17 per cent. richer in fat than during the first, and during the third it was 46 per cent. richer than during the first. The term "variation in quality" has in practice almost become limited to the variation in fat present in the milk, though the albumin and casein and the ash and sugar should also be taken into consideration. Since, however, the ash and sugar are found under widely varying conditions to vary very little, while the variations of the albumin are equally slight, there remains only the casein and the fat to consider. It has been found generally that in average milk where the percentage of fat lies between 3 and 4·5, the changes of casein keep a practically constant ratio with those of the fat. Taking all these points into consideration, it is clear that in knowing the changes which occur in the percentages of fat present we have in brief a good idea of the varying quality generally, and it is this fact which justifies the consideration of the fat present being regarded as fairly indicative of the character of the milk, so far as all its constituents are concerned.

One other method is adopted of indicating the change in fat content according to the interval from calving.

The general effect of becoming pregnant is to lessen the tendency to give milk. For this two causes may be given. The first is considered to be merely a sympathetic effect which comes into play immediately upon conception taking place, and is probably slighter in its effect on the production and yield of the milk. The second is purely physical, and is caused by the withdrawal of the blood from the udder in order to ensure the full nourishment of the growing young.

This is naturally not marked at first, but steadily increases, and by the time the fourth or fifth month of pregnancy is reached it is the essential cause of the diminution in the supply of milk. There are, as would be expected, considerable variations from this in individual animals, varying from those who hold out in such a way that the effect of becoming pregnant is little or none, to those who during the whole period are practically useless as milk producers.

The variations in the fat content of the milk after the calf is dropped, and after the colostrum has ceased, are such that from the third or fourth week to the seventh or eighth month the fat remains practically constant in quantity. Yet there is a definite variation noticeable in the character of the fat globules.

Early on in this period the globules are much larger in size, and, as the distance from parturition increases, these gradually diminish in size, but at the same time so increase in number, that only very slight variation is observable in the total fat present. Early in the period the cows are often out at pasture, and the character of the fresh food materially aids another characteristic of the milk. During that period the fat is found to contain more of the soft olein, which may even rise up to as much as 50 per cent. of the whole fat present, whereas the normal amount of this is only about 34. As time goes on this slowly diminishes, and the proportion of the harden fats, shearin and palmivin, increases, until from 50 per cent. the olein may drop as low as 20 per cent. This natural variation is intensified by any change from fresh to dry food, which may take place at the same time, and which also tends to increase the proportion of the hard, and lower that of the soft fats present.

A second cause of variation in the fat content of the milk, is as "natural" as the one above mentioned, and its modification is just as far beyond the power of the dairymen to effect. This is the difference between first-drawn milk (fore milk) and last-drawn milk (stripping-). It is well known that a wide difference exists between the extremes, and the first quart drawn may show a percentage of little over one, while the strippings will frequently rise as high as 10 per cent., being thus ten times richer in fat than the first-drawn milk.

The old explanation of this was simple and natural and very probably incorrect. It regarded the milk as naturally creaming itself while lying in the udder; the cream naturally rose to the top and the lower, the first-drawn portions, were thus a sort of skim milk, while the last contained the cream, and hence showed such a large increase in fat.

A more correct explanation is probably that the large globules of fat which tend to make the proportion of fat rise highest move much less readily along the milk ducts than the more watery portion of the milk. The latter, therefore, is first out, while the slower-moving fat globules come on later. This slow movement will also be still further retarded, as the udder becomes distended with the earlier milk, and considerable pressure is thus exerted on the milk ducts along which the slow-moving large fat globules have to pass.

Another assisting cause is suggested in the probable reabsorptive action of the lymphatics upon the milk which has been long standing in the milk cisterns. This absorptive action is naturally slow, and hence is apparent more clearly in the milk which has come first into the udder and remained there a considerable time before being drawn as the first drawn milk. The later milk, which has been in the udder a considerably shorter time, has suffered to a less degree the absorptive action of these lymphatics, and hence has retained a much higher proportion of fat.

LACTISSIMA.

Our illustration above is of the Jersey Cow Post Obit, winner of the First Prize in the Jersey Butter Test, First Prize in the Milking Trials, and Highly Commended by Inspection at the recent London Dairy Show. Post Obit, who was bred and exhibited by Mr. J. H. Smith-Barry, Stowell Park, Pewsey, Wilts, is 3 years 6 months old, and has produced two calves. She is by Gay Boy out of Post Stamp 6th.

Cheshire Cheese Show.

The twenty-sixth annual show of the Cheshire Dairy Farmers' Association was held in the Market Hall, Chester, on Tuesday and Wednesday, when a record was established in point of entries of cheese, there being 511 exhibits of cheese, comprising over 3,000 cheeses from the best dairies in the famous cheese county, and it is estimated that the display represented 90 tons. The cheese varied from the very big to the very small, but the medium sized was in a great majority, and coloured cheese predominated over white.

For the second year in succession Mr. Harry Denson, of Poulton, Chester, carried off the gold medal given by the association with a lot six weeks old and made on the medium ripening principle. They were shown in the class for the best twelve cheese, whereas last year the champion lot came from the "no barbed wire" class. They were rich, open-meated, clean-flavoured, very bright in colour, and of fair-keeping properties. Mr. Denson is a tenant of the Duke of Westminster, and has won many championships at important shows. He has this year won the Challenge Cup at Birkenhead, and the Duke of Westminster's Cup and first at the Cheshire Show. At the Fair the champion cheese was disposed of at the fine price of 145s. per cwt., the best for many years. The association's silver medal for the reserve lot in the final competition for the gold medal was awarded to Mr. R. Cooper, Ridley Hill, one of Lord Tollemache's tenants, whose cheese were also of high merit.

While the cheese as a whole were a splendid display, of fine quality, and well worthy the great fame of the premier cheese-making county, there were some lots in the show which helped to swell the total entries, and had no pretensions to winning in high-class company. One unfortunate feature, however, was that some excellent lots were disqualified through one or two of the cheese being discoloured. The judges could not assign any one cause for this discolouration, but suggested that there must be a variety of causes, or any single cause would have been discovered. It is a problem which they recommend cheesemakers to carefully study. The present summer has, of course, been the most trying for some years on account of the thundery spells, and the weather would no doubt adversely affect many cheese.

The class with the largest entry was that for the best four coloured or uncoloured. There were no fewer than ninety-five entries, and here again the judges found above the average number of discoloured cheese At the same time the general excellence of quality was so gratifying that many lots which had to be content with highly commended or commended cards were well worthy of receiving prize money. The class represented all the leading dairies of the county, and the judges of this class observed that it was not the early-ripening cheese which had won, but the substantial cheese full of body and substance. Mr. R. Cooper, of Ridley Hill, was placed first, Mr. Harry Denson second, Mr. R. Mullock, of Waverton, third, and Mr. W. H. Hobson, of Blakenhall (winner at the London Dairy Show) fourth.

As usual there were a number of classes for butter, which received fair patronage, whilst the butter all round was highly creditable.

There was a splendid show of cheese at the fair in conjunction with the show on Wednesday. One hundred tons of cheese were pitched, and also 100 tons of show cheese. There was a capital attendance of buyers, and trade was sharp. The best lots realised 65s. to 70s. per cwt., one lot fetching a higher figure. Medium lots 60s. to 64s., and lower grades down to 55s.

The champion gold medal cheese was sold for 145s. per cwt., which is in advance of the price obtained for the last few years. Silver medal cheese realised 120s. per cwt. Some of the first prize lots were purchased at prices ranging from 80s. to 100s., and other prize cheese made from 72s. 6d. to 80s., and ordinary show cheese from 65s to 70s.

Lincolnshire Notes.

ANOTHER Daniel is coming to the judgment of the small holder. Lord Kesteven, a gentleman who seldom speaks in the county, told his mind to a meeting of agriculturists at Weston, near Spalding. He did not propose to say a word against small holdings; he believed in them in reason. But they did not pay, and that was the reason why small holdings had decreased in number in the last 100 years. His lordship hinted that something in the direction of Fiscal Reform might alter things, but that he very rightly dismissed as quite another story.

THE burden of his argument was that whatever may be right about the subject, the Government is wrong. Some of their statements reminded him of the prospectuses put forward by promoters of what were popularly called "wild cat undertakings." If they were sure of the success of small holdings, why did not the Government devote some of the money they were using so freely, and buy up land to experiment with it, instead of pursuing what he called the distinctly dishonest policy of forcing the landowner to adopt the system which he believed to be wrong, and to compel him to let land in small holdings, whether he liked it or not?

WELL, time will tell us. A hundred years hence we shall all be competent to judge whether the small holdings movement is a failure or not. But that, too, will be quite another story.

MR. ATKINSON'S sale, at which his lordship spoke, averaged £34 2s. 10d. for the sixty-five lots. Mr. Atkinson is one of the foremost amongst the men who have devoted themselves to the improvement of the Lincolnshire Reds. He is quite in the front rank amongst the breeders, a prominent Royal winner, and his stock represents the very best the county has to show.

SOME important farming property has just changed hands in the South Lincolnshire district. Last week the whole of the Preston estates were purchased by Messrs. Calthrop and Leopold Harvey, solicitors of Spalding. The land comprises about 500 acres, the principal farms being the Marrow Hall Farm, Lutton, consisting of about 170 acres, which has been occupied by Mr. R. M. Wright and his late father (Mr. Wm. Wright) for the past fifty-three years; the Gedney Marsh Farm of about 130 acres, occupied by Mr. F. W. Tillson and his father for about fifty years; and a farm of about 150 acres at Swineshead. The purchase has no special significance, and I understand that the present tenants are not to be disturbed.

TWENTY tons to the acre. How's that for a potato harvest? Such has been the luck and the fruits of good husbandry of Councillor Tunnard, of Kirton, the well-known grower. It is the heaviest yield in the Boston district, and twice as big as would be regarded as a good average that way. Councillor Tunnard has been awarded a prize by Mr. J. H. Milestone, of Hull, for his achievement.

THE splendid harvest and the propitious weather are accounting for a much larger acreage of corn being sown this year. The farmers of Lincolnshire are beginning to be busy again.

MR. COHEN, of the Board of Trade, who is inquiring into the grievances of Lincolnshire farmers against the railway companies, was in several agricultural centres in the county last week. Mr. Cohen is gathering a good deal of information, and he seems to be drawing up a pretty strong indictment.

MR. COATES SHARPLEY, whose sudden death is recorded this week, was one of the biggest and best known farmers in Lincolnshire. The eldest son of the late Mr. Croft Sharpley, of Acthorpe, near Louth, he had resided at Kelstern Hall some fifty years. He was reputed to be the largest farmer in England. He owned and occupied nine farms, with a total acreage of between 6,000 and 7,000. His farms were at Kelstern, Wold, Newton (two), Grainthorpe, Alvingham, Towes, Bishopthorpe, and Brackenborough. He was a Churchman, and in politics a Conservative, and one of the strong men of the Louth district.

CATTLE owners, who graze their stock by the roadside, must beware. The law is on their track. At the sitting of the Gainsborough police last week, the Chairman (Mr. W. Embleton Fox) drew the attention of Supt. Wilkinson to the inconvenience caused by the presence of cattle on the roads. It was becoming increasingly a nuisance now that the roads were so much used by cyclists and motorists. It did not so much matter twenty years ago, when there were few cycles, or ten years ago, when there were no motors; but it seemed a great pity nowadays, when the roads were so much more important than they were; that there was no alteration of the law, so that no cattle should be allowed on the roads in this way.—Supt. Wilkinson said all the "tenters" in his district had been warned. The Bench might rest assured that the first case that came to his notice would be brought before them.

SOME of the Gainsborough farmers are beginning to ask what they pay their rates for? Also to express the fervent hope that their friends, the motorists, will graciously permit them to be on the earth.

A LOT of sixty-eight Lincolnshire Red Shorthorns from the herd of Mr. J. Langham, J.P., were disposed of by Messrs. Dickinson, Riggall, and Davy, at Brandon Grange, near Grantham, on Thursday. The total realised by the yearlings was 504½ guineas, or an average of £20 7s. 6d., whilst the females fetched in all £1,453 14s. 6d., which gives an average of £23 16s. 7d. Bull calves ranged in price from 8 guineas to 11½ guineas, and the sale realised £1,506 17s. Mr. W. J. Atkinson, of Weston, gave 28 guineas for Brandon Faith, and Mr. R. Chatterton, of Stenigot, 52 guineas for Brandon Ruby Nonpareil.

LINCOLNSHIRE FARMERS' UNION.

DONCASTER BRANCH.

A short time ago a meeting was held under the auspices of the Lincolnshire Farmers' Union at Doncaster, when it was decided to form a local branch of the Union, and on the 12th inst. this resolution was put into effect, the branch being put on a sound business basis at a well attended meeting presided over by Mr. T. Harrison, of Marr, who was elected president of the branch.

Mr. Harrison said there was every encouragement for them to form a branch for Doncaster and the district, and every reason why they should do so and make it a very useful and flourishing branch. He had conferred with many leading agriculturists, and he was really surprised to find how general was the feeling in favour of the Union scheme. He understood that the Union had been very successful in Lincolnshire and Nottinghamshire, and he thought that in an important area of Yorkshire like the Doncaster district a branch of the Union ought to be even more successful. There were many things in political and trading directions that they, as individual tenant farmers, were unable to cope with, but if they were combined there was no difficulty that could not be faced and overcome. They would be able to protect their interests as an important section of the public, and be in direct touch with Parliament. He saw no reason why a great industry like that of farming should not be directly represented at St. Stephen's.

Mr. Featherstone, one of the pioneers of the Union, said he had never had cause to regret being one of the founders of the Union. It seemed strange that while other trades and professions had their unions, from professional men like lawyers, to miners, all having representatives in Parliament to voice their case when their interests were attacked, the farmers had remained behind. Until the farmers placed themselves on similar footing they would not be able to protect their interests. A most important feature of the Union's work was legal aid, in which the Union had proved to be of great service in cases where, had the farmers been on their individual ground, they would have fallen. But that was not the extent of the Union's ramifications. Agriculture was the biggest industry in the country, and in connection with it they were all glad for brighter times in the way of prices. They wished to get upon a thoroughly sound system, to have their industry acknowledged and show the British public that they wished not to inflate prices, but to have their interests guarded in a respectable fashion, so as to be able to command the support of the public.

Amongst many things that they wanted was the registering of foreign meat. It was only right that when one went to a shop for Yorkshire mutton or beef he should have what he required, but at the present time anyone could sell foreign meat and charge the same price as for meat bred and fed at home. In common honesty it was time that this kind of thing was put an end to, and all those shops that sold foreign meat should be registered. In the matter of Army supply it was right that they should supply beef, pork, and mutton to the army that existed for the interests of the country in which they carried on their industry.

The question of rates cropped up from time to time, and it was clear that the farmer paid an undue share of the rates for the maintenance of the roads. The automobile had come, and come to stay, and it certainly should pay in some form or another to the maintenance of the roads that it used. As matters were, they who paid were practically driven off the roads that their fathers and grandfathers made.

Education rates pressed heavily upon them, and they did not get the advantage they ought to get in proportion to the rates that they paid. They wanted children in the country districts educated according to the conditions of their lives. They did not want them to be educated for town life. He, personally, would like to see a system whereby schools could be closed for a longer period in summer, and something in the nature of night schools introduced, so that boys would have the opportunity of being trained in a practical manner for the conditions of life that they would be called upon to fulfil.

Urging the necessity of combination, he said that the members of the Farmers' Union had not to pay a subscription even in proportion to that of the miners. The teachers had a union and two or three members of Parliament. In an ordinary way they had only a couple of teachers in a village, yet they could be well represented in Parliament, while farmers, of whom there were generally three or four in an ordinary village, were not represented.

Mr. Palmer, secretary of the Union, also made a speech, and in the course of his remarks spoke against the preferential railway rates for foreign produce, and said correspondence was being carried on with the President of the Board of Trade as to the unequal rates that the Lincolnshire and East Midland counties were paying on railways. They were paying 20 or 25 per cent. more than the North-Eastern, London and South-Western, and Great Eastern railways. Unfortunately, they would carry on their own lines, but when they got on other lines, up went the rates about 25 per cent. The Union were doing their best to meet this difficulty, and, he felt, would meet it well.

Mr. C. D. Nicholson, speaking in support of the Union movement, expressed himself as thoroughly in accord with most of the propositions of the Union. He was glad that there was nothing protective in this movement. There was no reason why the Doncaster district should not vie with and surpass any district in the Union.

The election of Mr Harrison as president of the new branch was confirmed, and Mr. J. Law was made vice-chairman. Mr. Law said the Union was a good movement, and he would do his best for it.

The president proposed that Mr. Dodson be the secretary for the next twelve months, Mr. Law seconded, and Mr. Coward supported, both testifying to Mr. Dodson's ability and the general respect in which he was held. The appointment was duly made, and the following elected the committee, with power to be added to:—Messrs. C. A. Chatterton (Intake), Ford (Wheatley); Salmon (Wilsic), G. Lockwood (Hickleton), J. Cooke, G. Pennington, R. Coward, W. Hinchliffe, Milner (Clifton), J. H. Haresign.

A vote of thanks to the chairman closed the meeting.

The membership of the new branch represents about 11,000 acres of land in the Doncaster district.

Small Holdings Commissioners.

Earl Carrington, K.G., President of the Board Agriculture and Fisheries, has appointed Messrs. Edwin John Cheney and Matthew Talbot Baines to be Small Holdings Commissioners for the purposes of the Small Holdings and Allotments Act, 1907.

Mr. Edwin John Cheney was born in the year 1862, and was educated privately and at Jesus College, Cambridge, and subsequently at the Royal Agricultural College, Cirencester, where he took a Diploma with Honours and the Haygarth Gold Medal. In 1888 he was elected, after examination, as a Professional Associate of the Surveyors' Institution. Since that date he has been concerned with the management of extensive landed estates in Surrey, Somerset, Dorset, Wilts, and Suffolk. In 1904 Mr. Cheney founded the Eastern Counties Farmers' Co-operative Association, of which he is the chairman, which has now a membership of over 600 and a turnover of some £170,000 a year.

Mr. Matthew Talbot Baines was born in the year 1863, and was educated at Harrow and Trinity Hall, Cambridge. In 1891 he was enrolled after examination, as a Fellow of the Surveyors' Institution, and has been concerned with the management of landed property in Lincolnshire, Yorkshire, Hertfordshire, Warwickshire, and Wiltshire.

Nottinghamshire Notes.

TEMPESTUOUS and stormy weather, accompanied by a heavy fall of rain, has been the chief characteristic so far as the atmospheric conditions are concerned during the present week. This has naturally considerably impeded the progress of the preparations being made for the sowing of wheat, winter oats, and beans. Odd fields have been drilled, but taking the county as a whole very few farmers begin sowing until the latter end of October.

SINCE my last notes a large acreage of potatoes have been lifted, and as with results of the corn harvest there has been much surprise created by the yield. On the light land I am told that there are actually more and better potatoes than were gathered in a year back. Here and there patches have been affected by disease, but not to any great extent. Since the advent of October tubers have increased in price about 15s. per ton, and one of the leading wholesale merchants gives it as his opinion that long before Christmas quotations will show an advance of £1 per ton as compared with the prices ruling at the present time.

THIS statement led me to ask the cause for dearer potatoes, and the reply I received is certainly worth recording, for the merchant stated: "The price of bread has increased by ½d. per loaf within a few weeks, and many people, when they find that 1s. only pays for two instead of three loaves quickly look round for a substitute. Many families who have hitherto consumed large quantities of bread at their mid-day meal will fall back upon potatoes, hence a larger demand. The supply not being so large as twelve months ago and the demand considerably greater, there is bound to be higher prices secured for potatoes in the near future."

THE Nottingham, Newark, Deansfield, Retford, and Worksop corn markets, along with the rest of the country, are just now of more than ordinary interest, so far as farmers are concerned. Agriculturists are reaping a rich harvest, and can hardly yet realise that wheat is once more in the region of £2 per quarter. But the saying that "much wants more" has once again proved true, and where farmers are not in immediate want of ready cash they are holding out for still higher prices.

WILL wheat make more money? is a question I have been asked many times during the past two or three weeks, and personally I am honestly of the opinion that it will. There is without doubt a certain shortage in the world's supplies, and the law of supply and demand will bring about still higher rates. This opinion is borne out by Mr. Robert Hubble, the genial secretary of the Nottingham Corn Exchange Company, who has been in business as a corn factor for many years, and also by Messrs. Armitage and Hopewell, with whom I have had a brief chat this week. Malting barley is also fetching higher prices, and the same may be said regarding oats and beans.

"HOW will this sudden return to prosperity affect the letting of land?" was a question I addressed to a large estate agent yesterday. "Most of the farms which were given up last Lady Day have been taken on again," he replied. "Our books are practically clear, and in some cases landlords have instructed us to ask for increased rentals. Many farmers who were hovering within measurable distance of the bankruptcy court will be set on their feet again, and land will quickly go up in value. Farmers want two or three years like this, and we should then hear less about the rural exodus."

MR. A. W. HICKLING, of Adbolton, Notts, and Messrs. Henry Dudding and R. Wright, of Lincolnshire, have arrived home from the Argentine, where they have been judging at the great Palermo Show.

THE Adbolton Stud of Hackneys has long been famous, and Mr. A. W. Hickling does not mean his horses to lack proper training. He has just had a large trotting and show ring made adjoining his stables, which will, without doubt, create surprise to visitors when they see its elaborate character. It is a good length, and boarded the whole of the way round to the height of about 8 ft., so that the attention of the animals will not be diverted when out exercising.

PROFESSOR ARKELL, of the McGill University, Canada, has purchased for the Macdonald College a very fine Large White boar and sow from Mr. R. M. Knowles, Colston Bassett, bred from noted prize-winning sows. An order has also been received from Frankfort, Germany, for a number of pigs from the same herd to be sent there.

ONE of the most serious cases of milk adulteration in Nottingham for some time was heard by the city magistrates to-day, when a man named Arthur Dexter, of Cinder Hill, was fined Inspector Sutton, in the course of his evidence, said that on July 27 samples were taken from two churns and also a bucket. The analyses gave the following startling results:—(1) 16 per cent. deficient in fat, and 14 per cent. of added water; (2) 19 per cent. deficient in fat and 13 per cent. of added water; (3) 7 per cent. deficient in fat, and 7 per cent. added water.

DEXTER denied interfering with the milk, but the chairman of the magistrates (Mr. F. Acton) said he must have known that he was grossly defrauding the public in selling such adulterated milk. "We intend to protect the public as far as we can, and in two cases we fine you £5, or £10 and costs."

MR. ARTHUR S. GIBSON, who for many years was steward at Ruddington to the late Mr. Philo L. Mills, has left this district to take up a similar appointment in South Lancashire.

BREAD has been advanced in price throughout the major part of this district, and is now selling at 6d per quartern loaf. I understand that another meeting of the Master Bakers' Association is to be held next week to consider the advisability of further increasing the price.

ONE of Derbyshire's leading farmers died on Tuesday in the person of Mr. T. B. Handley, of Swarkestone Lows, near Derby, at the age of fifty-six. Deceased met with an accident on Wednesday last, being thrown out of a trap in endeavouring to avoid a collision with another vehicle on entering the village of Swarkestone. He was returning home from judging at the Brailsford ploughing-match. It was mainly due to Mr. Handley that the Derbyshire Dairy Farmers' Association came into existence, deceased being one of the largest dairy farmers in the county. He was for many years a member of the council of the Derbyshire Agricultural Society, and also a member of the Shardlow Board of Guardians and Rural District Council. For some time deceased resided at Wirksworth and Stanton-by-Bridge. He leaves a widow and two sons to mourn his loss. One of Mr. Handley's sons died as the result of an accident on the farm a few years back. It was at Swarkestone Lows farm that a famous agriculturist lived for many years to whom is due the honour of first introducing the Shorthorn into the county—I refer to the late Mr. Wm. Smith. It was in 1818 that Mr. Smith attended a sale of Durham cattle at Mr. Colling's in that county, and many people thought him mad when he gave 621 guineas for a bull. However, in less than ten years afterwards Mr. Smith had a sale of Shorthorns at Swarkestone Lows, when over £4,000 was realised.

R. K.

October 17, 1907.

Dumfries hiring fair was held on Wednesday, when there was a moderate attendance of male servants, female servants also being scarce. Wages for experienced ploughmen were about the usual, but less experienced hands received from £13 to £14 10s., lads from £3 10s. to £7 10s., byrewomen to £10 10s., and kitchen women to £10.

Messrs. J. Rands and Jeckell, of Ipswich, have just issued a new illustrated list of their well-known rot-proof and weather-proof covers, which are in great demand at present for covers for machinery, &c., also particulars are given of their horse cloths and clothing, horses' loin covers, &c., together with other items for which they are famous. The extremely changeable weather we have been having lately has made it almost a necessity to have water and weather-proof covers for the machinery, otherwise it would get rusty and useless; horses have also to have covers on now because of the cold nip in the air in the early morning and late evening. Carters have to be kept dry, and Messrs. Rands and Jeckell have a large variety of waterproof aprons and rugs in stock. They have also a large number of hemp and jute sacks and bags, waggon and cart ropes, plough lines, halters, horse nets, cart nets, &c. The catalogue is well illustrated, a picture of a team of Suffolk horses in the front being especially good, while photographs of waggons, carts, machinery, &c., covered with their waterproof covers, are also shown, and the whole is enclosed in a tastefully-coloured green cover. A copy of this list will be sent free to readers on application.

Effective Spraying of Fruit Trees.

Two New Fluids.

That spraying is no longer an experiment, but a necessary practice in the successful cultivation of fruit, is now generally acknowledged by growers, but the difficulty has been to obtain an altogether satisfactory substance to spray with, and this drawback has led to many researches, notable among which may be mentioned those carried out by the Cooper Research Laboratory at Berkhamstead, and Mr. Walter E. Collinge, M.Sc.F.E.S., &c., head of the Department of Economic Zoology in the University of Birmingham. As the result of their investigations two new spray fluids have been put on the market by Messrs. W. Cooper and Nephews, Berkhamstead, who have issued under the title of "The Spraying of Fruit Trees" an interesting and valuable booklet giving full details of the sprays. A copy should certainly be in the hands of all fruit growers.

The history of the discovery of these two spray fluids is an interesting one, illustrating the fact that two separate and independent investigations not infrequently lead to an almost identical and simultaneous conclusion, and combined, to the solution of a difficult problem.

Mr. Walter Collinge had undertaken a thorough research, with the object of producing a spray fluid which should kill with absolute certainty the eggs of all insects and mites, and, having arrived at a certain formula, he found that the Cooper Research Laboratory had been engaged in similar experiments, the outcome of which was an almost identical preparation.

Messrs. Cooper placed at Mr. Collinge's disposal the results they had achieved, and he, in return, made certain recommendations to them which as above stated has resulted in the placing upon the market of two new fluids under the names of V1 and V2 which, in Mr. Collinge's opinion, are almost impossible to improve upon.

V1 fluid is for winter spraying, and is deadly to all animal parasites and their eggs, and to mosses, lichens, fungi, and their spores.

V2 fluid is for summer spraying, and destroys instantly aphis, scale, and other active pests, without injury to leaf or blossom.

These fluids constitute a complete revolution in spray fluids, being unlike anything else on the market—in composition, in chemical treatment, and in the thoroughness with which they do their work.

V1 fluid is not only a powerful insecticide in the ordinary sense of the term, but it will destroy every egg of every insect and mite, also chrysalids, and other forms of dormant animal life with which it comes in contact. Moreover, it effectively destroys lichens, mosses, and fungi, and does it so completely that they will fall away from the trees, leaving them clean and free of infection. These statements have been borne out over and over again, not only in the laboratory, but in different orchards throughout the country. The claims are further based upon exhaustive experiments on enormous tracts of fruit ground, the results of which show that insect and other pests may be practically exterminated and the crops improved, both in quantity and quality.

Thus with care in the winter spraying and the use of V1 fluid, every orchard may now be so thoroughly cleansed that in the spring time the fruit trees may start into bud, and blossom unhampered and uninjured by the pests which they have hitherto had to encounter. What this means to the fruit grower may readily be imagined.

Of course, no one expects winter spraying to prevent re-infection, no fluid can do this, so that it is necessary, for a time, to give the trees a summer spraying to destroy the insects which come from neighbouring ground. This fact being taken into consideration a separate series of investigations was initiated, and resulted in the discovery of V2 fluid which, as proprietor states, will not injure leaf or blossom, yet is certain death to such insects as apple suckers, aphids, and scale insects.

Both fluids are equally easy of application. They have only to be diluted with cold water to the strength advised in the printed instructions to make perfect spray fluids for their respective purposes.

As to the cost of spraying with V1 and V2 fluids, this is such as to add only an infinitesimal amount to the expenses, for when diluted as directed, they make an absolutely effective spraying mixture at a cost of about a penny a gallon, and as one gallon is sufficient for an average-sized tree, it will be seen how cheap the fluids are. The small cost is, however, soon repaid with bumping interest by the increased production of the trees; in fact, money laid out on V1 and V2 fluids is, without doubt, a first-class investment, and one which no fruit-grower should fail to take advantage of.

At the last meeting of the council of the Hereford Herd Book Society it was decided to give the same amount of money as before to the prize schedule at the Royal Agricultural Show.

Our 1907 Crop.

As far as the official returns can satisfy us, we may rest content with the answers now given to our many questions and our various forecasts. I do not recall any season in which there has been so much uncertainty or so large a range of figures put forward as to the weight of our yield as during the past few weeks. We have ventured as high as 450,000 cwt. and as low as a little more than half that quantity, some being confident that the crop of last year would not be exceeded now.

The official figures just published hardly satisfy the doubts that even still exist, but, at all events, our bets are settled, and some money has changed hands in consequence. In the minds of most of us there yet remains some question as to the correctness of the returns. This is not unusual, when we are aware of the haphazard methods adopted by the Board of Agriculture in this matter.

We are informed that their estimate of the total production of hops in England this year is 347,129 cwt. from 44,938 acres, showing a general average of 8·33 cwt per acre. Assuming this to be approximately accurate, we find an increase in the total from last year of 128,441 cwt., and an increased average of 3·07 cwt. per acre.

Considering the trying and somewhat unfavourable character of the last growing season, this comparison may be accepted as sufficiently satisfactory if we could be certain that it is to be relied upon. I may venture to say, however, that in the opinions of those who are acquainted with the facts, these figures are regarded as only comparative, the general feeling being that the actual crop harvested is somewhat, and perhaps considerably, in excess of the Government statement.

But having said this much, we have no choice but to examine the returns, in order to ascertain what we can from them. We find that with the exception of one insignificant item under the head of Gloucester and Suffolk, the renowned divisions of East Kent and Mid Kent show the worst results of all. Their totals are only 62,035 and 66,117 cwt. respectively, their common average being only 6·87 cwt. The Weald easily beats them, with a total of 93,708 and an average of 9·84 cwt.

Hampshire comes out bravely with an average of 9·70 cwt., and Surrey and Sussex are not far behind with averages of 9·53 and 9·35 cwt.

Turning to the Midlands, we have a good average of 9·48 cwt. from Hereford, but the sister county, Worcester, drops off to 7·79. This last is disappointing, although the Midlands as a whole have yielded much better than people talked about when, at the beginning of picking, it was said that the averages would not exceed 6 cwt. This instance proves how difficult it has been this year to make estimates in advance.

We find, therefore, that while the southern districts have given us 286,493 cwt., we get from the Midlands 87,636 cwt., the latter being about 23 per cent. of the whole yield.

As the Midland acreage remains in about the same proportion to the total English hop area, it can be seen that the growers there are well ho'ding their own with respect to production, and I have every reason to believe with respect to quality also.

The World's Markets.

London.

During the past week the Borough trade has undergone little if any change. As I anticipated in my last report, the comparative scarcity of choice samples has stimulated the demand for such qualities, and values have been slightly advanced.

The tendency in this direction is encouraging to holders, and I am prepared to see still further improvement. We have also more numerous inquiries for low priced lots, but I am not able to trace that any better prices have been realised, indeed, I hear that buyers are still able to operate at the currency of three weeks ago.

The medium sorts, priced at 50s. to 65s., are rather neglected at present, and, as many growers are anxious to sell, the tendency of this class of hops appears to be somewhat in favour of lower figures.

On the whole, the trade can hardly be described as vigorous, although fair quantities have been sold. But there is a dragging undertone in the market, which makes me rather apprehensive concerning the future. Much depends upon the growers themselves. If they are urgent sellers we shall have a dull market, with lower prices, and if they remain firm it is most probable that the market will be strengthened and values will be advanced. Unfortunately the merchants are not finding that their customers are supporting them. Brewers remain more or less indifferent, and until a healthy demand sets in from consumers we can hardly expect much improvement in the Borough.

The *Brewers' Journal* intimates in its issue this week that stocks of yearlings and older hops are held by brewers to some considerable extent, and appears to infer that the trade in hops will probably continue to be quiet for some time to come.

Most sincerely I hope that this will not be the case, as I am painfully aware that the prices at which hops are now being sold are not only unremunerative to growers, but involve very serious losses, and for the sake of the industry we all devoutly desire that this condition of affairs may be speedily replaced by a stronger trade and a substantial rise in values.

Nuremberg.

Although a gradual decline in quotations must be admitted, it is felt that the present position is more encouraging, as American demand has recently restored a rather firmer tone to the market. It is, however, a fact that cannot be ignored, that stocks are increasing, as the new supplies overbalance the sales, which totalled in the week ending October 9, 3,900 bales, whereas the arrivals amounted to 5,300 bales.

It is expected that before long local brewers will be operating more freely, and that a generally improved demand for bright healthy lots will be developed.

Saaz.

The Bohemian crop turns out well as regards quality and colour, and is therefore attracting the attention of the German buyers. Demand has been brisk, and the result is seen in advanced values to the extent of about 10s. per cwt.

Brussels.

The Belgian market remains in a calm and almost lifeless condition. Brewers are only buying sparingly, and dealers are waiting to see which way things are likely to go, and have therefore no special spirit. Current quotations are merely nominal, but they show a slight reduction from those of last week.

Recently at Ghent, and in several villages in Poperinghe, exhibitions of Belgian hops have been held, and competitions for prizes arranged. The examiners of the samples exposed have unanimously declared that marked improvements are evident in the general character of the various growths. The hops are tested in detail, points being awarded for aroma and lupulin, for colour, for the shape of the cones and their wholeness, for care in picking, and for drying or curing.

In all these particulars the judges discern much advancement, many of the samples being accepted as equal in all respects to the produce of other countries previously preferred by Belgian brewers.

These results are attributable to the encouragement given by the Government to the planters and the instructions conveyed in the agricultural schools and by means of the consultative associations established throughout the Belgian hop-growing districts.

America.

Recent advices do not show that the hop trade is improving. A letter just to hand from Washington, referring to the early advance in the English market, says:—"Our opinion is that the advance is only temporary, as the abundance of hops all over the world at the present time will entirely prevent any excitement in the markets.

"Business is very slow in this country, and the range of values on the Pacific Coast to-day is not more than 7 to 9 cents. The estimates we gave you in our last have not changed materially. California, however, is now estimated at 90,000 instead of 85,000 bales. This brings the crops of the U.S.A. to over 300,000 bales.

"Without taking into account the large stocks of "olds" on hand, we will have many more hops than we require, and therefore cannot see anything in the future but lower prices.

"Some efforts are being made by interested parties to minimise the size of the American crop, but this can have no lasting effect. The probability is that later in the year a better idea can be obtained of the actual yields, which will then show up much heavier than we have estimated."

I have received a cable message from the other side, which tells that "Markets are very dull, with very little doing, as buyers are holding off, waiting for lower prices. Brewers' trade very dull."

Imports and Exports.

Our new hop year does not open very favourably with respect to our trade in foreign competitive produce. We learn from the Board of Trade returns for September that we have received during that month from America 6,083 cwt., and from other countries 3,520 cwt., making a total of 9,603 cwt. landed in our ports, just at the moment when our own new crop is coming forward, and when we do not wish to be hindered by the least appearance of supplies from oversea.

This is really very trying to our planters, who are certainly surprised, when they know of invitations being issued to their opponents, by those who profess to be their best friends. Our exports for the same month are small, being only 271 cwt. of English and 66 cwt. of foreign hops, so that we are burdened already with a balance of 9,266 cwt. that we could very well do without, but which we fear are but the advance guard of an army that is even now threatening to invade us, to our sorrow, forecasting as it does ultimate disaster, so long as we are in our present helpless position.

These notes of warning are not pleasant to me who sound them, and I am sure they are equally unwelcome to my friends who read them. I wish we could assure ourselves that the forewarning meant the fore-arming, but, unhappily, we have no remedy for the coming evil day so long as we allow our rulers to remain quiescent, and so long as they remain deaf to our cries for reasonable assistance.

May the day soon come when the urgent necessities of our industry will arouse us to action, when one mind will influence us, and one mighty voice will be heard demanding justice for those who have so long laboured for their country's good, and suffered for her sake.

Earl Carrington on Horse Breeding.

In the course of a speech at Scarborough on Friday evening, Earl Carrington, President of the Board of Agriculture, referred to the question of horse breeding, and remarked that there was a general agreement that the present position of the industry was very far from satisfactory, as was seen from the fact that 10,000 fewer foals were dropped this year than last year. It was impossible to ignore the fact that many agriculturists were very dissatisfied with the Royal Commission. The opinion seemed to be growing that the matter should be put under Ministerial control instead of being left to an independent body, responsible to no one, and that a strong practical body should be created responsible to Parliament, on which the War Office, the Board of Agriculture, practical horse dealers, and representatives of agricultural societies should be represented. At present the War Office bought only horses at five years old. But farmers said they could not afford to keep animals for five years and then only get £40 each for them, though they were willing to breed them if they were bought at three years. On the other hand, they were of little use to the Government under five years, and it would cost £30 a year to keep them, which would involve a heavy dead weight expenditure on horses not available for service.

He did not profess to be able to suggest a solution of the difficulty, but he thought something might be learnt from the plan which was in force in France. There the Remount Committee usually bought three-year-olds in the autumn of their fourth year. In the case of mares suitable as brood mares, they were authorised to purchase in March or April, paying down their full value, and leaving them with their owners on the following conditions, which were embodied in a regular legal contract. The farmer undertook to feed the mare and keep her in good condition on light work only, paying all expenses, including forage, shoeing, &c. He further undertook to put the mare to a named Government saddle station two years in succession, in her fourth and fifth years, the produce remaining his absolute property. The mares were finally taken over by the remount authorities in the autumn of the sixth year, when the second foal was weaned.

The bargain was satisfactory to all parties; the farmer got the use of his money and of his mare as well, and probably two foals, and the Army got a young remount well cared for, without expense, instead of sending it to a remount farm to mature, and the resources of the State were probably increased by two embryo war horses.

At a recent meeting of the Yarmouth General Purposes Committee the Town Clerk stated that Mr. W. Shipley, the secretary to the local agricultural show, had inquired whether, in the event of the Norfolk Agricultural Association's show being held in Yarmouth in June, 1908, the new recreation ground would be placed at the disposal of the society free of expense, both as regards user and water supply. The borough surveyor estimated the total cost at from £150 to £200. It was resolved that a cordial invitation be given to the society to hold their show in Great Yarmouth next year, the Corporation granting them the free use of the new recreation ground for the purpose, together with the requisite water supply, and that the sum of £200 be included in the estimates, to be presented in March next, to meet the cost. There is therefore a probability of the Norfolk Show being held in "Bloater Town" next year.

POULTRY.

Winter Egg Production.

Poultry-keepers are always anxious to get eggs from their birds during the winter months, but although they hatch their pullets early with this object in view they do not always realise the best prices for their eggs, because they are not able to produce them at the time when eggs are scarce, and consequently fetch the highest prices. It is possible, by careful management of the birds, to secure eggs all the year round, and those who hatch pullets for laying will do well to learn how it is managed.

Birds which are not required to lay at the present time should be fed entirely on hard corn from the time they are three and a-half months old, and this should be given to them sparingly, and they should be made to scratch for all the grain they have. This causes the birds to grow well and become strong and healthy, and when they commence to lay they will not be troubled with ovarian diseases. If the young pullets' combs grow well, and they redden up for laying before eggs are required, they can be kept back by being moved from their run to another every fortnight.

A peaceful, contented life, combined with warm soft food in the morning and good grain, produces development and consequently activity of the egg organs, and assists in the growth of the birds, which are certainly stronger and hardier than those which are encouraged to lay at an early age.

Regulation of Diet.

If pullets are first allowed to lay at an early age, as birds bred from really good laying strains will do, eggs will be produced before they are wanted, and then when they are fetching the best prices, the birds will be resting between their batches. Those who have not tried to arrange matters in this respect will be very surprised to see how much they can do by the regulation of the birds' diet.

We have frequently kept pens of pullets back from laying for two months in this way, and then when we have required eggs we have had them in full lay, by feeding them on nourishing soft food for breakfast and boiled grain at night, with the addition of some meat two or three times a week.

It is necessary to begin feeding on soft food carefully—not to soften the condition of the birds too much after being fed on hard corn altogether. Where there are flocks of young birds, as there are now on every successful poultry-farmer's place, and on many ordinary farms, it is most essential that plenty of housing accommodation be provided.

Avoid Overcrowding.

Overcrowding should be very carefully avoided, as the young birds grow better when they are not crowded together, and they keep much healthier. Where it is not possible to build substantial houses to keep in reserve for the extra number of birds, which there must of necessity be during the autumn, before the cockerels hatched in the summer are disposed of and the young pullets sorted for laying purposes, it is well to provide the extra accommodation by the erection of padded hurdles, or sheets of galvanised iron, taking care to allow plenty of light and ventilation for the birds.

We have frequently seen birds which have not been doing well improve wonderfully in their condition by thinning them out and giving them all more room, and a dose of castor-oil once a week. A little aperient is most helpful to fowls, which frequently suffer from partial indigestion, and we believe that much illness would be avoided if more care were taken in this respect.

Separate the Cockerels and Pullets.

Young cockerels and pullets should be separated as soon as they can be distinguished from each other, as the pullets do not develop so quickly when separated thus, and this is a distinct advantage to their stamina, for although early laying proves that the laying strain of the birds is all right, and the sight of a few eggs is a pleasant one to those who have not done much rearing, the experienced poultry-keeper knows that it is not for the good of his pullets to have eggs which are worth but little produced before the birds are from six to seven months old.

We have been frequently asked as to whether it is possible for those who rear pullets for laying

To Get a Constant Supply of Eggs

throughout the year, and we have invariably answered in the affirmative, but we know so many who fail to accomplish their purpose that we feel it will be helpful if we give a few hints on the subject.

First of all, to secure eggs all the year round, one must consider that the egg-selling season commences in October, and to produce eggs then pullets should be hatched in February and March, and kept back from laying until the beginning of October; then pullets hatched in April and May will be laying in November and December, and these, if run on through the winter months and well fed and cared for, will lay throughout the winter, spring, and summer.

The secret of securing plenty of eggs from pullets which lay brown-shelled eggs—consequently of breeds which sit—is to allow them to waste no time in broodiness. It is always a subject for conjecture to people who get too many opinions on the best breeds for certain purposes as to which is really the best, because the opinions vary so much, and the advice offered by so-called experts is so entirely at variance with much that is written on the subject, that amateur poultry-keepers who wish to make the best selection possible are more confused than helped.

A WHITE WYANDOTTE PULLET AND COCKEREL.

Non-sitters as Egg Producers.

Many people argue that non-sitting breeds must be the best for egg-production, because the birds do not waste any time in broodiness—and there is sound sense in the argument, but everything depends upon the selection of the strain of those non-sitting breeds as to whether they will produce as many eggs as expected and required of them.

Minorcas are good layers, but are not hardy enough to stand the variations of the English winter, unless they have particularly well sheltered houses and runs. Some strains of Minorcas are absolutely useless for egg production in the winter months, owing to their lack of stamina and the impossibility of their supplying the reserve needed for the activity of their egg organs, on account of their being too frail to assimilate sufficient food to sustain the birds in health, and to supply the necessary motive power to enable their egg organs to become operative and especially in the winter months

It is not possible for those who have not studied the habits of fowls understand that there must be first of all

LAWRENCE HILL, BRISTOL.

Makers of FARM WAGONS & TROLLIES of all descriptions.

Full Catalogue, the largest and most comprehensive in the Trade, Free on application.

Also Builders of Motor Trollies, Wagons, &c., of the latest designs, and suitable for all purposes.

Chief Offices and Works—Clarence Hill, Bristol.
Showrooms—Victoria Street, Bristol.
London Offices—15, Victoria Street, Westminster, S.W.

Fertilisers and Feeding Stuffs.

Potato Manurial Experiments.

The results of the trials with different combinations of fertilisers, on the potato crop, carried out by the Edinburgh and East of Scotland College of Agriculture, should be studied by farmers interested in the cultivation of the potato crop. The plots were arranged on the following system :—

Plot 1.—1 cwt. sulphate of ammonia ; 4 cwt. superphosphate (30 per cent. sol.) ; and 1½ cwt. potash salts (55 per cent. sulphate of potash).

Plot 2.—1 cwt sulphate of ammonia ; 4 cwt. superphosphate (30 per cent.) ; and 1 cwt. sulphate of potash (92 per cent.).

Plot 3.—1 cwt. sulphate of ammonia ; 4 cwt. superphosphate ; and ¾ cwt muriate of potash.

Plot 4.—No artificial manure.

Plot 5.—No artificial manure.

Plot 6.—1 cwt. sulphate of ammonia ; 4 cwt. superphosphate ; 1½ cwt. magnesia potash sulphate (30 per cent. potash), equal to ¾ cwt. muriate of potash.

Plot 7.—(Board of Agriculture mixture) ½ cwt. sulphate of ammonia ; ½ cwt. nitrate of soda ; 2 cwt. pure dissolved bones ; 2 cwt. superphosphate ; and ¾ cwt. muriate of potash (92 per cent.).

Plot 8.—1 cwt. sulphate of ammonia ; 6 cwt. basic slag (30 per cent. phosphate) ; and 1 cwt. sulphate of potash.

Plot 9.—1 cwt. sulphate of ammonia ; 4 cwt. superphosphate ; ¾ cwt muriate of potash ; and 5 cwt. ground lime.

Plot 10.—1 cwt. sulphate of ammonia ; 4 cwt. superphosphate ; ¾ cwt muriate of potash ; 4 cwt. ground lime ; and 1 cwt. carbonate of magnesia.

And the results were as follows :—

	Total per Acre.		
Plot 1	12	2	16
,, 2	12	12	96
,, 3	12	2	96
,, 4	9	14	32
,, 5	8	8	64
,, 6	11	19	32
,, 7	11	19	32
,, 8	11	13	64
,, 9	10	7	96
,, 10	11	6	48

It should be mentioned that all the plots had been dressed with 30 loads of dung ploughed in during the winter, the artificials being applied later on in the usual way.

The best results were obtained from Plot 2, treated with

1 cwt. sulphate of ammonia
4 cwt. superphosphate of lime (30 per cent. soluble)
1 cwt. sulphate of potash (high quality 90 to 92 per cent.),

this would be equal to a dressing of 6 cwt. of a special manure with an analysis of

4 to 5 per cent. of ammonia
20 to 22 ,, of soluble potash
8 to 9 ,, of potash (pure),

and would cost about £6 to £7 per ton, or say, £2 per acre, amply repaid by the increased crop of 3 to 4 tons of potatoes.

Plot 3, to which the same dressing was applied, excepting that muriate of potash was substituted for the sulphate, was the next best, being nearly equal to No. 2 plot, and costing a little less money.

These results coincide with the conclusions arrived at by previous trials in different parts of the country, and may be accepted as a guide to potato growers, excepting that on soils of a full character, the expenditure on potash might be reduced, especially when a liberal dressing of farmyard manure has been applied. The quantity of sulphate of potash could probably be reduced by one-half without adversely affecting the crop.

Prices of Fertilisers.

There is now a brisk demand for fertilisers required for autumn application, particularly for basic slag, superphosphate and potash salts, while we hear of contracts also being made for nitrate of soda and guano for spring delivery.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	12	0	0
Peruvian guano ..... according to analysis			
Superphosphate, 26 per cent.	2	10	0
,, 35 ,,	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.	9	10	0
Fish guano, first quality, scarce & dear	7	10	0
Kainit	2	7	0
Sulphate of potash	10	0	0
Muriate of potash	9	0	6

At an Agricultural Show.

By H. B. M. Buchanan, B.A., Hales.

What struck me most were six small square wooden boxes, each containing a square foot or so of freshly cut grass sods.

It is not the cattle, sheep, horses, pigs, poultry, butter, cheese, honey, agricultural machinery, excellent as all these undoubtedly were, which have fixed themselves in my memory since the show, but just the contents of those six boxes, and for this very important, practical reason :—

The contents of those boxes seem to me to point to a better time coming for British agriculture.

The sod in two of the boxes was taken from the same field after the hay had come off, but one sod had been taken from a portion of the field which had been unmanured, while the other sod had been taken from the same field to which 7 to 8 cwt. of basic slag per acre had been applied the previous December.

There was no comparison between the unmanured plot and the manured plot.

It was the difference in feeding value of the aftermath of the two plots that has burnt deep into my memory.

I have seen many illustrations at shows, agricultural colleges, and at farms, of what skilful manuring will do to improve the feeding value of grass lands, but never before have I seen it so strikingly illustrated as those two small plots illustrated it.

The herbage of the manured aftermath was long, deep green in colour, and composed exclusively of clovers and profitable feeding grasses.

A feed that meant a good yield of rich milk.

The aftermath of the unmanured plot—well, the usual thing, which we all know only too well, very little clover, short, coarse herbage, all of which of course denotes a small yield of poor milk.

Judging from the aftermath, the hay harvested from the slagged portion must have been not only weightier in bulk, but, which is even of greater importance, it must have been composed of grasses and clovers of a vastly superior feeding quality.

If I mistake not, during the coming winter the milking cows and feeding beasts will find it out, and so will the purse of the farmer.

I might, perhaps, have said the balance-sheet of the farmer, but as farmers consider balance-sheets beneath their notice, it is of little use discussing the relative value of the two sods from the balance-sheet point of view.

Another two boxes.

This time they contained not sods cut from an aftermath, but sods cut from a permanent grazing pasture.

One sod had been slagged, and was covered with a thick carpet of delicious-looking clover and finefee ding grasses.

The unmanured plot. Well, yes, you all know the depressing sight only too well—coarse, rough, yellowish tinge, rough herbage, with no vestige of the milk-giving, flesh-forming clovers.

A herbage that even a town-bred, town-living, land-reforming, land-ignorant, gassy politician might see would be avoided by all stock, so long as a blade of anything better could have been found anywhere else over the whole field.

A herbage which, when I see it, and I see far too much of it, makes me feel downright savage. Savage against the appalling ignorance, or the appalling conservancy, or wicked neglect that has permitted such stuff to defile the surface of our soils.

The startling contrast of the sods in these two boxes had been brought about by the simple application of 8 cwt. of slag to the acre, which had been sown the previous December.

Some few weeks ago I was watching a bunch of cattle grazing ; they grazed on slowly towards me, until they reached a certain line in the field ; as each beast grazed up to this line it turned back, and not one ventured over it. That line extending across the field seemed to keep them in as effectively as a strand of barbed wire would have done.

In about an hour's time I returned to the same field, and found that the whole herd had walked over several acres in the middle of the field and were grazing at the other end of the field, where another line seemed to hem them in. The explanation was very simple.

The few acres in the middle of the field had not been slagged, while the few acres at each end of the field had been slagged, and the lines which had driven the animals back were the very lines which divided the slagged portion from the unslagged portion.

Well, every experiment made in every part of the country, from the north to the south, from the east to the west, teaches the same lesson the lesson, namely, that a much larger net profit is to be made from the grass lands of this country when they are treated by a skilled system of up-to-date manuring.

The farmer who will not try to learn the lessons of the experiments, or who will not endeavour to apply that knowledge to his own farm by making experiments for himself, is not fit to have the privilege of farming the lands of this country.

He would do far better to try his luck in those countries where he would be surrounded by desolation and discomfort, and where farming means turning the soil, throwing the seed in, and awaiting the harvest.

But the skilled, wide-awake, adaptable, and businesslike farmer in this country is better off in all ways—I write from what I have seen for myself and heard from farmers on the spot—than is the farmer over the seas, who in many cases is farming, if it can be called farming, in a manner which would make a skilful farmer over here shudder with horror.

Storing up Phosphoric Acid in the Soil.

Phosphoric acid, or phosphate of lime, must be present in every part of cultivated soils in order that it may be easily available for plant nourishment, because phosphoric acid does not remain in an actually soluble condition in the soil in the same way that nitrate of soda or sulphate of ammonia or even potash salts do. When superphosphate is applied to the land the soluble phosphoric acid in it is at once distributed and taken into combination by the lime or other bases in the soil, and then again converted into a condition to be absorbed by the plants by the carbonic acid in the soil, or the acid exuded by the plant rootlets. It is therefore essential that the plant fibres should be contiguous to the phosphate of lime, and to attain this object the fertiliser must be distributed everywhere in the soil.

This is the reason why it is necessary to apply to soils larger quantities of phosphate than the crops actually require, and some agricultural authorities, therefore, recommend that it is good practice to stock the soil with a large quantity as a reserve, and then only to apply yearly just as much as the particular crop may require.

There would be no waste, because phosphate of lime is not washed out of the soil.

To see how this idea would answer, the following experiment over four years was made on a fairly well cultivated light soil :—

Plot.

1. No phosphate or potash.
2. 10 cwt. slag, 10 ,, kainit } spread over three years, say 3⅓ cwt. each of slag and kainit per annum.
3. 10 cwt. slag, 10 ,, kainit } in one dressing. first year.
4. 10 cwt. slag, 10 ,, kainit } first year. spread over three years.
5. 10 cwt. slag, first year. 2½ cwt. slag, following two years. 10 cwt. kainit, spread over three years.

All the plots, including No. 1 plot, received a dressing of nitrogen.

The relative average results obtained over the four years, taking the yield of No 2 plot as 100, were :—

No. 3 plot	102·18
No. 4 plot	106· 2
No. 5 plot	113· 8

and the average profits were, after deducting the cost of the fertilisers over the four years, over the no manure plot :—

Plot 2	33s. per acre.
,, 3	38s. ,,
,, 4	40s. ,,
,, 5	42s. ,,

It was observed that the effect of the one big dressing of slag lasted throughout the four years, and was most effective during the third and fourth year. On the other hand, the effect of one big dressing of kainit was most apparent during the first and second year, and fell off during the last two seasons.

Taken as a whole, this interesting experiment seems to show that on ordinary soils it is good farming to stock the soil with a big supply of phosphate of lime and afterwards just to apply sufficient to meet the actual requirements of the crop—that is, just as much as is extracted from the crop from year to year.

The same principle does not hold good with potash, which cannot be stored in the soil in the same way, and is much more soluble, so that there is not the same necessity to have a surplus quantity distributed through the soil.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

WHEAT PRICES: THE TOP OF THE MARKET?

It is happily not necessary to bother readers of a leader column with the figures that must needs abound in the market portion of the paper. The main fact which we have to discuss here is sufficiently expressed in the heading of this article. We appear now to have arrived at the top of the market for breadstuffs, and the efforts of farmers should be devoted to maintaining a level of value which without being in any way excessive, is remunerative and encouraging. No fears exist as to the mass of the community suffering from dear bread.

If the present price of wheat is maintained the proper price for the quartern loaf will be sixpence, including delivery and a moderate amount of credit. A sixpenny loaf is not a dear loaf, but if the consumer finds it a grievance he can get it for fivepence halfpenny by calling at the baker's for it. He will even be obliging the baker by doing so, for the main anxiety of many bakers is over the distribution rather than over the making of the bread.

Compulsory education is now continued to so late an age that a permanent scarcity of boy labour is set up, and lads can get places without the least delay or even inquiry as to character. The result is natural enough, carelessness is the order of the day, and bakers, so far from profiting by the halfpenny on the loaf, which they charge in effect for delivery, lose customers continually, and suffer endless anxiety as to their rounds. The sixpenny loaf may be reduced another halfpenny still if the consumer would only bake his own bread. Not only is this perfectly feasible with the ordinary household oven, but a further economy is secured in the fact that home-made bread keeps longer and remains moist longer than baker's bread. The present price of flour allows of the home-made loaf being turned out for 5d., and the individual consumer can have his individual taste attended to. The farmer's satisfaction with wheat prices therefore need not and should not entail the consumer's dissatisfaction.

The question asked at Mark Lane is, of course, whether prices are likely to be undermined by foreign arrivals in November and December. We do not think that they are; for the supply on passage is below the average, and the Russian, Indian, and Canadian crops prove to have been recklessly over-estimated. In our technical market articles we have stated this weeks before the resulting rise occurred; we have now to warn our readers that it is with the English farmer that the prices for the remainder of 1907 will rest. If he persists in sending to market at the present excessive rate, there will not only be pause in prices but reaction. Already would Mark Lane be weaker but for the negligence and mismanagement of the railway companies, which have made it impossible to secure anything like prompt delivery of the new corn freshly sent up. Many hundreds, perhaps some thousands of quarters of new grain have become heated and got weather and travel stained through this railway breakdown, and we hear of litigation threatened right and left through millers refusing to accept grain which it would be dangerous to put through the mill, while farmers sent it off from their local stations in proper milling condition.

Let farmers make every effort to hold their new wheat and hold their new oats; the state of trade ought to result in the banks being willing to make sufficient money advances on the security of the stacks.

MASTERS, MEN, IMPLEMENTS.

Masters.

This week my text is taken from the first Book of Agriculture, and the second verse, because the first one is money, the quantity of which for the land occupied I need not go into it is now as when I was a lad, so far as one can see—about £10 an acre when starting as tenant, the first year's expenses always being heavy, and, as a rule, not much cash to take for twelve months.

But my subject is "Masters." How varied a one it is! To begin with, there are many farmers who do not employ even one regular horseman. In bygone days these little men were more numerous than now; they could not stand against such years as 1868 and 1879; the latter year I remember well. I was not master at our farm, however, and a good thing for me. It was terribly trying.

Surely it must be hard to make a living this way, and a tedious hardness with it, too: manure, plough, sow, and mow all oneself, as nearly as possible.

Any holding under 45 or 50 acres is not a workable one, in my humble opinion, or, anyway, not one upon which a living can be made; it will do nicely for Mr. Tapes or Mr. Cottons to spend money upon as a hobby.

This Government or any other can offer or give people 10 or 12 acres each. What can the folks do with them?

Then there are those who regularly employ one horseman, a lad or two, and odd men often. The first class of master and the second I take together. As a rule they are very practical as farmers, being so much more in actual touch with the minutiæ of the general working of the land than those with whom I deal later on. On a small holding, the greatest difficulty is often experienced unless the holder has as many implements as far larger farmers.

Next comes the 100-acre man. There there is a great deal of waste in horseflesh and the master's time, unless the hand that rules is a truly business-like one. Five large cart horses on 100 acres, as farming must now be done, is too much expense; and, unless "something coming in," as is generally said, or some time spent in managing other land or in another business, there is waste of time on the master's part too. He must keep two horsemen, therefore his time certainly ought not to be given on the farm.

If he is situate far from a station, and cannot ride a bicycle, one of the four horses he should keep can occasionally be used for the road, the fellow one being used for carting, single harrowing, or light rolling during the absence of the fellow horse and its master.

A 200-acre farm is a good one for comfortably working. Binder, drill, mower, and all else, as nearly as possible, will do as well for 200 as for 100 acres.

Masters must have a good supply of implements.

The 300, 400, 500, and 600 acre farmer is, of course, or is supposed to be, a "man of money," as we say. The income, had the money been invested elsewhere, should be sufficient to provide him with several luxuries; but we in Essex are not accustomed to see any class of master-farmer indulge to any extent in luxuries.

A 1,000 acre farmer is an important man in the parish, and, as a rule, is also the one who does most of the honorary work for the parish.

And now, in conclusion, a few genuine words of advice to all masters. Be firm with, but kind to, your employees; give a little and take a little; let them plainly understand, and try and make them see, that their master's interest is their interest; encourage them to look well after and fully work the horses under their charge; make them punctual in the morning, and let them be punctual at night; pay them for all overtime; strict honesty or instant dismissal; courtesy an essential from every one; neatness compulsory: in a word, be fair, honest, and right ahead with your men, as "you would they should be with you." J. B. M.

THE FARMERS' DIARY.

TUESDAY, OCTOBER 22.—Clay Cross Ploughing Matches—Brewers' and Barley Exhibition at Islington continued—Sale of Hereford Cattle at Kingsland, near Leominster, at noon—Important Sale of Underwood at Patching, Sussex—Horse Sale at Bognor—Horse Fairs at Rugeley and Salisbury—Great Dog Show at the Crystal Palace—Agricultural Fairs at Market Harborough and Gainsborough.

WEDNESDAY, OCTOBER 23.—Brewers' and Barley Exhibition continued—Horse Sale at Crewe—Bath and West of England Society: Finance Committee meets at Bath—Bardon Hill Horse Sale—Chichester Market—Live Stock Sale at Basingstoke—Great Sale of Trees at Haywards Heath—Farm Sales at Tonbridge and Lower Halling, Kent—Agricultural Fairs at Winchester, Ripley, and Boroughbridge.

THURSDAY, OCTOBER 24.—Kilmarnock Dairy Show, first day—Brewers' and Barley Exhibition continued—Horse Sale at Derby—Agricultural Fairs at Gravesend, Marshfield, Market Drayton, Ashford, and Leighton Buzzard—Special Horse Sale at Southminster—Melton Mowbray Great Autumn Cattle Market—Lloyd's Great Horse Sale at Welshpool—Sale of Lincoln Red Shorthorns at Stenigot (Donington Railway Station), Lord Heneage presiding at the Show and Sale Luncheon, 12.30 p.m.

FRIDAY, OCTOBER 25.—Kilmarnock Dairy Show, second day—Brewers' and Barley Exhibition continued—Great Autumn Farm and Live Stock Show at Tonbridge—Sale of Small Farms, Cottages, and Fruit Plantations at Sittingbourne (Bull Hotel, 4 p.m.)—Great Autumn Sale of Store Stock at Kidderminster—Farm Sale at Lenham—Agricultural Fairs at Grantham, Chepstow, Louth, and Warwick—Windrow Great Annual Fair—Queen Canal Fair—Dorchester Great Autumn Sheep Sale—Runcorn Special Cattle Market.

SATURDAY, OCTOBER 26.—Agricultural Fairs at Carlisle, Leyland, Penrith, and Ballymena—Newcastle-on-Tyne Special Horse Sale—Sending-in Day for the Norwich Fat Stock Show.

MONDAY, OCTOBER 28.—Sending-in Day for the Nantwich Dairy Show—Fareham Great Market—Helston Great Autumn Fair—Agricultural Fairs at Horncastle, Thirsk, Burton, Newtown, and High Wycombe.

Notes of the Week.

Wheat has topped 40s. per qr. on our markets for the first time for many years.

That is a fact worth a very big note!

"Land as an investment" may again come within the range of practical consideration.

And England may become once more "Merrie England."

"The oldest industry"—

"Honour waits o'er all the earth,
Through endless generations,
The art that calls the harvest forth,
And feeds the expectant nations."

It is reported that the root crops are bolting all over the country.

But why they are bolting and where they are going to no one seems to know.

Twelve hundred householders in Maine, United States, have pledged themselves to abstain from fresh meat for the space of fourteen days.

This is not in order to boom vegetarianism, but, if possible, to break the high price of meat due to the action of the meat trust.

A New York restaurant, feeding daily 13,000 people, as a consequence of the high cost of meat has raised its prices for dinner for the first time for forty years.

The storm fiend has been working havoc during the last week in France and Spain. The French Government propose to make a contribution of £240,000 to relieve the distress.

Even a mountain in the South of France has been so influenced that it has been moving across the country to the consternation of the inhabitants.

The tail of the fiend has swished these islands during the last few days.

We sympathise sincerely with those farmers in the North, who still have corn crops out in the fields; they will be severe sufferers.

The name of the horse chestnut has nothing to do with horses. It is derived from a Welsh word meaning hot or bitter.

The *Lancet* is of opinion that much indigestion is caused by food which has been preserved by borax. The moral is that we should avoid foods imported from abroad.

We are threatened with a new potato disease, the "black scab." Any grower observing the intruder is requested to give prompt notice to the Board of Agriculture.

The gooseberry mildew is another undesirable alien, unfortunately becoming naturalised.

No half-measures are of use against such pestilent pests. They must be eradicated.

The effect of some drugs on flowers is remarkable. If a plant is chloroformed, it wakes out of its enforced sleep with a vigour that causes it to outstrip in growth plants not so treated.

Different colours also influence plants most strangely. Plants under red glass grow vigourously; plants under blue become stunted; plants under green act normally.

The fact that some plants are able to absorb ammonia from the atmosphere was known more than a century ago.

Dr. Howison, a hundred years ago, wrote:—"I consider mustard an excellent medium by which to take ammonia from the atmosphere. It will grow in land so much worn out as not to bear any other crop."

Artificial manures have become a necessity to farmers in Australia. In the province of Victoria the use of superphosphates has grown from 40,000 tons in 1903 to nearly 100,000 tons.

And this increase is in spite of the fact that they have to pay £5 10s. per ton for superphosphates, 35 per cent. soluble, the price here for the same fertiliser being £3 10s. per ton.

Wheat grown west of Chicago and sold in Great Britain at less than 30s. per qr. after paying all charges leaves a loss to somebody, says the chairman of a big American Land Company.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended October 12, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (12,078), 8,369; sheep and lambs (1,664), 872; horses (186), 245.

Fresh meat:—Beef (109,837 cwts.), 120,475; mutton (113,416), 56,599; pork (9,951), 14,298.

Salted or preserved meat:—Bacon (97,930 cwt.), 83,720; beef (2,780), 4,222; hams (19,686), 14,200; pork (3,314), 4,478; meat (11,611), fresh, 11,489; salted 1,228; meat, preserved (7,146), 5,781.

Dairy produce and substitutes:—Butter (73,314 cwt.), 61,819; margarine (21,461), 14,273; cheese (81,845), 73,460; milk, fresh in cans or drums (—), —; cream (69), 79; milk, condensed (19,188), 16,032; milk, preserved, other kinds (380), 92.

Eggs (great hundreds):—(434,150), 450,235; poultry (value £2,142), £2,696; game (value £1,991), £2,804; rabbits, dead (not tinned), (36,005 cwt.), 26,678; lard (22,689 cwt.), 32,247.

Corn, grain, meal, and flour:—Wheat (780,100 cwt.), 2,279,700; wheat meal and flour (375,700), 216,400; barley (455,700), 522,200; oats (199,500), 239,400; peas (30,010), 52,330; beans (5,040), 77,690; maize or Indian corn (1,111,600), 983,600.

Fruit (raw):—Apples (100,060 cwt.), 136,667; grapes (67,379 cwt.), 62,051; pears (18,639 cwt.), 25,743; plums (32,640 cwt.), 1,752.

Hay (3,308 tons), 630; straw (1,904 tons), 1,618; moss litter (1,884 tons), 1,183; hops (4,589 cwt.), 4,407; locust beans (10,100 cwt.), —.

Vegetables (raw):—Onions (173,489 bushels), 179,573; potatoes (24,967 cwt.), 89,089; tomatoes (14,568 cwt.), 15,554.

At the October Fair at Bakewell on Monday there was a large show of stock of all descriptions, and a fairly brisk trade at about late market prices. Best milch cows and in-calf cows found purchasers at £17 10s. to £22; superior calving heifers from £15 to £17 10s.; barren and lying-off cows, £11 to £14 10s.; stirks and steers, £8 to £11. Best heifer beef, 7s. to 7s. 9d. A good trade was done in the sheep market. Best wether mutton realised 8d. to 9d. per lb.; fat ewes, 7d. to 8d.; lamb, 9d. to 10d. per lb.; hogs, 32s. to 35s. each; store ewes, 38s. to 42s. A few good store pigs sold from 25s. to 45s. each. In the horse fair were some very useful hacks and lighter horses suitable for trade purposes. These realised good prices.

LORD ROTHSCHILD'S HERD OF SHORTHORNS AT TRING PARK. SEVERAL OF THE WINNERS AT THE RECENT LONDON DAIRY SHOW ARE SHOWN IN THE GROUP.

Photo by] [J. T. Newman.

CATTLE.

Notes and Jottings.

AT the time of writing the weather appears to be of a very broken and stormy character throughout the country generally; heavy downpours of rain have been experienced, causing many of the low lying parts of the country to be flooded; cold winds and frosts have also helped to make matters very uncomfortable for the outlying cattle. It is very safe to prophesy that we are going to have higher prices for cattle of all kinds; therefore they will be worth looking after, and care must be taken either to supply them with some dry food on their pastures (for there is still an immense quantity of grass left on the fields), or what with valuable stock is much better, a shelter of a good open fold yard at night where the dry food can be utilised without poaching the land so badly.

OUR daily papers are very loud in their cries about dearer food of all kinds for the population. One of the first products to be noticed in this respect is beef; home markets, though not what one may term brisk, are characterised by firmness and a good demand for all animals of a good standard. The American markets, we read too, are steadily advancing, so that the close of the year bids fair to find feeders in a better position than at one time was anticipated. In addition to the greater demand for beef, the supply of stores is visibly shorter, and a great many animals that, had this been the reverse, would have gone to the block are being taken into the yards and sheds for winter feeding.

MILCH cattle are also sharing in the better demand, cows with condition and good udders of the ordinary market kind (that is, without pedigree) readily fetching from £20 upwards per head, whilst the calves that they take with them into the market are eagerly sought after at the extreme prices of 50s. to £3 per head. In spite of the demand for these cows, however, it is rather difficult to understand why the prices paid by the dairymen for their udder produce are lower than those prevailing a year ago. The abundance of succulent food available at the present time must doubtless be the cause of this rather untoward circumstance.

THE recent Dairy Show in London was a great triumph for the Shorthorn and Lincoln Red Shorthorn breeds of cattle. The former breed, both pedigree and non-pedigree, was altogether exceptionally well represented. A very satisfactory feature in these classes was the fact that the cows have improved considerably in quality and shape when compared with their predecessors of a few years ago. In the way of richness of milk (butter fat) there is also room for great satisfaction, if figures and management are correct, which we have no reason to doubt. The fact of a Shorthorn cow yielding considerably over 4 lb. of butter in twenty-four hours, so far as memory will serve, is a record breaker.

IN America these dual purpose Shorthorns appear to be rapidly establishing themselves. Complaints, however, are urged by some breeders and exhibitors that the quantity of milk, 20 lb. at morning and 20 lb. at evening, if freshly calved, is rather a severe task to enable them to become elegible for competition. Some of these quantities will in the course of time doubtless be regulated upon a more reasonable basis. Meantime breeders, in attempting to produce these heavy yields, must not lose sight of the other side of the question, the ability to produce beef; if so they will develop simply a milking machine, which is not at all the end desired.

SO far as bulls are concerned and beef production, only the Scotch-bred Shorthorn appears to hold the field against all comers. The extreme prices prevailing at the Duthie sale the other day are quite, of late years at least, unprecedented. Mr. Duthie's selection was so keenly competed for that the seventeen calves sold worked out at the remarkable average of £409 16s. 3d. per head, three bulls making over 700 guineas each, and very few of these are leaving the country. It is quite wonderful how these Scotch bred animals retain their favour, and it is equally wonderful what fine animals they produce when crossed upon milking herds.

IT was very pleasing to find that so great a demand was experienced at the sale of Mr. Tudge's famous Herefords at Dux Moor, in the home of the breed. Great attention has always been paid in the management of the herd as regards the strains of blood mated, as well as the individual merit of the animals. We invariably find them not only symmetrical to a degree, but covered with a wealth of hair and flesh. Buyers appear to have been present from all parts of the world, several of the best animals being sold for exportation to Australia and New South Wales.

Two hundred guineas were also paid for a bull for export to Uruguay, the average for the whole herd of £42 per head being obtained, distinct proof that the White Faces are holding their own with the foreigner as well as at home.

THE shaggy West Highlander, we are pleased to see, has not been forgotten in the good things that have been taking place, the sale at Oban the other day being prolific of steady and satisfactory prices, though not excessively high. Ordinary store cattle of this kind for grazing purposes are almost certain to experience a pretty good trade, the immense quantity of grass left upon the pastures being much in their favour, as also is the great quantity of indifferent hay about the country. Highlanders in bad weather are the best of foragers, and will not turn up their noses at damaged fodder, especially when the weather is severe. At Oban the pedigree animals of this breed ran up as high as £53 each, a good number realising from £30 to £50 each.

MANGEL and swede crops have bulbed since the recent falls of rain, many crops of the former having developed into great weight per acre. Where other green crops are scarce a few mangels may be quite safely used thus early, but they must be added to a liberal supply of good cut chaff and a certain amount of dry concentrated food, such as some of the varieties of corn meals. Milch cows will thrive and do well on them under such conditions, and fat stock will also clean out their mangers with better relish, for all cattle are fond of the sweet juice of the mangel.

Sale of Gainford Hall Cattle.

Mr. George Harrison's pure bred herd of Shorthorns at Gainford Hall, Darlington, is known throughout the country and also abroad as one of the greatest excellence, and the sale on Tuesday of a choice selection, owing to the breed having outgrown the accommodation, naturally attracted a large and representative attendance of breeders from all parts, all eager to secure such first-class animals. Started in 1890 by the purchase of the heifer Warfare and the bull Royal Ury, the herd has gradually grown up by judicious purchases and systematic management until it has reached a very high state of perfection. Exhibiting began in 1893, and has continued year by year with such remarkable success that up to September 20 of this year 2,008 prizes—and in this number are no fewer than eighty-eight champion awards and 1,168 first prizes, truly a remarkable record—have been won at the Royal, the Highland, the Royal Dublin, as well as at the great county shows throughout the kingdom.

Tuesday's catalogue comprised nearly half the herd, offered without reserve, and included some very good cows. The two-year-old heifers as a lot made a most favourable impression, and several of the yearlings looked very well indeed. A number of the bulls, on the other hand, were rather plain in colour, but in the main they met a very fair sale. The handicap in the case of over a dozen animals was the lack of the very long pedigrees which are now looked for in the Argentine, but it was evident that buyers had other outlets in view, and so they kept up a cheerful run of bids where shapes and colours took their fancy. Gainford Fragrance, a rich roan, winner of seven firsts as calf and ten premier awards this season, in calf to The Pride of Tees, made the top price of the sale, viz., 210 guineas, purchaser being Sir W. Greenwell. Earl Manvers, of Holme Pierrepont, Notts, gave 120 guineas for Kate Forty-seventh, a yearling heifer by Mr. W. Anderson's noted bull Sir Simon, which has already figured prominently in the prize ring, whilst the Duke of Northumberland paid 125 guineas for Gainford Rhoda, a roan by Royal Ensign and calved February 21, 1906. These were the only three-figure prices, but, as will be seen from the following list of the principal lots, a large number realised well over 50 guineas, and the average per head for the fifty sold worked out at a little over £49. Sir Oswald Mosely, Rolleston Hall, Burton-on-Trent, got a cheap heifer in Rose of Gainford 7th, a most promising roan, in calf to Royal Ensign. He also purchased Bella 4th, a white yearling.

Sale of Shorthorns at York.

Over 200 head of Shorthorns were brought under the hammer at York Wool Sheds on Thursday in the presence of a large company of buyers, and though with but two exceptions prices were not particularly high, there was a good demand and a satisfactory sale resulted.

Among those who sent stock were Sir Maurice Bromley-Wilson, Bart, Milnthorpe; Sir John Swinburne, Bart., Capheaton; Major Cradock, Richmond; the Right Hon. F. J. S. Foljambe; Mr. H. Williams, Moor Park; the Earl of Feversham, the Hon. H. W. C. Fitzwilliam, Lieut-Colonel the Hon. W. Lawson, Sir Oswald Moseley, and Mr. P. E. J. Hemelryk, Woolton, Lancs, whose whole herd was forward. The highest price realised for a cow was 100 guineas, which was paid by Mr. Victor Cavendish, M P., for Duchess of Bartlow 3rd, while Senor Bolero purchased Mr. R. Booth's bull Viking, which has won a good many prizes at local shows this year, for 205 guineas, for exportation to South America. A number of Guernseys were also included, among them being some very useful milkers; prices ranged from 14½ guineas to 18 guineas, a young bull being sold to Mr. Thomas Parker, York, for 41 guineas, and a bull calf for 3½ guineas to Mr. Appleton. The following were the chief sales of Shorthorns:—

Shorthorn Sales in Scotland.

Pressure on space prevented us giving the results of the last two of the week's sales of Shorthorns in Scotland in our last issue, so we make good the omission here. As is usually the case, the prices obtained at the end of the week did not come up to those at the first sale, but nevertheless satisfactory sales were the rule. At Mains of Sanquhar, near Forres, on the Friday, the Messrs. Law offered just over thirty animals from their far-famed herd, and obtained an average per head of £69, whilst Mr. H. M. S. Mackay got the fine average of £102 2s. 8d. for eleven. Curiously enough the top price of the day—240 guineas—was obtained by both these sellers, Messrs. Dean and Son paying that sum for Messrs. Law's bull calf Sanquhar Pearl, whilst Mr. Gordon, Cullerse, gave a similar amount for Mr. Mackay's yearling heifer Border Zoe, and also 200 gns. for that gentleman's yearling heifer Princess Royal, B. Messrs. Law also sold at 200 guineas, paid by Mr. Crawford, Lime Park, for Florence 3rd, whilst 170 guineas was given by Mr. W. Duthie, for the cow Zoe 10th. Altogether fifty-six head were sold at this sale for an average of £75 9s. 9d.

At the conclusion of this sale another was held at Forres Auction Mart, several breeders contributing to the catalogue, and some first-class animals were brought under the hammer, the result being a good sale, with an average of £52 5s. 6d. for fifty-two head. Mr. Duthie gave 155 guineas for one of Sir H. J. Smiley's lot; Fairy Fancy 2nd, from the same herd, was knocked down at 130 guineas to Mr. Durno, while Mr. Hughes, Gresby, gave 130 guineas for Plum Blossom 2nd, which also came from Sir H. J. Smiley's herd, fifteen animals from which realised no less than £1,191 15s., or £79 9s. per head.

Perth was the scene of the concluding sale on the Saturday, and here there were offered over 100 animals from about a score of herds Quality, taken all round, was not up to that of the previous days, and the result was a big drop in price. Only three three-figure prices were recorded, whilst many animals sold at considerably less than 20 guineas, and the average for the eighty-three sold was but £28 12s. 2d. per head. The three-figure animals were:—Pansy 5th, a two-year-old heifer sent by Colonel Munro and sold to Sir H. H. Smiley for 160 guineas; Red Baron, a yearling bull from Aberchurl, sold to Mr. Thomson, Kendal, for 120 guineas; and Mr. Stephen Mitchell's two-year-old heifer Augusta Lady 2nd, bought by Mr. Watson at 100 guineas.

Mr. T. Stokes' Shorthorns.

On Friday just over forty pure bred Shorthorns from the herd of Mr. Thomas Stokes, Warmington, Oundle, Northamptonshire, were offered for sale by auction at Warmington. Unfortunately the wet weather mitigated against the attendance, which was somewhat small, but local tenant farmers gave the sale their hearty support, and the fairly satisfactory average of £10 14s. 6d. per head for forty animals was obtained. The chief sales were as follows:—

Cows and Heifers		Gns.

Devon Cattle Breeders' Sale at Taunton.

The forty-third sale of pure-bred Devon cattle, held under the auspices of the Devon Cattle Breeders' Society, took place in Taunton Market on Thursday in the presence of a large attendance. Thirty-five pedigree Devon bulls and four pedigree Devon cows, from well-known breeders, were offered, and met a ready demand at satisfactory prices, which ranged up to 40 guineas, given by Mr. S. A. Passmore, Ashby St. Ledgers, for Mr. T. C. Dening's Troubadour, but the general run of prices was between 20 and 25 guineas. The chief sales were as follow:—

BULLS.—Playmate (Mr. T. Hearn's), Mr. Clark, Middle Chinnock, 24 guineas; Taunton Mayor (Mr. H. Gillam's), Mr. T. L. Mead, 25 guineas; Compton Gerald (Mr. J. Taop's), Mr. W. Day, 22 guineas; Bickley Tutor (Mr. S. Kidner's), Mr. W. Burden, Barnstaple 25 guineas; Lord Olga (Mr. E. Clatworthy's), Mr. Knapman, Loxbeare, Tiverton, 23 guineas; Lord Nurthey 7th (Mr. A. J. Hill's), Mr. T. Penny, Musgrave Farm, Taunton, 26 guineas; Rosy Quaker (Mr. H. C. Hancock's), Mr. Tink, Linkinhorne, 25 guineas; Daylight (Mr. T. C. Dening's), Mr. Tucker, 22 guineas); The Czar (Mr. C. L. Hancock's), Mr. J. Pope, 20 guineas; Orderer (Mr. T. Dibble's), Mr. F. Yeandle, Thorverton, 25 guineas; Dewdrop Boy 7th (Mr. A. J. Hill's) Mr. Bond, North Petherton, 26 guineas; Troubadour (Mr. T. C. Dening's), Mr. S. A. Passmore, Ashby St. Ledgers, 40 guineas; Stockleigh Magnum Bonum (Mr. W. Tuckett's) Mr. Thos. Dyer, Liskeard, 37 guineas; Stockleigh Model (Mr. Tuckett's) Mr. J. Watts, 28 guineas; Dewdrop Boy 8th (Mr. A. J. Hill's), Mr. T. S. Mead, 20 guineas; Longforth Ploughboy (Mr. E. H. Buncombe's), Mr. F. H. Brooks, Wellington, 26 guineas; Rosebery (Mr. T. C. Dening's), Mr. T. Boucher, Wivelscombe, 28 guineas; Overton Eclipse 3rd (Mr. J. L. Huxtable's), Mr. Slowman Heals, 27 guineas.

COWS AND HEIFERS.—Crusoe's Lady A (Mr. S. Kidner's), Mr. Mallett, 23 guineas; Crusoe's Lady Jane (Mr. Kidner's), Mr. Mallett, 20 guineas; Dainty 18th and her steer calf (Mr. J. Surridge's), Mr. T. G. Bisdee, 26 guineas.

Sale of Kerry Cattle at Tetsworth.

There was a good company at Attington House, Thame, on Thursday last, when Messrs. Thornton and Co. sold the entire herd of Kerries belonging to Mr. Alfred Deverell. The cattle have been kept as a dairy herd to supply a London milk contract, and were a choice lot, the cows having good udders. Mr. J. L. Tillotson secured, among others, a couple of good cows in Attington Blackberry at 15 guineas and Shiplake Molly at 16 guineas, as well as Hazel at 18 guineas. Mr. E. W. Beck gave 20 guineas for Marguerite, to go into Norfolk. Several of the others made up to 13½ and 14 guineas each, Mr. J. E. Ward taking several animals at these prices into Wiltshire. The forty-one head sold averaged £10 2s. 3d.

Forthcoming Sales.

The Earl of Carnarvon has instructed Messrs. Dreweatt and Watson to sell a choice draft of sixty-nine pedigree Berkshire and thirty-nine other pigs at Highclere Park near Newbury, on Friday, the 29th inst. The herd of Berkshire pigs at Highclere Castle was founded in 1895, and replenished since by purchases of many well-known breeders, and has obtained a world-wide reputation. Many noted sires have been used, all either winners or bred direct from winners, and all are sires of winners. The sale will afford a rare opportunity to obtain some of the old Highclere blood which is so popular in the United States, as nearly all the pigs now offered can trace back to the grand sow Highclere 14th, the Royal champion of 1897. Conveyances will meet all trains at Highclere Station.

Ashford annual sheep and bullock sale will be held by Messrs. W. and B. Hobbs on Friday next. The catalogue will consist of 1,500 Kent and half-bred sheep and lambs, including 450 Kent ewe tegs and 300 capital home bred beasts, including 10 pedigree Sussex yearling heifers from Mr. H. Amos's herd, 161 two-year-old steers and heifers, 118 yearlings to eighteen months, 19 cows and heifers in and with calves, and 2 bulls. There will be a good supply of trucks on hand, and every convenience will be made for the quick removal of stock. The sale will commence at 10 o'clock.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible. | *Charges for announcements under this heading Six Shillings an inch.*

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.

Norwich, Norfolk.

By Messrs. DREWEATT & WATSON.

HIGHCLERE PARK, NEAR NEWBURY.

One-and-a-half Miles from Highclere Station and Five from Newbury.

MESSRS. DREWEATT and WATSON are honoured with instructions from the Right Hon. the EARL OF CARNARVON, to SELL by AUCTION, at HIGHCLERE PARK DAIRY, on TUESDAY, OCTOBER 29, 1907, at 12 for 1 o'clock, a choice draft of

69 PEDIGREE BERKSHIRE AND 30 OTHER PIGS.

The herd of Berkshire Pigs at Highclere Castle was founded in 1895 from the stock of Mr. E. Hayter, Mr. E. Burbidge, and Mr. A. Hiscock, and replenished since by purchases of many well-known breeders, and has obtained a world-wide reputation. Many prizes have been won at the leading Shows, including twice Champion at the Royal; also Breed Cup and Champion at Smithfield. Pigs have been sent all over the World, and at a recent sale at Baltimore, U.S.A., four young sows (sisters) bred at Highclere, sold for over £50 each. Many noted Sires have been used, among others may be mentioned Swansea, Rightaway, Blenheim, Handyman, Drogheda, Hall Mark G., Persimmon, Barsac, William III., Harold XI, and His Lordship, all either winners themselves or bred direct from winners, and all are sires of winners. The pigs now offered include all the young pigs in the herd, those retained being the Boar, Sailor Prince, and the older Sows with litters at foot. The present Sale affords a rare opportunity to obtain some of the old Highclere blood which is so popular in the United States, as nearly all the pigs now offered can trace back to the grand sow Highclere XIV, the Royal Champion of 1897.

Conveyances will meet all trains at Highclere Station.

May be viewed, and Catalogues had of Mr. W. T. Hall, Highclere Farm; and of the Auctioneers, Newbury.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

Tuam Fair, co. Galway, held on October 16, was a very large fair. There were plenty of buyers present and demand was brisk, especially for bullocks with quality and condition. Almost a complete clearance was effected at prices favouring sellers:—Calves, 1st class, £4 15s. to £5 5s.; 2nd class, £3 12s. 6d. to £4 10s.; yearlings, 2nd class, £6 10s. to £7 10s.; 3rd class, £4 5s. to £5 10s.; two-year-olds, 1st class, £11 7s. 6d. to to £12 5s.; 2nd class, £8 12s. 6d. so £10 10s.; 3rd class, £6 10s. to £7 10s; three-year-olds, 1st class, £13 10s. to £15; 2nd class, £10 12s 6d. to £12 17s. 6d.; 3rd class, £8 15s. to £9 10s.; springers, 2nd class, £12 to £14; 3rd class, £9 5s. to £10 10s.

HORSES: NOTES AND JOTTINGS

The Motor Car as Covert Hack—Her Methods—The Unfairness of It—The Remedy—The Position of Farmers—Ladies and the Spur—The Railway Rates on Polo Ponies—A Good Stud.

The Motor Car as Covert Hack.

ONE of the boasts of motorists is that their pet motor car is the best of covert hacks. I once heard a lady boast that she could hunt with hounds seventy miles from her home and always be back to dinner by using her motor car. Whether she was wanted in the country she honoured with her presence in this way, or whether her absence would not have been preferred, she never once inquired. Whether she was doing something which was likely to cause annoyance to those to whom she was indebted for her sport she never once considered. Her own selfish pleasure, which wealth enabled her to gratify, was all she thought about.

Her Methods.

NOW to gratify these pleasures, let us see what annoyance she caused others. It answered her purpose to live in a country in which hounds were not—a fine shooting country. But she must have good hunting too, so she drove some seventy miles twice a day to get it. And under these circumstances would she drive at a reasonable pace? It is scarcely likely; forty miles an hour would be nearer the mark than twenty, and I have heard these motorists boast of their great speed when there was no risk of their being brought to answer for it. Then after driving to the annoyance and danger of the peaceful inhabitants a distance of seventy miles she hunted in a country in which no one wanted her, and no one cared to see her but a few of her own kidney. She was a nuisance to the master of hounds, to the secretary, and to the members of the Hunt. She subscribed—as little as she could, you may be sure of that—and said sweetly as an excuse for not giving more that she lived out of the county. She had not one single thing in common with the people over whose land she hunted, and she and such as she caused trouble and heart-burning in a country where such things were hitherto unknown.

The Unfairness of it.

I have dwelt rather at length upon the methods of this lady, because of their unfairness. She is a type of much of the unrest of the present day—and not a very pleasant type either. But the type is there and has to be reckoned with. Not only do such as she make mischief by their selfishness and want of thought for others; they act unfairly in other ways. For instance, the lady whose vagaries I have been describing spent nothing in the country which she honoured with her presence. No charity ever received her assistance—her charity began at home. No agricultural society received her subscription. She paid the minimum subscription to hunt and poultry fund, and thought she did all that could be required of her.

The Remedy.

BUT what is the use of dwelling on this subject, my readers may ask.? We can tell of plenty of similar instances, but where is the remedy? There is none. Now that is what I am coming to. There is a remedy. We cannot drive the motor car and the road hog from our roads it is true, though there is no doubt that more drastic methods to keep them in order will be resorted to ere long. No, but we can keep them from our hunting fixtures; we can prevent people using them as covert hacks. A friend of mine who farms some 3,000 acres of land in a good hunting country managed the matter very nicely. The hounds met at his house, and the master drove up in a motor car. He went into the house as usual. And then my friend told him that if he used a motor car as a covert hack again he should send the three puppies home that he walked and were every yard of land in his occupation. "I do not object to your doing it yourself so much," said he. "But others will follow your example, and we shall have a big crowd of people coming for whom we care nothing, and from whom we shall never get a courteous or even civil word." People, that is, who are like the lady of whom I wrote above. Motor cars are not seen in evidence at fixtures of the pack of which I have been speaking. Neither are they to be found at the fixtures of the Warwickshire, Lord Willoughby de Broke having spoken to some purpose on the subject.

The Position of Farmers.

FARMERS have it entirely in their own hands as to whether they will have motor cars at the Hunting fixtures in their country. If they make a fitting representation of their wishes on this subject to the master of hounds those wishes will be respected. And I am quite certain that the bulk of hunting men in the country, who have motor cars, when they hear of the farmer's protest, will cease to use those motor cars as covert hacks when they realise why they are objected to. The motor car can bring a much greater influx of objectionable strangers than the railway can, and that is a thing to be taken into consideration. In taking leave of this subject I would not be misunderstood. All strangers in the hunting field are not objectionable. Hunting men and farmers alike welcome the stranger who comes a few times to visit their country. But the man or woman who comes regularly, and who never in any way identifies himself with the rural life of the country in which he gets his sport, is a great deal better away, and farmers can, at any rate, prevent him coming in a motor car.

Ladies and the Spur.

I AM very sorry to learn that it is becoming fashionable amongst ladies to use the spur. There are very few men who ought to ride with sharp spurs, and certainly there are fewer ladies. I heard a lady say the other day that she liked to ride with a spur because it made her horse so frisky. This being interpreted means that she spurred the horse to make him jump about, and punished him with the bit for doing what she had incited him to do. This is not only cruel but it likewise goes far to spoil a horse and make a generous horse a rogue. Of course it may be said that the lady's spur should be blunt, but whoever knew a lady ride without a "business" end to it. Feminine logic would at once ask the question, What is the use of wearing a spur that is not sharp? A woman's seat gives her tremendous purchase in the use of the spur, and I have seen some horses cruelly butchered by ladies' spurs. The best horsewomen I have known only used the spur on certain horses. It is a maxim which admits of no refutation that no one should wear sharp spurs who cannot keep them from the horse's sides when they are not needed. And how many horsemen and horsewomen can do that?

The Railway Rates on Polo Ponies.

I HEAR that there is to be a meeting of the County Polo Association early next month, at which the excessive rates charged for Polo ponies will be considered. The existing rates are certainly very heavy for ponies going to and returning from matches, and something like the same rules should prevail with Polo ponies as with horses going to shows or Hunters. Anything and everything which tends to lessen the expense of playing polo is of importance to the breeder—more people would play polo if the cost of the game is lessened, and consequently more ponies will be wanted. It is the incidental expenses which make Polo costly. And in these days of motor cars, Polo pony breeding is one branch of horse breeding that is not affected.

A Good Stud.

IT is not often that I mention a stud of horses that is going to be sold in these columns, but exceptional circumstances are a sufficient excuse for me calling attention to Mr. W. Eyton's half dozen weight-carrying Hunters that are to be sold at Tattersall's to-day. Of the half dozen five are well up to 17 stone, and the horse I particularly liked, Ginger, an eight-year-old chesnut by Greenfield, is in my opinion just the right type of weight-carrier. He is one of the old, long, low, and level sort, standing 15 hands 3½ in., and is remarkably level in shape, and very near the ground. He is also a fine mover, and looks a Hunter all over him. His sire Greenfield is a rare bred one. He was by the famous Springfield, and his dam, Lady Lucas, was by Tynedale, who was by Warlock, and who strained back to Whisker and Phantom on the dam's side. Lady Ripon, the dam of Lady Lucas, was by Stockwell, from Mary Aislabie by Malcolm, so that Greenfield is remarkably stoutly bred on the dam's side, coming from a family of short-legged powerful horses. I wonder if there are any stallions by him travelling. If there are and they are well bred on the side of their dams they should make famous Hunter sires. Greenfield was foaled in 1883, so if living is an old horse. He is a rare sire if his stock all take as Ginger.

THE LOOKER ON.

Good Prices for Hunters.

The chief lots included in the sale of Messrs. Warner, Sheppard, and Wade, at their Leicester Repository on the 12th inst. were Hunters sent from the South of Ireland by Mr. T. Donovan, M.F.H., and they fetched capital prices. The top price, 175 guineas, was paid for an upstanding bay gelding described as being up to any weight; and two other Hunters, one the winner of a point-to-point steeplechase over one of the most difficult countries in Ireland, each reached 150 guineas; whilst a chesnut gelding up to 14 stone seemed to be a bargain at 110 guineas. Mr. G. E. Gibson sent a nice draft of Hunters from Oakham, and Sprite, up to 13 stone, reached 95 guineas, while Edante changed hands for 80 guineas. Other consignments sold at prices ranging up to the last mentioned figure.

Suffolk Horse Society.

A meeting of the council of the Suffolk Horse Society was held at Ipswich on Tuesday, when, before the business on the agenda was commenced, a vote of sincere condolence with the Marchioness of Bristol and other members of the family on the great loss they have sustained was passed on the motion of the president, Sir Cuthbert Quilter, Bart.

The Breeding Scheme Committee reported that at the annual sale, held on July 29, eight nomination foals were sold, averaging £20 13s. 6d., against £18 3s. 6d. in 1906. Owing to the small crop of foals, only 42 per cent. of the mares put to stud producing foals for the sale, the committee has to report a loss of £14 10s. on the year's work. Considering, however, that this money has been the means of encouraging and extending the breeding of Suffolk horses, and has been of material assistance to small farmers, the financial deficiency may safely be regarded as money expended in a satisfactory manner in furthering the chief aims of the society. At the same time, the committee are of opinion that a much greater percentage of foals may be safely anticipated in average years.

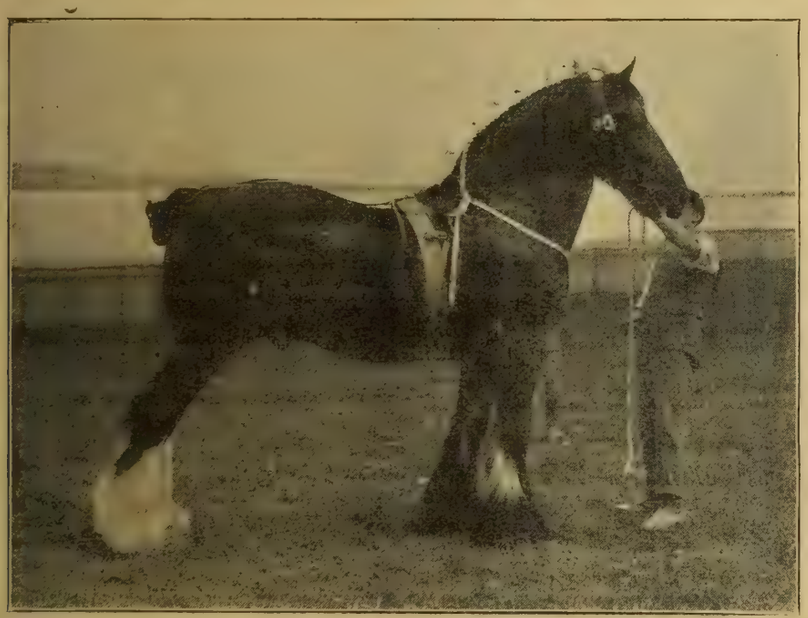
The president said he did not know that he had anything to add to the report. He thought that the small deficiency should not cause a feeling of discouragement. The scheme was uniformly successful, and it had doubtless done a great amount of good. Many had been benefited, and it had, undoubtedly, useful work before it. He moved the adoption of the report, which was carried.

A letter was read from the secretary of the Royal Agricultural Society, stating that the council would have under consideration the prize sheet for 1908 at their meeting to be held on November 6. The hon. director was desirous that the prize list should then be as complete as possible, and it would be a great assistance if the Suffolk Horse Society would be so good as to state in what way they proposed to support the prize sheet in furtherance of the interests of the Suffolks.

Accompanying this was a letter from Sir Gilbert Greenall, stating that though a long distance from Newcastle, he hoped the Suffolk Horse Society would do what they could towards the classes for Suffolks at the Royal. The exhibition of Sir Cuthbert's team had, he felt certain, made many people interested in the breed that previously took little notice of them. He hoped the Suffolk Society would give something to the breed classes beyond its challenge cup. He might say that it was proposed to give prizes at the coming show for heavy cart horses, shown in vehicles, and he hoped it would be a most attractive feature.

The president observed that, having read this communication, he thought it would be well to call the council together. He somehow felt that the Royal had not in the past been quite in as much accord with them, nor they perhaps with the Royal, upon certain points, as they could well have hoped. However, what they had to consider was what they as a council should do next year. They did not, of course, forget that they were desirous of keeping their place with the Royal Society, and while they might be disposed to meet the proposals of the Royal, were the Royal, on their part, disposed to meet their views? This was a point which they had to consider, and he should be glad to know the feelings of the council on the point.

Mr. W. R. Hustler asked to be permitted to digress from the agenda for a moment. He desired, now that they were on the subject of the Royal prize list, to make a proposal, which he was sure would meet with the approval of the council and their cordial support. It was that they should accord a hearty vote of thanks to Sir Cuthbert Quilter for the great assistance he has rendered the Suffolk horse in exhibiting his valuable team of horses at the Olympia and at the Royal Show. The result had undoubtedly been to create a boom in Suffolk horses, much to the benefit of the breed, and at the same time their pockets, while it had undoubtedly awakened much widespread interest in the chesnuts. It had been a huge advertisement—indeed, one of the best that the Suffolks had had. He had much pleasure in proposing also that the resolution should be placed on the books of the Suffolk Horse Society.



The motion was carried unanimously amidst applause.

Sir Cuthbert Quilter, in acknowledgment, remarked that though he embarked upon the Olympia venture with great hesitation and considerable difficulty, he must confess that he was extremely glad at the result. He trusted that it might be an inducement to the authorities at the Olympia, and on the part of the Royal Show, to endeavour to afford owners an opportunity of showing their horses in harness and in waggons. Of course, the expenses of a team of that size were very heavy indeed, and if any prize was given at the Royal or Olympia shows it might be regarded as something by way of a return for expenses incurred. He desired to heartily thank the council for the resolution they had just passed.

Considerable discussion then took place upon the letter of the Royal Agricultural Society, and it was suggested that the Suffolk Horse Society should contribute the same amount as last year to the Suffolk classes. It was said, however, that they were practically prevented from showing the best horses in consequence of the age limit for the classes. One gentleman pointed out that this applied all round, and a member of the council replied that gentlemen identified with other breeds did not probably want to show their older horses.

The president reminded them that there was proposal to have a class for heavy horses in harness, and suggested that possibly an opportunity would be afforded of showing mature Suffolks in connection with this section of the show. The expenses of such a show were, however, considerable, and perhaps the Royal could be induced to provide a fund from which to ease the expense of the conveyance of vehicles to exhibitions.

The proposal was regarded an excellent one, and the council eventually resolved that £40 should be given as last year, and the president, Mr. W. R. Hustler, and Mr. E. R. H. Moorsom were appointed a committee to arrange the apportionments of the classes.

Mr. E. Muntz's Shire Stallion King Forest, winner of First Prize for Shire Stallions foaled in 1905 at the Bath and West Show this year. Its sire was Lockinge Forest King, dam Lockinge Dimple, and was bred by Mr. H. R. Craig, Market Harborough.

Record Price for a Dorset Horn.

A record for Dorset Horn sheep was established at the dispersion of the famous registered flock of Mr. J. H. Creed, at Burstock Grange, near Bridport, when six-teeth ewes made up to 110s. apiece, which was given by Mr. C. Scutt, a prominent Dorset flockmaster, of Preston, near Dorchester. The next age fetched 105s., Mr. Murford purchasing at this figure, whilst the two-teeths, which excited unusual rivalry, went up to £8 10s. apiece, the entire flock of ewes, some 800 in number, averaging 80s. a head. This price, extraordinary as it was, was eclipsed by the Chilver lambs, Mr. Johnson, an Australian buyer, paying £8 10s. for a pen, a price never before touched for lambs in the West of England, or, in fact, any other sale for lambs simply for flock purposes.

Professor Arkell, of McGill University, Canada, has purchased for the Macdonald College a very fine Large White boar and sow from the Colston Bassett and Borrowfield herds, bred from noted prize-winning sows. An order has also been received for a number to be sent to Frankfort, Germany.

SHEEP: NOTES AND JOTTINGS.

THE warm and fine month of September, followed as it has been by abundant showers during the past fortnight, has undoubtedly improved the prospects for the winter keep of the flockmaster. The vigorous growth one notices when passing through the country, particularly in the swedes and turnips, is a gratifying feature for those who are flockowners. The mangel crops and also those of the thousand headed kale and other fodder crops for autumn consumption is highly satisfactory.

TAKING a review of the position of the flockmaster so far as regards food for the coming winter and spring, it may be said that there is every reason to anticipate an abundant crop.

TO those who own breeding flocks experience has proved that an abundant crop of turnips is not altogether a blessing. If reference be made to the lambing reports in past years one cannot fail to be struck with the fact that it is almost a certainty that in a good turnip year the losses in the lambing flocks are always heavier and more severe than in those years in which the turnip crop is a short one.

THERE cannot be any question but that a large percentage of this heavier loss is accounted for by too many turnips being given to the lambing flock previously to the lambing time. It is as well, therefore, that attention should be called to this fact before harm has been done.

EVERYONE who is acquainted with the management of those farms whereon the large lambing flocks of this country are kept, know full well that the turnip crop is grown with a dual object—first, to provide food for the flock, the produce of which forms a very large proportion of the receipts of the farm, and, secondly, to provide means for manuring the land upon which these crops are grown. Consequently those who are farming such land naturally look to the ewe flock to consume upon the land where the turnips are grown.

EXPERIENCE, however, as mentioned above, shows that when too abundant a supply of roots is given to the lambing flock, the results accruing from that flock are not so good as when the supply of roots is small, and this supply has to be supplemented by an additional supply of dry food in some form or other.

NOW, in view of the experience of former years, the prudent manager of a lambing flock will take care that the usual supply of dry fodder shall always be given to the ewe flock, no matter how large the crop of turnips may be.

IF it should be that the turnip crop is so abundant that the land cannot be cleared in time for the succeeding corn crop by the ewe flock, then comes the position as to how the surplus shall be dealt with. There are two ways of doing this, either to purchase other sheep, and let them eat the roots, or to draw the roots off and consume them elsewhere by cattle, or, if neither of the above methods can be adopted, then there is a third way—*i.e.*, that the over-abundant supply of roots shall be utilised for manure—*i.e.*, that the roots shall be ploughed in. This last resource, however, must only be taken when all other schemes have been exhausted; and it is well to remember that there are so many chances against the root crop holding out sound all through the winter, and consequently the last method recommended for dealing with the surplus crop should not be carried out until a certainty has been secured of a full supply of food for that period of the year, when the food supplies for the flock often run very short—*i.e.*, in the early spring.

NOWADAYS one does not see so much of that excellent practice in dealing with the root crops, followed, as used to be the case some thirty years ago, *i.e.*, for the swedes packed together in long rows and then to be covered up by running the plough down each side of them. The practice was to put some five or six rows of swedes together, packed closely, and then a couple of furrows thrown up by the plough on either side to cover them up and to keep them to some extent protected from the frost, and also to preserve them in a moist and good condition for late feeding in the spring.

THE importance of the flock to every farmer who owns one needs no word to emphasise it at the present, for a reference to the prices that are being paid for the first quality home grown and fed mutton proves most conclusively that this source of income is one of the most lucrative that is at the command of the farmers at the present time, and there is no indication whatever of any likelihood of the value of English mutton being depreciated for some time to come.

THE prices at which store sheep have been selling also show how keen the demand is for them, and this fact emphasises how essential and important it is that all owners of flocks should take every means they know to prevent any unavoidable losses taking place in the lambing pen, for every lamb that is saved means a substantial addition to the profit that such flockowners ought to be able to make.

ADVICES received from the Argentine show that the prices realised there by the Argentine-bred Lincoln sheep at Palermo Show, whilst they have not been quite so high as was the case last year, are still at an average that affords those who are importing stud rams an ample margin of profit for breeding stud sheep.

AMONGST the prices realised by Mr. M. J. Cobo (who was the principal winner at Palermo) for his rams were £323 15s., £262 10s., £87 10s., £78 15s., &c., the average for fourteen being £70 15s.

MR. T. E. DE ANCHORENA averaged £42 2s. 6d. for three, Mr. Villafane £59 5s. for seven, Mr. C. Lopez £59 7s. 6d. for five; 102 rams, bred by different breeders, which sold at prices from £87 10s. to £10 5s., averaged £23 4s.; another lot of seventeen averaged £25 17s. 9d.

MR. M. J. COBO averaged £24 1s. 10d. for fifteen, the range of price being from £29 7s. 6d. to £19 5s.

A NOTABLE sale of imported sheep took place on September 17 last at Buenos Ayres. This consignment, which numbered thirty-six yearling rams, averaged £34 10s. 10d., Mr. Dudding's quota making an average of £177 2s. £182 was the top price, another made £306 5s., and so on down to £23,12s. 6d. Mr. E. C. Howard's average for five was £70 17s. 6d., top price £87 10s. Mr. J. H. Headland's average for three was £43 15s., top price £70.

MR. H. CASSWELL'S average for seven was £42 15s., top price £87 10s. Mr. W. Pate's average for seven was £40 15s., top price £70. Mr. W. S. Fox's average was £37 7s. 11d. for six, £70 being the top price. Five ewes from Mr. C. E. Howard's flock averaged £58 6s. 8d., five from Mr. Henry Budding's flock averaged £26 15s., eight from Mr. H. Casswell's flock averaged £21, and twelve lambs from Mr. Henry Dudding's flock averaged £22 8s.

Sheep Sale at Sittingbourne.

At Sittingbourne on Wednesday there were offered about 6,000 sheep and lambs which, on the whole, met a satisfactory demand, only a few failing to find purchasers. Kent wether lambs made up to 36s., several lots making 30s. and over.

YOU WANT

a Boot in which you can do the work about the Farm, feel easiness in walking and yet keep out the damp?

NOW we are making such a Boot on a specially Sprung last, enabling the wearer to plough or go about the byre with absolute comfort. They will not tire the feet, are made from home tanned Leather, Tackets to heels and guaranteed water-tight.

10/6 will bring a pair of these comfortable FARMER'S BOOTS to your door.

Better quality in same Boot, whole Kip Leather . . . 14/9

Tell us your size and send a P.O. for the amount. We do the rest.

E. BROWN & SON,
The Pioneers in Farm Foot Wear,
313, ARGYLE STREET, GLASGOW.
Price List Free on Application.

Kent ewe lambs of good quality were in good request, and ranged up to 35s. Kent lambs (ewes and wethers mixed) ranged from 36s.; half-breds made from 31s.; Southdowns, from 24s.; and one lot of Suffolks, from 32s. per head. The Kent ewe tegs, many of which were draft lots, were hardly in so keen demand as expected, 59s. was the top price, and for wethers they ranged down to 38s. 6d. per head.

The ram trade, although the prices were not high, was decidedly better than at Stroud and the whole of the 152 registered rams offered were readily sold. Mr. W. F. Wood sold a dozen at an average of £6 5s., Mr. Faunce de Laune giving £11 10s., the top price; Mr. Croucher gave £7, the others ranging from £6 10s. Mr. M. Benstead's annual consignment came out well and were readily sold at an average of £6 4s. 2d. for the twenty-six. Messrs. Dean gave the top price, £8 15s., the others making from £8 to £6 15s. Fifteen of Mr. R. G. E Locke's were disposed of at £4 6s. 4d., and here £6 was the top price. The Exors. of Mr. W. Elvy sold thirty at £6 0s. 11d. Mr. Philips gave the top price, £11 10s., the same buyer took another at £10, at which figure Mr. Ledger also got one. Thirty from Lieut.-Colonel Honeyball realised an average of £4 3s. 10d. Mr. Warren gave the top price of £7 10s., whilst twenty of the second run from Lord Harris's flock averaged £5, the best price being £8 10s., given by Messrs. Wakeley Bros.

Maidstone October Fair.

The annual fair at Maidstone took place on Thursday, when the supply, with the exception of cattle, was the largest for many years, whilst despite unfavourable weather there was a very large attendance of buyers and others. Sheep were the feature of the fair, there being on offer upwards of 13,000 sheep and rams, and they met a ready trade and good prices.

Messrs. Ambrose and Foster offered no fewer than 8,606 sheep, as compared with 7,200 last year, together with 179 rams, 18 horses, and 95 beasts. The sale of sheep was also highly satisfactory, and throughout the bidding was brisk. The prices for Kent lambs were from 27s. to 30s., but in a few cases 32s. and 33s. were obtained. The highest price for half-bred lambs was 37s., which was given for a pen of twenty belonging to Mr. W. Veitch. Some good prices were realised for Kent sheep, Mr. C. F. Foster obtaining 65s. for a pen of ewe tegs, and Mr W. L. Wigan 56s. for similar sheep Mr. T. Phillips sent eight pens of ewe tegs, which changed hands at from 44s. to 61s., whilst Mr. G. Farmer secured 62s. for one pen and 60s. for each of three other pens.

The first Kent rams offered were a consignment of thirty-four by Mr. G. Farmer, of Leeds Abbey, and these made the best prices of the sale, the top figure being £12 1s. 6d., which Mr. Champion gave for a splendid specimen. Lord Falmouth also became the owner of one almost as good for £11 11s., whilst others from the same flock reached up to 8½ guineas. Rams from other breeders made up to 7 guineas, whilst for ram tegs prices ranged from 2 guineas to 4 guineas.

Mr. Edward Waterman offered over 3,773 sheep and lambs, 211 rams, &c., and with bidding brisk, a good trade was done. Of Kent sheep, the principal consignor was Mr. F. Chambers, of Chart Sutton, whose 200 ewe tegs were of excellent quality, and were quickly disposed of, the top price of 57s. being obtained, whilst other figures were 56s., 55s., and 54s, other consignments reaching 49s. Half-bred sheep which were not particularly numerous, reached up to 43s, and Southdowns to 50s. For the rams there was a good demand at satisfactory prices.

For rams some good prices were realised, the highest being 14 guineas, which was given by Mr. Cornwallis for a pure-bred Southdown ram of Duke of Richmond blood, belonging to the Hon. R. P. Nevill. The same purchaser also became the owner at 10 guineas of a similar sheep sent by the Hon. R. P. Nevill. These prices stood out as the highest in the sale. The next being 7½ guineas, which was also given for one of the Birling flock.

OBITUARY.

Mr. T. B. Handley.

The death occurred on Tuesday morning, as the result of an accident, of Mr. T. B. Handley, of Swarkestone Lowe, near Derby. On Wednesday the deceased gentleman was thrown out of his trap while returning from a ploughing match, at which he had been judging, and sustained internal injuries. Mr. Handley was one of the largest dairy farmers in the country, was a member of the council of the Derbyshire Agricultural Society, and was looked to as an authority on pigs and sheep and the quality of milk.

At the annual cattle fair at Knaresborough on Wednesday there was a small show of grazing stock and a fair supply of horses. Calving cows were in better demand, whilst the best cart horses made £40 to £60, harness horses £25 to £35, ponies £15 to £20 each.

IMPORTANT TO FARMERS and POULTRY KEEPERS.

How is it your Hens are not laying as they ought?

They require a little

"GARSTANG TONIC"

In the morning's soft food, which will keep them free from Colds, Roup, &c., and in a short time the Egg Production will be wonderfully improved.

All Poultry Keepers ought to know its value. Ask those who have tried it!

Beech Mount, Garstang.

Mr. J. Thomas, Dear Sir,—My Turkeys for last Xmas kept dying off one by one until I was afraid I was going to lose them all; my man, Walter Cross, had heard something of your Powder, so he suggested to me one day that we should try the "Garstang Tonic." We did so, and I can assure you that we lost very few more, and what were left fed up and were as good a lot of Turkeys as ever I had for Xmas. I also gave it to some Irish pullets, and it had exactly the same effect on them, smartening them up, and making them ready in very little time. I can confidently recommend the "Garstang Tonic" as the best preparation ever I have used, and I have tried a good many in my time.—Yours respectfully,

(Signed) ROBERT MARSDEN.

To be had from all Grocers and Chemists. Be sure you ask for Thomas's "Garstang Tonic," and don't be put off with any other. If you have any difficulty in obtaining the Powder write direct, and you shall have a tin per return.

Sold in tins 10d., 1/6 & 2/6. Post free 1/1, 1/9 & 2/9.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock. The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

PUBLICATIONS RECEIVED.

We have received a copy of a booklet written by Mr. A. H. Hartevett, of 6, Stationsweg, Rotterdam, which deals with the Canadian Pacific Railway Company's Irrigation Project in Canada, and more especially with Southern Alberta. A series of dry seasons turned the attention of settlers to the possibility of aiding the growth of their crops by irrigation. Such marked success attended their efforts that general attention was directed to this method of extending settlement and increasing crop production. This little booklet shows how the irrigation scheme was carried out by the Canadian Pacific Railway Company, and the great benefit all classes of agriculturists have derived from irrigation. The scheme makes the farmers practically independent of rain, for if a dry season occurs, they can water their fields and stock by means of the canals made under the irrigation scheme. The land out in Southern Alberta is cheap, and a determined man can save money and become independent long before old age. We strongly advise intending emigrants to get a copy of this booklet, which is written in English and well illustrated, for Southern Alberta is destined to be one of the first countries for stock raising, dairying, and small farming.

We have received a copy of the *Salisbury and Winchester Journal's* Complete Farmers' Account Book. This book will enable the farmer to keep his accounts accurately and in order without him having to learn all the intricacies of book-keeping, which he has not time nor the inclination to do. Most farmers are very careless about their accounts, and only hazard a guess at what they earn above their expenditure; but this book would change all that, and the farmer will be able to tell at a glance what a certain thing would cost or was sold for and the date of the transaction, instead of having to spend a lot of time looking up bills, &c. All the transactions are printed and classified, and all the farmer need do is to enter the amount of the transaction, and at the end of the year he can fill up the balance sheet which is already made out for him with the exception of the amounts, and thus tell how much profit he has made during the past year, what expenses he has incurred, and how his profit has been made, besides which there is a space for memoranda at the end of the book, also spaces to show how many cheques he has received, the amount and who they are from. The book is well got up and is printed on good paper, besides being enclosed in a stout orange and green cover. No business can be satisfactorily carried on without book-keeping, and this useful book is published at 5s, from the *Salisbury and Winchester Journal* office, Salisbury.

Messrs. Wm. Blackwood and Sons will shortly begin the publication of a new edition of "The Book of the Farm." Originally compiled by the late Mr. Henry Stephens, F.R.S.E., "The Book of the Farm" has for nearly threequarters of a century been recognised as the leading standard work upon British agriculture. In the gifted author's own days three large editions were exhausted; and about twenty years ago the publication was begun of a fourth edition, revised and in great part re-written by Mr. James Macdonald, F.R.S.E., secretary of the Highland and Agricultural Society. That edition with several reprints has also been exhausted, and to meet the continued demand a fifth edition is now being prepared. The work is being brought thoroughly up-to date in all its departments, and in this undertaking the editor is being assisted by a large number of the most eminent agricultural authorities of the day. As with former editions, the work will ultimately be published in three large one-guinea volumes, but in the first place it will be issued in six divisional volumes at 10s. 6d each. Publication will begin early in the new year.

MISCELLANEOUS.

POTATO BAGS, Second-hand, to hold one cwt, 3d. each.—FIRMIN & Co., Handford Works, Ipswich.

POULTRY.

PEAFOWLS and SWANS. Largest stock in England. All varieties kept.—WHEADON Ilminster.

TURKEYS (splendid birds), Buff Orpingtons, and Partridge Wyandottes for Sale, at reasonable prices. SEED WHEATS. — Webb's Red Standard, White Stand-up, Red Fife, and Squarehead Master, 40s. per qr. —NIXON (Lord Wolverton's Farms), Iwerne Minster, Blandford.

PUBLICATIONS.

JUNIOR COUNTRY READERS. By H. B. M. Buchanan, B.A., and R. R. C. Gregory. Gl. 8vo. I. True Animal Stories, 128 pages, 25 illustrations, 1s.; II. More True Animal Stories, 172 pages, 29 illustrations. 1s. 2d.; III. Talks on Country Life. 190 pages, 67 illustrations, 1s. 4d. SENIOR COUNTRY READERS. By H. B. M. Buchanan, B.A., Gl. 8vo, I. 256 pages, 65 illustrations, 1s. 6d.; II. 242 pages, 84 illustrations, 1s. 6d., III. 302 pages, 143 illustrations, 2s. LESSONS ON COUNTRY LIFE, 342 pages, 175 illustrations, Gl. 8vo, 3s. 6d. THE OBJECT OF THE READERS. —While the interest and simplicity of the reading matter fixes the attention of boys and girls unconsciously to themselves, they learn a great deal of accurate knowledge concerning life and work in the country, and at the same time there is aroused in their minds a desire to go outside and observe things for themselves.—London: MACMILLAN & Co., LTD., St. Martin's Street, W.C.

THE NEW ZEALAND FARMER. Stock and Station Journal. An illustrated monthly publication, containing practical and scientific information on Farming, Stock Breeding, Cattle, Horses, Sheep, Dairying, Fruit Growing, &c. The only paper entirely devoted to Farming matters and circulating throughout the Colony. Price 1s. 1d., by post 1s. 4d. Proprietors, The Brett Printing and Publishing Co., Ltd., Auckland. London Manager, R. B. BRETT, 134, Fleet Street (over "The Standard" Offices) London E.C.

A NEW FARMER'S Account Book! 254 pages; the most complete and up-to-date; price 6s., post free. — CULLINGFORD, Printer, Colchester.

FARMS, BUSINESSES, &c., TO BE SOLD OR LET.

BAXTER, PAYNE & LEPPER, LAND & ESTATE AGENTS, AGRICULTURAL VALUERS, SURVEYORS, & AUCTIONEERS. Special Agents for DAIRY, FRUIT, STOCK AND MARKET GARDEN FARMS. Particulars on application. All applicants stating details of requirements will have a selected list of Farms answering thereto forwarded free of charge. MESSRS. BAXTER, PAYNE & LEPPER'S AGENCY has proved a valuable medium for Owners and others to secure substantial Tenants for FARMS, ESTATES & COUNTRY PROPERTIES. Landed Estates managed and owners advised upon the best method of dealing with Farms to meet the circumstances of present times, and so protect interest and income. Offices: 69, King William Street, London, E.C., and Market Square, Bromley, Kent.

TO BE LET, large Warehouse in commanding position opposite the Custom House in Lower Thames Street. Floor space, 24,500 ft, or might be divided.—For full particulars apply to ALFRED SAVILL & SONS, 24, Great Winchester Street, E.C.

DAIRY FARM TO BE LET. 24 miles south of London, 2½ miles from 3 stations, 190 acres (38 arable), superior modern residence and ample buildings, 5 good cottages, water laid on. Rent £300. Possession at once.—Apply to Mr. HARRIE STACEY, Auctioneer and Estate Agent, Redhill.

SHIPPING.

CANADIAN PACIFIC LINE.

FASTEST TO CANADA.

NEW "EMPRESS" MAIL STEAMERS (4 DAYS OPEN SEA). Weekly from Liverpool. Work and Wages Pamphlet free. Emigrants met at Liverpool by C.P. officials.

For Passages, apply C.P. Rly., 62, Charing Cross, S.W.; 67, King William Street, E.C., or Local Agents.

EDUCATIONAL.

EDINBURGH UNIVERSITY.—AGRICULTURE COURSE. Prospectus, Edinburgh Agriculture College; also Regulations, Degree of B.Sc., and GARTON LECTURES on COLONIAL and INDIAN AGRICULTURE. — Apply to CLERK OF SENATUS.

BANK.

BIRKBECK BANK.

Established 1851.

Southampton Buildings, High Holborn, W.C.

2½ PER CENT. INTEREST allowed on Deposit Accounts.

2 PER CENT. INTEREST on Drawing Accounts with Cheque Book

All general Banking Business transacted. ALMANAC, with full particulars, POST FREE.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.

KENNEL CLUB'S DOG SHOW, to be held at the CRYSTAL PALACE, OCTOBER 22 to 24, 1907 The London and North Western Railway Company will make arrangements for Through Vans for the conveyance of Dogs to be run to the Crystal Palace on Monday, October 21. Consignments from the Branch Lines, and from Nottingham, Peterboro', Oxford, Cambridge, &c., will be placed in these Vans at the various Junctions. Conveyance Rates can be obtained at the various Stations on the Line. Arrangements will also be made for the return of the Traffic in Through Vans at the close of the Show, and Exhibitors are requested to order their Consignments "per London and North Western Railway." The Company's representatives will be at the Show to answer enquiries with regard to the arrangements for the return journey. All information can be obtained of Mr. ROBERT TURNBULL, Superintendent of the Line, Euston Station, London; the Company's District Superintendent, Mr. H. A. WALKER, Euston Station, London; or Mr. I. T. WILLIAMS, Broad Street Station, London, E.C.

FREDERICK HARRISON,
General Manager.

AUCTIONEERS, AGENTS.

LARGEST AND OLDEST LIVE STOCK AGENCY. ESTABLISHED 1878.
Practical Farmers in 57 Counties (whose Testimonials will be sent on application)
TESTIFY THEIR COMPLETE SATISFACTION with the LIVE STOCK with which they have been supplied by
E. GOODWIN PREECE, who buys on Commission CATTLE & SHEEP of all breeds and classes for FEEDING, DAIRY, or BREEDING. Satisfaction Guaranteed. Personal Buying. Ewes, from 35s. to 55s., according to breed and age.

Welsh Ewes, 18s. to 25s.	Cattle, 2 years and over, £10 to £15.
Cheviots, 26s. to 35s.	Milch Cows, from £17 to £23.
Yearling Wethers, 45s. to 50s.	Dairy-bred Heifers for bulling, £8 to £10.
Lambs, from 27s to 35s.	12 West Highland Bullocks, 2 years, £8 10s.
Rams (any breed), 5 to 10 gs.	
Yearling Cattle, from £7 to £10.	
11 West Highlanders, £7 10s.	

CROSS HILL, near SHREWSBURY.

Agents, Situations Wanted.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

AS ASSISTANT, or in position of trust, on gentleman's farm; age 24; good rider and driver; well up in general farming; capable and energetic worker; sound knowledge of care of stock accounts; experience in Argentine and England; excellent references.—BENSON, 86, Culverden Road, Balham.

WANTED, PARTNERSHIP IN GOOD FARM. House essential. —Write Box 1492, WILLING'S, 125, Strand.

ADVERTISER (20) wishes to get on farm where pig and sheep breeding and feeding is carried on, as Working Pupil or Improver; 2 years' experience with good men. Midlands preferred.—"T," Office of MARK LANE EXPRESS.

"ARTIFICIAL MANURES. How to Make, Buy, Value, and Use." A Useful Handbook for Agriculturists, Chemical Manure Manufacturers Merchants, and others. By Alfred Sibson, F.C.S., Consulting and Analytical Chemist. Revised and re-written by the Author and A. E Sibson, F.C.S. Price One Shilling. Post free 1s. 2½d. —W. A. MAY, "MARK LANE EXPRESS" Office, 3, Wellington Street, Strand, London, W.C.

WILL BE ON SALE throughout the United Kingdom EARLY IN DECEMBER.

Give order at once to your Local Bookstall, Bookseller, or Newsagent, and thus **SAVE POSTAGE.**

This useful Year-Book can also be obtained direct from the

PUBLISHER, 3, Wellington Street, Strand, LONDON,

or the "Mark Lane Express" Stand at the forthcoming Smithfield Club Cattle Show.

PRICE ONE SHILLING. BY POST, 1/4.

Mark Lane Express Agricultural Journal and Live Stock Record.

Seasonable Topics.

Floods. RECORDS show that heavy rains in the autumn are not unseasonable, while they are also beneficial after the harvest is gather over in filling up the springs and replenishing the earth with its essential moisture, but, of course, it is easily possible to get rather too much of a good thing. Some of our friends are thinking so who want to get on with their preparations for sowing, but are prevented from doing so by the moist conditions prevailing. We have had storm and tempest since October came in, and at the moment of writing rivers have swollen into torrential streams of muddy water, and many acres of low-lying land are under water. This state of affairs is somewhat troublesome and inconvenient, but even floods have their redeeming features if they do not come at the wrong season, for after the water has gone down a rich deposit is left on the land which has its own fertilising properties, and some of the best feeding and dairying land in the country is to be found in the valleys of rivers where it is liable to be submerged in rainy seasons. The trouble is when the floods come at the wrong time, in the summer for instance, when hay is about, and then the effects are disastrous, as many farmers know to their cost.

Autumn Tints. FARMERS are essentially a severely practical class of men, and are little prone to give way to feelings of sentiment, but breathes there a man, we wonder, in the agricultural fraternity who can look on a coppice or woodland in the autumn, when the leaves are painted with a hundred glorious and delicate tints, without being moved with the beauty of the scene? If so we pity him, for one needs not the soul of an artist to admire the work of the great painter, Nature, on the threshold of winter. We are used to the picture. We have seen it every year from childhood upwards, and have written of it more than once, but as successive autumns roll round it is placed before us again and has all its old attractions. The golden tints of ripened leaves have an appeal of sadness about them, because they speak and tell of death, but in every touch of brilliant colour one sees on the part of Nature a combined—yea, and successful—attempt to make her dying days the most beautiful. And when the colours are at their brightest the scene changes; frost comes, leaves fall, and winter reigns supreme.

Falling Leaves. WE have dwelt above on the beauty of autumn tints and their appeal to human nature, but there is something dismal and depressing about the falling of leaves. First they come to the ground with a continuous pitter-pat that grows monotonous, and then the process is aided by a storm of wind and rain, which brings off the leaves in showers and hurtles them hither and thither until they are finally deposited in some corner as mere heaps of dampness and decay. Whether the habitation be a mansion, a farmstead, or a cottage, its surroundings are untidy and look uncared for while the leaves are falling, and so they must remain till the trees are bare and a general clearing up can be effected. But the leaves have not completed their work when they flicker mournfully to the ground, for decay follows death, and in the latter process food is provided for living vegetation, and the cultivated crust of the earth is improved by the humus matter that is added to it. Leaf-mould is not such an essential requirement of the farmer as the gardener, and the latter would have difficulty in finding a substitute for the above material when mixing up his soil for potting purposes. But in agriculture falling leaves play their own part, which is not a small one when all things connected with them are considered.

The Earthworm. IN connection with the fall and decay of leaves we may associate that humble and silent friend of the farmer, the earth worm, who drags quantities of fallen leaves into its burrows, breaks them into tiny morsels, mixes them with the soil, and rich humus is formed. Nor is this the only good office which worms perform, for they live by consuming earth containing vegetable matter, and having been made use of in this way, the soil is brought to the surface by the worms and cast about in the form of a surface dressing. That great observer of Nature, Darwin, is the authority for the statement that in some parts of the country ten tons or more of earth on every acre passes every year through the organs of worms and is brought to the surface. Worms are like some other blessings that are never missed till they are gone, and we have known instances of wholesale destruction of these creatures through over-applications of gas lime or by tidal floods, and the ground set so hard and steely that it was most difficult to break it asunder. Further credit to the earthworm is given by the statement that its burrows are useful aids to drainage, and they act as channels by which the air enters the soil. In short, the earthworm is such a useful creature that it is deserving of a word of approbation occasionally, lest we should forget the good offices it performs.

MILL ON THE RIVER AVON (WARWICKSHIRE).

Milking Machines. IS the dainty, prim milkmaid of poetry and fiction to give way to a prosaic machine for extracting the milk from the udder of the cow? Time will tell, but at therecent Dairy Show a large and interested crowd gathered round to see cows milked by machinery without the aid of human fingers. Well may the old country dame ask: "Lors a mussy, what is the world acomin' to?" But what do we hear about the new cow milker? Namely, that it extracts more milk than human hands, and by the aid of machines two boys can milk cows in less time than six adults could perform the operation by hand milking. Saving of time and labour and saving of milk! These are items which appeal to farmers of to-day, and particularly those farmers who dispatch their milk from the shed and experience difficulty in getting good milkers. We hold no brief for the new machine, and do not prophecy about its future, but like all other machines, if it does its work well and saves time and labour, no sentiment will stand in the way to guard the occupation of the milkmaid.

Damsons on Farms. THE damson is not everybody's fruit, because it selects its own localities where it will grow and flourish, and it is not represented in quantity outside these areas. But in what are known as damson districts this is an exceedingly useful and popular fruit, as it is a general favourite with the public, and the demand for it is usually keen. Like all the plum family, damsons are either plentiful or scarce according to the season, and sometimes there are gluts, but, though this may be termed a damson year, the demand has been keen, and prices have kept up fairly well. Damsons are a farmer's fruit, and in Cheshire, Shropshire, Staffordshire, and other parts where the fruit flourishes, one sees trees growing in orchards and dividing hedgerows, costing nothing to cultivate, and, taking one season with another, adding appreciably to the revenue of the holding. It is questionable, indeed, whether there is any fruit which demands so little from the cultivator and gives, taking one season with another, such a good return. Indeed, where the damson-growing farmer is concerned, picking and marketing are practically the only items of expense.

Liquid Manure. PASSING the other day by a farmstead situated near to the roadside we noticed a stream of rich brown liquor that had oozed from a heap of manure in the yard, trickling down amongst the cobblestones, and eventually losing itself amongst the nettles and docks growing luxuriously in a ditch close by. If this was a solitary case there would be no need to comment on it, but the same thing is occurring on scores of farms, and hundreds of gallons of liquid manure —the very essence of plant food—are annually wasted in this deplorable manner. We know, of course, that the proper way to keep manure is under shelter, but covered yards are the exception rather than the rule, and scores of farmers have no means of preventing the rain from falling on the dung heap and washing the plant food out of it. After admitting this, however, there are numerous instances in which a contrivance could be made for the liquor from the dung-heap to run into a tank or even a hole, from which it could be taken from time to time in cart or barrel and put to more useful purpose than assisting the growth of docks and nettles in adjoining ditches.

Dirty Milk. A SHORT time ago a milk vendor was brought before a Westminster magistrate to answer a charge of selling dirty milk, and not being able to do this satisfactorily, a sentence of six months' hard labour was passed on him. We commend the magistrate on displaying the courage of his convictions in this manner, as it will perhaps serve as a warning to others who are not so careful as they ought to be over the manipulation of this commodity. What provision will be made in the Bill that Mr. John Burns has in preparation for enforcing cleanliness and purity in the sale of milk remains to be seen, but we understand that there is a possibility of the measure being introduced shortly, and the hand of the Local Government Board is strengthened by the above case. In the interests of public health it is absolutely essential that every care should be taken to ensure nothing but pure and wholesome milk being supplied, and any legislation that will assist in this direction and at the same time avoid unnecessary pressure on milk producers—farmers—will be welcomed.

Agricultural Politics.

BY A LOBBYIST.

A Welsh Purchase Movement.

I do not know whether there is any similar intention in England as there evidently is in Wales to seek to put into operation the land purchase clauses of the Act of 1892. If there be such an intention I should doubt its success. Under those clauses county councils can lend to tenant farmers four-fifths of the money required for the purchase of their holdings. In the Principality there is justification for seeking to render effective a Parliamentary purpose which elsewhere has been nugatory. First of all, there exists a sympathetic disposition in the local authorities. More important still, a considerable quantity of occupied agricultural land happens to be in the market. Of course, where the landlord declines to sell or where the local authority refuses to raise the loans, the Act is useless; but here we have conditions which make for its effectiveness. It is a singular fact that the earnest advocates of purchase—and how earnest they are and how many they are few of us had but little comprehension until Mr. Harcourt introduced the Small Holdings Bill—have not hitherto recognised that in this measure they have at hand an instrument for the realisation of their purpose. May I point out to Mr. Jesse Collings, for instance, how here he has a means of calling into existence that peasant proprietary which is his ideal? Why should he not initiate a propaganda among that landlordism which, when the Small Holdings Act was passing through the Lords, professed itself to be hugely enamoured of the idea of purchase? Why should he not appeal to those county councils which actually have these powers and against whose coercion by the executive authority the very heavens were recently bidden to revolt? Yes, this Welsh incident provides Mr. Collings with his mission.

* * *

Mr. Chaplin and his Old Constituents.

The honour which his old Sleaford constituents have paid to Mr. Henry Chaplin does them infinite credit. Mr. Chaplin occupies a position in our Parliamentary esteem in which he has no peer. No other personage in our public life can lay claim to his title—the agricultural statesman. No man has so deliberately devoted himself and his energies to the agrarian interest. No politician has so distinctive a recognition in the House itself as, if I may be allowed the phrase, an agricultural specialist. Mr. Chaplin is, in a sense, a paradox. He is both a memory and an influence. He recalls in his method and demeanour a past decade. His oratory is reminiscent of the old school—it has the element of dramatic dignity, which, in these days of compact debating, has somewhat of the appearance of diffuseness. While this is so, the right hon. gentleman is abreast of modern influences and is a recognised leader in the new economic propaganda. I should say that quite as much an influence in securing Mr. Chaplin his remarkable and distinctive position is the Parliamentary comprehension of the fine sense of honour animating him, of the catholicity of his temperament and of that generous outlook which refuses to allow his political enthusiasms to canker his personal relations. I would that Mr. Chaplin represented a constituency of a more rural character than Wimbledon possesses. I am personally profoundly grateful that Wimbledon has been the means of returning so fragrant a personality to the House of Commons.

* * *

The Anti-Socialist Unwisdom.

I have to thank your correspondent "Timely Reform" for his admirable and instructive letter on the unwisdom of introducing the Anti-Socialist propaganda into the villages. Let me emphasise his assertions. The Socialists themselves disregard the villages; they disregard the labourers. In all their scheme for what they call the redemption of labour the rural worker has no part. To their trade union conventions they do not invite that rural worker. Theirs is a purely urban faith, and they do not for the moment seek to accomplish aught more than will affect the proletariat of the towns. To, therefore, repel an attack before that attack is made is to invite assault. To reply to a faith that is not entertained is to invite an examination of that faith. The villages are as yet outside the ken of the Socialist. That Socialist, however, is a belligerent animal—he is, in Mr. Healey's famous phrase, ever on the pounce. He will go where he is attacked; and, going there, will become an evangelist in a faith that before was never understood.

* * *

Mr. Burns' Method.

Mr. Burns has, I find, been sedulously pursuing a system of rural inquiry. He has gone from village to village seeking information on the subject that is now nearest his heart—rural housing. He has gone outside official sources—he has trusted to his own intuitions and observation. The President of the Local Government Board has persuaded himself that in a matter of this moment he must secure first-hand information, and he has gone the most practical way to work to secure it. He has gone unheralded, seeking no publicity, inquiring of cottagers themselves, delving into the bye-paths and byeways, cultivating acquaintance with practical men. It is an unconventional method for a politician having the official distinction of Mr. Burns, but it must have a beneficial effect on the measure he intends to introduce. The Housing Bill will, of course, not be a mere rural measure; but its chief significance will be derived from the influence it will have on rural areas. What will be the borrowing powers conferred on rural authorities? What will be deemed a remunerative rent? What powers of rent-revision will be conferred?

* * *

Explaining the New Act.

I understand that the Liberal electioneerers, as well as Earl Carrington, are altogether satisfied with the reception accorded the Small Holdings Act. The Board of Agriculture has, of course, been deluged with requests for information concerning the measures, and the method in which it may taken advantage of. These electioneerers, however—and I do not think they are prompted by political motives alone—attach more significance to the explanatory conferences which they are conducting. Those conferences have evoked a considerable local interest, and they have been marked by an intelligence and by a practical anxiety, and, moreover, by a worldly wisdom that has greatly gratified the politicians sent down to counsel. Lord Carrington is himself so impressed with the success of this effort that he is, I am told, half convinced that it would be well to introduce into the machinery of the Act a few expert lecturers—men, in a word, who would not have associated with their practical exposition the taint of partisanism. I repeat that I do not believe that these Liberal conferences have been inspired by a mere party design. All the same their genesis cannot but affect the reception of the counsel given at them.

Monmouthshire Chamber of Agriculture.

An important general meeting of the above Chamber will be held to-morrow (Tuesday), at 2.30 p.m., at the Beaufort Arms Hotel, Chepstow, the agenda being as follows:—

1. Election of new members and other general business, including minutes of last meeting, and business arising therefrom.
2. Secretary's report of meeting of secretaries held at Royal Show, Lincoln, upon the question of forming an independent agricultural party.
3. The Draft Larceny Bill (which is intended to check trespassing in search of mushrooms, blackberries, &c.).
4. Report of the Departmental Committee on Agricultural Education (if issued).
5. Report of the Post Office Departmental Committee on insurance by Government against workmen's compensation.
6. Circular from Birmingham and District Butchers' and Pork Butchers' Trade Association respecting the decrease in pig rearing and feeding.
7. Resolution from Glamorganshire Chamber of Agriculture respecting the turning out of undesirable stallions on the hills and waste lands of Wales.
8. Letter from the Ratin Bacteriological Laboratory, and report from Glamorganshire Chamber of Agriculture, upon the experiments to demonstrate the rat-killing properties of Ratin.
9. Suggestions for Mr. John Burns' Bill, in next session of Parliament, dealing with the production and distribution of milk.
10. Other general business.

Offices, Emlyn Works, Newport, Mon.,
October 23, 1907.

Mr. G. Harrison, of Gainford, has sold a Leicester shearling ram for exportation to New Zealand, its destination being Mr. Slack's farm at Palmerston North.

An important unreserved sale of pedigree Large White Yorkshire Pigs belonging to Mr. John Blundell, of Lower Burrow Farm, Scotforth, near Lancaster, and Mr. J. J. Tong, of Hambleton, near Poulton-le-Fylde, will take place on Wednesday, November 20, at Lower Burrow Farm, Scotforth, near Lancaster. The catalogue comprises the entire herd of prize-winning pedigree pigs, numbering ninety-five head, principally choice young sows due to farrow in early spring and a quantity of boars, including the prize boar, Shard Roger, 8725, a winner of numerous first prizes, and the grand stock boar, Jester, of Nottingham, 9923. There will be a luncheon at 11.30, and the sale will commence at 1. Catalogues can be had from the owners, or Mr. E. G. Hothersall, auctioneer and valuer, Auction Mart, Preston.

BARLEY, HOPS, AND CIDER AT THE BREWERS' EXHIBITION.

AMONGST THE BARLEY.

It is difficult indeed for the mere spectator to find ideal conditions of light as well as opportunity to pay a visit to each individual sample, and compare its merits and demerits with the same exactitude as does the bench of judges, and the task is rendered the more difficult as the judging numbers remain on the sacks and render identification extremely difficult in the earlier stages of the show when alone there was ample light. Anyone conversant with the season through which we have passed would not expect English barleys to come forward in that fine condition so often seen in the hall. It was only too apparent after an inspection of the various samples that many sent their barley in the hope of winning rather than in the expectancy of doing so, as on some occasions. There were barleys that would not be lookeed at, much less examined, by the judges, their defect was so apparent, that being so the judges' work was rendered all the more difficult to pick the winners and in placing the seed diplomas in order

The general run was a weighty, plump barley, lacking in fineness of skin and also colour; in fact, the ideal Burton barleys were rather conspicuous by their absence rather than by their presence. The champion barley originally went to an Austrian-Hungarian sample, of which few particulars could be gleaned; it was of nice colour, with thin skin, and fairly plump, but it was not so even as has been before. It was undoubtedly best.

On Thursday a consultation of the barley judges led to the Hungarian sample being disqualified on account of the exhibitor not being able, in compliance with the conditions of entry, to produce the requisite quantity in bulk from which the sample was taken.

The champion cups, therefore, all pass to Mr. Thomas Rawle, who farms on the stonebrash in those cosy little fields at Porlock, which catch every glint of sunshine and suffer more from dryness than moisture. It was grown after ley fallowing wheat. Fison's manure being used, there was a plumpness about this sample that certainly attracted it, but it had not the curl or the skin of the champion; it was well shown and evenly dressed.

Coming to the British grown, Chevalier still holds the precedence. The first prize went to Mr. T. Rawle's sample, the second going into Kent; and here lies the singular coincidence that these two best British barleys were grown near the sea, and it is well known that the atmospheric conditions vary more considerably than they do inland; there are more breezes to part the clouds and let the sunshine through. The third prize went to barley grown near the sea in Somerset; the very highly commended was grown on the chalk and ragstone of Buckinghamshire, and then the highly commended was found again very near the sea, being grown at Brightlingsea. It may be a mere coincidence, but when it comes to four to one, the odds are that the best Chevalier barleys are this year to be found rather near the coast.

The same is found with the Goldthorpe barley; here, again, the third prize lot was grown on the breezy coast line at Minehead, Somerset. First honours therefore appear to be due to some climatic conditions that occurred round the coast, which certainly produced thinner-skinned barley of better colour.

The next noticeable item was the number of weather-stained samples shown and the sourish smell so indicative that they were not in condition. It became more and more noticeable that they were sweating, and these are not in favour. It would also tend to show the farmer how careful he should be with his bulk samples at home, as barleys seemingly in condition get out of it in record time.

If the barleys were bad in themselves it was apparent even to the most non-skilled observer who has come to the show year after year how educational it has been in many respects. Firstly, as to the threshing, it mattered not how the drum of the thresher was set so long as it threshed the straw clean; if set too close it split or pulped a goodly percentage of the barley, according as to whether it was dry or soft and the number of damaged ends, the maltster's horror, was simply appalling. But even this had a beneficial side, as it induced growers to pay far more attention to dressing to get rid of the crime committed with the split and damaged corn. The utility of this was so apparent that closer dressing followed the sensible setting of the drum of the thresher. These two things have brought barley into more favour in these days when substitutes could be used. There is not now the waste in the steeping tank or on the floor as in days gone by, and the malt is all the better for it.

There is no hope of winning a prize, much less taking one with barley that is either badly threshed or dressed, and what is more, the maltsters know how to regulate the price to cover the loss of weight and the expense of removing it. The farmer thus gives away tail corn that would be useful for feeding purposes on his farm and has extra carriage also.

Another object lesson has also been driven home—that is, barley must not follow the sheep; those dark yellow barleys, reeking of the sheepfold, are not in request to-day for delicate ales. A perusal of the entries will show year by year a diminution of barley grown after turnips or swedes. It is a pity that the entry does not show whether these were fed on the land or carted off for feeding elsewhere. But the tendency is to increase year by year the fallowing of a white straw crop, generally wheat, but in some instances barley after barley; this has a most refining influence, and is permissible and good practice in these days of free cultivation.

The British farmer must produce what his customers requires, or else some one else will do it.

As regards cultivation; or manuring rather, it is most noticeable how the artificial has replaced the natural or farmyard manure, and seldom indeed was there any manure used.

It is quite surprising the meagre entries made by the farmers of some counties and the keen competition made by others. Taking away Norfolk and Suffolk, which are ideal barley counties, we find counties with over half a dozen entries in the Chevalier section as follows:—Berks, Bucks, Essex, Kent, Lincoln, Oxford, Somerset. Then corn-growing farmers of Gloucester are well content with one entry equalled by Huntingdon, Louth and Tipperary, Middlesex and mighty Yorkshire, Northumberland and Shropshire. Surely there must be barleys worthy of exhibiton in

GROWERS OF PRIZE BARLEYS.

Mr. SIDNEY CHAMPION,
Sarre, Birchington-on-Sea, Kent.

Mr. R. E. HORWOOD,
Drayton Beauchamp, Bucks.

Mr. R. PREECE,
Cressage House, near Shrewsbury.

Mr. T. E. JAMES,
Minehead, Somerset.

Mr. M. E. BACON,
Brightlingsea, Essex.

these counties. Then in the two are included Bedford, Devon, Dorset, which has an old established barley show of its own, Hampshire, Herefordshire, Kerry, Rutland. Norfolk made fourteen entries and Suffolk twenty-one, or equal to a goodly number of the other counties grouped together. How the farmers of these apathetic counties are content not to put their barley beneath the eyes of the finest judges and buyers in the world passes comprehension.

As to variety, whilst Norfolk is devoted to Chevalier, Herefordshire prefers the stiffer straw of the Goldthorpe, Shropshire is the same, and it is with this variety that Yorkshire makes a better entry. As regards crops grown, the two heaviest were grown in Worcestershire with Goldthorpe and in Kent with Chevalier, the quantity grown being 8 qr. per acre respectiveiy in one instance, after swedes, in the other after mangolds; this bears out the old-time theory that the heaviest crops can be grown after roots, but the quality is not there, and it is this which makes the price in the market.

Even now, with the improvement already made, there is still ample opportunity for more, and the British farmer must move forward and not be content to put everything down to weather. He must know what his aim is, the seed required, the soil to suit it, to cut at the opportune moment, and then the proper machinery to be used to put it on the market in the most perfect condition. All these must come in together harmoniously to produce the desired result of growing the champion barley of the world.

PRIZE LIST.

World's Champion Prize.

106.—Barley: Mr. T. Rawle, Court Place, Porlock.

The Burton Challenge Cup: The "Mark Lane Express" Challenge Cup: the E. W. King and Co.'s 25 guinea Challenge Cup: the Joseph Fison and Co.'s £25 Challenge Prize: the Penny and Co.'s 5 guinea Cup.

106.—Somerset Barley: Mr. T. Rawle, Court Place, Porlock.

CLASS I. (Chevalier).

106.—1st, Somerset Barley: Mr. T. Rawle, Court Place, Porlock.
44.—2nd, Kent Barley: Mr. S. Champion, The Elms, Sarre, Isle of Thanet.
108.—3rd, Somerset Barley: Mr. T. Rawle, Court Place, Porlock.
14.—V.H.C., Bucks Barley: Mr. R. E. Horwood, Drayton Beauchamp, Tring.
35.—H.C., Essex Barley; Mr. H. G. Bacon, Lower Marsh Farm, Brightlingsea.

CLASS II. (GOLDTHORPE).

182.—1st, Salop Barley: Mr. R. Preece, Cressage House, Cressage.
183.—2nd, Somerset Barley: Mr. T. E. James, Lower Moor, Minehead.
198.—3rd, Yorkshire Barley: Mr. W. H. Laverack, The Grange, Knapton (entered by Isaac Poad and Sons, York).

CLASS III. (No entries).

CLASS IV. FOREIGN MALTING BARLEY (Two-rowed).

209.—1st, Slovak Barley: Messrs. Liebmann Brothers, Hop Exchange, S.E.
232. 2nd, Moravian Barley: Prince Rudolf Liechtenstein, Kroman, Austria (entered by Woodley, Watney and Richardson, 31-32, Crutched Friars, E.C.).
230.—3rd, Moravian Barley: Prince Rudolf Liechtenstein, Kroman, Austria (entered by Woodley, Watney and Richardson, 31-32, Crutched Friars, E.C.).

CLASS V. FOREIGN MALTING BARLEY (Two-rowed).

237.—1st, Ouchac Barley: Messrs. Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.

CLASSES VI. and VII. (no entries).

CLASS VIII. (Foreign Malting Barley, other than two-rowed.)

213.—1st, Smyrna Barley: Messrs. Shaw, Son, and Co., Ltd., Hull.
226.—2nd, North African Barley: Messrs. J. Westrope and Co., Hull.
225.—3rd, North African Barley: Messrs. J. Westrope and Co., Hull.

CLASS IX. FOREIGN MALTING BARLEY (Other than two-rowed).

229.—1st, Californian Barley: Messrs. J. Westrope and Co., Hull.
228.—2nd, Californian Barley: Messrs. J. Westrope and Co., Hull.

CLASS X. SPECIAL COUNTY PRIZES.

CAMBRIDGESHIRE.

(No award for 1st prize.)

19.—2nd, Mr. C. F. Clay, Manor Farm, Little Shelford.
21.—3rd, Mr. J. Scambler, Conington, Cambridge.

LINCOLNSHIRE.

61.—1st, Mr. F. Holmes, Greatford, Stamford.
65.—2nd, Mr. J. Thurlby, Baston, Market Deeping.
60.—3rd, W. T. Dixon, Ashby-de-la-Zouch, Lincoln.

YORKSHIRE.

193.—1st, Mr. W. H. Laverack, The Grange, Knapton (entered by Isaac Poad and Sons, York).
188.—2nd, Mr. W. Bowe, Crakehall, Bedale (entered by C. D. Mills, Ltd., York).
189.—3rd, Mr. C. H. Clark, Thrintoft, Northallerton (entered by Isaac Poad and Sons, York).

CLASS II. SPECIAL COUNTY PRIZES.

ESSEX.

25.—1st, Mr. M. G. Bacon, Lower Marsh Farm, Brightlingsea.
29.—2nd, Mr. G. Cousins, Jun., Cressing (entered by Hasler and Clapham, Dunmow).
80.—3rd, Mr. W. G. Fairhead, Brick House, Peldon, Colchester.

NORFOLK.

74.—1st, Mr. G. B. Burtt, Denton, Harleston.
83.—2nd, Mr. A. Rushbrooke, The Grove, Roydon, Diss.
171.—3rd, Mr. W. Mitchell, The Vale, Kirby, Bedon, Trowse.

SUFFOLK.

119.—1st, Mr. W. Dyer, Edwardstone, Boxford.
126.—2nd, Mr. W. M. Lawson, Church Farm, Bedingfield, Eye.
120.—3rd, Mr. H. Fulcher, Blaxhall Hall, Wickham Market.

CLASS XII. SHEPPEY GLUE AND CHEMICAL CO.'S PRIZES.

44.—1st, Kent Barley, Mr. S. Champion, Sarre, Isle of Thanet.
156.—2nd, Essex Barley, Mr. J. G. Eve, North Ockendon, Romford.

CLASS XIII. STEPHENS' CHEMICAL MANURE CO.'S PRIZES.

137.—1st, Surrey Barley, Mr. C. H. Goschen, Ballards, Addington.
185.—2nd, Sussex Barley, Mr. H. Jennings, Park Farm, Pulborough.

CLASS XIV. CRONE AND TAYLOR'S PRIZES.

136.—1st, Surrey Barley, Mr. C. H. Goschen, Ballards, Addington.
60.—2nd, Lincolnshire Barley, Mr. W. T. Dixon, Ashby-de-la-Zouch, Lincoln.
57.—3rd, Lincolnshire Barley, Messrs. Briggs and Sons, Priory Farm, Stamford.

CLASS XV. JOSEPH FISON AND CO.'S PRIZES.

GROUP A.

120.—1st, Mr. H. Fulcher, Blaxhall Hall, Wickham Market, Suffolk.
133.—2nd, Mr. F. W. Stearn, Old Newton, Stowmarket, Suffolk.
83.—3rd, Mr. A. Rushbrooke, Roydon, Diss, Norfolk.

GROUP B.

88.—1st, Mr. F. Holmes, Greatford, Stamford, Northampton.
90.—2nd, Mr. S. Taylor, Barnack, Stamford, Northampton.
87.—3rd, Mr. W. Carter, Ailesworth, Castor, Peterborough, Northampton.

GROUP C.

106.—1st, Mr. T. Rawle, Court Place, Porlock, Somerset.
108.—2nd, Mr. T. Rawle, Court Place, Porlock, Somerset.
107.—3rd, Mr. T. Rawle, Court Place, Porlock, Somerset.

GROUP D.

1.—1st, Mr. G. Duncombe, Cople, Bedford.

GROUP E.

139.—1st, Mr. H. Gosling, Botley Park, Chertsey, Surrey.
163.—2nd, Mr. O. J. L. Bird, Belvidere, East Malling, Kent.
144.—3rd, Mr. H. Jennings, Park Farm, Pulborough, Sussex.

GROUP F.

154.—1st, Mr. W. Purser, Bovoney Court Farm, Windsor, Bucks.
92.—2nd, Mr. F. W. Castleman, Heyford, Banbury, Oxon.
96.—3rd, Mr. G. Partridge, Begbroke Hill, Kidlington, Oxon.

CLASS XVI. E. WEBB AND SON'S PRIZES.

DISTRICT A.

182.—1st, Mr. R. Preece, Cressage House, Cressage, Salop.
159.—2nd, Mr. J. Poulton, Strangford, Ross, Hereford.
36.—3rd, Mr. H. Butler, Pauntley Court, Newent, Glos.

DISTRICT B.

128.—1st, Mr. T. S. Moore, Occold, Eye, Suffolk.
124.—2nd, Mr. W. G. Jarvis, Church Farm, Clare, Suffolk.
34.—3rd, Mr. R. Seabrook, Tolleshunt D'Arcy, Essex.

DISTRICT C.

173.—1st, Mr. J. Chew, Woodford, Thrapston, Northampton.

DISTRICT D. (No entries).

DISTRICT E.

61.—1st, Mr. F. Holmes, Greatford, Stamford, Lincs.
97.—2nd, Mr. G. Smith, Church Farm, Lewknor, Oxon.
7.—3rd, Mr. F. A. Horwood, White Waltham, Maidenhead, Berks.

DISTRICT F.

43.—1st, Mr. G. Kelsey Burge, Dent-de-Lion, Westgate-on-Sea, Kent.
143.—2nd, Mr. H. Jennings, Park Farm, Pulborough, Sussex.
50.—3rd, Mr. H. S. Lane, Cliffe-at-Hoo, Rochester, Kent.

CLASS XVII. "MARK LANE EXPRESS" DIPLOMAS. (CHEVALIER BARLEY).

BEDS.

2.—Mr. G. Duncombe, Cople.
1.—Mr. G. Duncombe, Cople.

BERKSHIRE.

5.—Mr. F. W. Headington, Wargrave.
7.—Mr. F. A. Horwood, White Waltham.

BUCKS.

14.—Mr. R. E. Horwood, Drayton Beauchamp.
12.—Mr. J. H. R. Horwood, Drayton Beauchamp.

CAMBRIDGE.

19.—Mr. C. F. Clay, Little Shelford.

DORSET.

24.—Messrs. Bedford and Dwight, Bere Regis, Warcham.

THE HOP SECTION.

Mr. Burnett Tabrum, J.P., chairman of the judges in this section, in replying to the toast at the inaugural luncheon, in which he was interested, remarked that some years ago he had ventured to predict that the Weald would eventually surpass East and Mid Kent in the quality of their produce unless the planters in the latter divisions of the county bestirred themselves. He was glad to say that the desired result, thanks in some degree to the stimulus given by the competitions at Islington, had been effected.

In proof of the remarkable progress made in English hop growing, he would mention that he had introduced a foreign visitor not long ago to the famous plantations of Messrs. E. A. White, at Beltring, and his friend was so deeply impressed with the skill displayed, and the machinery and other appliances, that he exclaimed in amazement: "This is not merely hop-growing, it is the manufacture of hops; it is magnificent!"

Improvement was manifest all round, the hops were now much more whole than formerly, and were consequently better conditioned, and he was glad to notice that hops were now judged more frequently by their intrinsic value than by their mere outward appearance. Certainly the present crop was deficient in colour, but this was to be traced to the absence of sunshine from which they had all suffered during the summer, and he sincerely regretted the losses to growers which had occurred, despite the pains they had taken to secure the crop.

But they also suffered from other causes, one of the principal of which was our annual importations of about 200,000 cwt., and he considered that something should be done to check these supplies, and retain the labourers, from whom our best soldiers and sailors were recruited, on the land. He was decidedly of opinion that the interests of our own country were the most prominent, and should have first consideration.

THE EXHIBITS

entered for competition numbered ninety-seven, this being the largest number of entries since these competitions were inaugurated. Probably the increased value of the prizes offered had some effect in bringing more competitors into the field, but whatever may be the cause, the directors are to be congratulated on the success that has this year attended their efforts in this respect. But while recognising, as we do in all sincerity, this excellent result, we must be permitted to take exception to the arrangements made for the display of the samples.

The object in view, as we understand it, is to afford to brewers a full opportunity of judging of the quality of the English growths. As Mr. Tabrum pointed out, this judgment should be arrived at not by outward appearance only. The intrinsic quality can only be ascertained by the "rub," which involves the handling, and "nosing" of a portion of the samples. The enclosure of the exhibits within a high wire fence absolutely prevents any such examination, and even hinders satisfactory examination by the eye. The multitude of cards placed in front of and upon the samples, and the greenish coloured glasses with which each sample was covered, were also serious hindrances to efficient display, and last but not least, the location of the counters is most unfavourable, as tho light in this position does not fall upon the hops to show them to advantage.

We trust that before our next exhibition the directors, who, we are sure are willing to assist their friends as far as possible, will arrange to make such alterations as will result in more complete success in this section of their very popular show.

We are compelled to plead the disadvantages referred to as our excuse for any deficiencies that may be found in our criticisms, and can only say that, imperfect as we know they must be under the circumstances, we have done our best to make them impartial.

The keynote to the whole of the samples is

sounded by Mr. Tabrum, when he refers to the absence of sunshine. When this is absent, as it has been during the greater part of the last growing season, hops must be deficient not only of colour and brightness, but also of condition. With but few exceptions these deficiencies characterised the samples as a whole, and although the champion exhibit is found amongst the East Kent Goldings in Class 1, a survey of this class does not give us a very favourable impression of the growths of this renowned district. Mr. Mount, who takes the gold medal, certainly deserves his distinction, which is doubtless gained by the delicate flavour, and good management and ripeness, although the sample seems to be wanting in brilliancy. The same grower takes the third place also in this class, but we did not find any marked superiority in the sample, beyond that it presented a fairly good side. Mr. Minter's sample that secured the second award, seemed to us somewhat chaffy, and without any special attraction.

In Class 2 Messrs. White's excellent sample, taking the highest class position, and also the silver medal in the champion class, presents very attractive features, being not only smart and clean, but well furnished with lupulin, and showing a fat side and bold face. We were rather inclined to wonder why it had not been placed in the premier position. Mr. W. Rogers has not attained his usual pre-eminence this year, but we are hardly surprised when we see that his sample, which is placed second, does not come up to his previous standard. It is bold, but somewhat coarse, and appears to be wanting in condition. Mr. Thomas's sample, standing in the third place, is well ripened and rich apparently, and will, we think, be appreciated by brewers.

Mr. Wellband takes the first prize in Class 3 with an attractive sample, the boldness of which demonstrates his skilful management. It is full of quality, and speaks well for the hot-air system by which it was cured. Again we meet with Mr. Rogers taking the second place in this class, and showing a very merchantable sample of fairly rich, whole, and bright hops. Of Mr. Mount's exhibit, which takes the third place, there hardly needs any further notice than it is a fair sample of the season's produce.

The 1st prize sample in Class 4 does not present any special attraction to our eye, and we are rather surprised when we compare it with Mr. Large's sample, which is placed second, as the latter appears to us much more worthy of honour. Mr. Noakes also shows an excellent sample in this class, his hops having a bold side, betokening condition, and useful brewing quality. The judges have, however, only given him the third place.

A fine sample is that of Mr. Large, who takes the first prize in Class 5. These hops are fully ripe, of rich colour, well managed, whole, well-conditioned, and full of brew. Messrs. Body's sample is also fairly attractive, and well deserves the position as winning the second prize, but we consider Mr. Mannington, who comes third, might safely have been placed higher, as his sample is skilfully managed, well grown and ripened, and of very useful quality. Coming to Class 6, we find Mr. Brissenden at the top, and his sample is certainly worthy of its position, as it is of good useful quality, and well ripened, though not very even in colour. Of the others in this class we prefer to say nothing; they are just ordinary, and do not call for remark.

The first and only award in Class 7 is given to Mr. Ashby, and we congratulate him that his competitors were few, otherwise we hardly think his hops would be occupying their present position.

We now arrive at the display from the Midland districts, and with absolute impartiality we venture to say that we have before us a very superior range of samples. First in Class 8 stands Mr. Shew, who, being the inventor of a special system of hot air drying, has doubtless done his best to demonstrate its merits. He has certainly succeeded, as his hops are perfectly whole, bright in colour, and full of condition. The winning sample was universally approved. Mr. W. H. Gabb takes second place in this class, but we fail to see the reason, as Mr. Pudge's hops, which take only the third prize, are, in our judgment, much superior both in colour, form, and condition.

There were seven entries in Class 9, but owing to some unexplained mishap only three samples were presented to the judges. Of these, Mr. W. F. Pudge's is, of course, placed first. It could not have been otherwise decided, as his sample presents all the super excellent qualities for which he has so long been noted. We have frequently remarked upon Mr. Pudge's skill as a hop grower, and need not say more now than that the sample at present under review is well up to his usual high standard. With this sample Mr. Pudge gained the bronze medal in the champion class.

Mr. L. G. Bonham-Carter's sample was awarded the first prize in Class 10. These hops are plummy and fat, well ripened, and have fair colour. Their position is worthy of their quality. The second and third prize samples, shown by Mr. G. W. Duncan and Mr. W. Lillywhite, were almost hidden in a shaded corner, where it was impossible to examine them; they appeared to be of good average quality, but we can say nothing further concerning them.

Only one prize was awarded in Class 11, this being taken by Messrs. Candy & Baigent, whose sample presents no special feature to call for remark.

Outside the Competition.

Amongst the English firms exhibiting hops are Messrs. Jones Brothers, of Northingtown, Worcester, who are now cultivating over 120 acres in Worcestershire, and are taking over 180 acres at Harbledown, Kent, formerly occupied by the late Mr. Henry Barnes. This firm disperse of their produce direct to brewers, and, for the information of their customers, have issued a most elegant booklet on the history and evolution of hops, illustrated by numerous photographs and engravings. Their excellent samples secured the attention of a constant crowd of visitors. Messrs. Webb and Sons, Wordsley; Messrs. Gascoyne and Co., of Worcester; Messrs. J. T. Best and Son, of Preston; Messrs. J. W. Buckland and Son, Worcester; and others, occupied their usual places in the hall, showing hops of various qualities.

Foreign competition was also evident, the most prominent display being that of the E. Clemens Horst Company, of San Francisco. In their stand we examined three bales of hops from California and Oregon which had gained the Champion silver cup offered at the State Fair in San Francisco. These hops were picked entirely by the use of a machine, invented by Mr. Clemens Horst, and were absolutely free from leaves or stalks. Their perfect condition and brilliant colour attracted the attention, and excited the wonder of many of our English growers, to whom they were freely displayed. This company is engaged in many interesting experiments with regard to the constituents of hops, and exhibited samples of the aromatic oils extracted therefrom under various conditions. Their experiments are not yet completed, but as far as they have gone, they are able to demonstrate that the lower the temperature at which hops are dried, the higher is the percentage of essential oil, that excessive sulphuring reduces the proportion of oil, and that the same result appears when hops are stored at very low temperatures. These researches are most important, and will probably affect the future of the hop industry very materially. Messrs. Edward Scharrer and Co., of Canstatt and Nuremberg, exhibit Bavarian and other Continental hops. Messrs. the Horst Company, Denman Street, London, show samples of Oregons, Californian, and Washington hops; also of Oregons grown from English sets, which they claim are free from the pungent aroma of those ordinarily grown on the other side of the Atlantic.

Mr. E. G. Shew, of Bosbury, Ledbury, exhibited drawings and photos of his newly-invented and patented pure hot-air drying apparatus. This has been previously described in our columns, therefore we need only say here that its utility and success are demonstrated by the awarding of ten prizes in the present competition to hops dried by this process. Mr. Shew's invention was examined by many growers, and we understand that he received orders for the fitting of some thirty kilns in readiness for nex season.

THE CIDER.

The cider section has now got over that crudeness which was so characteristic of its inception—the exhibitors know what is required, they send it better packed, and, what is more, of vastly better quality. This year the collections of apples were not so large by reason of the great scarcity of cider fruit in the apple-growing counties of the West, but it was noticeable that they were much better shown and more of them named, and there was a splendid collection of perry pears, one of the finest that has yet been seen together. The difficulty of getting such a collection is great, and it is a pity that there is no fruit-modelling establishments in England as there exist in Germany, where such a collection could be modelled and kept for reference to all time.

The ciders as a whole were this year much better, all the prize-winning lots having to be submitted to analysis for purity before the judges' decisions are confirmed. This is a big stride in the pure cider movement. The Devon exhibits showed great improvement; but the classes of the show for quality were Somersetshire bottled ciders, and dry and sweet perry. These three were as near perfection as possible, except that there were a few dry perrys in the sweet class and *vice versa*, otherwise each exhibit would have been noticed by the judges. The champion prize went to those well-known Somersetshire makers, Messrs. Tilley Bros., whose cider was superb; and for the first time Devonshire obtained such high position as reserve champion, this going to Mr. C. Dart.

For the first time the Colonies were represented, a bronze medal being awarded to exhibits from New South Wales and Nova Scotia.

Judges at the Dublin Winter Show.

The following gentlemen have agreed to officiate as judges at the Royal Dublin Society's forthcoming winter show:—

IN-FED CATTLE.—W. A. Mitchell, Auchnagathle, Whitehouse, Aberdeenshire.

KERRY AND DEXTER AND OTHER SMALL CATTLE.—William Field, M.P., Blackrock, co. Dublin.

OUT-FED BULLOCKS.—Joseph O'Connor, Mylerstown, Naas.

OUT-FED HEIFERS AND COWS.—G. H. Lennon, Hotwell, Enfield, co. Meath.

SHEEP.—John S. Paterson, Cluen, Bansha, co. Tipperary.

BUTTER, CREAM, AND CHEESE.—R. Gibson, Public Creamery Market, Limerick.

HONEY.—E. B. Drought, Woodlands, Blackrock, co. Dublin.

MALTING BARLEY.—H. W. Hutchison, Kirkaldy, N.B.; A. E. Walker, Great Yarmouth.

ROOTS.—E. M. Archdale, Riversdale, Ballinamallard, co. Fermanagh; Thomas O'Malley, Woodlands, Raheny, co. Dublin.

POULTRY.—H. Abbott, Thuxton, Norfolk; T. H. Stritch, Vine Cottage, Ormskirk, Lancs.

Wisbech Mustard Market.

There was a larger supply and also a larger attendance at the second mustard market held at Wisbech, and a considerable amount of business was transacted. The prices remained about the same, though the good quality of the seed kept the average high, compared with the top price. The buyers of white seed had much more business than at the first market, and more seed changed hands. The prices were 8s. to 8s. 6d., the average being a good 8s. 3d. There was a great deal of good brown seed, but also a considerable quantity of second quality samples. The best quality seed maintained the prices of the previous market week, viz., 10s. to 10s. 6d., but second quality were bought at rather lower figures, 9s. to 9s. 6d. There is still a large quantity of seed to come, and it is expected that two or three more markets will be held.

Owing to the disqualification of the Hungarian barley the Champion Cup passes to Mr. Thomas Rawle, of Porlock, Somersetshire. The manure used was the extra quality fertiliser, manufactured by Messrs. Joseph Fison and Co., of Ipswich, who, it is interesting to mention, have had their manures used by the winners of the Champion Cup on no less than five occasions since 1896. Quite a host of cups and prizes go to Mr. Rawle by virtue of success; among them being the 25 guinea cup or cash from Messrs. Joseph Fison and Co., Ltd., besides other minor prizes.

At Ashbourne October Fair, held on Monday, calving cows made £17 to £20; calving heifers, £14 to £17; stirks, £11 to £13; two-year-o'd bullocks, about £12; yearlings, £7 10s. to £9; barren cows, £12 to £13; and barren stirks, £7 to £9. A good average show of sheep, prices ruling firm. Ewes, 45s. to 51s.; wethers, 47s. to 53s.; store lambs, best, to 35s.; smaller sorts, 28s. to 30s.; rams, £5 to £6; yearling rams, £3 to £4 10s. each.

At Yarm Fair on Monday trade in sheep was somewhat slow. Leicester tup rams brought 55s. to 80s.; Leicester shearling rams, 70s. to 100s.; Scotch ewes, 17s. to 25s.; half-bred shearlings, 42s. to 50s.; half-bred lambs, 18s. to 24s.; Cheviot ewes, 32s. to 40s.; Wensleydale rams, £3 to £4 each. Irish cattle sold quickly at £10 to £13 for the better class, and £5 to £7 10s. inferior. A few Wensleydale cheese were disposed of at 6d. to 8d. per lb.

The annual horse and cattle fair, known as "Great Saturday Fair," was held at Clitheroe on Thursday, when there was a very large attendance, the streets being crowded throughout the day. The show of stock of all kinds was abnormally large, the most notable feature being the extraordinary number of rams, for which there was a keen demand. Trade all round was good, and excellent prices were realised, especially for horses. Team horses made £22 to £55; agricultural horses, £15 to £35; Hackneys, £15 to £45; traders' horses, £7 to £20; unbroken colts, £15 to £25; unbroken fillies, £14 to £30; cobs, £10 10s. to £30; ponies, £2 10s. to £15; foals, £5 to £12 10s.; calving cows, £13 to £19; calving heifers, £11 10s. to £17 10s.; newly calved cattle, £12 10s. to £23; lying-off cattle, £11 10s. to £18 10s.; geld cows, £8 to £13; bulls, £7 10s. to £13 10s.; bullocks, £4 to £9; stirks, £3 10s. to £7 10s.; Scots, £7 10s. to £10; Irish store stock, £2 10s. to £6 10s.; young stock, £3 10s. to £6 10s.; Scotch ewes, 22s. 6d. to 34s.; Cheviot ewes, 23s. 6d. to 32s. 6d.; halfbred ewes, 37s. 6d. to 45s.; good-bred sheep up to 65s.; shearlings, 20s. to 31s.; store lambs, 16s. to 25s.; Leicester rams, £2 to £7 10s.; Shropshire 37s. 6d. to £6.

DAIRY.

Fermentations in Milk.

The constitution of milk is such as to make it a complete and almost perfect food. In this fact lies its great and recognised utility. But this excellent character indicates a composition which is admirably suited for the growth and development of fermentation, and the superiority as a food renders it equally successful as a medium for those varied changes which are called collectively fermentative changes.

The work of animals and plants during life is to raise the food they consume into higher and usually more complex forms. The waste materials given off, and the whole body after the processes called "life" have ceased, return again to their original state. In this simpler form they again blend with the air or the soil, and a new set of changes is begun which enables the substances to serve again as the food once more of other plants and animals. And thus one unending cycle goes on: one part consisting of a building-up of more complicated substances, the other of the reduction and simplification of these; the most important of the accompaniments of these being that condition of the plant or animal serving as the medium of changes which we name "life."

The Jersey Heifer Doria, the subject of our illustration above, was calved May 14, 1907, sire Flying Foam, dam Dulce of Oaklands, and was bred by Lady de Rothschild, Aston Clinton, Tring, who won with it a Third Prize at the Royal Show at Lincoln, and a Highly Commended Card at the Royal Counties Show at Maidenhead.

In the reduction of these complicated animal and vegetable products to the simpler forms, one of the most active agencies is that called generally fermentation. The "process" is set going and continued by a ferment. The ferments are of wide variety in their work, but are all organisms which in character lie on the borderland of the animal and vegetable kingdoms. They are of microscopic size, and their essential characteristic is that their life course necessitates or produces those chemical changes which are summed up generally under the name of fermentation or fermentative processes.

There are, as in all forms of life, certain conditions which must exist before they can continue their activities, and it is because milk furnishes these conditions in an almost ideal manner that they have a direct connection with dairy products and the dairyer's work.

In order that the microbe or ferment may germinate and continue its action effectively, there must be moisture present in some degree. The food for the microbe must also be at hand, and though there is considerable variety in the forms in which it is most easily utilised, the sugar and albuminoids in milk give it in one of the most easily available forms. Milk, further, contains inorganic compounds which in some cases are indispensable to their growth and are injurious to few or none.

One other condition alone is necessary, and that is a suitable temperature. Each of the microbes of fermentation has a temperature which suits its growth best—above and below there is a range which allows its growth to continue, though not the most advantageous. Outside these upper and lower limits their activity is lessened or destroyed. Heat of about 140 deg. Fahr. destroys altogether the majority of them in their most ordinary forms; but they exist in the harder spore form quite frequently, and in this state they are able to endure unharmed a much higher temperature. Later the ordinary form develops from the spore, and unless the temperature is outside the range mentioned above the development will go on unaffected by the greater heat to which the spore has been subjected.

All forms of ferments appear to have an immense power of resistance to cold, and this means of affecting their activity is practically inoperative.

It is to be understood that by no means all the fermentations which milk undergoes are harmful. In some undoubtedly the value of the milk is destroyed if the fermentation is allowed to get beyond control and to go on unchecked. Yet the character and quality of butter is greatly modified and improved by the setting up and continuance of certain fermentations, and in the manufacture of cheese certain other fermentations are absolutely indispensable.

The fermentations can be regarded also from another standpoint. One group may be regarded as normal ones—that is, they occur naturally in milk when it is left under ordinary conditions. The other are less frequent and may be called abnormal, since their occurrence only comes about under special conditions, or incidentally, or in isolated localities. The latter class are nearly always associated with some distinct taste or smell, or some odour or flavour is noticeable which by its presence is sufficient to indicate the abnormal character of the fermentation. To this belongs that producing ropy or slimy milk; that which causes bitter milk; and the whole group of fermentations which are named "chromogenic," or colour-producing, since the most noticeable feature of their existence is the presence of an unusual colour in the milk in which this class of ferment is at work. In another class of abnormal ferment the casein coagulates without the production of lactic acid—the so-called sweet curdling takes place. These ferments are of the rennet class, and the most common is the one named the tyrothrix bacteria. Another not infrequent form is that shown by the production of alcohol from the breaking down of the milk sugar into alcohol and carbon dioxide. Milk sugar, however, responds much more slowly than fruit-sugar to this type of fermentation, and hence its occurrence is comparatively rare and its rate of formation slow.

Of the normal fermentations the souring of milk shows the most frequent of all; and the one of most importance from the dairy standpoint. It belongs to the friendly class of fermentations when under control, or when specially desired, as in the ripening of milk and cream for churning; but will have to be classified as unfriendly when it causes the turning of milk which it is desired to keep sweet.

Another group of normal fermentations is concerned, not with the milk-sugar, but with the albuminoids—the nitrogenous compounds in the milk. They are usually divided into two classes. One group is classed as peptogenic, since they produce a digestive action on the albuminoids; the casein first coagulates and then is liquefied or changed to a peptone. The second, and by far the more numerous class, is called putrefactive, since they are caused by the decomposition of the albuminoids, together with the production of some gases of a non-agreeable odour. The exact relation of the work of these ferments to those of the lactic-acid fermentation group is not yet clearly understood. Their action is weakened by vigorous lactic-acid fermentations, and hence, since the latter are very frequent, the former are of the rarer occurrence. They go on more vigorously at lower temperatures, and are accompanied by the liberation of odours which are foul smelling, sometimes accompanied by a bitter taste.

The third and last group of normal fermentations are those which result from changes in the fat. These are much slower and more rarely found than either of the two preceding ones, and this is usually attributed to the protection afforded to the fat by the so-called envelope of the globules. The change which does take place is the decomposition of the fat into butyric acid and carbon dioxide and hydrogen. The two latter gases are liberated, while the formation of the former is the cause of the rancid-butter odour which is not infrequently to be detected in old sour milk. The old explanation gave it as a sort of advanced stage of the lactic-acid fermentation, but later investigation

goes to prove that the fermentation is caused by a distinct set of microbes, which find sour milk all the more favourable to their development because of the absence of dissolved oxygen in the milk, since this has been consumed by the lactic-acid forming organisms. LACTISSIMA.

Gainsborough Cheese Fair.

At the October Cheese Fair held at Gainsborough on Tuesday the following prices were realised:—English Stiltons, 9d. to 10d.; Cheddars, 9d. to 10d.; Cheshires, 6d. to 8d.; Trentsides, 6d. to 7d.; Derby, 6d. to 7d.; double Gloucesters, 8d. to 9d.; Canadians and States, 6d. to 7d. per lb.

Whitchurch Cheese Fair.

There was a pitch of 80 tons at the above fair on Wednesday. The market opened with a good tone, and several new buyers being present a rapid clearance was made at the following prices:—Best 66s. to 70s., one lot exceeding that figure; medium, 60s. to 65s.; lowe-t, 55s. As compared with last year prices were 73s. to 78s.—nothing under 60s., pitch then being 60 tons.

CORRESPONDENCE.

Small Holdings.

SIR,—The article which recently appeared in the *Times* relating to the development of the Wissington Estates by Mr. Keeble has drawn further attention to the question of small holdings which the Government are creating by means of the new Act which comes into operation next year. Whether such an experiment as Mr. Keeble's can be imitated, even in a lesser degree, successfully by county councils and county boroughs, is open to the gravest doubt. The *Times* correspondent says truly enough that men are the essentials, the land but an accident; and we question if a body of men, generally of varied occupations, such as an ordinary county council, are capable of devising a scheme to acquire, compulsorily if need be, lands of neighbouring owners, and to divide them into holdings to satisfy the aspirations of the small cultivator and enable him to make a living. The very existence of the latter class might seem to be a matter of doubt, as the Board of Agriculture, in its circular letter of the 30th ult., artlessly recommends that they may be sought for in advertisements, which should be framed in simple language! Very few men in this country can make a livelihood out of a 50-acre holding, except perhaps in the case of a skilled and experienced market gardener having the right land within easy reach of a big town.

Whilst this country is content to remain the commercial and monetary exchange of the universe, agriculture here must feel the effects of foreign and colonial competition, and to hold his own the farmer should possess the widest training and adequate capital, and co-operation amongst farmers is generally almost essential if greater success is to be assured. Our experience is that as a rule the small holding is a delusion—in the main a petted project of politicians mostly ignorant of the subject on which they talk so freely, but who have to satisfy at election times the fads of the day.

As Mr. Keeble's agents, it is true that we purchased the greater part of this land at a low price, but it must be remembered that he has spent thereon many thousands of pounds beyond his initial outlay to bring about the present result. That the officials of the Government failed to attempt what he has achieved is not altogether their fault—it required bold initiative and considerable capital as well as engineering skill to succeed in such an undertaking. The experiment—which has been in this case justified by the enterprise of an individual with a practical knowledge of the capabilities of the land when adequately drained, and a shrewd foresight into the requirements of the tenants likely to cultivate it—could not have been undertaken by a public body in the ordinary way. Mr. Keeble, although benefiting others by his labours, is the last man to pose as a philanthropist, and his example should invite large landowners to inquire as to whether their properties are laid out and managed on the most advantageous lines. Probably other estates could be made more remunerative if governed by a proper appreciation of their inherent possibilities.

Whether a real demand will ensue from a genuine agricultural class, just beyond the grade of labourers, to acquire the small holdings to be provided under the Act, remains to be seen. If so, we shall watch its progress with interest and sympathy, but with doubt as to its successful working. As the cost of failure will to a large extent fall upon the taxpayer, it is to be hoped that the commissioners appointed under the new Act will in every case require very strong evidence indeed before giving their approval to compulsory acquirements.

It is a deplorable fact that in different parts of the country are to be found striking instances of the ill success of these minute divisions of land. The men who clamour most for the allotment holding rarely prove to be the best workers. No doubt many of your country readers can point to cases where an exceptionally steady allotment worker has acquired extra land, and has by his industry and capacity raised himself into a higher position. Unfortunately the other side of the medal reveals holdings neglected and abandoned from incompetence, idleness, removals, and other causes, the derelict land often forming a puzzle for the owner what to do with.—Yours, &c.,

London, W., KNIGHT FRANK RUTLEY.
October 21, 1907.

Duplicate Samples.

SIR,—I notice in your excellent paper, which I always read with great interest, that you have once or twice touched upon the subject of farmers having some method by which a duplicate sample of the grain they sell be retained in case of any dispute. I intended writing you upon this point but have been so busy with the association work in all my spare time that I have not had an opportunity. I might say that you will have observed that the existence of this association owes its birth to such kind of disputes—deliveries of barley being thrown up at some station a hundred more or less miles away was not infrequent, a position of affairs difficult for an ordinary farmer to deal with. In consequence members were advised to divide the samples sold, handing the buyer one and myself the other, which samples are kept in a cupboard specially provided in the Corn Exchange here.

This has been most effective, barley and other grain disputes are few, and only about a small percentage of members now avail themselves of it. When a dispute occurs samples are drawn from a number of bags of the delivery according to quantity of bulk and are examined with the retained sample. When the latter does not exist the dispute is settled the best way without. When it is barley the question may resolve itself into whether being sold for malting purposes it is fit for the purpose or not, or freedom from heated or dead grain, &c.

Decisions have not always ended in favour of the farmer, there are careless agriculturists as well as other people. The result of the whole is, the latter exercise more care, and the buyer does not make complaints without first satisfying himself there is just ground for it.

The relations of each are not strained by the services of the association being called into requisition, rather a welcome mediator.—Yours, &c.,

P. B. KENT.

Socialism in the Villages.

SIR,—I quite agree with "Timely Reform" that the best, in fact, the only way to fight Socialism, as the term is generally understood, is to remedy the faults of the present system. The agricultural labourer is not a vindictive individual; he may, as your correspondent says, not be cute, but he is not quite the same meek-spirited knock-me-down-and-kick-me individual that he was half a century ago.

I do not believe he wants any Socialism, but he knows that he does not get adequate reward for his labours, and his remedy now is to get out of it. I am tired of that hackneyed cry about country lads being lured to the town by the lights in the streets, the amusements, and excitement and glamour.

Let us be honest about it and admit that it is wages, prospects, shorter hours, and a spirit of independence that prompt him to leave the occupation of his fathers and the village home of his childhood. Can you blame him? I have a case before me now of a man who has worked all his life as an agricultural labourer and has brought up a family respectably on his meagre 14s. a week. How he has done it no one knows except himself, and I doubt if he could tell you; but now he is old he can work no longer, and is invited to go to the workhouse, where he will be parted from the partner who has stood shoulder to shoulder with him through his long struggle for existence, and, what is worse, he will be branded as a pauper—that wretched name which sticks in the throat of every self-respecting man or woman.

This is a solitary case, but there are many more, and the number would be increased considerably but for the kindly sentiment of those farmers who keep old men on till the end of the chapter, and when they are no longer profitable to them, or even earn the wages they get, rather than see them end their days as paupers. Let the agitator describe all these possibilities in forcible language in country places, and the spirit of modern Socialism will be established in the village as it is in the town. Remove the evils, remedy the faults, act instead of talking; either give the farm labourer a wage that allows some margin for saving, or provide some prospect for his old age that is better than the workhouse, and the ground of the modern Socialist will be cut from under his feet. We want none of that Socialism which levels down, and we must fight it by a policy of levelling up.—Yours, &c., ANOTHER REFORMER.
October 22, 1907.

The Inflation of Grain Prices.

SIR,—Noticing the criticisms of grain prices in your columns, I perceive that in one quarter they are regarded as too low, in another as too high. Where such differences of opinion manifest themselves, it may usually, perhaps, be inferred that the original figures criticised are about right, but the point which I wish to ventilate in your columns rather relates to your article on "The Top of the Market" than to particular details of any four days' trade.

What I would ask farmers most earnestly to bear in mind is that the artificial inflation of grain prices is always to their detriment. Many agriculturists fail to see this; friends on the Stock Exchange or elsewhere have talked to them about "getting in on the top of the movement," and so forth, and they therefore tend to encourage figures in advance of the fact.

What in effect happens is that inflated prices are quoted in the interest of importers who have stock in granary or import, and who want promptly to unload. The "fancy quotation" once in print forms a lever from which a good bargain may be made, and the clever promoter who operates daily has got home with his profit before the farmer gets into action.

Then the latter finds that the inflated price quoted has checked demand, and that his stuff is exceedingly difficult to place at all. Moderate quotations on a rising market help to sustain the *bonâ fide* business of sellers for actual delivery, that is to say, farmers.

The prices that are inflated by fancy figures in the daily Press are thus, in my experience, manipulated. The first device is to publish prices as "prices asking," which, though it tends to deceive, is in itself no deception, for, of course, a holder may ask what he pleases. When, however, the plot thickens and there is market excitement, this little limitation is apt to drop out.

The second device is to give enormous emphasis to one sort of grain which happens through real scarcity to be at a specially high price. How many dealers during the past month have quoted Manitoba best wheat as if it were the leading sort dealt in, whereas it seldom exceeds 5 per cent., one ton in twenty, of the whole transactions at a port market, and hardly appears at inland markets at all.

The third trouble is not like the first two, a trick of the market, but a genuine omission. You escape it more or less than others, but only because you give special space to the markets. It is the omission to say with what previous date the rise quoted is compared.

Thus a Monday market's report in a daily will often be found to quote a rise when the comparison is with the previous Monday (though since the Monday's market trade may have gone back), and on another occasion to quote a rise when it is only from the previous Friday, and on the week there is a loss of ground.

If the Government published averages of trade in foreign and imported corn the trade would be able to compare sales with some accuracy. In the total absence of such figures the Press would be held to fulfil a most valuable market, and, indeed, public service, so as, with all imperfections, to leave us much its debtor.

Meanwhile you will, Sir, be specially serving the trade in continuing to give us for imported produce analogous figures to the Government's figures for English produce, that is to say, returns of prices *made*.—Yours, &c.,

A MAN OF MARK LANE.
Farmers' Club, October 23, 1907.

At the last meeting of the Canterbury Farmers Club a resolution was passed, only two voting against it. "That in the opinion of this club an independent agricultural party is quite necessary to the interests of agriculture." At the same meeting the following was carried unanimously:—"That this club suggests to the Central Chamber that an effort should be made to induce the Government to establish an insurance department where agriculturists and others could insure their employees at a moderate rate and on more favourable terms in respect to the older workmen than is now the case."

West Country Notes.

THE price made for the July draft of cheese from the Cheddar Cheese School will make a good many mouths water, the lot having been secured by Messrs. W. Cary and Son, of Shepton Mallet, at 68s. The general run is making now about 60s. to 63s. and 64s.; truckles, as usual, a shade under.

I FIND there is an increasing inquiry from some of the retailers for cheese direct from the makers of the best dairies, and these are only too willing to try to do away with the middleman where they can see a chance of placing a really good consignment.

THERE is another side to the question, however; for the dealer will take the lot, and there is from his point of view the set-off that he does not care to take the job lots left over after the pick have gone. Unless there is a fair prospect of clearing all except the few lots which the landlord bespeaks and the friends require, the maker thinks twice before he makes a deal with the retailer.

CAERPHILLY prices are variable just now, ranging as widely as most people can remember. The lower grades are going at about 45s., whilst the best command up to 60s., and selections can be made at almost any price between.

GENERALLY the cheese prices are advancing from their late low level. This is in harmony with the general rise of other commodities.

ZUMMERZET had a look in at the championships of the week, what with the good place of the barley at the Brewers', the cider championship there, and the winner of the latter, Mr. Tilley, taking a championship and two reserve championships at the Crystal Palace Dog Show for his sheep dogs.

ORCHARD work is receiving plenty of attention just now with the fruit shows at Street, Shepton Mallet, Exeter, and Gloucester, as well as some others in Devon and the West Midlands. There are evidently those who are beginning to recognise that the orchard is more profitable in the long run than the cow. Prizes for orchard cultivation are becoming a feature with some show societies.

THE land of sunshine at "the Italy of England" belied its credit on the occasion of a public function at Penzance lately, and gave the bishop a chance for indulging in an episcopal joke at the expense of the weather—a shockingly common thing, of course, for a bishop to do. Still, over 2 in. of rain in a day was something like a downpour, and agriculturists would rather that it came a little less abundantly. It is thirteen years since the total was exceeded in one day.

DEVONIANS, in some of the show parts of the county particularly, are exercising their minds about the hedges again. How they shall be kept is a question in which residents, visitors, the bench of magistrates and the county council and its officials may have views totally divergent from the unfortunate owner. One writer suggests the formation of an association of passive resisters on one phase of the question. This would inevitably lead to others resisting if the farmers would combine. But when did they ever do much that way?

FAIRS and pedigree stock sales are causing a lot of cattle to change hands at the present time, and as both sellers and buyers appear to be satisfied, the run of prices must be considered profitable to both. They are not very remarkable anyway.

MRS. MAITLAND SPENCER has cleared out her herd of Jerseys founded by the late Mr. Maitland Spencer a number of years back at Oakhill on the Mendips. A few of the animals remain on the Mendips and at the foot of the hills; but the customers on Wednesday covered a large area. Lord Roberts, whose nephew is married to a daughter of Mrs. Spencer, secured a few for Ascot; another nephew of his lordship secured some; Captain Spicer, of Spye Park, went to the top price of 31 guineas for a cow. The average ranged at £15 13s.

"ARTHUR" welcomed all and sundry at Motcombe for his sale on Thursday, and I hear is quite as smiling as ever at the result, though full details are not available at the moment of writing.

TRAINS are being held up in some parts of Devonshire by the bunny rabbits. The timid creatures being already dead, there is no special cause for alarm, but passengers are crying out that the extent of the traffic requires better organisation.

BRAVO, Dartmoor! They are waking up at last to the fact that the handy little ponies on their wild lands are occasionally worth more than the pound a leg or less which is so common. That jump from £5 to £75 at Olympia has caused them to agitate for a better representation of the breed at the big shows.

A SERIOUS charge against a farmer is a novelty, and a sad case of a man, Fred Keitch, forty-two, of Knowle St. Giles, after being a farmer, having to accept work as a labourer and then losing his head over his worries to such an extent as to try to murder his employer's son, came before the Western Assize Courts this week. A sentence of ten years was imposed, with the intimation from the judge that the man's health would be studied whilst under sentence.

WEST Countrymen foregathered at the Cape recently and regaled themselves with as many delicacies of the Old Country as they could obtain. Cornish pilchards, Somerset ham, apple dumplings, and cream, Devonshire junket, and Gloucester and Cheddar cheese were washed down by "zyder," and then the smoke of the long churchwardens rose, whilst the ear was regaled with "Widdicombe Fair," "All among the turmits," and other West Country songs.

THE re-opening of mines and the stimulus given to the employment of labour by this means is likely to have a serious effect upon the profits of West Country farmers in the near future.

October 25, 1907.

Northern Notes.

THE hymn-book is hardly closed upon the thanksgiving-service favourite, "All is safely gathered in," than we hear of farms on the Wolds of Yorkshire, let alone North Britain, where not a single sheaf of corn had been "gathered in" at the time of writing! Thanksgivings with the use of such hymns are a travesty of religion and a reflection upon our common sense. This leads one to reflect upon the absence of that close bond of sympathy which might with great advantage bind the farming classes together and induce them readily to reach out a helping hand one to the other in cases of necessity; and especially would the loan of a wagon or two and a few horses be acceptable to help on the carting. Thus when one farmer had finished he could exercise the gift of charity and enable his neighbour to bring his last sheaves home.

"COUNTRYMAN" interrogates me in your issue of last week about the bottling of fruit. My reference to the poor failing to avail themselves of the cheapness of fruit was intended to show that, notwithstanding this year of plenty, the difficulty in the way was the dearness (comparatively) of sugar. I left out of account the "capital" expenditure on the bottles, which I foresaw was prohibitive to them, and therefore I did not mention these specially-constructed receptacles. They may be purchased at almost any large glass and china warehouse, and range in price, I believe, from about 2½d. each. The agricultural department of the Leeds University has taken a great interest in this matter, and at the agricultural shows in the county the lecturers had on view various styles of bottles used for preserving fresh fruit, and for demonstrating the process employed. Another stumbling block in the way of the poor "preserving" fruit by boiling and reducing to jam is the initial cost of a proper brass pan. Jam makers talk of "silver" pans used by them when puffing their wares; but the ordinary householder who chooses to make her own is content with a brass receptacle. Fruit might be "bottled," I would suggest, in old pickle jars with wide mouths, which may be purchased at marine stores for about a halfpenny each. These are within the means, at any rate, of cottagers. The temptation to buy jam at the grocer's all ready for use is perhaps too great to be overcome.

THE Martinmas hirings are close upon us. They are already advertised in the local newspapers, and it is as well to impress upon those concerned that to make a bargain for over the year cannot be upheld in law. Cases of breach of agreement are now seldom entered for hearing unless there has been a written agreement between the parties. What seems so strange is that local bodies sanction and actually advertise hirings days to be held prior to the date when contracts made without being reduced to writing are null and void at the caprice of either of the parties to them. The ordinary term day is November 23, and as the majority of hirings take place a week or more earlier, farm servants engaged before the 23rd until the corresponding date in the following year are really "engaged" for upwards of twelve months, although they would be actually paid for only a year of service; therefore the contract is not binding. Masters should know this. Most of them probably are aware of it. A little trouble in making the contract a reality would be advisable. Lads may give their word to enter upon their duties on a particular farm, but when they realise that hiring by parole is not legally effective, one cannot wonder that a few of the fickle ones should change their minds when an offer of more money comes their way. In some quarters a movement is being made to obtain an alteration of the law, and to provide that agreements for a year should be good by parole, that is, when made *viva voce*. We have not much hope of that consummation being reached, nor do we think it desirable. Farm servants, as a rule, have consciences; the exceptions are few.

A DISCUSSION, which is not without interest to the outside world, but into the merits of which it is not expedient to enter, has been going on among the supporters of Wensleydale sheep. The breeders of this type of sheep have two flock books. One is known as the Longwool Society, and the other as the Blue-Faced Association. Both societies were founded in 1890. The first named society was the original. The council offered to accept for registration rams which had been used prior to the year 1889, but not to number them, and as some think, by so decreeing, "utterly disregarded one of the most important objects for which any pedigree record association is founded." Some of the older breeders, who could prove the purity of and wished to number rams used many years before the foundation of the Flock Book Society, resented this action of their council, and, all argument failing to move that body, another association was formed with the prefix of "Blue-faced," and no flock was accepted for registration in which there was any doubt of purity of lineage. Both societies have the same aim. Their methods vary; that is all. It is said, however, that the seceders have become the much more powerful association of the two; but it appears there are two opinions on that head. In justification of their action, it is pointed out that between twenty and thirty rams used in the "Longwool" flocks last season were bred by the "Blue face" flockmasters, and that only one ram bred in the Longwool flocks was used in the Blue-face flocks, and this ram's sire, his dam's sire, and granddam's sire were all bred by Blue-face members. Another peculiarity of the situation is that a good sheep belonging to either book is eagerly competed for by members of both books. All the first and champion prizes offered at the Royal, Yorkshire, Royal Lancashire, and Wensleydale shows during the past two years have also been awarded to the Blue-face sheep.

I HEARD the Vicar of Walker lecture at Newcastle last week on his rambles in Northumbria. He threw on the screen the picture of a very fine Border Leicester ram, which he said was "the best sheep of the year in England, because," the rev. lecturer added, "it was the winner of first prizes at both the Royal at Lincoln and the Yorkshire at Barnsley!" Mr. Wardroper is one of the raciest raconteurs I have ever listened to, and his stories of life among the hills and dales of Northumbria kept his audience in a continuous laughing mood. His harvest pictures—of hay and cereal ingatherings—were most interesting, and his groups of large families and personal details must have impressed his city audience with the happiness and healthiness of rural occupations.

THE next day I had the pleasure of travelling over a fine stretch of the country which the Tyneside vicar talked about. From Newcastle to Hexham (noted for its famous abbey, now in the restorers' hands) by rail is a veritable panorama of the loveliest river and hillside scenery; the autumn-tinted foliage of the woods with which the country is thickly studded form a nature picture that will leave a lasting impression.

Poultry Show at Norwich.—In connection with this important show the Great Northern Railway Company are making arrangements for the conveyance of exhibits to the show from stations on all parts of their system. Rates for the conveyance of traffic may be obtained on application to any Great Northern stationmaster or agent, and they will be found in no case to exceed the rates in force by any other route.

Nottinghamshire Notes.

CORN merchants in the district continue to complain respecting the scarcity of blue peas, and a friend writing from Hull predicts almost famine prices for them should the coming winter be severe. Already quotations have reached 90s. per qr., but almost without exception the yields have been disappointing.

NEW Acts of Parliament mean new duties, and the justices' clerks in Nottingham are finding that the Dogs Act has entailed a considerable addition to their clerical work. They are agitating for increased remuneration as a consequence, but for the time being the question has been postponed by the County Council.

WHAT are people going to do in the event of a railway strike. This is a question which a good many people are asking. It will not only seriously affect townspeople, but also farmers. It will be just as well if they see that their supplies of cake for feeding purposes is increased and plenty of coal secured. In this district events cast their shadows before them. We already have a number of men in camp at Chellaston, a few miles from Derby, ready to take the places of men who go on strike in connection with the Midland Railway. I am informed this evening that the same company are making preparations in Nottingham for the housing of a number of other men in one of their warehouses. However, forewarned is almost equal to being forearmed, and farmers will be well advised to study the consequences if such a calamity is brought about as a railway strike.

BACON pigs just now are very cheap, several being sold in Nottingham and Newark markets this week for as low as 6s. per stone. Why don't farmers combine and go in for bacon-curing factories like our friends in Denmark? An Englishman loves his rasher of bacon for breakfast, therefore why do not our English farmers cater for him? I have made inquiries at a number of provision merchants' shops this week not only in Nottingham, but also in Leicester, Loughborough, Derby, and Mansfield, and I find that the retail prices of American bacon ranges from 7½d. to 11d. per lb. This is considerably more than our English farmers are securing for their large pigs, and I again ask why do they not go in for bacon curing factories? The initial outlay would not be large, and farmers could send their fat pigs to the factories, where they could be killed, dressed, and cured, and then sold direct to the retailers, and I am certain that the idea is worthy of consideration. Co-operation is one of the few ways of successfully fighting the foreigner at the present time.

MR. PEARCE, of Sturton-on-le-Steeple, has just had the misfortune to lose through death a nine-year-old pony. A post-mortem examination shows that death was due to the fact that in the animal's intestines was a stone 21 inches in circumference and weighed 6¾ lb.

AMONG those attending the Small Holdings Conference at Leicester on Thursday there were several gentlemen from this district, including Mr. Wilton Allsebrook, J.P., Mr. E. W. Enfield, J.P., Mr. J. Godfrey, J.P., Mr. J. R. Anderson, C.C., Mr. J. Greenwood, Mr. S. Plumb, Mr. J. E. Truman, and Mr. H. Lee. Gentlemen were also present from the counties of Derby, Bedford, Rutland, Worcester, and Northampton.

VISCOUNT GALWAY, who is a large landowner in the lace county, presided over the annual dinner of the Worksop Labourers' Friend Society on Thursday. In the course of his speech he alluded to the Small Holdings Act, which he was prepared to see carried out fairly and squarely, but with due regard to the interests of the ratepayers. He had always favoured the idea of small holdings, because they helped to encourage individual energy and thrift. He liked the idea of encouraging a man to a small holding and from that to a larger one. Where men succeeded in this manner they were bound to be a real help to the prosperity of the district in which they lived.

October 25, 1907.

At a meeting of the Lancashire Farmers' Association at Lancaster on the 19th inst., the Sheep Dipping Order was discussed at length, and resolutions were passed that three days' notice of dipping was a longer time than was necessary; that the time for dipping should be extended to November 24 (a fortnight more); and that rams should be excused the later dipping, because it was injurious to them. Another debate took place in regard to the sparrow pest, and it was resolved that the attention of the Board of Agriculture be drawn to the pest, which was doing serious harm to farmers, especially where cereals were grown.

SCOTTISH AGRICULTURAL CONFERENCE.

The annual conference promoted by the Scottish Chamber of Agriculture took place at Glasgow on Wednesday, and despite the fact that it was robbed of a great deal of its interest by the absence of the President of the Board of Agriculture, the attendance was one of the most representative of recent years.

The annual meeting of the Chamber was first held, Mr. J. Craig, Invergeldie, presiding, at which Lord Rosebery was unanimously elected honorary president. All the retiring directors were re elected, and a number of others, including the Rev. Dr. Gillespie, of Mouswald, were appointed.

The Renfrewshire Agricultural Society had on the agenda a proposed amendment of the rules to the effect that associated societies with a large membership should be allowed to appoint directors to the Chamber as hitherto. It was remitted to the directors to consider the propriety of devising a method whereby district societies could nominate directors.

Mr. J. S. Ainsworth, M.P., hon. president, who took the chair at the conference, said they all regretted the absence of Lord Carrington. He knew Lord Carrington enjoyed the conferences with Scottish agriculturists, and he thought that he was influenced by the fact that the Chamber had taken a strong attitude in opposition to the Small Holdings Bill, which, as they knew, was to be reintroduced next session. Above all, Lord Carrington was a sportsman, and he was sure his feeling was, knowing the general opinion of that Chamber, that in the discussion it would be better that the opinion of Scottish agriculturists represented there should be expressed quite freely in his absence.

Eleven resolutions dealing with various important matters were down on the agenda, and the majority of them were carried unanimously. The first was "That H.M. Government be respectfully urged to introduce a Bill early next session for the purpose of consolidating the Agricultural (Scotland) Acts," and this was carried unanimously. The second resolution was to the following effect:—"That the Agricultural Holdings Act, 1906, should forthwith be amended so as to exclude from sub-section 2 of section 1 all away-going valuations, including especially sheep stock valuations." Considerable discussion followed, but after an amendment had been submitted that the words "including especially sheep stock valuations," and a rider had been moved "but that otherwise the provisions under the Act in respect of away-going valuations as a whole shall remain unaltered," the resolution as originally framed was adopted.

Two resolutions dealing with milk were then submitted and both carried, viz.:—(1) "Resolve to again impress on the Board of Agriculture the justice of the claims by successful defenders in milk prosecutions to be repaid their expenses incurred in rebutting a presumption of guilt created against them by statute, and urge that legislation should be introduced for this purpose without further delay." (2) "That in any measures that may be introduced into Parliament to give effect to the conclusions which the Royal Commission on Tuberculosis have reached regarding the sale and consumption of milk, due provision ought to be made for the payment of compensation to any individuals who may suffer loss thereby in the public interest, and that the Board of Agriculture be respectfully urged to give this matter their particular attention in order to safeguard the interests of agriculture."

The subject of friars prices was then discussed, the following resolution being moved:—"That the Board of Agriculture be respectfully urged to appoint a Departmental Committee to consider and report as to what alterations should be made on the present antiquated procedure for striking friars prices in Scotland, in order to bring such procedure into conformity with modern requirements and conditions," but it was suggested that the words "or be abolished upon equitable conditions to all concerned" should be added, and the resolution with this amendment was adopted.

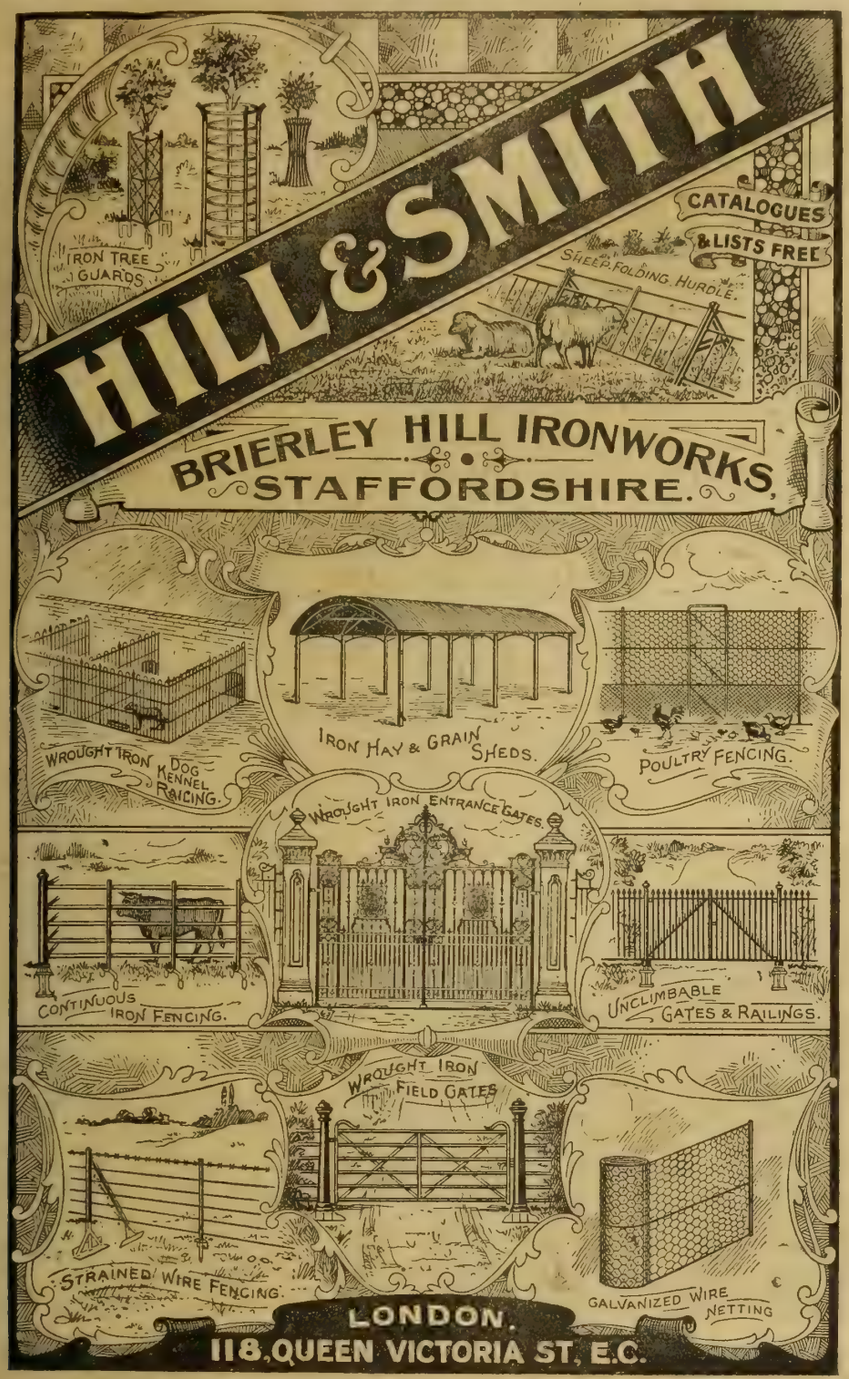
Then came a resolution dealing with agricultural education, and as usual when this topic is introduced, there was much said, but in the end the resolution, which was to the following effect, was carried unanimously:—"That, recognising the value of agricultural education, this conference is of opinion that the subject should be included in the curriculum of all our day schools in rural districts, and remits to the directors to take the necessary steps with a view to attaining this object; further, resolves that the Board of Agriculture be respectfully requested to appoint a Departmental Committee to inquire into the present condition of agricultural education and research in Scotland on lines similar to those of the inquiry presently proceeding in England."

Finally a resolution "That the attention of the Board of Agriculture be directed to the importance of taking legislative or other steps without delay with a view to the destruction of rats and birds, from which agriculturists suffered serious loss every year," was passed, and then there was an adjournment for luncheon, the delegates being entertained in the City Chambers by the Corporation of Glasgow. Many speeches were made at this luncheon, but the outstanding feature was the strong attack on the Scottish Small Landowners Bill by Lord Rosebery. The ex-Premier made a stirring speech, which was applauded all the way through, thus indicating that his lordship was voicing the views of the majority present. He said he felt so strongly about this Bill that he was sceptical about it ever becoming law. It was no doubt promised in the highest quarters that it would be re-introduced in its present shape unaltered and unimproved. If that were so it could only be meant as a battering ram against the House of Lords, because it could not be expected that the House of Lords would recant in eight months without reason, having shown its deliberate opinion on the principle of this Bill. If the House of Lords were sick, and some said it was sick, its debility must, indeed, be great if it were to be swept away by the Scotch Small Holdings Bill. If the House of Lords were destined to perish he himself would drop a sympathetic tear over its remains, but he should at the same time feel it could die in no better cause than in resisting to the last the introduction of a system so vicious, so pregnant with malignant possibilities as that contained in the Scotch Small Landholders Bill.

The conference was resumed with a consideration of the Bill which was so strongly condemned by Lord Rosebery. There were divided views on the matter, but in the end the following resolution, which figured on the agenda, was carried by 149 votes to 31:—"That H.M. Government be strongly urged before re introducing the Small Landholders (Scotland) Bill to amend it (1) on a purchase basis, (2) by constituting a Scottish Agricultural Council subordinate to the present Board of Agriculture, and otherwise on lines which would not involve the separation of Scotland from that Board, together with needless disturbance of the existing conditions under which Scottish agriculture has been an outstanding success, and loss of support from the classes directly interested in the prosperity of agriculture."

Other resolutions were passed declaring "That the statutory requirement for three men being in attendance on traction engines on public roads should be repealed;" calling attention to the railway rates on perishable goods; and declaring "That the operation of manure and fertiliser rings, by tending unfairly to enhance prices and to exclude legitimate competition, is seriously prejudicial to the interests of agriculture, and that, with a view to providing a remedy, the Board of Agriculture should appoint a Departmental Committee to inquire into the matter." To the latter resolution the previous question was moved, but the motion received only four votes.

The proceedings thereafter terminated with a vote of thanks to Mr. Gilchrist, who had been concerned in making the arrangements for the conference, and to the chairman for presiding.



The annual dinner was held in the evening, and was well attended.

SHOW GOSSIP.

Intending exhibitors of live stock, poultry, roots, &c., at the Birmingham Cattle and Poultry Show, November 30 to December 5, are reminded that entries close on Friday next, November 1. When applying to the secretary, Mr. W. H. Lythall, Bingley Hall, Birmingham, for entry forms, it is necessary to state for which section they are required. The entries for implements and stands have already closed.

The council of the Hereford Herd Book Society have decided to offer at the Royal Dublin Society's forthcoming winter show a champion prize of £10 for the best Crossbred beast by a registered Hereford bull. We would here remind intending exhibitors that the entries for the show close as follows, viz.:—On single fees Friday, next, November 1. On double fees, Saturday, November 2. Entries for poultry close finally on single fees on Thursday, November 7. Applications for entry forms, &c., should be addressed to the agricultural superintendent, Leinster House, Dublin.

By an Order of the Board of Agriculture which appeared in Tuesday's *London Gazette*, the administrative counties of Derby, Leicester, and Nottingham, and the county boroughs of the same counties, to-day come under the regulations in force in other places with regard to gooseberry mildew.

CORN & SEED CRUSHERS

SEPARATE OR COMBINED WITH

BEAN & MAIZE KIBBLERS.

Turner's Crushers were awarded **First Prize** by the R.A.S.E. in 1853, and still retain the high reputation which they then gained for durability and general efficiency.

SOME RESULTS OBTAINED WITH

KAINIT, SULPHATE OF POTASH, AND MURIATE OF POTASH.

POTATOES.

Experiment by
Mr. J. B. BAILEY,
Thornhill, Bitterne,
Southampton,
Hants.

Crop: Potatoes.
Soil: Hazel.
Gain from 1½ cwt. of Sulphate of Potash—
3 tons 10 cwt. of Potatoes.

STRAWBERRIES.

Experiment by
Mr. J. B. BAILEY,
Thornhill, Bitterne,
Southampton,
Hants.

Crop: Strawberries.
Soil: Clay.
Gain from 1 cwt. of Sulphate of Potash—
920 lbs. of Strawberries.

HAY.

Experiment by Mr. R. H. TUCKER, Babbage Farm, Bickington, Fremington, N. Devon.
Crop: Meadow Hay. Soil: Heavy Clay.
Gain from 4 cwt. of Kainit—1 ton 9 cwt. 2 qrs. of Hay.

MANGOLDS.

Experiment by Mr. A. BROWN, Hill Lane Dairy Farm, Southampton, Hants.
Crop: Mangolds. Soil: Deep Loam.
Gain from 5 cwt. of Kainit—19 tons 10 cwt. of Mangolds.

N.B.—When buying 'Special Manures,' insist on a MINIMUM of 6 per cent. pure Potash or 12 per cent. Sulphate of Potash

Fertilisers and Feeding Stuffs.

Fertilisers for Early Potatoes.

Within the memory of many of us, the Channel Islands enjoyed a practical monopoly in supplying the English market with the delicacy of early potatoes, and the industry had the reputation of being so lucrative that growers in other places were induced to make an attempt to secure a share of it.

Thus, gradually, early potatoes were shipped from Malta, the Canaries, Portugal, and more recently in large quantities from the north of France, while they have been cultivated with a fair share of success in some parts of this country, notably in the south-west of Scotland, and within the last few years an effort has been made to introduce the industry into Ireland.

It is certain that the Channel Islands will have to meet increased competition in the future and in order to do so with success, the growers must strain every nerve to make their systems of cultivation and marketing as perfect as possible.

Nature is very favourable to them. They have a climate and soil specially suited to the industry; they are conveniently situated for shipment, and "Jersey" potatoes enjoy a prestige which is worth a great deal.

The judicious use of suitable fertilisers plays an important part in the production of a crop to arrive at early maturity, and it is to this point that some growers do not devote sufficient care As the committee appointed, a few years ago by the Royal Jersey Agricultural Society to investigate the conditions of local agriculture, pointed out, there is reason to believe that artificial manure is, in many cases, extravagantly used or misapplied, but, so far as we can see, the committee did not go a step further and offer any suggestions as to what system of manuring could be recommended so as to produce the best results. The growers should also be very careful that the quality of the purchased fertilisers is up to the mark both in the percentage of the principal constituents and in their condition. The minimum percentages of ammonia soluble phosphate and potash should be guaranteed by the seller, and sample sent to the analyst of the agricultural society to be tested.

The crop is so dependent on the fertiliser applied that it is not to be wondered at if the results are disappointing when the manure has been carelessly bought without any guarantee of quality.

In this connection it is surprising that there is no fertiliser law in the Channel Islands to protect the interests of the farmers. It is an anomaly which we hope will be rendered at an early date, because it places Jersey farmers at a disadvantage with farmers elsewhere. In Great Britain and its important Colonies, in America and in all the countries of Europe, the purchasers of artificial manures and feeding stuffs are protected by law against fraudulent sellers, and although cases of fraud may be scarce, the fact that the law exists has a great moral effect, and has served to raise the quality and purity of the goods sold.

What is the Most Suitable Fertiliser?

The Jersey early potato growers use enormous quantities of fertilisers of various kinds, and we have not the necessary local knowledge or experience to enable us to recommend any special system. This would be more within the province of the Agricultural Society, but one may draw attention to the suggestions of the Irish Department of Agriculture, which has been making a special study on the subject. It is pointed out that farmyard manure alone, no matter how heavy the dressing, will not produce the maximum crop nor the best quality. Dung must be supplemented by a suitable artificial fertiliser, this is imperative for early potatoes.

A fertiliser of quick action must be used as it has only about three months to do its work, and one with an analysis of:—

Nitrogen ..... 8 per cent.
(Equal to ammonia 9·75).
Potash ..... 4 to 5 per cent.
Soluble phosphate... 18 to 20 per cent.

and compounded of soluble materials would be a safe mixture.

The quantity to apply will vary according to the condition of the land and the quantity of dung applied. With a moderate dressing of dung 6 cwt. of artificials should be enough. If without farmyard manure, the artificials should be doubled.

The time to apply is at planting, and before the sets are put down. It is not a good plan to top-dress potatoes and force them by fits and starts, as might be done with a forage crop or cabbage.

As regards the composition of the fertiliser, it has always been found that soluble guano is one of the most suitable, as its complex quality renders its action quick at the start, with further supplies of nourishment available to carry the crop to maturity.

Seaweed Analyses.

Semi-decayed seaweed, according to analysis, has the following composition:—

Analysis of Semi Decayed Seaweed.

	Per cent.
Water	61·03
Organic matter	28·92
Ash or mineral matter	10·05
	100·00
Nitrogen	1·20
Phosphoric acid	·19
Potash	·90

Some years ago a sample of fresh seaweed (*Fucus furcatus*) was analysed, the data of which may here be given for the purpose of comparison.

Analysis of Fresh Seaweed.

Water	63·49
Organic matter	27·63
Ash or mineral matter	8·58
	100·00
Nitrogen	·468
Phosphoric acid	·108
Potash	2·025

The general result of the decomposition, it will be seen, has been to increase the nitrogen-content and to decrease the percentage of potash, so that while the fresh seaweed is essentially a potassic manure, the semi-decayed weed is more particularly nitrogenous. The value of seaweed as a manure is undoubtedly enhanced by the readiness with which this naturally occurring fertiliser decomposes in the soil, quickly liberating its constituents in forms available to crops.

Trials with Different Forms of Nitrogen.

Farmers in Germany are watching with much interest the result of trials made with the new nitrogenous fertiliser (calcium cyanamide), because they hope to find in it a gradual substitute for nitrate of soda, or at any rate, a means of keeping nitrate of soda within reasonable prices. Some hundreds of tons of calcium cyanamide were used in Germany last season, with results that, on the whole, appear to have been satisfactory.

The journal of the National Agricultural Society (Germany) published some interesting results of numerous experiments, according to which the effective power of the three fertilisers, nitrate of soda, sulphate of ammonia, and calcium cyanamide, many be classed somewhat as follows, taking nitrate of soda as 100:—

	Nitrate of Soda.	Sulphate of Ammonia.	Calcium Cyanamide.
Barley	100	92	77
Potatoes	100	99	95
Beetroots	100	93	72
Average	100	95	81

Sulphate of ammonia and calcium cyanamide appear to be better suited for potatoes and cereals than for roots.

In the application of the calcium it may be noted that it is not adapted for broadcasting by hand, either alone or mixed with sand or dry earth, but must be applied by a manure distributor,

As regards time of application, experiments prove that in light soils none of the fertilising materials in question should be applied in the autumn, otherwise the greater part of the nitrogen is lost. On the other hand, in heavier soils both sulphate of ammonia and calcium cyanamide can be applied with advantage in the autumn for wheat.

Calcium cyanamide must not be mixed with superphosphate, but it can be quite well mixed with basic slag and potash salts, either kainit, sulphate or muriate of potash.

Prices of Fertilisers.

There is now a brisk demand for fertilisers required for autumn application, particularly for basic slag, superphosphate and potash salts, while we hear of contracts also being made for nitrate of soda and guano for spring delivery.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	12	0	0
Peruvian guano ..... according to analysis			
Superphosphate, 26 per cent.	2	10	0
,, 35 ,,	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.	9	10	0
Fish guano, first quality, scarce & dear	7	10	0
Kainit	2	7	0
Sulphate of potash	10	0	0
Muriate of potash	9	0	6

The Supply of Superphosphate.

The fluctuations of the phosphate market during the last quarter of a century afford a striking example of the changes which may take place in the position of an important commodity.

At a lecture delivered in London about twenty years ago by a chemical manure manufacturer, attention was directed to the growing deficiency in the supplies of raw phosphate and the increasing difficulties experienced by manufacturers of superphosphate in securing the necessary supplies. At that time the bulk of the supplies came from South Carolina, and the total imports into the United Kingdom were about 280,000 tons. The demand for superphosphate throughout Europe was rapidly growing, and was springing up in America as well as in Australia, while the supplies of the material from which to make it were not increasing, and indeed, showed signs of diminishing. People were talking of a "phosphate famine," and the prospects for the industry were gloomy.

It was not long, however, before the demand brought in the market new supplies. Deposits were discovered in Florida, Algeria, and Tunis, and on islands in the Pacific. The new deposits were rapidly opened up, and within the space of a few years the supply once more overlapped the requirements of the trade. This continued to be the position until about a couple of years ago, when the enormously increased demand throughout the world sufficed to absorb all the surplus stocks and strained to the utmost the producers of phosphate to meet it.

As a consequence, the price of the raw phosphate has been moving upwards for some time, and manufacturers of superphosphate for the last eighteen months have had to pay about 25 per cent. more for the raw material.

At the present time the total quantity of raw phosphate raised in the world is estimated by Monsieur Tibulle Collot in round figures as—

America	2,000 000 tons
North Africa	1,000,000 ,,
Islands in the Pacific	250,000 ,,
Europe	750,000 ,,
	4,000,000 ,,

and the consumption of superphosphate in the different countries as—

America	1,600,000 tons.
France	1,400,000 ,,
Germany	1,100,000 ,,
United Kingdom	850,000 ,,
Italy	600,000 ,,
Belgium	350,000 ,,
Austria-Hungary	350,000 ,,
Australia	200,000 ,,
Japan	150,000 ,,
Other Countries	750,000 ,,
	7,350,000 ,,

reaching the enormous total of over seven million tons, and increasing rapidly.

The use of superphosphate in America, Australia, and Japan, and even Italy is comparatively modern, and is extending in those countries at a very rapid pace.

This is a good thing for our farmers, because it is evident that the virgin soils have become exhausted, and that the cost of producing the crops will be greater.

There is, however, no foundation for the rumours of a phosphate famine. The deposits already known are sufficient to last for more than a century, and there is no reason to suppose that new deposits will not be discovered, but the raisers of phosphate are in the fortunate position that the demand for their goods is greater than the present supply, and they are therefore able to ask for an advance in price, which the manufacturers, protest as they may against paying more, are finally obliged to concede.

No doubt, in due course, the pendulum will swing back again. The remunerative prices for the phosphate will encourage the raisers to produce larger quantities by employing more labour and more machinery, so that in the course of time the supply will again overtake the demand and prices drop again, but for the present the enhanced cost of the raw material is leading to higher prices for superphosphate on all the markets in Europe.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, in the paper.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

More Profit from Stock.

The profit from rearing and especially fattening cattle is usually much diminished by the necessity of purchasing a large quantity of expensive concentrated foods. How this expenditure can be diminished is a problem which the dairymen in Denmark are considering, just as much as the farmers in this country. The Journal of the Agricultural Society for Denmark discusses the subject as follows :—

The farmer could spare many a hard-earned pound if he were more careful to make the best use of his own pastures and meadows; the fodder obtained from those is the best and cheapest he can get.

He must set himself to improve the quality of his grass and increase the quantity. In this important matter there has been far too much neglect.

The average yield of the meadows is only equal to 1½ tons of hay per acre, whereas with proper management it could be brought up to nearly double as much.

The cause of the unsatisfactory average yield is in most cases neglect of proper management, and especially the omission to supply the grass crop with proper nourishment. Phosphate of lime must be considered a necessary for all grass lands, and potash is almost as essential. With the help of these two substances the meadows can be wonderfully improved, and in many cases the omission of either one or the other renders the expenses useless.

Not only the hay meadows, but also the pastures must be treated in a rational way if the best results are to be obtained. When compost is made it should be enriched with addition of phosphate and kainit.

Every two or three years the pastures should have the benefit of a dressing of basic slag or superphosphate and kainit applied in the autumn.

The Danish farmers are finding out, just as our farmers are doing, that the neglect of meadows and pastures has been a weak link in the prosperity of their farms, and are now beginning to remedy this defect.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in an early issue of each month.

Turnip Manurial Experiments.

In a bulletin issued by the West of Scotland Agricultural College, Professor Wright gives an interesting report on the results of his experiments with fertilisers in turnip cultivation.

The objects of the experiments were :—

1. To compare the efficacy of phosphatic manures (superphosphate and basic slag) applied in autumn and applied in spring.

2. To compare the efficacy of the potassic manures (kainit, potash manure salt, and muriate of potash) applied in autumn and applied in spring.

3. To compare the efficacy of these three potash manures with each other, whether applied in autumn or in spring.

4. To compare the efficacy of the two phosphatic manures, superphosphate and basic slag, with each other, whether applied in autumn or in spring.

5. To determine the value of the new nitrogenous manure, lime nitrogen (cyanamide of calcium), as compared with a combined dressing of sulphate of ammonia and nitrate of soda.

The conclusions drawn are thus stated :—

1. That superphosphate forms a more effective manure for the turnip crop when applied in the drills in spring than when broadcast on the land in winter.

2. That basic slag also generally produces larger crops when applied in the drills in spring than when broadcast in winter.

3. That kainit and the other potash manures also generally, though not invariably, give the best results on the turnip crop when applied in the drills in spring.

4. That the relative efficacy of the winter and the spring applications varies with the season, and that in some years the spring application may be only moderately, if at all superior.

5. That potash appears to be of nearly equal efficacy for the turnip crop in the three forms of kainit, muriate of potash, and potash manure salt, but that kainit is somewhat the more effective form of the three.

6. That lime nitrogen appears likely to prove a valuable nitrogenous manure for the turnip crop.

With regard to conclusion No. 6 more experiments are desirable because other experiments seem to show that the new nitrogenous fertiliser is not so suitable for roots as sulphate of ammonia or nitrate of soda.

Storage of Cake and other Concentrated Foods.

It should be remembered that cattle cakes and other concentrated foods should not be stored in unsuitable places, otherwise they are liable to lose part of their value. The warehouse should be airy and dry.

As a rule, cakes should not be stored over a stable or shed, where the warm air permeates, nor in a place where fodder is steamed.

It is not an uncommon occurrence that the results obtained from the cakes are not so satisfactory as might be expected from their high quality, and the cause is due to their deterioration through bad storage. Moreover, if cake is kept in a damp place it may get mouldy and be absolutely injurious to stock.

To Manure at a Profit.

We have pleasure in directing attention to the booklet "To manure at a Profit—Every Farmer His Own Experimenter"—published at the office of this paper at the small price of 6d. (by post 7½d.). It is a reprint of the series of articles which appeared in these columns some time ago, and attracted a good deal of attention. The writers of the articles combine a thoroughly practical and scientific knowledge of the important subjects dealt with, and have succeeded in putting their suggestions and recommendations in simple language capable of being grasped by the reader who is too busy to study the scientific books usually written by scientific men. Every farmer should read the booklet and keep it by him for reference. It can be obtained from the Publisher, 3, Wellington Street, Strand, London, W.C.

Correspondence dealing with Fertilisers and Feeding Stuffs appear in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in an early issue of each month.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Approximate Analyses of Principal Fertilisers.

Statement showing the approximate percentages of nitrogen equal to ammonia, phosphoric acid equal to phosphate of lime, potash and lime in the principal commercial fertilisers :—

	Nitrogen.	Equal to Ammonia.	Phosphoric Acid.	Equal to Phosphate of Lime.	Potash.	Lime.

BETTER TIMES—BIGGER RENTS.

One of the results of higher prices for farm produce is already making itself apparent in the subject of rents. A striking instance has transpired last week, when a farmer residing only a few miles from Newark, gave his landlord notice that unless the rent of the 160 acre farm which he occupied was reduced, he should quit on Lady Day, 1908. Of course the notice was handed in, but no abatement of rent was offered or even promised.

With the advent of August this particular farmer saw that times were likely to be better than was expected. His crops—both cereal and root—looked wonderfully well, and an abundant harvest was assured. Fodder was plentiful, he had been successful in his lambs, many of them having gone off fat to the butcher, while his wool had averaged 12¾d. per lb. He, therefore, bethought himself, and after due deliberation with his wife and family, decided to take the farm on again at the old price of 26s. 6d. per acre rental.

As was his custom, he attended Newark market, and after transacting certain business he sought out his landlord's agent and endeavoured to persuade him to take 1s. 6d. per acre off the rent. The agent allowed him to ventilate the whole of his grievances—hard times, low price of corn, heavy rates, dilapidated buildings, and so forth, and then sprung upon the farmer not only a flat refusal to take less money per acre, but the startling statement that 28s. was to be the rent in the future. Naturally the farmer left the office, after making several remarks not altogether complimentary.

Since that time wheat has advanced considerably, barley meets with a better demand than twelve months ago, oats are maintaining their prices well, beef and mutton continue dear; in fact, farmers are just now enjoying a rosy time. Last Wednesday the same gentleman again wended his way to the agent's sanctum, having decided to pay 28s. per acre rather than lose the farm. But he was too late. He was surprised when informed on his previous visit that 28s. was the price, but he was staggered when told that a farmer in a neighbouring village had actually taken the farm and given 30s. per acre. This is not an isolated case where the rent has been increased, for it was whispered in Nottingham Market last week that on two or three estates the stewards have given a good broad hint that notice of increased rentals will be given next April.

There are very few farms in the county to let, and even some farmers who retired a year or two back are expressing a desire to again enter business.

MASTERS—MEN—IMPLEMENTS.

II.

MEN.

Undoubtedly the class of man we employ on a farm is a great help on the road to success if he is a good class man, and soon a serious drawback if he is not. I have seen a good deal of the labour market in the metropolis and elsewhere; the way work is done in London seems, to my idea, the best way in several businesses—*i.e.*, an almost natural briskness, smartness, and general promptness. But our Essex men and their ways, like most subjects, have a bright side and a rather dark side.

I have heard it said that the labour problem is the great drawback to agriculture. But let us look at the matter in a perfectly fair way. Let the men be divided into four departments or classes—1, lazy; 2, indifferent; 3, medium; 4, good.

1. Lazy.—Please tell me of a worse disease! Late in the morning; if a horseman, horses never properly seen to, and seldom cleaned; untidy; possibly a man who drinks too much; the land "muddled about," but never done;

work getting behind; implements and pieces of them all over everywhere, &c., &c. But someone says, "Well, a good farmer would not keep such a man." In some instances there are such men kept, possibly partly through the true old saying, "Like master, like man."

2. Indifferent.—Also a rather bad class. The end breaks off his ploughshare; he does not notice it; he never cleans his harness if he has a few spare moments in the stable; a shoe comes off a day or two before he notices it; a horse's shoulder gets quite raw by collar-chafe before he sees it; he would almost as least think of picking up the moon in his garden as stooping to pick up a dangerous piece of glass or a nail, and so on *ad lib.*

3. Medium.—Now we begin to get along on a far more pleasant road. The man is not by several degrees what he ought to be; still, there are many things about him we like, perhaps an even-tempered fellow—a capital point for a horseman; to be depended upon for a fair day's work, although perhaps not so when going to "town," as they say, which means the county or local one, of course; a few days in town would do many of them good, if only to see how hard it is to get a job. But with a fairly slow-going master, and perhaps as slow-going son, the middle-class or medium Essex agricultural labourer or horseman is "sorter tidy happy," he says. These men come up to the house for their wages very regularly; that's the only strictly regular thing with them. Why do not they try a little more and get into a better system; there is great need in every department of the world's commercial enterprises for a better supply of the fittest.

Now I come to the part of my subject to enjoy myself upon. My pen could very comfortably go on until a column—ah! and a column of smaller type, too, and "larger measure" than the MARK LANE EXPRESS—was written, then I should not be tired.

What is a nicer sentence in connection with farming than that important one: "I have good men"? There are little "ups" and little "downs," of course, in all occupations; but a master knows he has men he can depend upon, and is so far content. To time in the morning; clean horses; out early when a long journey with corn; home good time, and horses not very hot and never knocked up; good-tempered, tidy at all times and in all places; land a pleasure to see because so well ploughed, or whatever else done to it, always in a thorough workmanlike way; honest, obliging; by giving his time ungrudgingly he helps his own interests as well as those of his master.

As last week, a word of advice in conclusion. You will find, my men, it will never pay you to be independent and offhanded. The sun shines to-day, perhaps; how do you know that you will not presently be pleased to have your old master chatting to you by the side of your sick bed, a bed from which perhaps the doctor says it will be weeks before you can rise? Do your work as every Englishman should, and your conscience will give you as much independence as is good for anyone; your tongue can keep quiet.

My experience is that in Essex we have all the men we want—with an important alteration: we would that some kind fairy (I nearly put fiend!) came and took many a one away and left a better man in his place; good food should never be wasted on that that does not pay for it, and also him who does not properly earn it.

I once spent the day on and about the battle-field—no, not as a soldier, but at Waterloo, but not during the battle. It was in 1905, and I was greatly impressed with the large amount of women labour farmers employ—a class of women, too, who seem perfectly happy in their work, some of which was carting away in harvest time, weeding, &c. Still, it certainly looks more natural to see buskins than frocks with horses.

J. B. M.

Notes of the Week.

The Brewery Exhibition at the Agricultural Hall, Islington, was the great event of last week.

The brewery industry is so closely allied with important agricultural interests that the exhibition always brings up to London a number of country visitors.

Not so closely allied as it should be, says my cynical friend. There's too much chemical about it.

As a man brews so shall he drink, according to an old proverb.

The Hall had undergone a great transformation scene, from the Dairy Show of the week before to the Breweries.

Milk had given place to malt, butter to beer.

The exhibition was eminently successful, and it was enlivening to meet so many cheerful people.

The contemplated attack of the Government on brewing interests evidently did not bother them.

And the rabid teetotaller who expected to find signs of depression would have turned green with spite.

It is pleasing to note that the world's champion barley prize remains in England, having, after all, been awarded to Mr. T. Rawle, of Porlock.

Our hearty congratulations to him on his great success.

At the same time we sympathise with Messrs. Liebmann Bros. in the disappointment which they must naturally feel.

We hope they will compete again next year. A little foreign competition will serve to stimulate English growers to greater exertion.

By the way, the chief object of the hop and barley samples seems to be to advertise chemical manure makers.

A little official control and organisation in the matter would not be amiss.

"Hops, carp, pickerel and beer,
Came into England all in one year" (1532).

A black Sussex pig has been engaged to perform a part at one of the London theatres. The play is called "The O'Grindles."

Of course it's an Irish piece, and the pig is "the gentleman that pays the rent."

The animal-maiming miscreants seem to have transferred their diabolical energies to pigs. Some mysterious outrages on pigs have occurred in Lincolnshire.

A single Government Board to control such different interests as Agricultural and Fisheries is a curious combination. So it is in contemplation to have a separate Board of Fisheries.

On the subject of Fisheries, the fishermen of Yarmouth had a splendid harvest last week. They netted out of the sea in the one week 76,000,000 herrings, worth £50,000.

"A plague on you both" is the feeling on the part of the public on the much-boomed dispute between railway men and railway directors.

In this case might and right seem to be on the same side.

New Zealand sheep breeders are importing numbers of South Devon sheep. The climate and scenery of New Zealand much resembles Devonshire.

The wettest week for many years is a fair description of the kind of weather we had during the week of the Dairy Show.

"I canna get over it," a Scotch farmer remarked to his wife. "I put a twa-shillin' piece in ta plate at the kirk this morn instead o' ma usual penny!"

The beadle had noticed the mistake, and also the frightened face of his old friend, who had not the courage to retake the coin as the old-fashioned ladle-like spoon was carefully passed over the head to the next pew, and one penny after another was dropped into the bowl. The farmer said nothing, and in silence the old beadle allowed him to miss the plate for twenty-three consecutive Sundays. On the twenty-fourth Sunday the farmer again ignored the collection, but the old beadle steadied the ladle in front of him, and in a loud tragic whisper hoarsely said:

"Your time's up noo, Sandy!"

THE FARMERS' DIARY.

TUESDAY, OCTOBER 29.—Bath and West Society's Council Meeting at Bristol—Sale of Lord Carnarvon's Pedigree Berkshire and other Pigs at Highclere, near Newbury—Farm Sale at Etchingham—Bridgnorth St. Luke's Fair and Great Annual Cattle Market—Fairs at Ashford, Great Marlow, Wellingborough, and Preston.

WEDNESDAY, OCTOBER 30.—Rochester Agricultural Association's Show—Nantwich Dairy Show—Leek Cheese Fair—Horse Sales at Bampton and Shrewsbury—Agricultural Fairs at Tadcaster, Saintfield, Newcastle-on-Tyne, North Molton, St Lawrence, and Bury St. Edmunds—Great Sale of Store Cattle, Carlisle—Mynd Farm Sale, Shropshire—Aldington Farm Sale, near Thurnham—Oaklands Farm Sale, near Tonbridge.

THURSDAY, OCTOBER 31.—Ely Annual Three Days' Fair Opens—Agricultural Fairs at Bourne, Frodsham, and Nuneaton—Mottram Cattle and Pig Fair—Important Corn Market, Maidstone—Sending-in Day for Viscount Tredegar's Show at Newport—Great Live Stock Sale at Perth—Strood Autumn Stock Sale—Longton (Staffordshire) Prize Horse Sale.

FRIDAY, NOVEMBER 1.—Shepton Mallet Cider Show—Sending-in Day for the Smithfield Show—Great Horse Sale at Peterborough—Wrexham Great Horse Sale—Tarrant Rawston (Dorset) Cattle Sale—Agricultural Fairs at Coventry, Poole, Wadhurst, and Saffron Walden—Many other Fairs. "All Saints' Day Fairs"—Horse Sales at Newark, Moy, and Kelso—Cattle Sales at Rutherglen and Llan-y-byther—Important Farm Sale at Alcombe—Birmingham Cattle Show Entries Close.

SATURDAY, NOVEMBER 2.—Alnwick Agricultural Hiring Fair—Berwick Agricultural Hiring Fair—Halifax Great Fair—Keswick Cheese Fair—Sending-in Day for Darenth Show—Carlisle Great Sheep and Lamb Sale—Buckingham Cattle and Sheep Sale—Tolgarth Agricultural Sale—Knutsford Cattle Sale—Toddington Cattle Sale—Winch's Great Agricultural Sale at Rhoden, near Paddock Wood.

MONDAY, NOVEMBER 4.—Farmers' Club Meeting, 4 p.m.—Farmers' Club House Dinner, 6.15 p.m.—Edinburgh Great Sheep Sale—Sending-in Day for Whitchurch Dairy Show—Agricultural Fairs at Eastwood, Droxfield, Plymouth, Newcastle-under-Lyme, Rotherham, Welshpool, Beverley, Aberystwyth, and Crewe—Farm Sale at Willesborough—Cirencester Cattle Fair.

A Disastrous Harvest in Scotland.

Probably one-half of the Scottish grain crop is still in the fields, and much of what has been secured cannot be said to satisfy the owners. Stooks which were set from a fortnight to nearly three weeks ago are in a very bad way owing to the excessive drenchings and relatively mild atmosphere.

Of the fairly early counties under normal circumstances, Berwick and Stirling are now among the most unfortunate. The north-east of Scotland is barely finished with cutting. Ten days ago a good deal of grain on the lower grounds of Aberdeenshire was getting into very fair condition for leading, but since then misfortune has followed misfortune, and the last state is worse than the first.

There will be an excessive amount of bad fodder in the country, especially in what might be classed as the "second early" localities. The very early districts escaped more or less, and the latest are nearly half right so far as straw is concerned. In the latter case, however, much of the oat grain has been either devoured by birds or knocked out by the storms.

On the stronger soils the late potato crop cannot be touched owing to the sodden conditions. In the majority of cases the crop is at the least from 25 to 30 per cent. under a good average for bulk. Rain has helped the turnips to a moderate extent where there was a form of growth, but otherwise it has not apparently moved the important root crop out of its early dead set. "Shot" fields, mainly the result of early June frosts, are much more common in the southern than in the northern counties. —*Glasgow Herald*, October 22, 1907.

A Dyed Horse.—In a case heard at Birmingham County Court, on Wednesday, a plaintiff said he bought what seemed to be "a beautiful black steed, young and healthy," but some days later he found that though its body was still black the legs were a suspicious grey. Apparently they had been bleached by standing out in the rain. Its teeth had also been filed down, and the horse, instead of being a "vigorous young blood of seven years, turned out to be a decrepit old hack of apparently twenty-seven." He believed the horse had been dyed with black lead. He therefore sued to recover a portion of the £15 spent on this "beautiful black steed," and was awarded £5.

SHEEP.

THE PRODUCTION OF WOOL.

THE report of the production of wool of Great Britain, which has just been issued by the Board of Agriculture, is one that should be read and studied by every breeder of sheep in this country.

THE subject with which it deals is one of outstanding importance, and the information it contains is interesting, instructive, and doubtless will be, in many cases, of great value to those who are breeding sheep.

THE report, as a whole, is most valuable, and it brings to the fore many vital questions that affect, to a large extent, the welfare of those who are engaged in breeding sheep.

VERY many points there are to which reference could profitably be made, and opportunity will be taken in future notes to refer in more detail to the different points that are dealt with, for before this is done there is need of careful thought and study, and as the report has only just been issued there has not been sufficient time to thoroughly master all of its valuable details.

TABLE 3 in the appendix appears to be one of special importance, for there in tabular form is given the average weight per fleece of washed and unwashed wool of seventeen distinct breeds of sheep, and eight distinct cross-breeds.

THE total number of fleeces of washed wool given is 2,396,128, weighing 13,284,110 lb., which brings out the average weight of the washed fleece to 5½ lb.

THE total number of unwashed fleeces given is 961,963, weighing 7,768,120 lb. This gives an average weight of 8¼ lb. per fleece. This table enables the breeders of sheep to ascertain the correct proportion of the reduction in price that should be made for the unwashed fleece as compared with the washed fleece.

THE percentage of the allowance that should be made, however, varies materially in the different breeds. For instance, the average weight of the washed fleece of the Herdwick and the Cheviot were, respectively, 3⅜ lb. and 4 lb., and their unwashed fleeces 4 lb. and 4¾ lb., so that in the case of these two breeds the difference between the washed and the unwashed fleece is much smaller than the general average shows.

LEICESTERS and Lincolns, on the other hand, when washed, give an average of 10⅜ lb. per fleece, but when unwashed an average of 14⅜ lb. The Shropshire gives an average of 5¼ lb. for washed fleeces and 8¼ lb. for unwashed. The Southdown's average for washed fleeces is 4½ lb., and for unwashed 6¼ lb.

IT is singular to note that so far as regards the South Devon and Dartmoor breed, there are no returns given of the washed wool at all, the average weight of the unwashed fleeces being 11 lb. On the other hand, the whole of the Dorset Horn and the Cotswold wool included in the return is given as washed.

ANOTHER interesting point in connection with the wool production is that lambs' wool practically applies only to three breeds—*i.e.*, the Kent, Dorset Horn, and Dorset Down, and the average weight of the washed fleeces from 161,597 lambs is 1½ lb., and of the unwashed fleece from 33,615 lambs 2⅞ lb.

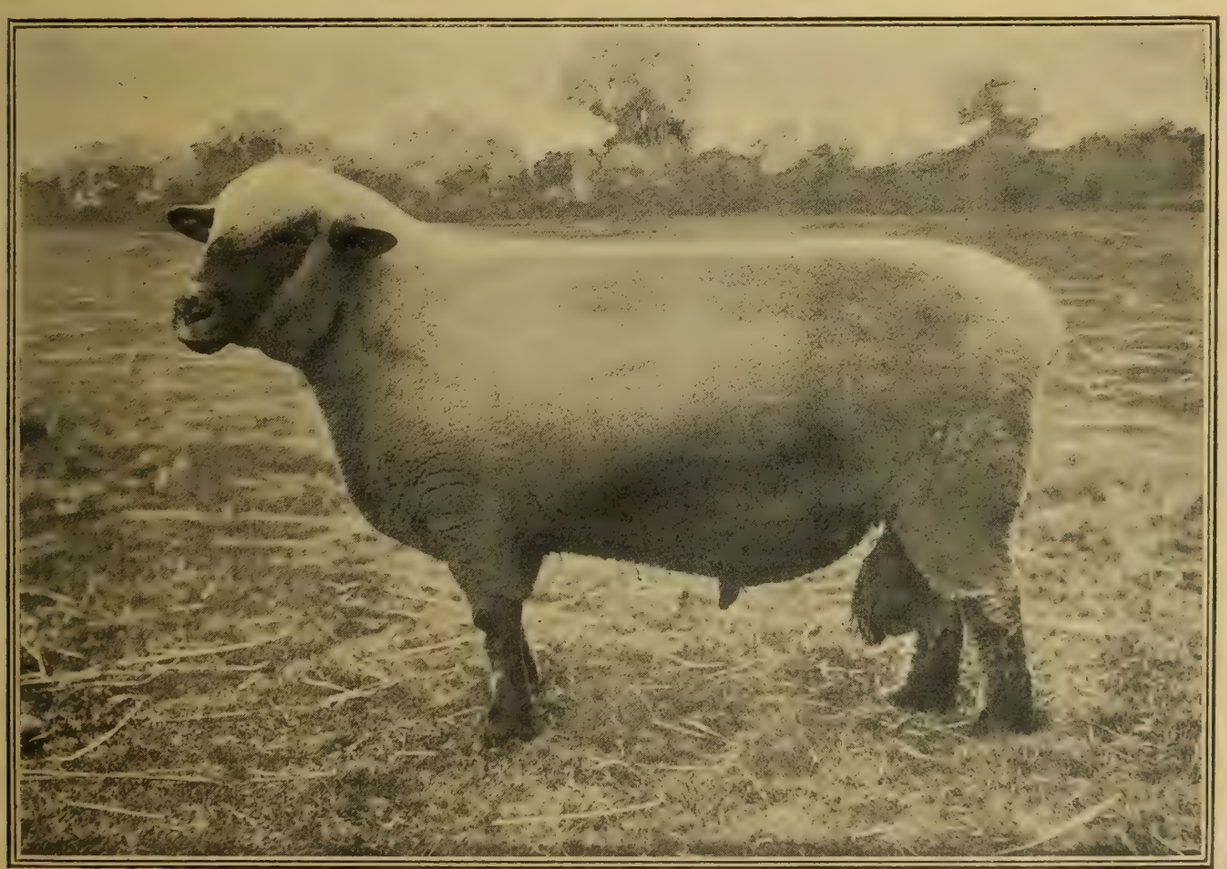
TABLE 2 is one also of great interest. It gives the average weight of the ewe fleeces for the different breeds kept in each county of Great Britain. It gives also a very useful summary, and it shows that the 9,998,435 ewes kept in Great Britain gave an average weight of 5⅜ lb. of wool, and that the 5,123,196 other sheep, one year old and above, gave an average weight of 6½ lb., making the average production of wool in this country for the year 1905-1906 to be 87,837,000 lb.

LOOKING down the tables one observes that the heaviest average weight per fleece for ewes was produced in Devon, *i.e.*, 11¼ lb. for 833,872 sheep, Lincoln, on the other hand, producing the highest average for sheep one year old and above, *i.e.*, 13 lb. for 203,962 sheep, Cornwall coming close up with an average of 12½ lb., followed by Devon with an average of 12 lb.

THE highest average for Wales was 6¼ lb. for Anglesea, for the ewe flocks numbering 40,059, and the same county gave the highest average for other sheep one-year old and above—*i.e.*, 6¼ lb. for 6,450.

IN respect to Scotland, the highest county average for ewe fleeces was 6¼ lb. for Fife, the number of ewes being 38,466. Two other counties gave an average of 6¼ lb., and the same county gave the highest average for sheep one-year-old and above—*i.e.*, 7¾ lb. for 19,792. One other county, Renfrew, gave an average for this section of 7½ lb., and three others, Clacmannan, Forfar, and Haddington, an average of 7¼ lb.

THE concluding table in Mr. Rew's very able report shows that the average production of wool for the United Kingdom for the year 1905-6 was 133,088,000 lb., which shows that we produce at home about 27 per cent. of the required quantity of wool used for home consumption.



THE above statement shows that the users of wool for clothes, &c., are, like the consumers of mutton and other commodities, also to a very large extent dependent upon their supply from the imported produce. Is it possible that an increased quantity of wool could be, with profit, produced in this country? This is an important question for all who are interested in the prosperity of agriculture, and the reply is that without question a good deal more wool could be grown at home. There are two ways in which this could be done, both of which ought to be adopted.

IN the first place, the keeping of more breeding sheep, for we have many acres of land upon which such sheep could be kept with undoubted profit and benefit, and in the second place by those who are breeding sheep giving greater attention to the production of wool.

DURING the past thirty or forty years enormous strides have been made in the production of mutton, and there can be no doubt but that if the same attention had been given to the increased production of wool, much heavier fleece could have been grown.

THE neglect of so many flock-masters to give any serious attention to the question of wool production has resulted in many of the flocks of this country not producing nearly the quantity of wool they should. The more careful selection of breeding sheep, particularly in regard to their fleeces, would materially add to the average weight of the fleeces produced. For instance, not long ago the writer, at a sale of one of the Down breeds, watched throughout the day the purchases of rams for breeding purposes made by several flock masters.

AN examination of these stud rams afterwards disclosed the fact that those who had purchased them had done so without any regard, or

The animal shown above is the Hampshire Down Two-shear Ram with which Mr. James Flower, Chilmark, Salisbury, won a First Prize at the Royal Agricultural Society's Show at Lincoln this year.

IMPORTANT TO FARMERS and POULTRY KEEPERS.

How is it your Hens are not laying as they ought?

They require a little

"GARSTANG TONIC"

In the morning's soft food, which will keep them free from Colds, Roup, &c., and in a short time the Egg Production will be wonderfully improved.

All Poultry Keepers ought to know its value. Ask those who have tried it!

Beech Mount, Garstang.

Mr. J. Thomas, Dear Sir,—My Turkeys for last Xmas kept dying off one by one until I was afraid I was going to lose them all; my man, Walter Cross, had heard something of your Powder, so he suggested to me one day that we should try the "Garstang Tonic." We did so, and I can assure you that we lost very few more, and what were left fed up and were as good a lot of Turkeys as ever I had for Xmas. I also gave it to some Irish pullets, and it had exactly the same effect on them, smartening them up, and making them ready in very little time. I can confidently recommend the "Garstang Tonic" as the best preparation ever I have used, and I have tried a good many in my time.—Yours respectfully,

(Signed) ROBERT MARSDEN.

To be had from all Grocers and Chemists. Be sure you ask for Thomas's "Garstang Tonic," and don't be put off with any other. If you have any difficulty in obtaining the Powder write direct, and you shall have a tin per return.

Sold in tins 10d., 1/6 & 2/6. Post free 1/1, 1/9 & 2/9.

PREPARED BY

JOSEPH THOMAS, Chemist, GARSTANG.

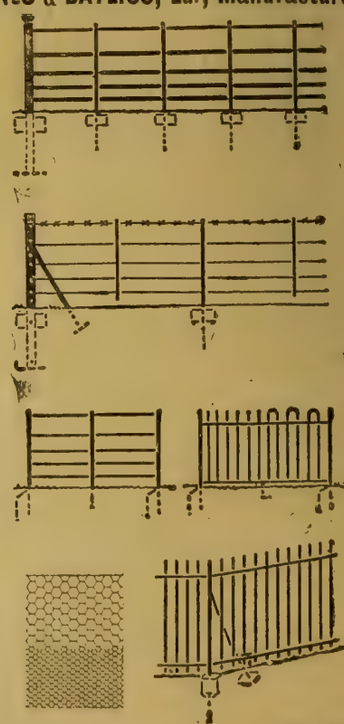
THE CURE FOR CATTLE ABORTION.

Of all the so-called cures for the bane of the farmer's life, Abortion in Cattle, there is nothing which has been so successful or which is so efficacious and yet so simple to administer as the

KYNAZON TREATMENT.

Hundreds of herds have been cleared of the disease by its use; and one user writes as follows:—

Wiltshire, 26th December, 1906.



"I am pleased to say the result of the treatment has been highly satisfactory In all 70 cows were treated. Those which were in calf then carried their calves to full time and gave birth to healthy calves. Those not in calf were put to the bull, held, and have calved or are now heavy in calf."

The name and address of this user will be given on application. Full particulars sent free on application to

JOHN J. FORBES,
Veterinary Chemist,
9, Broad Street, DENNY, N.B.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

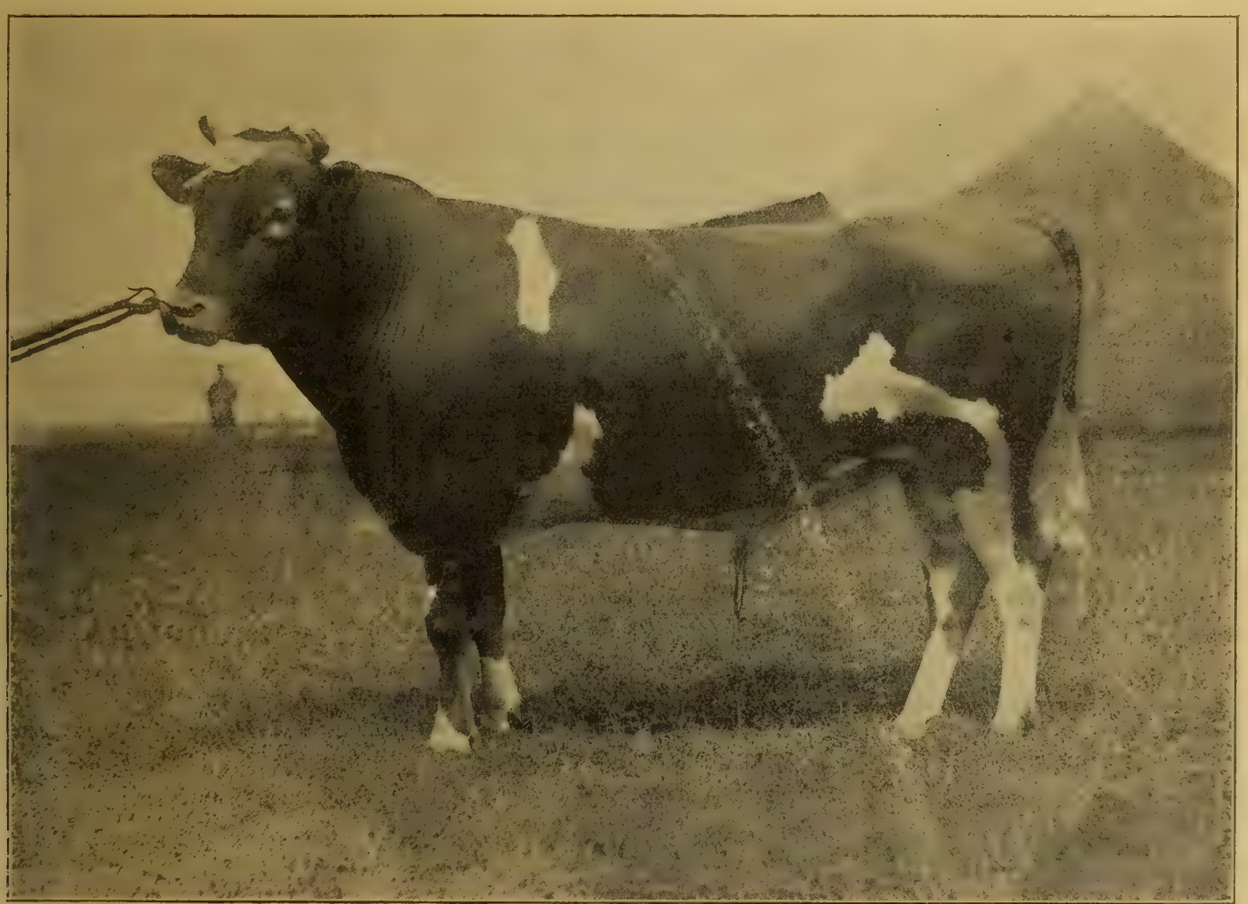
1907.

at any rate with but little regard, as to the quantity of wool they were likely to produce, and in some cases the fleeces were thick, close set, and filled the hand when handled. In others the fleeces were thin, and when in the hand were found to be wanting in closeness, or in other words, some rams had fleeces that would produce from one to two pounds more weight in the ordinary year's growth than others, and yet rams of both descriptions were purchased by the same breeders.

IF it were possible to ascertain the difference in the weight of the fleeces produced by the progeny of these two different rams, a very instructive lesson in connection with the wool production of this country would be afforded. This reference, referring as it does to an individual purchase, could without doubt be duplicated many times, and it is owing to this want of care in selection of stud sheep that the gross production of wool of this country is not nearly so large as it might and could be without in the slightest degree decreasing the production of mutton.

CATTLE.

Mr. A. Hiscock's Shorthorns.



Mr. Arthur Hiscock's herd of Shorthorns at Motcombe, Shaftesbury, Dorset, which has now been established as a large dairy herd for a quarter of a century, having been started by Mr. Hiscock's father in 1882, having become considerably overstocked, a sale became necessary before winter set in, as the building accommodation is limited. This took place on Thursday and attracted a large company of breeders from all parts; but it is satisfactory to record that many of the best lots were bought by Dorsetshire breeders. The catalogue consisted of eighty lots, including the calves at foot, and they well maintained the great reputation of the herd. Bidding throughout the sale was very brisk, with the result that some first-rate prices were realised, the average for the sixty-three head sold working out at over £41 10s. Appended is a list of the sales at 30 guineas and over :—

The Guernsey Bull shown above is Merton Signet, sire Reuben 2nd, dam Signalmina, bred by and the property of Mr. F. Hargreaves, Merton Grange, Gamlingay, Cambridgeshire. At the Bath and West Show at Newport this year Merton won the First Prize in its class, that for bulls of the breed calved in 1903 or 1904; but at the Royal Show at Lincoln and the Royal Counties at Maidenhead it had to be content with a Second Prize.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

New Ross Fair, co. Wexford, held on October 22, was an average-sized fair; demand good, especially for cattle with condition. Yearlings, 1st class, £8 to £8 6s. 8d; 2nd class, £6 7s. 6d. to £7 10s.; 3rd class, £5 17s. 6d.; two years old, 1st class, £11 to £12 17s. 6d.; 2nd class, £9 5s. to £10 5s; 3rd class, £7 10s.; three years old, 1st class, £13 15s.; 2nd class, £12 10s.

Maryborough Fair, Queen's Co., held on Oct. 23. Average-sized fair; good demand, which was chiefly local, but a clearance not quite effected. Calves, 1st class, £4 12s. 6d.; 2nd class, £4 2s. 6d. to £4 5s.; yearlings, 1st class, £7 15s. to £9 15s.; 2nd class, £6 10s. to £7 5s.; two-year-olds, 1st class, £11 5s. to £12 15s.; 2nd class, £8 15s. to £10 10s.; three-year-olds, 1st class, £13 10s.; 2nd class, £12; springers, 2nd class, £12 10s. to £14 15s.

Sleaford Cattle Fair, held on Monday, was fairly well attended, whilst the supply was good. Strong bullocks made £17 10s. to £18 10s., and younger sorts £12 to £14. About 600 lambs were penned, prices ranging from 38s. to 44s. each. There was very little demand for horses, the bulk of which were unsold.

Sale of Jersey Cattle at Bletchley.

Messrs. John Thornton and Co. conducted a sale of Jerseys at Bletchley on Friday, the 18th inst., to which several of the best breeders of these well-known Island cattle contributed. The day was most unpropitious, heavy rain falling throughout the afternoon, but as will be seen by the sale list below, some good prices were realised, an £18 average being obtained for nearly ninety lots.

Sale of Store Cattle at Dublin.

One of the most successful of a series of sales held during this autumn at Dublin took place on the 17th inst., when the catalogue totalled almost 1,500 head consigned direct from breeders and graziers, and represented a very large entry of Polly bullocks, also a large number of Aberdeen-Angus cross and Hereford cross bullocks as well as Horned bullocks and heifers, all in forward condition and many suitable for short keep. There were also several lots of choice-bred yearlings.

Although the late harvest prevented a number of cross-Channel patrons from attending, a fairly representative company of buyers turned up, and trade ruled buoyant for cattle of good class and quality. Most of the Pollies and a number of the Aberdeen-Angus yearlings were bought by Scotch feeders, while home feeders purchased most of the Horned bullocks, a large number of heifers being bought for the Isle of Man.

The following are a few of the prices realised:—Polly bullocks from £7 17s. 6d. to £15 17s. 6d., Aberdeen-Angus bullocks from £10 15s. to £15, Aberdeen-Angus heifers from £8 12s. 6d. to £15, Shorthorn bullocks from £7 10s. to £14 17s. 6d., Shorthorn heifers from £7 10s. to £12 5s., Aberdeen-Angus yearlings from £6 17s. 6d. to £9, Shorthorn yearlings from £4 10s. to £9.

Sale of Stenigot Lincolnshire Red Shorthorns.

Further evidence of the increasing popularity of Lincolnshire Red Shorthorns was given by the good prices realised on Thursday at a sale of animals from Mr. R. Chatterton's well-known Stenigot herd. Altogether 65 cows, heifers, and bulls were sold for £2,808 4s. 6d., or an average of £43 4s. apiece, the eight bulls averaging £55 15s. 7d., and the 57 females £41 8s. 9d. per head. Stenigot Duchess Beau, the first prize two-year-old bull at the Royal Show at Lincoln this year, was knocked down to Mr. D. Frame, for export to South Africa, at 99 guineas, after keen competition with Mr. E. Ashley, Godmanchester, and Mr. J. F. Locking, Weelsby, but Mr. Ashley managed to secure King Cowslip at 72 guineas. Flower Chief goes into Derbyshire to Mr. Swanston's, at 52 guineas, and Birthday to Mr. W. B. Swallow's at 40 guineas, while another fine bull named Welcome Chief was bought for South Africa by Mr. Eustace Barlow, at 62 guineas.

The twenty-one cows with heifer calves averaged £50 8s., Stenigot Gwynne 16th going to Mr. George Marris, Kirmington, at 48 guineas, and her calf, by Ashbed Red 2nd, to Mr. G. Langdale, Market Stainton, at 36 guineas. Cows with bull calves numbered fourteen, and these averaged £51 14s., Steingot Flower 23rd falling to Mr. Turnor, Oadby, Leicester, at 40 guineas, and the bull calf, Rose Knight, to Mr. George Langdale, at 42 guineas; Violet 8th and her calf made 64 guineas; and the Duchess 10th 61 guineas. The pick of the ten two-year heifers was Stenigot Daisy 21st, who went into Mr. George Marris's herd at 44 guineas, while Mr. W. B. Swallow, Wootton, gave 38 guineas for Daisy 22nd. These heifers averaged £30 3s., and the twelve yearlings £23 2s., Mr. T. B. Wilkinson, Edwinstowe, giving 30 guineas for Queen 9th, and Mr. J. Thompson, East Keal, 31 guineas for Buttercup 17th.

Mrs. Maitland Spencer's Jerseys.

In consequence of the farm having been given up the herd of pure-bred Jersey cattle, belonging to Mrs. Maitland Spencer, of Hillylands, near Bath, was disposed of by auction on Tuesday in the presence of a fair company of breeders. The prices only ranged up to 31 guineas, and the average per head for the thirty-three sold was £15 13s. 1d. Capt. Spicer bought Portia at 31 guineas, and Dorothea 3rd at 21 guineas. Lord Roberts gave 29 guineas for Phœbe, Mr. T. Holford the same amount for Oxford Dame. Beautiful went to Mr. A. O. Shuttleworth at 28 guineas, whilst Mr. J. Brutton gave 26 guineas for Irish Lass. Other prices ranged up to 21 guineas.

Sale of the Kingsland Herefords.

One of the most successful sales of Herefords this season took place on Tuesday, when the pure-bred herd established by the late Dr. Hamlen Williams was disposed of at St. Mary's, Kingsland, near Leominster. The animals numbered over a hundred, of which thirty-five were calves, so that the average of £32 11s. per head obtained for them must have been highly satisfactory to Mrs. Hamlen Williams, who has carried on the herd with so much success, a fact proved by her winnings at shows during the past two years, these including thirteen firsts, fourteen seconds, and six thirds, the greater number of these being gained by quartettes of cows with their calves, two-year-old and yearling heifers, and yearling steers.

The sale was well attended, and, as has been gathered from the good average realised, the demand was keen throughout. Mr. D. A. Thomas, M.P., paid the top price of the sale, viz, 130 guineas, for the two-year-old heifer Carnation, winner of second prize at the Ludlow and Leominster Shows this year; whilst the next best price was 100 guineas, given by Mr. T. R. Thompson, Penarth, for Silkweed, a splendid cow, which has won amongst other prizes first at both the Royal and Bath and West Shows. These were the only three-figure prices, the nearest approach being 75 guineas for the two-year-old Reefer Lovisine, Mr. T. R. Thompson being the buyer. Appended is a list of the other sales at 30 guineas and over.

COWS AND CALVES.—San Toy, Mr. de F Pennefather, Kinnersley, 36 gs.; her bull calf, Chinaman, Mr. A. Tanner, Shrawardine, 51 gs.; Silene, Mr. T. R. Thompson, Penarth, 33 gs.; Silkweed, Mr. T. R. Thompson, 100 gs.; her heifer calf, Mr. George Firkins, 29 gs.; Aurania, Mr. T. R. Thompson, 60 gs.; Trilby, Lady Boughton, 72 gs.; Pretty Maid 7th, Mr. H. Dent, Perton, 33 gs.; Prunella, Mr. de F. Pennefather, 33 gs.; Pinky 8th, Mr. W. Whiteman, Leominster, 34 gs.; Silver Queen, Mr. Price, Cwmhir, 30 gs.; her bull calf, Mr. Walpole, Ireland, 29 gs.; Sultana 3rd, Mr. P. E. Bradstock, Yarkhill, 34 gs.; Her bull calf, Mr. J. L. Hall, Lulham, 34 gs.; Delta, Mr. J. Bowkett, Kingsland, 30 gs.; Gipsycraft, Mr. J. W. Smith, Thinghill, 30 gs.; Phyllis, Mr. G. A. YEARLING HEIFERS. — Mandoline, Mr. Morris, Gwernygol, 35 gs.; Fortune Teller, Messrs. P. and G. Hughes, Crewe, 71 gs.; Rose, Messrs. P. and G. Hughes, 60 gs.; Delia, Mr. D. A. Thomas, M.P., 30 gs.; Susannah, Mr. T. R. Thompson, 40 gs.

BULLS.—Field Marshal, Mr. W. H. B. Cave, Monkland, 60 gs.; Best Man, Mr. Cooper, Kyre, Tenbury, 40 gs.; Simon, Mr. Bach, White House, Onibury, 62 gs.

Not "Overstocked."

There was a very large gathering of agriculturists and others interested during the hearing at Stokesley Petty Sessions on Saturday, the 19th, of summonses against Mr. Thomas Petch, farmer, of Little Ayton, at the instance of Inspector Cape, of the R.S.P.C.A. (of Darlington), for the alleged overstocking of three cows which he had purchased at Stokesley Auction Mart on September 30.

Mr. G. H. Watson (Messrs. G. Newby Watson and Son, of Darlington) appeared for the complainant, and the defendant was represented by Mr. E. Wooler, on behalf of the Darlington F.P.A.

At the outset Mr. Wooler took objection that the defendant was charged with three offences on one summons, and the complainant must elect on which of the three he would proceed. After legal arguments, two charges were struck out, and the complainant proceeded with one is respect of a cow numbered Lot 102 in the catalogue of sale.

Police-Inspector Side stated that he was at the Auction Mart, and saw the cow in question. It was overstocked with milk. He afterwards saw the defendant's driver driving it home. The udder was distended and the teats projecting at a sharp angle from it. Mr. Smith, veterinary surgeon, of Stokesley, said that the animal must have been inconvenienced, and probably suffered pain.

The defence was that Mr. Petch was a large farmer in the district, and was not likely to do anything to injure his own stock; that the animal was not overstocked; and that if anyone ought to have been summoned, it was the vendor. Mr. Petch paid for the cow when it was knocked down to him, and at once ordered its removal.

A number of witnesses were called to prove that the animal was not overstocked, and the Bench dismissed the case. Summonses against the vendors for overstocking the three cows were then withdrawn.

An American Appreciation of the South Devon Cow.

Mr. J. E. Wing, who has been visiting Great Britain during the past summer, and has visited nearly all parts of the country, was much impressed with the excellence of the South Devon cattle. It is wonderful, says Mr. Wing, that the South Devons have not been introduced into America. They are very large cattle, the largest shown at the Royal Show. They are red, of a yellowish tinge, fairly smooth, very good beef cattle, easily fattened, reaching enormous weights sometimes, a bull at the late Royal show weighing 3,136 lbs., and heavier ones were left in Devon. There had been killed a bull recently weighing dressed above 1,900 lb., if I remember correctly. The cows are gentle, having good udders and teats, are large milkers. In 1904 a South Devon cow won the championship at the National Dairy Show. In 1906 in the butter test at that show the South Devon class of cows produced the highest average points of any breed. The breeders have now a herd book and 250 members, and are doing much to improve the form and promote uniformity in the breed. It is probable that many years ago there was an infusion of Guernsey blood put into the Devon veins. This with selection and good environments has made the present breed.

A Farmers' Dinner at Oswestry.

The Molassine Company (1907), Ltd., recently entertained a large number of agriculturists—the majority of them buyers of molassine—to an excellent banquet at Oswestry. Mr. John Prosser, manager of the company, occupied the chair, and in rising to respond to the toast of "Success to the Molassine Company," was accorded a warm reception. He said he thought it was very flattering to a company like theirs that they should have been able to gather round that table such a representative company. This was his first official visit to Oswestry, and he hoped it would not be his last. He had several times been asked why they called their friends together in that way. Indeed, when in Scotland last year, a chemist asked him whether it would not be better to reduce the price of molassine meal instead of giving these dinners. He (the chairman) told him what their turnover was, and when he assured him that sixpence a ton on their turnover provided all the dinners which they gave in the course of a year, he seemed amazed. While he was glad to inform them that they were doing extremely well with their sales, he wished to acknowledge that it was in great measure due to their customers who, realising when they had a good thing, stuck to them instead of forsaking them; and thus it was that instead of distributing this sixpence on the tonnage among their shareholders, they were encouraged to share it with them in that way. Indeed, he did not know a

better mode of meeting than around the dinner table. Many a dispute had been settled over a mutton chop, and he oftentimes thought that if they used the dinner-table more and the law courts less people would get on a great deal better than they did

Proceeding, Mr. Prosser remarked that there were all sorts of misconceptions abroad as to what Molassine Meal really was and what it did; but before he proceeded to clear the air of these he would like to say, inasmuch as they had been good enough to drink success to his Company, and in that way wish for increased sales of their meal, that their wish was, without a shadow of a doubt, already being realised. They had only been in existence some six years; yet in that time they had got together an enormous business, having its ramifications in every part of the United Kingdom. Apart from that, they were sending their meal by the ship load to America, to Canada; indeed, to all parts of the civilised world. Naturally, there must be some reason for success such as this, and he thought the explanation was to be found in their having put on the market an article not only of merit, but also of considerable worth—a food for all classes of live stock superior to anything ever produced before. Now, this article, when first introduced, was not put on for experimental purposes. It had been tried on hundreds of farms before it was commended to the British public. For a hundred years and more it had been recognised that molasses, the chief constituent of which was sugar, were good for animals, and yet it was not given them in any quantity. The explanation of this was two-fold; one was the difficulty in getting animals to take them, and the other was the danger which would arise from the use of molasses in large quantities, owing to the potash salts which it contained giving rise to diarrhœa. To meet these difficulties all sorts of experiments were tried. Oats, bran meal, and other things were mixed with molasses in the ground state in order to get them into the animal's stomach. All proved unsuccessful. Afterwards, a special kind of moss was tried, and that was the bugbear of their trade at the present time. People argued that it was a good thing to put under a horse but not inside him; beyond that, they tried to make them believe that this was the stuff they used in the manufacture of their meal. Now, there was no mystery at all about what they used. It was a species of moss—and the sample he held in his hand was exactly the moss they used; and it was used first because it was a fine absorbent—it absorbed the molasses better than anything hitherto discovered—and, secondly, because it contained a certain acid which, when it came into contact with the molasses, changed it. Indeed, it had so definite an effect on the potash salts that, instead of those salts remaining in the stomach and doing mischief, they passed away in the excreta.

Now, what were the objections to Molassine Meal? Why was it that, with such evidence as they could produce with regard to its worth and value, they sent out travellers to seek their orders? The answer was a simple one, because there was so much prejudice against its use. First of all, there was an objection against its appearance. He had come across many well-known breeders who had said, "Fancy giving my animals this!" When they commenced business it was not unusual for them to receive letters like this:—"Dear Sir,—I ordered 5 tons of Molassine Meal; you appear to have sent 5 tons of manure instead. Please fetch it from the station." Such a man, accustomed to giving his horses the best oats and beans that money would buy, was thunderstruck when advised to feed his animals with this. Let him say at once that Molassine Meal was not sold by reason of its appearance, but by reason of its merits.

Then there was some objection to its composition. As he had already made clear to them, it was simply composed of Molasses and moss, and he hoped he had destroyed the excuse for this objection by what he had said before. Still, there was far more virtue in this moss than many people seemed to realise. They knew very well that worms only lived in filth! Now, such was the healthy condition which Molassine Meal created in the stomach of the animals fed upon it, that parasites and worms could not live in it, and that had been proved over and over again by the users of the Meal.

Another objection raised was the so-called absence of analyses. Some people thought they did not show such a large analysis as did other foods. After all, while they believed in analysis, analyses were sometimes prone to be a little misleading. He was once talking to a prominent dairyman, who said he cared more for experience than he did for analysis. The best analysis was afforded by the cow's stomach, and if by giving a food, he said, he could get milk of greater quality and quantity, then he did not care what kind of analysis was produced.

Then there was another misconception about their meal, and that was that it was a condiment. This was a mistake, and he begged them to understand that it was a food, which could be used instead of oats, beans, or cakes, and that it could be given to all kinds of animals.

He had one more word to add about their food, and that was to point out that it was of British manufacture, that there was nothing imported about it, that it was manufactured for them by the well-known firm of Henry Tate and Sons, of Liverpool and London, a firm which would never have lent their name to the food were they not satisfied that it was above suspicion. All he asked of them was to give it a trial, and if they did that he was sure they would like it, would continue to use it, would talk about it and would recommend it.

Some time ago he was told that one of their customers made a request to his friends that when he was dead and his body was placed in its coffin they would cover it with Molassine meal, and when asked why he made this strange request, he replied that he did so because he knew from experience that it was the best preventive against worms.

Concluding, Mr. Prosser again thanked them for their presence, and expressed the wish, that, while he hoped to see them all again on some future occasion, in the meantime they would have the pleasure of doing a big trade with them, one which would be continued for many years to come.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

MESSRS. IRELAND solicit consignments for these important weekly sales; best market value assured.

Cattle consigned to Ireland's, Norwich, will be properly fed and carefully attended to.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.

400 IRISH CATTLE.

Several lots weighing 11 cwts., suitable for finishing for Christmas, including Aberdeen-Angus cross, Blue-greys, Shorthorn and Hereford cross bullocks and heifers, from the Marquis of Sligo, Charles Phibbs, Esq., R. G. Robinson, Esq., Messrs. Murphy, Smith, and others; the greater portion for absolute unreserved sale.

Sale at 12.30.

Commissions carefully executed.

All cattle weighed in view of bidders.

Auction Offices:
Wellington, Shropshire.

Earl Carrington, President of the Board of Agriculture and Fisheries, visited the fish market at Hull on Monday, and at a subsequent meeting, replying to an appeal for a separate department in the interests of the trade, said he acknowledged that, with its wonderful growth, with the necessity for prompt action in dealing with its affairs, there was a great deal to be said in favour of the fishery department being a separate department of the State, and his first duty on his return to London would be to lay their request before Sir Henry Campbell-Bannerman. The demand for a separate department wts simply made with the object of developing the fishing trade to its utmost capacity, and to do this would require the individula services of a Minister.

HORSES.

The Horned Horse—A Cleveland Bay Market—The Japanese and Horse-Breeding—An Open Mind—The Lesson—The Origin of the Cleveland Bay—The Forest Horse—The Royal Commission.

The Horned Horse.

SOME weeks ago I drew attention to a horned horse which is in the possession of Messrs. Southall Brothers and Barclay, Ltd. I have now got the pedigree of that horse so far as it is known. He is by Crofton Compensation 15566, a Shire horse that was bred by Mr. Samuel Beckett Chadwick, of Runcorn, Cheshire, and that was by St. Pancras 13544—16952 Mab by Timon 5394. The dam of the horned horse is described by his breeder, who hails from Launceston, as being a "breedy mare," but her pedigree was unknown. It would be interesting to know if she is descended from any of those forest ponies of which there are so many in the West. It is not unlikely, and as they are of long descent and are very closely allied to Eastern blood—practically having the same tap root—it is probably from some ancestor of one of these breeds that the horns are derived. Horned horses have by no means been uncommon, as Darwin points out, and in the "Natural History of the Quadrupeds of Paraguay," by Azara, quoted by Professor Ridgeway, it is stated that two horses in South America had hornlike projections between three or four inches in length. But however common hornlike projections may have been, or may be, and they are common enough for most writers on horses to cite instances, the cases quoted have all been, so far as I am aware, of well-bred horses, that is, of horses bred on what may be termed thoroughbred lines. This is the first instance that has come to my knowledge of a half-bred horse—a horse with carting blood in his veins—having any horn-like projections, nor do I remember hearing of the skull of a Shire or Clydesdale showing traces of rudimentary horns.

A Cleveland Bay Market.

AMONGST purchasers of Cleveland Bays the Japanese are now to be counted, and quite recently three good Cleveland Bay stallions have been purchased and sent to Japan. So far as I know, and I have a pretty close knowledge of the Cleveland Bay trade for upwards of twenty-three years, this is the first time that a Cleveland Bay has gone to that country.

The Japanese and Horse Breeding.

THE Japanese have not been great horse breeders, and their lack of adequate cavalry in the Russo-Japanese war was one of the marked features of that gigantic contest. The Japanese horses are undersized—ponies, in fact—and though they may probably possess several good properties, they are looked upon as very inferior animals by those whose writings on the subject I have come across. The new departure on the part of the Japanese is really of more importance than on first sight appears. It should be needless to insist upon the thoroughly practical, common-sense methods of the Japanese. They have adopted Western civilisation and modern inventions in a remarkable way. They have no sentimental regards for old-fashioned European methods. The romance and traditions which cling round the horse in England are as nothing to them. To them such names as Eclipse, or Herod, or Matchem are not names to conjure with. To the average Japanese I should say that they convey no concrete mean. Traditions of "Tantivy Trot" awake no pleasing memories of a means of travelling, which if not very rapid, was at any rate picturesque. Ramsdale's Performer, the very mention of whom will make the Market Weighton men thrill, to them is a mere figment.

An Open Mind.

HERE then is a people who have a perfectly open mind as to horses and mechanical means of locomotion. They are also so eminently practical that they are not likely to look at anything which comes from the West except from one standpoint—that of practical utility to the people of Japan. If the cry of the motor fanatic that the motor car will oust the horse before very long has anything in it, here in Japan, one would think, would be first seen demonstrated the uselessness of the horse. But Japan is setting herself seriously to work to breed horses, and, having examined well the various breeds, they have selected the Cleveland Bay as a foundation. No Yorkshire Coach Horse would do for them, or no Hackney; they were not to be led away by the caprices of fashion. Cleveland Bays of good pedigree were what they wanted for a foundation. Let the rest come after.

The Lesson.

WE may well take a lesson from our allies of the Eastern seas. They have recognised the value of a breed which it has been the fashion in England to neglect of late years, even by those who should have known better. There was a chance a few years ago of increasing the number of high-class Cleveland mares, and of keeping them in the country. But the chance was neglected. Many many years ago, when there was a "slump" in Cleveland Bays, ship loads of high-class mares were sold at starvation prices, £30 each and even under, and we are paying big prices for the descendants of those mares as carriage horses at the present day; carriage horses, mark you, that are nothing like so good as we should have bred here if we had had the sense to keep those mares at home. There are plenty of useful mares yet to make a foundation, if the supply is used with intelligence, and in a few years we might have a body of brood mares in the country which would bring horse breeding once more into the position which it occupied once as a national history.

The Origin of the Cleveland Bay.

PROFESSOR J. COSSAR EWART in his able "History of the Origin of the Domestic Horse," inclines to the theory I have always held, viz., that the Cleveland Bay is the result of a cross between the Barb and the native mares of Yorkshire. Professor Ewart calls these the cart mares of Yorkshire, but he means something other than mares of the Shire type. He points out that these cart mares were very probably "fairly typical members of the Forest variety," which is a distinct family of prehistoric horses, the existence of which has only recently been thoroughly established. Then he goes on to say that the probability of this origin "is suggested by the fact that at one time Cleveland Bays had, as a rule, a distinct dorsal band, and because in the offspring of Broadfaced mares and Barbs the face is usually long." It is curious that science and tradition should be at one upon such a difficult subject as the origin and breed of horses.

The Forest Horse.

PROFESSOR COSSAR EWART'S description of the Forest horse is worth reproducing. Says he: "The head is short and broad, and (partly owing to the position of the eyes) the distance between the eyes and the nostrils is relatively short — shorter even than in the Plateau variety; the ears, broad but not long, are wide apart, but not far back as in the Steppe horse. The eyebrows sometimes project beyond the level of the somewhat concave forehead, and the outline of the face for some distance beyond the level of the eyes is concave, but about midway between the eyes and the nostril it becomes convex. . . . The neck is short and thick and often greatly arched, but while in the Steppe horse the body is short, the back nearly straight and the croup nearly level, in the Forest horse the stout body (mounted on short strong legs) is very long, the back hollow, and the outline from the highest point of the croup to the beginning of the second thigh in the form of a half circle, from near the centre of which projects the low set-on tail. Between the loins and the root of the tail the dorsal band lies in a shallow groove. . . . In the short-headed Forest horse the withers are thick and flat. In the fore limb one especially notices the short upright pastern, thick fetlock joint, wide shank, broad knee, tied-in elbow, and that the arm is short and the shoulder blade nearly upright; the hind legs agree with the fore limbs in the pastern and fetlock joints; the hocks are inclined to be straight and wide apart, and the feebly-developed gaskins are abruptly separated from the thighs. As might be expected in a forest form, the action is free and high, but neither at the trot nor the gallop is a great speed attained, As the conformation leads one to anticipate, the Forest horse is only adapted for covering short distances at its fastest paces." Something descended from this type might well make a foundation for the Cleveland Bay when crossed with something smarter in the shape of the Libyan horse.

The Royal Commission.

SPEAKING at Scarborough the other day, Lord Carrington said that many practical farmers were disappointed with the Royal Commission on Horse Breeding and its work, that at the Conference on Horse Breeding many men had made long speeches but no suggestions, and then he suggested that the question of horse breeding would perhaps be better handed over to a responsible Minister. Lord Carrington's ill-disguised sneers are unfair. I have in the past more than once considered it my duty to criticise the actions of the Royal Commission, and it is more than likely that I may have to do so again. But the Commission is composed of practical men who have done a lot of good considering the wretched pittance which has been doled out to them. As for there being no suggestions made at the conference, but requests for more money, what suggestions, in the name of wonder, can be made when such a meagre sum as £4,200 per annum is all that is likely to be at the disposal of the Royal Commission? The Royal Commission does its work quite as well as any Government department can be expected to do—in all probablity a great deal better; and it certainly does not make so much noise about it. After all, successful horse-breeding, which is the only horse-breeding worth consideration, is a matter of individual intelligence, and that a Government department has a monopoly of intelligence I have yet to learn.

THE LOOKER ON.

Sale of Shire Horses at Bardon Hill.

Some capital prices were obtained at the sale of Shire horses at Bardon Hill, Leicestershire, on Wednesday, when just over sixty Shire mares, fillies, and stallions belonging to Mr. W. T. Everard and Mr. M. Hubbard, were brought under the hammer. They included all the recent prize-winning mares and fillies of both owners, and were mostly by or in-foal to that noted sire Lockinge Forest King or his sons, and it was for his stock that the best demand was experienced, though bidding was brisk throughout, with the result that Mr. Everard got an average per head of £137 15s. for his animals, whilst Mr. Hubbard's average was £86 18s.

A list of the chief lots sold, purchasers' names, &c., is given below, so we need not refer in detail to the various sales, but would mention that three-figure prices were quite common, Mr. Everard securing no fewer than a dozen, whilst Mr. Hubbard's record was seven. Mr. Everard paid the top price of the sale, viz., 610 guineas for Mr. Hubbard's three-year-old stallion, Ivy Forest Chief, by Lockinge Forest King, the next best figure being 440 guineas for another of this sire's stock, viz., Mr. Everard's three-year-old filly Easenhall Shamrock, the purchaser being Mr. Hamer Towgood.

MR W T EVERARD'S.

THREE-YEAR-OLD FILLIES. Gs

Bardon Alberta, s Lockinge Forest King — Mr Morris 130
Lavinia, s Lockinge Forest King — Lord Rothschild 210
Easenhall Shamrock, s Lockinge Forest King — Mr Hamer Towgood 440

TWO-YEAR-OLD FILLIES.

Ashleigh Royal Duchess, s Lockinge Forest King — Mr Whitley 480
Ruddington Glory, s Boro' Conqueror II — Mr Freckleton 70
Maori Diamond, s Lockinge Forest King — Mr J Brooks 96

YEARLING FILLIES.

Bardon Flower of the Forest, s Lockinge Forest King — Mr F E Muntz 230
Falterton Heather Bell, s Lockinge Forest King — Mr Smith Carington 220
Newton Solney Countess, s Dunsmore Jameson — Mr F E Muntz 92

YEARLING COLTS.

Bardon Swell, s Watnall Warrior — Miss Talbot 115
Bardon Tickler, s Lockinge Forest King — Mr F E Muntz 210
Bardon Monarch, s Lockinge Forest King — Mr Hudson 78
Bardon Salopian, s Markeaton Ransom — Mr Kington 56

FOUR-YEAR-OLD MARE.

Bardon Gertrude, s Lockinge Albert — Mr Blacker 70

BROOD MARES AND FOALS.

Bardon Dorothy, f 1903, s Lockinge Manners — Mr Humphreys 56
Bay filly foal by Ivy Jubilee Harold — Mr C E de Trafford 41
Bardon Louisa, s Bardon Harold — Mr Conchar 165
Bay colt foal by Lockinge Forest King — M De Hoz 170
Bardon Merry Lass, s Bardon Harold — Mr Nicholson 310
Brown colt foal by Lunesdale Kingmaker — M De Hoz 82
Alfrida of Willington, s Vulcan — The Grantham Corporation 52
Rustic Princess, s Rustic Prince II — Mr Wild 76
Bay filly foal by Lockinge Forest King — Mr Porter 50
Bardon Lady, s First Lord — Mr Kearns 76
Bardon Hilda, s First Lord — Mr Kearns 210
Sweet Mary, s Calwich Heirloom — Mr T Horn 86
Rosebud, s Dunsmore Willington Boy — Mr Topham 60
Bardon Rose, s Harold — Mr Watters 54

MR MATTHEW HUBBARD'S

THREE-YEAR-OLD FILLIES.

Markeaton Graceful, s Lockinge Forest King — Mr F W Griffin 95
Ivy Buttercup, s Markeaton Royalty — Mr Waddington 53

TWO-YEAR-OLD FILLIES.

Ivy Forest May, s Lockinge Forest King — Mr Everard 110
Emily Belle, s Lockinge Manners — Mr Whitley 165

YEARLING COLTS.

Dreadnought, s Dunsmore Raider — Mr W Richardson 140
Ivy Victor Chief, s Intake Albert — Mr W Smith Carington 250

THREE YEAR-OLD STALLIONS.

Ivy Forest Chief, s Lockinge Forest King — Mr Everard 610

FOUR-YEAR-OLD MARES.

Hitchin Goldylocks, s Holker Conqueror — Mr S Grimes 105
Ivy Flower Girl, s Hendre Wonder — Mr Emberlin 50

BROOD MARES AND FOALS.

Ivy Darling, s Scalford Baron — Mr Heathcote 72

Brown filly foal, s Dunsmore Combination — Mr Buckmaster 40
Desford Belle, s Pride of Blagdon — Mr Graves 54
Waresley Dolly, s Castle Bromwich Keith — Grantham Corporation 56
Brown filly foal, s Redlynch Forest King — Mr Nicholson 66
Lowfield Violet, s Hendre Conqueror — Mr Handley 130

Good Prices for Hunters.

There was a very large attendance at the Leicester sale yard on the 19th inst, and capital prices all round were paid for Hunters. This was more especially the case with the draft sent from Lamport Grange by the executors of the late Major Jenkinson, the stud of eight aggregating 1,520 guineas, only a few shillings under £200 each. The top price, 240 guineas, was paid for Rascal, a six-year-old undocked gelding by Florin, and there was keen bidding for the possession of Villiers, a winner at the Pytchley Show at Althorp last season. He reached 230 guineas, and offers of 210 guineas and 200 guineas were accepted for Jeanette and Royalty respectively. The remaining lots from Lamport, with the prices paid for them, were:—Konig 175 guineas, New Boy 170 guineas, Swallow 150 guineas, and Rector 145 guineas.

Mr. E. Stanley Webb sold a five-year-old chestnut gelding by Peter Lobb for 120 guineas, and Robin Hood, a winner in the show ring, for 75 guineas; Mr. A. J. Cay's Miss Golightly was allowed to go at 70 guineas. The studs of Mr. Douglas Courage and Mr. H. E. Courage also sold very well, Jim reaching 130 guineas, Pilot 140 guineas, and Rufus 120 guineas, while Mr. Edmund Hodgson sold Paddy, well known in the Holderness country, for 140 guineas. An Irish-bred Hunter, Grey Lady, with which Mr. A. W. Hickling had been successful in the show ring, was cheap at 120 guineas, and of the remnant of the stud sent up by the executors of the late Mr. Edgar Lubbock Bridge and Token reached the highest prices. They were sold for 155 guineas and 120 guineas respectively.

The above illustration is of the Shire Gelding Kirby Muxloe Duke II., winner of First Prize in the Class for Four-year-old Geldings at the Shire Horse Society's Show this year. It was exhibited by Mr. F. S. Freckleton, Kirby Muxloe, Leicester, but was bred by Mr. D. Simpson, Crimbles Farm, Cockerham, Garstang, its sire being Horbling Harold, and its dam by Tartar II.

Hunters' Improvement Society.

Hunter Stud Book Rules.

One of the principal topics at the last meeting of the Council of the Hunters' Improvement Society was the report of the Special Committee appointed on April 11 to inquire into the operation of the rules relating to the admission of stallions into the Hunter Stud Book, and the extent to which the objects of the council had been realised. Mr. J. B. Kingscote, chairman of the Editing Committee, stated that that committee had considered the report at a previous meeting, and he added that the desideratum aimed at by the council when instituting a system of premiums for Hunter sires was to bring about the production of sires of weight, bone, and substance, with the necessary three crosses of Thoroughbred blood laid down by the council. The Special Committee found that after allowing for the Thoroughbred stallions registered under this scheme, and those Hunter stallions which had either died, been exported, castrated, &c., there were eighteen stallions registered which, *prima facie*, satisfied the requirements referred to. The Special Committee felt that the breeding from the produce of registered mares was proceeding slowly, and that some more expeditious method seemed to be needed, and that the attention of breeders might be usefully drawn to this aspect of an important matter.

Mr. Kingscote said that the feeling among the members of the Editing Committee was that the results quoted were as much as they could expect at the present stage, in view of the difficulties of giving effect to the objects aimed at by the council. There was a distinct and growing demand for these Hunter stallions from the colonies, and their experience was that the rules laid down for registration and entry in the Hunter Stud Book had proved to be correctly framed, but, owing to the apparent apathy of owners of mares, the registration of the produce—colts and fillies from registered mares—was not maintained, while in most cases colts that were registered were not kept entire, thereby defeating the object of the rules, viz., to insure the continuity of registration. Taking, therefore, all the circumstances into consideration, the committee recommended that the conditions for the next three volumes, 4, 5 and 6, should remain unaltered, with the exception that it would probably help registration if the society admitted foals to entry, and a number, with a slight amendment of Clause 3, that mares or their produce winning races under rules would be admitted to full registration. This report having been presented, a short discussion ensued, Sir Richard Green-Price bearing testimony to the efficacy of the rules of registration. Their difficulty was undoubtedly due to the apathy of breeders in entering up the produce of registered mares, and the indifference of the purchaser to the breeding of their horses. Their progress must of necessity be slow, and he thought it might be of some encouragement if they were to give a premium to four-year-old stallions bred on the lines advocated by the council.

Mr. Algernon Turnor thought that the crux of the matter was the expense of keeping the colts entire, a contingency difficult to obviate. He had endeavoured to meet that difficulty by his suggestion to form a syndicate. They might, however, take one step, and that was to impress upon the judges the importance of the class of horse aimed at; the undesirability of giving premiums to light horses which, while lacking purity of blood, had no advantage over the ordinary Thoroughbred country sire in the essential matter of weight and substance; the want so strongly felt by owners of light high-bred mares of a cross which would give bone and substance.

Captain H. Heywood Lonsdale, as an owner of a Hunter stallion, urged that the scheme must essentially take a long time. In the first place a three-quarter bred stallion had no reputation, except that of the showyard, while there was very little opportunity given to them when they had to compete against Thoroughbreds. Practically there was only the class given by the society at Islington, to which they also admitted the Thoroughbreds registered in the Society's Stud Book, and judges would naturally lean towards the quality horse.

Mr. Algernon Turnor moved, and Captain E. Pennell Elmhirst seconded, that the judges officiating upon the Hunter Stallion Class at Islington should have a copy of the report of the Special Committee, directing their attention to the points mentioned above. This resolution being accepted by the council, the report of the Editing Committee was then adopted.

Mr. Kingscote stated that the number of entries received for Vol. 3 of the Hunter Stud Book numbered over 500, and would include twenty-four stallions registered under the society's rules, and more than 480 mares. From entries specially submitted for the committee's consideration, three stallions and seven mares had been selected for registration, two others being remitted for inspection. The illustrations would include the two champion horses at the 1906 and 1907 shows—viz., King Edward and Fable, while the returns collated in respect of qualified stallions serving under the horsebreeding schemes covered the awards to 1,350 produce sired by 366 stallions.

The 1908 Show.

Mr. Owen C. Wallis, chairman of the Horse Show Committee, reported that the dates of the Spring Show in 1908 would be March 10, 11, and 12. The schedule had been carefully considered, together with suggestions from members and judges at the last show, and they recommended that no alteration should be introduced, with the one exception that in the produce class the sire of the group need not necessarily be alive at the time of entry. In view of the increased size of the ring, they proposed that the jumping competitions would be improved by the addition of a water jump; while the desirability of introducing high jumping would be further considered at their December meeting. Increased publicity of the show was also considered, and their recommendations submitted, while the catering arrangements made for members was also gone into with a view to improvement in this direction. The report of the committee was adopted.

Gold and Silver Medals.

The secretary presented his annual statement showing that thirty-four gold medals had been awarded to Hunter brood mares, twenty-six silver medals for fillies, thirty-five silver medals for mares and geldings at associated shows in addition to the six gold medals given by the society at the national shows.

It was resolved that the medals should again be offered under the same conditions as in force in 1907, those for brood mares and fillies to be awarded to the best animals actually registered or entered in the Hunter Stud Book at the time of the award, while the Royal Agricultural Society of England, the Highland and Agricultural Society of Scotland, and the Royal Dublin Society, the council resolved to again offer medals under similar conditions to those awarded during the past season.

The council then adjourned till their meeting on Thursday, December 12.

If you want your hens to lay more eggs, give them a little Colman's Mustard in their morning meal.

See "The Field," Feb. 6, 1906.

It's a simple experiment and well worth trying.

For every six fowls take one teaspoonful of Colman's Mustard and mix with the dry meal before adding the water. It also keeps the hens in fine condition.

The best Mustard for the purpose is

Colman's

HORSES.

SHIRES.

BLAGDON SHIRE HORSE STUD. (Established 1879). Proprietor, CLEMENT KEEVIL, Billington, Leighton Buzzard, Beds. (late of Blagdon, Malden, Surrey). High-class animals for sale of all ages and both sexes; also massive sound Stallions to let for the season

CONCHAR, JOHN, Wylde Green, Birmingham. Breeder of High-class SHIRES and HACKNEYS. Several have been successful in the showyard. Colts and Fillies by the leading Stallions of the day.

CROSS, J. L., Catthorpe Towers, Rugby. Shire Stallions, Mares, &c. Also Red Shorthorn Bulls from milking strains, and Oxford Down Sheep.—Apply F. CAMPBELL, Catthorpe, Rugby.

GRIFFIN, F. W., Boro' Fen, Peterboro'. Shire Stallions, Mares, and Fillies for sale, in natural condition; 40 pedigree mares kept for breeding; every facility to foreign buyers.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Hereford. Stud Horses: Lockinge Lord of Misrule and Lockinge Bonny Lad, both by Lockinge Forester, full brother to Lockinge Forest King. Colts and Fillies for Sale.

JOHNSON, WALTER, Hatfield, Doncaster. Stud Horse, Lambton King 16757; Stallions for hire; weighty young Stallions, Mares, and Fillies on Sale.

MUNTZ, FREDERICK ERNEST, Umberslade, Hockley Heath, Warwickshire. Shire Stallions, Mares, Fillies, prize-winners.—Particulars from Mr. JOHN T. B. HARTLEY, Estate Office.

MUNTZ, Sir P. ALBERT, M.P., Dunsmore, Rugby. — SHIRE-BRED STALLIONS, COLTS, MARES and FILLIES. About a hundred of all ages. Prize-winners London and other leading shows. Also high-class Shropshire SHEEP, winners first prize at Royal Agricultural, 1886, second in 1887, and first in 1888.—Apply THOMAS EWART, Dunsmore.

NOTTINGHAM CORPORATION, STOKE FARM.—Shire Stallions, Mares, Fillies, and Geldings of fashionable breeding, including prize-winners, on Sale. Inspection invited. Visitors met.—Address A. AVIS, Stoke Bardolph, Nottingham.

PEARSON, E. E., Brickendonbury, Hertford. Shire Stallions, Mares and Stock for service and sale; prize winners. Stations: Hertford, Great Eastern and Great Northern.—Apply Estate Office, Brickendonbury, Hertford.

ROWELL, JOHN, Bury, Huntingdon. Breeder Shires and Hackneys; Stallions for sale, hire, or service at home; mares and fillies for sale.

WHITEHEAD, Robert, Fashionably bred mares and fillies in natural condition on Sale. Stallions, Bodenham King 17177, Whitestone Prince Alfred 22930.—Apply J. M. JOHNSTONE, Hargate Hall, Buxton. Station, and telegrams, Millers Dale.

HACKNEYS, &c.

BENSON, ALFRED, Upper Gatton Park, Merstham, Surrey. Hackney Stallions: Copper King 7764, reserve champion, London Hackney Shows, 1905 and 1906; yearling Colts and Fillies by Copper King and other well-known Stallions for sale. For particulars, pedigrees, &c., apply to T. Hyett.

MOORE, HENRY, Burn Butts, Cranswick, Hull. Pedigree Stud of HACKNEYS, including many prize-winners, yearlings, two years, and others.—Can be seen on application to Henry Moore.

SMITH, THOMAS, Shirley Stud, Hall Green, Birmingham. Breeder of Pedigree Hackneys and Ponies. Owner Hackney Stallion, "Viscount Hopwood" 8686; Pony Stallions, "Pinderfields Horace" 7952, "Shirley King Horace" 9882. Prize winners on sale.

WHITWORTH, ROBERT, Warley Stud, Halifax, and Londesboro' Stud, Market Weighton. Hackney Stallions: Polonius, Edemynag, Beckingham Squire 8078. Hacknevs and Harness Horses always on sale. Matched pairs a specialitv.

PONIES.

BEALE, Mrs. A. J., Cacketts, Cudham, Kent. Prize-bred Pedigree Shetlands for sale; three grand Stallions at stud.

MILLER, W. S., Forest Lodge, Brecon, South Wales. Extensive Breeder and Exporter of best class of Welsh Mountain Ponies and Cobs.

CATTLE.

SHORTHORNS.

BELL, CHARLES, Norley Hall, Norley, Cheshire. Shorthorn Bulls for sale, from Kirklevington, Red Rose, Barrington, and Cruick bank tribes. Telegrams "Norley"; railway stations, Acton Bridge and Delamere.

COWLEY Manor Shorthorn Herd, property of James Horlick, Esq. Bulls and Heifers of choicest breeding. Cruickshank and Bates blood, successful in dairy and showyard.—Apply, W. HITCH, Estate Office, Cowley, near Cheltenham.

MOSLEY, Sir OSWALD.—High-class Shorthorns. Home Farm, Rolleston Hall. Bulls and Heifers on sale. Apply A. E. Beck, Rolleston, Burton-on-Trent.

PREECE, JOHN ADNEY, Drayton Home Farm, Thrapston, Northampton. Herd of 250 Shorthorns, best Bates and Scotch blood; stock Bulls, Duke of Barrington 70th, Primrose Earl 83641, and Royal Baron 93492; Bulls and Heifers for sale.

CATTLE—*continued.*

SHORTHORNS—*continued.*

ROTHWELL, R. R., Much Hoole, near Preston. Pedigree Shorthorns, chiefly Scotch blood. Stock bull Strowan Marquis 13th, winner of many prizes. Young bulls and heifers always on sale.—Apply to D. COLLYER, Estate Office, Miller Arcade, Preston.

TAYLOR, GEORGE, Cranford, Middlesex.—Bates' Shorthorns, deep milkers. Winners Milking Competitions, London Dairy Show, 1905-6. Bull Calves for Sale. Stock Bulls: Beau Sabreur, Drumcree, Rowbury, and Kirkcharm.

WORDSWORTH, Duffcarrig, Gorey, co. Wexford, Ireland. Pedigree Dairy Shorthorns (Cruickshank and Scotch strains). Successful in dairy and showyard. Young Bulls and in-calf Heifers of good colours for sale. Exportation orders executed.

SUSSEX.

BANNISTER, T., Limehurst, Haywards Heath, Sussex (mile from Station, one hour from London). Pedigree Sussex Cattle (descended from the oldest and best strains of blood), unrivalled for their early maturity, the production of the best beef and working oxen, and ability to thrive in all weathers on the roughest fare. Bulls, Cows and Heifers for Sale.

HEREFORDS.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Herefordshire. Pure-bred Hereford Cattle, with pedigrees dating back to very early volumes of Herd Book. Bulls and Heifers for Sale at reasonable prices. Shire Horses and Shropshire Sheep.

PULLEY, CHARLES THORNTON, Lower Eaton, Hereford.—Noted prize-winning herd of HEREFORD CATTLE. First prize Royal winners, Protector 19660 1900; Eaton Champion 21351, 1903; and Ashleaf 3rd, 1905. This herd is headed by Eaton Champion and Glendower 2nd 22196, also a Royal winner. Bulls and Heifers for sale. Also prize-winning Shropshire Sheep.—Apply Mr. HEDLEY JONES, Lower Eaton Estate Office, Hereford.

THE SHEEPCOTE HEREFORDS, property of Peter Coats. Established 1900. This herd has in 1904 1905 and 1906 won more first and champion prizes than any other in England. Headed by Endale, Bage Protector, and Fusilier. Young stock on sale. Inspection invited. —Apply, J. K. HYSLOP, Estate Office, Sheepcote, Clifford, Herefordshire.

DEVONS.

BOWERMAN, ALFRED, Capton Williton, Taunton, Breeder of Pedigree Devon Cattle. A speciality for large size, with quality and robust constitutions; colour dark red. Sent to all parts of the world. Prices moderate.

SKINNER, ALFRED C., Pound, Bishops-Lydeard, Somerset. Pedigree Devons, constitution, quality, size, milk; 600 prizes principal shows, many champions; exports most successful; bulls and heifers for sale. Inspection invited.

ABERDEEN-ANGUS.

BRIDGES, J. H.—This old-established herd of Aberdeen-Angus cattle of the leading families can be seen at Langshott Home Farm, Horley, Surrey (near Horley Station, L.B. & S.C.R.), and catalogues obtained on application to Mr. Albert Pulling.

CRIDLAN, J. J., Maisemore Park, Gloucester, Erica, Pride of Aberdeen, Lady Ida and other noted tribes. Stock Bulls, Wizard of Maisemore (21,465), Champion and winner of gold medals, 1905; Everwise (24,436), Champion and medal winner, 1907; Bengal of Ballindalloch, prize winner, 1906.

Breeder of Pure Lincoln Long Wool Sheep.
Lustrous Fleeces. Good Constitutions.
SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

Lincolnshire Notes.

A WORD for small holdings. And from a landlord, too. Lord Boston, who owns land in South Lincolnshire, has addressed to his tenants a message of congratulation on the land legislation of the Government. He expresses himself in favour of the principal provisions of the Land Tenure Act, and he believes firmly that the measure will cause no disturbance whatever in the relations of landlord and tenant when estates are administered in accordance with best traditions. That has all along been the Liberal argument for the measure. Baron Boston is not a Liberal, but he is evidently a liberal-minded man.

BUT about small holdings. His lordship does not expect so much from them as his friend Earl Carrington, and he favours conferences between landlord and tenant as a substitute for the compulsory acquisition of land. But as a landlord he recognises that "legislation of that kind must be met in a philosophic spirit. No injustice must be caused to the sitting tenant, and he feared that the tenants of the intermediate public authority might suffer from being cut off from immediate contact with the owner of the soil. Still, he recognised that changes in a modified form were inevitable, and that it was desirable that a larger number of persons should, if possible, and in pursuance of equitable arrangements, be settled on the land."

BRAVO! Right or wrong, that is the spirit in which to meet the growing aspirations of the land-worker. It is as refreshing as a sea-breeze to hear it from the lips of a landowner.

IN Lincolnshire we deny that farmers are a race of grumblers. They are not grumbling, and they have nothing to grumble at, we are told, for they have had a glorious harvest, wheat is being bought freely at 39s. per qr., and there is a splendid outlook for the potatoes. Prices are still going up, and they are going to touch 50s. we are told. Grumbling? We are in the highest spirits; we do not even want to sell our corn. We are going to wait a little while and count the blessings of this wonderful 1907. Besides, prices are still going up.

WHO is the largest Lincolnshire farmer? A South Lincolnshire paper asks the question *apropos* of the death of Mr. Coates Sharpley. The Bowsers, the Wards, the Atkinsons, the Dennises, the Casswells, the Proctors, the Banks's and the Thompsons are all names that suggest themselves in this part of the country. Probably the largest individual occupier is Mr. William Bowser, of Sibsey, whose holdings extend in all directions from Boston to Lincoln and Louth.

LORD WILLOUGHBY D'ERESBY, M.P. for Horncastle, has disposed of his famous thoroughbred stallion White Feather. His new home will be in South Africa, and it will perhaps be remembered by some of my readers that a few years back this fine animal carried off the Ascot Plate and the Goodwood Stakes. For some time he has been on the Drummond Castle in Perthshire, where he has left some very good stock.

EVEN agricultural poverty has its compensations. A seventy-year-old labourer has just died at Boston who, from birth to death, had never had a doctor. He expired suddenly, and a medical man was called in after death—that was the only time a doctor had been requisitioned on his account. Apparently, he lived a normal life and died a natural death. How many of us well fed, well clothed, well slept, well amused, and well pampered individuals, will be able to say the same at three score years and ten?

THE vexed question as to when foxhound puppies out at walk come within the provisions of the Dogs Order as to the wearing of collars has again been before the magistrates at Spittlegate (Grantham). Counsel for defendant argued that the Act did not intend to apply to foxhounds. Lord Carrington, who had charge of the Bill in the House of Lords, was asked the direct question whether it applied to foxhounds, and he said foxhounds and all sporting dogs would be exempted from wearing collars. The magistrates dismissed all three cases, but refused the application for costs.

LINCOLNSHIRE has really seen the last of the smock frock. The veteran Holden, of Pinchbeck, who clung to the old order of agricultural attire, both for Sunday and weekday wear, died last week. He was really the last link of a gone and now almost forgotten past.

MUSTARD, we are told, is expected to yield well this year. Threshing operations have been delayed by the heavy rains, but there are good prospects of a plentiful harvest. Up to the present hour the demand is not very keen. At the Wisbech mustard market Messrs. Coleman were the principal buyers, and prices ruled from 10s. 6d. to as low as 6s. 6d. per bushel.

THE Farmers' Union, which has had a splendid inauguration at Peterborough this week, was unable to be as strongly represented as it would have liked at the annual conference of the North-Eastern Agricultural Federation, held at Northallerton on Friday. The date, unfortunately, clashed with the ordinary monthly meeting of the F.U. committee; but the two important subjects, Small Holdings and Federation, have been thoroughly thrashed out by the Union, and a wire was sent from the committee meeting cordially approving of the resolutions submitted to the conference.

SOME cattle maiming outrages are being inquired into by the Lincolnshire police in conjunction with the Nottinghamshire police. Two valuable pigs, the property of George Bell, a cottager and the sub-postmaster of Willingham, on the borders of the county, were discovered maimed by a piece of whipcord tied tightly round the hind leg so as to cut the flesh to the bone. The dastardly deed is said to be the work of a stranger—a madman, too, I should imagine.

LINCOLNSHIRE FARMERS' UNION.

CENTRAL COMMITTEE.

A meeting of the Central Committee of the Lincolnshire Farmers' Union was held at Lincoln on Friday. Mr. Colin Campbell, who presided, stated that the North Eastern Agricultural Federation was meeting at Northallerton at the same time, and he was of opinion that it would be very graceful on the Union's part to send a telegram wishing them every success. Among the resolutions to be submitted at the conference were two the Union had often discussed, viz., "That, whilst giving general approval to the system of Allotments and Small Holdings, this Federation strongly objects to any additional charge being placed upon local rates through the provision of the same, and to any farmer being dispossessed of his land without ample compensation," and "That agricultural land should be relieved from a larger portion of the burden of local taxation, a burden which is out of all proportion to the benefits derived by it from the huge and rapidly expanding outlay on sanitation, education, poor, police, roads, and other local purposes."

The meeting unanimously decided to send a telegram expressing their warm approval of these resolutions, and wishing the conference every success.

The chairman informed the Union that in accordance with their wishes Mr. Howard and himself met the Land Agents Society last Friday, and had a very good meeting indeed. If there had been any suspicions of their (the Union) actions in the past, he thought what they said, for they were asked a good many questions about what they were doing, quite allayed them. In the future he did not think they would be looked upon by any of the good land agents with any suspicion at all.

A letter was received from Mr. T. Roberts, of Croxton, regarding the Motor Car Act, which is to come up for revision during the next Parliamentary session, and proposing that the Union appoint a committee to gather evidence of damage to roads adjoining owners' crops, and the increased cost to farmers caused by motor traffic, &c., and also the great danger to farm teams in winter by the use of tarred roads.

Mr. Godson, who is on the Highway Committee of the Kesteven County Council, said there would be no more tarred roads in Kesteven for some time; they had had quite enough.

Mr. Howard agreed with some of Mr. Roberts' proposals, and said they ought to get in touch with the authorities to prevent damage being done on the roads by motors, as it fell on them to pay the cost. If they did not move in the matter nobody would help them.

Mr. Burt said he had nothing against motor cars as long as they were driven carefully, but he did think they ought not to tar the roads for the pleasure of motorists. It was against their teams, for, as they all knew, on a frosty winter's morning the horses were unable to hold their feet as well as on the ordinary roads. If the motor people would pay for them it would be all right, but if not it was for some of the members to grumble, and grumble very much.

Mr. J. C. Mountain said the general conclusion come to in Warwickshire by drivers of all vehicle traffic was that the macadam roads were very much against them, and very dangerous indeed during winter time.

The chairman did not think a committee necessary, and suggested that the matter be referred to the General Purposes Committee to consider and report. There was no doubt whatever but that this was a very serious matter indeed for them. He also happened to be on the Highway Committee of the Kesteven County Council, and he had been speaking to Mr. Purser, the surveyor, recently on the matter. It was awful what it was going to cost them. He specially pointed out that it was having through passage cars with studded tyres that did the damage. and he believed the surveyor said that the roads that had been steam rolled on the Great North road in ordinary cases would have lasted ten years, whereas now they would only last four. He (the speaker) thought the General Purposes Committee should go fully into the matter, and that they (the Union) should send a deputation to the President of the Board of Trade before this Bill was brought in. He did not know any more serious thing that they had pressing on them at the present time than this.

Mr. Godson remarked that the county surveyor said the roads had cost £2,000 extra.

The suggestion of the chairman was unanimously adopted.

PETERBOROUGH BRANCH.

Although the attendance was not to the extent one could have wished for, there was a large and representative gathering of farmers in connection with the formation of the Peterborough Branch, held at Peterborough on the 19th inst. Mr. T. H. Vergette, who was voted to the chair, said he should like to know what other body had so much stake in the country as agriculturists? Farmers were the backbone of the country, and they fed, clothed, and educated the people all for nothing. Instead of being disunited they should be one of the strongest bodies in the land. *Punch* was fond of picturing Farmer Giles in his top boots and with a very leisurely way, as if he did not care for anything, but they all knew, in real life, that when agriculture failed then trade failed. If the corn trade went up, then the trade throughout the country went up also, for the farmers dug the gold of the world. It was therefore essential that they should be a united body, that they should be acknowledged as such, and that they should have their own representatives in Parliament. Was there a single tenant farmer representative in Parliament at the present time? ("No.") That being the case, therefore, it was about time that farmers set about altering the present state of affairs, for, at present, it was left to the farmers to fight their own battles and also those of the landlords, the agricultural labourers, and the whole lot. Farmers should think of all these things for themselves, and he was sure that if they would then combine together they could demand fair railway rates and fair taxation, and he therefore hoped that all present that afternoon would support the Farmers' Union.

Mr. S. Dean (Folkingham) followed with a lengthy address, in which he contended that it was absolutely necessary for the farmers to combine and have a Union, for although agriculture was the most important industry in the country, gave employment to most labour, and had ten times more capital invested in it than any other industry, yet there was no organisation in existence to protect its interests, and it had no direct representation in Parliament. Agriculture had lost the influence and power it once held in the country, and he believed that was due to the extension of the franchise, for when more people received the vote they immediately started organisations to safeguard their interests, and agriculture had at last been squeezed out by these very organisations. If tenant farmers combined they would be able to remove many injustices that at present existed, and also restore agriculture to its former place. By these means also, not only the tenant farmers, but the landlords and also the labourers would benefit.

Mr. S. Fitzwilliam remarked that if small and big holders of land would combine and make the Union "go," then it would doubtless be for the benefit of the landlord, the tenant farmer, and the labourer also. If they could see agriculture on a better footing than at the present time they would then be pleased to meet one another, instead of the tenant farmer being afraid to come into the office occasionally to meet his landlord. Years ago he tried to get them to combine, and they started off with enthusiasm, but they ended there also. If they combined and stuck to it, they could do anything with any Parliament in the world.

After other speeches Mr. Little proposed that every farmer in the room should become members of the association. This was seconded and carried unanimously.

The question of the appointment of officers was then proceeded with, and resulted as follows:—Chairman, Mr. T. H. Vergette; vice-chairman, Mr. Geo. Moore; committee, Messrs. H. Little, J. H. Saunders, S. Egar, W. Horrell W. Carter, R. Walker, James Heys, E. Shepperson, and Jos. Emerton.

LIST OF

FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d. to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock. The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No. 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits.—Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training, and Trimming Trees and Shrubs. By D. Grant McIver. A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit. Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24.—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

BEES.

No. 81.—Book of Bee-Keeping. A very Practical and complete Manual on the Proper Management of Bees, especially written for Beginners and Amateurs who have but a few Hives. By W. B. Webster, First-class Expert, B.B.K.A. Fully Illustrated. In paper. Price 1s., by post 1s. 2d.; in cloth, price 1s. 6d.; by post 1s. 8d. G.

FERTILISERS AND FEEDING STUFFS.

No. 84.—Artificial Manures. How to Make, Buy, Value, and Use. A Hand-Book for Agriculturists, Chemical Manure Manufacturers, Gardeners, and others concerned in similar pursuits. By Alfred Sibson, F.C.S., Consulting and Analytical Chemist, Author of "Agricultural Chemistry," "Every-day Chemistry," "Food, Feeding, and Manure," "A Lecture on Superphosphate," &c. Late (for eight years) Assistant Professor of Chemistry in the Royal Agricultural College, Cirencester, and First Assistant in Dr. Voelcker's Private Laboratory. Formerly Student of the Royal College of Chemistry and the Birkbeck Laboratory of University College. Revised and Rewritten by the Author and A. E. Sibson, F.C.S. Third Edition. 143 pp 8vo. In cloth. Price 1s., by post 1s. 2½d. L.

FODDER.

No. 87.—Fodder Crops. Uses. By C. G. Freer Thonger, M.R.A.C., F.C.S. 72 pp. 8vo. In paper. Price 1s., by post 1s. 1½d. L

ACCOUNT BOOKS.

No. 106.—Utility Poultry-keepers' Account Book. A very Useful Book for Amateur Poultry-keepers, showing at a glance the Daily, Weekly, Monthly, and Yearly Statement of Profit or Loss Account. By A. Hunt. Second Edition. In stout boards, price 2s., by post 2s. 3d. L.

No. 107.—Jee's Milk Book. An Account Book for Farmers, Dairymen, and Consumers, showing Profit or Loss at the end of each Week; can be used for a period of three years. Price 2s., by post 2s. 3d.

LAW.

No. 108.—Law for the Householder. By a Barrister-at-Law. A book written for the layman and not for the lawyer, its object being to supply ready information to the householder, on matters of direct personal interest to himself. In paper, price 1s., by post, 1s. 2d.

Small Holdings in Carnarvonshire.

Largely owing to the efforts of Mr. Ellis Davies, M.P. for South Carnarvonshire, a movement has been initiated to secure that the existing powers of County Councils shall be used to enable tenants of small holdings in Carnarvonshire to become the owners of them.

Taking advantage of an extensive sale of farm lands forming detached portions of great landed estates in his constituency, Mr. Davies has formed an agricultural committee, comprising tenant farmers among his constituents. This committee aims at influencing the County Council to step in at the present moment in order to enable the sitting tenants of the farms now offered for sale to purchase their holdings. It is proposed that this shall be done under the Small Holdings Act of 1892, which provides (Section 17) that where the tenant of a small holding wishes to acquire his land the county council shall be empowered to advance to him four-fifths of the purchase money, which is to be repaid in annual instalments covering capital and interest, spread over a term not exceeding fifty years.

The Government would find the money for the county council at a low rate of interest, the council charging the tenant the same rate plus a sum not exceeding 10s. per cent. per annum. This provision applies to any holding not exceeding 50 acres in extent, or which is assessed for income tax purposes at not more than £50 per annum. The great majority of the farms now offered for sale in Carnarvonshire will come within one or other of these definitions.

We are advised from Buenos Ayres that Mr. C. H. Sanford has, for the second year in succession, won first prize for bulls at the Rosario Agricultural Show. Both bulls were sired by Wanderer's Heir, who was bred by Sir Alexander Henderson, Bart., in his Buscot Park herd; Wanderer's Heir was sired by the famous bull Wanderer's Prince, 78,105.

SEEDS, PLANTS, POTATOES, ETC.

BLACK CURRANTS. — Strong, transplanted bushes. Boskoop Giant, true, 4s. doz., 25s. 100. Baldwin, 2s. 6d. doz., 15s. 100. Carriage paid.—W. J. Guy, Crowe Hill, Ringwood, Hants.

BLACK CURRANT BUSHES.—An extensive stock of strong fruiting bushes offered at very low prices. Naples, 3 and 4-year, £3 per 1,000. Naples (extra branched), 2-year, £2 10s. per 1,000. Send for samples. Our plantations are perfectly free from Mite.—E. W. Beaven, Fruitgrower, Holmer, Hereford.

THE BEST OF EVERYTHING now offering for autumn planting in Fruit Trees, Roses, Climbing plants, Alpine and Herbaceous plants, Hardy Shrubs, Forest and Ornamental Trees, Bulbs, &c., at cheapest rates and best qualities.—Wm. Fell & Co., Ltd., Royal Nurseries, Hexham.

Seasonable Topics.

November. TIME flies along. We are now in November, which in some respects is the dullest and dreariest month in the year. A typical November is damp, foggy, and dark; the days are short and the nights long, and there does not seem much to look forward to till the shortest day is past and the first half of the winter is over. Isolated indeed are many farmsteads at this time of the year, and it is now that our town cousins feel sorry for us, and wonder how we manage to pass the time. It is done, however, and without time dragging or seeming to go slowly, for when weather is unfit for outdoor operations a farmer is never at a loss to find a job under cover, and when work for the day is over there are ways and means of making time pass pleasantly which townsfolk know nothing of. Happily the old spirit of freemasonry which has existed among farmers for so long has not been obliterated in the changes of modern life, and it is this spirit which brings farmer folk together in the winter and helps to break the monotony that might otherwise be depressing.

A CHAMPION MERINO EWE.

Bonfire Day. THE fifth of November is imprinted on the mind of every schoolboy as the day when Guy Fawkes was disturbed in his nefarious design to blow up the House of Commons, but perhaps more particularly as the day when he (the schoolboy) is privileged to put crackers under your door, fasten catherine wheels to your window frame, and explode fireworks in your backyard—outrages that he would never think of commiting on any other occasion. While firework-makers exist we do not think that Guy Fawkes day will be forgotten, but in some places the event is celebrated with far more zeal than in others. In most places bonfires glare in the darkness on the fifth of November, and stacks and buildings run a greater or less risk of getting ignited; but in some of the villages of Kent, for instance, there are properly organised bonfire societies that have carnivals on the eventful day, a flare up, of course, at night, and, need it be said, the all-essential dinner, which makes a complete finish to the whole business. These bonfire societies are amongst the oldest institutions in Kent—a county that delights in keeping up ancient customs.

Farmers and the Railway Crisis. AT the moment of writing the unfortunate disagreement between railway servants and directors is unsettled, and people are anxiously asking each other what would happen if the trouble should end in a general strike. For our own part we are sanguine enough to think that common sense will prevail and the calamity be avoided, and we hope that when these lines are being read the crisis will be past, the knotty points settled, and the minds of the public be at rest. We represent agriculture, and hold no brief for either directors or employees, and though we, as farmers, have reasons at times to complain of the railway companies, we realise their indispensability; also the fact that they exist for public convenience as well as the payment of dividends, and we contend that even the danger of a railway strike ought to be made impossible. It is absurd to think that the whole business of the country should be disorganised and helpless individuals be put to inconvenience and loss because a certain few people get to loggerheads over matters that could be settled by sensible arbitration.

The Scarcity of Eggs. GREAT advances have been made in the industry of poultry keeping during recent years, and science has been brought to bear upon it with marked effect, but there is one important bit of knowledge that does not yet appear to be in the hands of poultry keepers in general—how to make fowls lay in November. Perhaps this remark will bring some expert on to the platform, so to speak, to show how it can be done as easily as A, B, C, but the fact remains that the man who enjoys a new laid egg for his breakfast in the morning has a difficulty in getting it at this time of the year, even if he is prepared to pay twopence for it, and the good people who sell their few odd eggs at the above price would give anything if they could only induce their fowls to lay more. The obvious deduction then is that the production of eggs in November is not so easy in practice as it appears on paper or we should hear less of the scarcity. Of course, some people have home preserved eggs to fall back upon and the well-known "shop 'un" can always be had, but the proper companion to the morning rasher is the egg that is newly laid, and at the present scarcity and price this is a luxury.

Roadside Grazing. FROM time immemorial it has been the custom of cattle owners, particularly small holders, to graze their cattle on the herbage that grows by the roadside, and no one has complained, but now things are changing, and in some districts efforts are being made to prevent roadside grazing, even when a "tenter" is in charge. Is this another concession to the motorist, who on many roads has made side grazing impossible by choking up the grass with dust? To us it seems a pity that the useful herbage that grows by the wayside should be wasted, and that the people who have been in the habit of grazing their cattle on the roadsides (properly tended, of course) should be deprived of the privilege, but little by little country people seem to be losing grip of the roads, and soon all that will be left to them will be the pleasure of paying for them.

Fine Weather Wanted. QUITE enough autumn rain has fallen to satisfy the agricultural fraternity, and what is wanted now is fine weather. We are now in November, and under the most trying conditions we see attempts being made at ploughing, and a strain indeed it is on horseflesh if the land is at all on the heavy side. We have just returned from a journey in an upland district in a western shire, and observed the hillsides dotted with beans waiting only for fine weather to get them in. Beans, of course, will not take much harm, and they have often been carried later than this; but still, one does not like them to remain out day after day and week after week, when a few dry days would put them in condition for hauling. As for the sowing of wheat and winter oats, these operations are being retarded considerably by the state of the ground and the weather, and farmers

to-day are more serious about wheat-growing than they have been for some years. We have heard, by the way, expressions of opinion that the prices will touch 50s. by Christmas. What optimism, to be sure, to come from a farmer! We will wait and see.

Agricultural Politics.

BY A LOBBYIST.

Can We Have a Conference?

It is, of course, perfectly obvious now that the next momentous fight between the peers and Liberalism will be over the Scottish Land Bill. Lord Rosebery's conduct has simply rendered that inevitable. It would be—human nature being as it is—an act of craven cowardice to refuse the Premier's invitation. To connive at a measure which the large majority of the peers aver to be unwise, and which the former colleague of the Ministry declares to be malignant, would mean the wrecking of its own authority and the flagrant jettisoning of its own claim to be a fair, dispassionate, and judicial revising chamber. I do not for the moment say whether the Bill is wise or unwise. To review the debate would be to prematurely rehash the funereal meats of the last session. Is it possible, after all, to avoid this strenuous conflict—a conflict in which the admitted necessity for Scottish land reform will be obscured and forgotten? Is the line of cleavage so sharp-cut that conciliation and a mutual understanding is impossible? Is it, after all, impossible to make some concession to those Lowland peers who hold that it is simply midsummer madness to mathematically apply to their areas principles of tenure only applicable to the Highlands? I ask this question in the hope of preventing a great Parliamentary effort fallow of results. Supposing the Bill be mutilated and re-shaped by the peers, would the Government resign? I do not believe it for a moment. If it did, it would call down upon its head the vehement and vitriolic criticism of all those anxious for educational reform, licensing reform, disestablishment, and what not. The Bill—which will inevitably contain many desirable provisions—would be simply abandoned; and this time it would have no resuscitation.

Should Wales be Differently Treated.

Are we to have a different land system in every individual part of the United Kingdom? The Irish system differs from the English; it is suggested that the Scotch should differ from both. And now there is a clamorous demand being raised in the Principality for the distinctive treatment of Wales. It is urged by leaders of Welsh thought like Mr. D. A. Thomas, M.P., that it is ludicrous to apply the same principles of tenure to a people so differing from the English in temperament, in method, and in practice as do the Welsh. These men hold, indeed, that Lord Carrington himself has been recreant, so far as the Principality is concerned, in not embodying in his Small Holdings Act the views he expressed in the famous Land Commission report. Wales—or, rather, the overwhelming section of the Principality—is ready for a Land Commission? It is no use blinking our eyes to this. It may be urged that the power to at intervals revise rents amounts in practise to a Land Commission. It does not in the esteem of the Welsh land reformers. They want a formal Land Commission with definite powers, clearly expressed in a formal Act. They want that Land Commission to have not inflexible powers but a certain elastic authority which would permit of some occasional concessions, when deemed necessary, to human failures and human ills. We shall not, of course, see it in the life-time of this Parliament. Its cruse of responsibilities is filled to overflowing. This fact will only tend to nerve the agitation. We shall hear a good deal of this demand in the next few years; and the prophets of the Principality aver that the landlords may even welcome it in preference to nationalisation.

Wisdom of the Lords Lieutenant.

The lords lieutenant have set an example in the art of patriotism, and in doing so they have rebuked those foolish persons who advised that they should hold aloof from the Territorial Army scheme because of its Liberal inspiration. Had they taken this advice they would have revealed that they were possessed by a partisanism that preferred a party and schismatic triumph to a national and Imperial necessity. They have risen above the rather sordid suggestions of these maladroit persons, and shown that in their view the nation should not be visited with a penalty because it had had the impertinence to prefer a Liberal Administration. I am not going to pretend that some of the accusations delivered by individual Liberals against landlordism have not been infected with unnecessary spleen—they have been in not a few cases gangrened with venom. Mr. Haldane's policy is, however, nothing less than a recognition of landlordism as a force in the natural polity. The lords lieutenant represent landlordism; and the lords lieutenant have been now conceded that formal position of authority in the national fabric which before was only faintly surmised. Had the lords lieutenant been unwise enough to hold aloof from the new military system, they would have connived at their own undoing. They would, for instance, have placed a formidable weapon in the hands of those who would remove the manning of the magistracy from their jurisdiction. I do not say that this was in the minds of the lords lieutenant; I believe their action to be an entirely patriotic impulse. They, however, have done admirably well for their order.

The Future of the Board.

It is an interesting speculation as to whether Earl Carrington will manage to associate a greater authority with the Board of Agriculture than it as yet possesses. Of course, the Small Holdings Act has considerably accentuated its significance and given it a place in county administration which it did not before possess. All the same the Board, so far as agriculture as a calling is really concerned, remains still a shrunken, debilitated, and emasculated body. Its powers are sadly restricted, and even when it seeks to be useful it has so to rely on voluntary effort that it can seldom be aught than impotent. That so much should have been accomplished, by successive Ministers is under the circumstances in itself a tribute to their sagacity and enterprise. The purpose of the English Board of Agriculture should be to secure a grant corresponding—let area and population be the standard—to that secured for the Irish Board of Agriculture. Then it might become a real potent influence in the old traditional interest of this country. It does all that is possible with the money at its command. The parsimony of the State is its enemy. It ought to have its advisers in every part of the country. Its experimental culture ought to be a boon and a blessing to every farmer. Lord Carrington hath a persuasive tongue, and his colleagues have in the past shown themselves greatly sensitive to it.

Kill the Dangers of a Strike.

I want to emphasise the danger it would mean to agrarianism if the railway strike takes place. The whole circuit of communication with the great distributive centres would be interrupted. This would be a calamity not merely to the industry, but to the State. Now, let me point out that if we had subsidiary means of communication this danger would be in a large degree mitigated. Had we a complete system of co-operative distribution it would be entirely avoided. And with a co-operative system of depôts it would be impossible. In this I am arguing for a system of co-operative distribution in which local depôts would be supplemented by a generous State contribution. In this event any tragic disturbance of the means of communication with the great centres could not take place. The killing of the canals was an economic and national crime. The establishment of a compensating method of auxiliary inter-communication is a duty. Whatever is established must be an auxiliary system. The railway must always be the first and supreme method of communication. It is well, however, to have a substitute for the railway when it fails, be that failure through the ineradicable double dose of original sin possessing the men or the unfortunate mistakes of Nature.

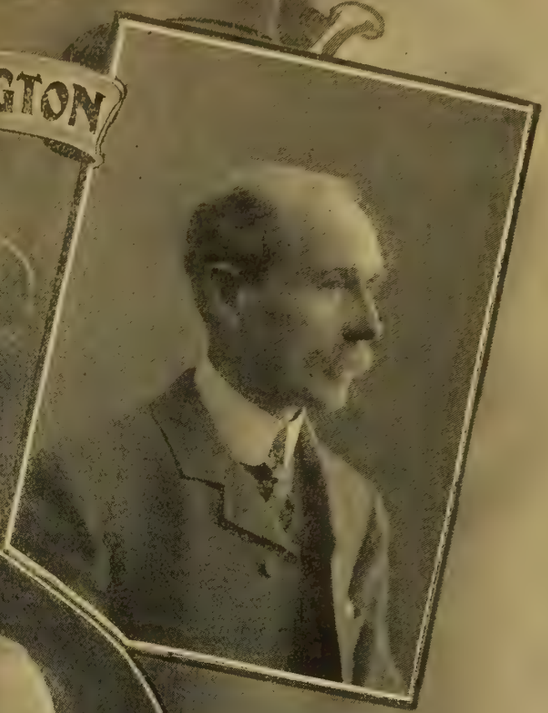
PUBLICATIONS RECEIVED.

Messrs. John K. King and Sons, of Reading and Coggeshall, have just issued an illustrated pamphlet, entitled "Earth's Ripened Grain," on their pedigree seed corn. It is a work which every farmer should have. That the system of pedigree selection, as carried on by Messrs. John K. King and Sons on their Essex seed farms has been productive of the most remarkable results, was abundantly testified by the English and Continental visitors who inspected the crops last summer. Messrs. John K. King and Sons' aim for a long time past has been to produce wheat, barley, oats, and other grains which will yield the biggest crops and finest quality grain, and they have been very successful in doing so. The pamphlet may be obtained free from Messrs. John K. King and Sons, Coggeshall, Essex, and Reading, Berks.

The third edition of the "Chemical Trade Directory" is now on sale. It gives a list of all the names of merchants, agents, &c., who deal in manures, acids, chemicals, &c., and will be found most useful to all who are in any way interested in the chemical trades and allied industries. The names and addresses of public analysts have been omitted from this edition. Since the last edition of this Directory was issued the Institute of Chemistry has published an official list, and to this list all inquirers are referred. This directory may be obtained from Messrs. Davis Brothers, Danes' Inn House, 265, Strand, London, W.C.

Volume XIII. of the Kent and Romney Marsh Flock Book has been recently issued, and it shows that success has attended the efforts and work of the Association during the twelve months since the previous issue. The number of members, and also of registered flocks, show a most satisfactory increase. The rams entered are 2,402 in excess of any previous year, but a considerable number of ram lambs are included in the entries. The number of ewes entered (524) is of great importance, and it includes those sold for export. It may be remarked that one feature of the demand—a very large one all through the year, more particularly from New Zealand—has been the great increase in the number of ewes purchased. Copies of this volume may be had from the secretary, Mr. W. W. Chapman, Mowbray House, Norfolk Street, Strand, London, W.C.

The Calendar of the Armstrong College, Newcastle-upon-Tyne, for 1907-8, which has recently come to hand, gives a very comprehensive survey of the college, and shows what a great work is being carried out there, the education extending over a very wide area. The book contains a list of former students who have passed their examinations, also one of present students, of degrees, scholarships, &c.; also a lot of other information which would be of great help to intending students. The price is only 1s., or 1s. 4d. post free, obtainable from the college.



"Observing and Forecasting the Weather: Meteorology Without Instruments," by D. W. Horner, F.R. Met.Soc., &c., is a handy little guide for amateurs for telling what the weather will be. As there are many works of much greater pretensions than the present, already before the public, treating of instrumental observations, the author has confined his remarks almost entirely to non-instrumental observations, a subject which can be taken up without any expense or outlay whatever, and if due care be used to eliminate errors these observations may frequently turn out of practical scientific value, when perhaps the worker was aiming no higher than his own amusement or instruction. This little book is published by Messrs. Witherby and Co., 326, High Holborn, London, E.C. Price 6d., post-free 7d.

Thirsk October Cattle Fair, held on Tuesday, was well supplied with stock. Beasts forward in condition and likely soon to make beef were most in demand, and found ready purchasers. English heifer stirks made from £5 to £5 10s; two-year-old English bullocks, £8 to £8 10s.; two-and-a-half year old English bullocks, £10 to £11; and forward animals to £13. There was a herd of good strong Irish heifers, which made from £11 to £12 10s. Very few dairy cows were on offer, and late prices were realised. Although Monday was the sheep fair, there were a few, principally half-bred lambs, for sale, which made from 17s to 20s.; North country lambs, 28s. to 33s. At the sheep fair on Monday there was a good show but a slow trade. Twice crossed lambs were the best to sell, and made from 30s. to 35s.; half-bred lambs realised to 25s.; Scotch sheep, 20s.; breeding sheep up to 45s.; Wensleydale rams, £3 10s. to £5 each.

The Farmers' Protection Association of Darlington

Mr. Councillor J. G. Fruish.
Chairman of Bedale Branch.

Mr. P. B. Kent.
The Secretary.

Mr. Geo. Smurthwaite
Chairman.

Mr. W. Dent.
Hon Secy. for the Barnard Castle and Barlington Branch.

Mr. A. G. Ramshay
Secy. of Bedale Branch.

FULL PARTICULARS OF THE DARLINGTON FARMERS PROTECTION ASSOCIATION WILL BE FOUND ON NEXT PAGE.

DARLINGTON FARMERS' ASSOCIATION.

Objects of the Association—The Last Annual Report—Work of the Association—Value of the Association—Financial Report—The Executive—Rules—Aims and Ideals.

A new form of combination among farmers has been growing rapidly of late, and it is pleasant to know that the Darlington Farmers' Protection Association, though of youthful origin, is perhaps the oldest body of its kind in the north of England, and has not failed to make rapid strides during the past year or so.

It has now a membership of nearly 800, and with an energetic executive at its head will soon total over four figures. Such a body can and will be of assistance to its members. Whether it be a railway company, a trading company, or an individual, there would be much greater hesitation in pursuing a farmer where it is known that he is defended by the body to which he belongs, especially where such body has through its committee heard the evidence on both sides, and determined its action accordingly.

Objects of the Association.

Farmers in the past have too frequently been the butt of others. Their good temper, their geniality, and dislike of law and annoyance, their too great submission to the demands of those who have been in the past too ready to impose upon them, have frequently been followed by losses which they ought never to have borne. Instead, therefore, of future submission to wrong or to the still more disagreeable necessity of consulting a lawyer in their own defence, they have only to adopt the methods of the association to protect themselves.

Numerous cases have been settled—frequently by the arbitration of the secretary—with necessarily good results. The unfair action of their servants, difficulties with railway companies, damages to cattle, losses owing to the wrong delivery of produce, trespasses, and damage to their land, false warranty in regard to stock which they have purchased, imperfect samples of grain, unsound feeding stuffs, the sampling of milk, losses by bad debts, and other matters have from time to time occurred, and have been wholly or partially settled without having recourse to law, or, when this is essential, by action being taken for the benefit of the member by the association itself.

The Last Annual Report.

The last annual report stated that, with a considerable addition to the list of members, the work of the association has grown proportionately, increasing the duties and responsibilities of officials. Upwards of seventy cases have claimed attention during the past year, in addition to all the other business details that necessarily arise in conducting the affairs of a large society that seeks to promote the best interests of agriculture besides looking after its own special province. The committee are pleased to be able to report that in the great majority of disputes dealt with, settlements have been fortunately arrived at without recourse to law through the policy adopted of using all reasonable means to effect an amicable arrangement without materially giving way or sacrificing a principle. It is equally gratifying to state that in those cases in which no other alternative was left but to take legal proceedings favourable verdicts were in each instance secured. Several of the decisions were of much importance to agriculturists generally, and were regarded as being in some measure in the nature of test cases.

Work of the Association.

The various matters of dispute that have arisen are of a somewhat similar character to those occurring in preceding years. There are only three to report in connection with the sale of barley, which formerly was a great source of trouble; two were settled by the secretary acting as arbitrator at the request of both parties, each approving of the decisions, and the other is in the early stages of inquiry. Penalties have been exacted against servants found guilty of unjust actions or wilful misconduct. Four railway cases have engaged attention, in three of which compensation was obtained, namely:—1. Damage to stock in transit. 2 Delay in the delivery of goods and consequent loss. 3. Damage by sparks from railway engine. The fourth arose from an excessive charge in the carriage of the bull, and the charge was substantially reduced. Compensation has also been obtained in regard to seed grain not being equal to purchased sample, failure of a quantity of valuable marked peas to germinate, sheep worrying by dogs, damage to conveyance, trespassing upon land and damaging crop, a sale by auction warranty, inferior delivery of feeding stuffs, &c. Legal and expert advice has also been given to members, enabling them to steer clear of complications present and future.

Value of the Association.

The value of an association of this kind should not be solely judged by the number of cases in which it is engaged, as these by injudicious acts can always be multiplied. The influence it wields over the wide area in which its members are scattered must also be considered. The knowledge of the existence of the association is a well-known hindrance to vexatious and unjustifiable actions being brought against its members.

Financial Report.

The balance-sheet presented has been duly audited, and shows a balance in hand of £126 12s., which may be considered very satisfactory.

The Executive.

The members are to be congratulated upon having an efficient staff of officials, whose efforts are ably seconded by the various members of committees, all of whom are practical farmers and good business men.

During the year, in Darlington, upwards of 100 new members have been elected, whilst at Bedale the additions have been equally encouraging, and the total of combined membership approaches 800. Most of the principal work of the association is necessarily done in private The secretary's annual report of last year (from which extracts appear above), excellent as it is, can only be regarded as a sort of index, and in no sense an adequate presentation of admirable work, accomplished at a minimum cost, quietly done, but none the less effectively.

The chairman in Darlington, which is the head centre, is Mr. George Smurthwaite, a well-known farmer, who is also chairman of the Farmers' Auction Mart Company. The secretaryship of the association is in the capable hands of Mr. P. B. Kent, of Ingleside, Darlington. Mr. Kent is frequently asked to render assistance in forming similar organizations elsewhere.

In the Barnard Castle and Lartington Districts Mr. W. Dent kindly acts as hon. secretary in an enthusiastic and praiseworthy manner. The branch at Bedale enjoys the advantage of having Mr. Councillor John O. Trotter as chairman and Mr. Albert Smith, J.P., as vice-chairman, both of whom are deservedly popular and possess a wide knowledge of all matters agricultural An excellent secretary is found in Mr. A. C. Ramshay.

Rules.

The association is established for the purpose of protecting and promoting the interests of its members in all matters relating to them as farmers.

Members must be—

1. Bona-fide tenant farmers.
2. Farmers in actual practice.
3. Farmers temporarily out of business.
4. Retired farmers.
5. Sons of farmers engaged in farming.
6. Agricultural pupils.

The subscription shall be 5s. per annum, payable in advance in January of each year.

No member shall be entitled to vote or enjoy the privileges of the association whose subscription is in arrear. A member intending to withdraw must give notice in writing to the secretary on or before the December 1 in each year.

A general annual meeting of the members shall be held in Darlington, or such other place as may be decided, in January of each year, to receive the annual report and balance sheet, to elect officers, and transact general business.

General meetings shall be held at intervals, when considered necessary or expedient by the committee, due notice being given by the secretary.

A special general meeting may be called by a requisition to the secretary signed by not less than seven members. Such requisition must state the object for which the meeting is to be convened. The meeting shall be held within twenty-one days from the receipt of the requisition, at a date to be fixed by the chairman. The purpose of the meeting shall be stated in the notice issued to members.

The officers of the association shall consist of a chairman, vice-chairman, treasurer, secretary, and a committee of twelve members.

One-third of the committee shall retire annually in rotation. Retiring members shall be eligible for re-election provided they have attended one-half of the meetings of the committee during their term of office.

Five members shall form a quorum. The chairman, vice-chairman and secretary shall be ex-officio members of the committee.

The committee shall transact the general business of the association. They shall investigate all complaints or other matters submitted to them, and shall have power to engage legal or other assistance, and to take any action they may deem advisable to protect members.

After examining each matter submitted, and the evidence relating thereto, the committee shall decide what action (if any) the association shall take, and what proportion (if any) of the costs incurred shall be borne by them.

No member shall be entitled to receive assistance in matters that have arisen prior to the date of his election, or within a period of three months afterwards.

Members desiring the advice and assistance of the association must supply full particulars to the secretary as early as possible. The committee are not authorised to consider cases that are prejudiced by lapse of time, contributory negligence, or other cause, when brought to their notice. A member giving evidence to the committee of a false or misleading character, or withholding essential or vital particulars, shall forfeit all claims to assistance from the association.

The committee shall have power in cases of emergency or necessity to levy extra subscriptions on members.

All the funds of the association shall be at the disposal of the committee for the time being, and no money shall be expended except by a resolution of the committee.

Aims and Ideals.

The association does not co-operate in buying or selling, as it is found that there is no difficulty in members obtaining all agricultural requirements at the lowest rates from the competitive sources of supply which are now in existence.

Fresh markets for produce or overlapping of supplies come in for attention, and the association has been of considerable assistance in this direction. The association does not interfere in the relations between landlord and tenant.

The "Mark Lane Express" has been appointed the Official Organ of the Darlington Farmers' Protection Association, and in future all Official Notices and Reports will appear in these columns.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended October 26, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (6,841), 8,382; sheep and lambs (2,391), 1588; horses (280), 277.

Fresh meat:—Beef (88,635 cwts.), 151,151; mutton (59,586), 105,751; pork (12,456), 12,891.

Salted or preserved meat:—Bacon (102,257), cwt.), 76,977; beef (2 478), 2,081; hams (23,114), 13,171; pork (3,026), 4,440; meat, fresh (11,782), 10,393; salted (11,782), 963; meat, preserved (5,856), 10,112.

Dairy produce and substitutes:—Butter (68,330 cwt.), 56,758; margarine (21,271), 14,322; cheese (73,424), 61,907; milk, fresh in cans or drums (—), 2; cream (103), 95; milk, condensed (17,127), 17,943; milk, preserved, other kinds (178), 86.

Eggs (great hundreds):—(427,207), 506,042; poultry (value £3,663), £4,222; game (value £2,843), £3,960; rabbits, dead (not tinned), (24,905 cwt.), 22,090; lard (25,963 cwt.), 30,130.

Corn, grain, meal, and flour:—Wheat (1,405,300 cwt.), 2,461,600; wheat meal and flour (215,900), 210,200; barley (789,800), 943,300; oats (216,700), 265,500; peas (36,340), 137,210; beans (8,190), 89,170; maize or Indian corn (956,000), 1,190,200.

Fruit (raw):—Apples (151,817 cwt.), 103,733; grapes (70,510 cwt.), 87,280; pears (14,539 cwt.), 17,506; plums (8,064 cwt.), 226.

Hay 3,379 tons), 895; straw (1,060 tons), 1,585; moss litter (1,211 tons), 1,627; hops (6,236 cwt.), 6,956; locust beans (21,657 cwt.), 56,404.

Vegetables (raw):—Onions (194,726 bushels), 220,340; potatoes (19,699 cwt.), 205,997; tomatoes (9,109 cwt.), 11,794.

OBITUARY.

Mr. P. Slatter.

We regret to have to announce the death of Mr. Philip Slatter, of Bourton-on-the-Hill, who died in the Moreton-in-Marsh Cottage Hospital on October 26, after an illness of only a fortnight. His malady was a most painful one, viz., an affection of the bladder. Frequenters of the Moreton-in-Marsh Shire Horse Show will learn with regret of Mr. Slatter's death. He has been a prominent exhibitor from the formation of the society. He was one of the first to seize the opportunity of embarking in the Shire horse boom in this district some twenty years ago, and the well-known Shire mare Flower was one of his first notable representatives. On the occasion of her being shown as a two-year-old he was bid 200 guineas for her, but her progeny proved so valuable that perhaps his refusal was not unwise.

The latest of his stars was Bourton Marvellous, a very fine mare of true Shire character, and winner for two or three years at the Moreton-in-Marsh Show. The deceased gentleman leaves a widow, three sons, and two daughters.

Lincolnshire Notes.

THE £500 from the local fund of the Royal Show visit is a nice and an unexpected little plum for the ratepayers of Lincoln. So well did the folk of Lincolnshire respond to the appeal that the fund was over subscribed by £1,000. Of this Lincoln rates will get £500, the Farmers' Benevolent Society £300, and the Lincolnshire Agricultural Society £100. It would have completed a capital scheme of distribution had the other £200 been divided amongst the other agricultural organisations of the city—say the Chamber of Agriculture and the Farmers' Union. Both institutions could have made an excellent and thoroughly educational use of the money.

HOWEVER, we must be content with £100 for the Agricultural Society. Its funds will well do with the money, for although fortunately the society's income has exceeded the expenditure by £209 last year, it has lost, through the visit of the Royal Show to Lincoln, the opportunity of a remunerative show. Let us hope the loss will be more than made up in a bumping success at Sleaford next year. Everything promises well for such a result. A good site has been secured, the draft schedule is prepared, and everybody is looking forward to a big event. Major-General Sir Mildmay Willson is appointed the new president of the society.

IT was Sir Mildmay Wilson, K.C.B., who presided at the notable gathering at which the presentation was made to Mr. Chaplin last week. He is a gentleman of considerable prominence in the Sleaford district, and frequently takes the chair at petty sessions. Sir Mildmay has had a distinguished military career. He entered the Scots Guards in 1866; served with the Guards' Camel Corps on the Nile in 1884-5; was a Special Service officer in South Africa 1901-2, and was thrice mentioned in despatches; was made a K.C.B. in 1902; in 1875 was High Sheriff of Lincolnshire: and now takes a very active part in county affairs. Sir Mildmay is sixty years old.

SOMETHING has got to be done. The outcry against the motor-car grows louder than ever. County councils are waking up to an enormously increased cost of repair of the roads; district councils are writhing under the general nuisance and the danger; and agricultural associations like the Lincolnshire Farmers' Union, which is about to lay its views before the Board of Trade, are everywhere protesting against the annoyance, the danger, the damage, and the unblushing impudence of the motor traffic. The motorist has never been a man and a brother. At his very best his offence is rank, and smells to heaven. But he has become altogether *de trop*. Yet he is much too big an individual to be kicked out. What are we going to do with him?

AS to the roads, it is stated that, at one time, the Great North Road surface lasted ten years; now, in consequence of the heavy motor-car traffic, it only lasts four years. The farmers of Lincolnshire heard with joy that Kesteven County Council will have no more of tarred macadam roads.

WHEAT has not yet found 50s. a quarter, and those farmers who are holding until spring in the expectation of such an event are taking rather a long risk. Nevertheless, there will be no more corn sold than is absolutely necessary this side of Christmas. The excellent condition into which the recent rains have brought the land is very favourable to wheat sowing, and doubtless there will be more land laid down than there has been for many years past. But is not that making rather a long calculation, too? Does it necessarily follow that the foreign harvests will fail in 1908 as they have done in 1907?

IS a wet summer wholly unfavourable to the root crops? Here is rather a potent argument. In the Deepings' acreage classes Mr. Jonathan Ward has again carried off the championship, but this year he has a weight of 51 tons 16 cwt. to the acre as against last year's weight of 66 tons 10 cwt. of mangolds. In last year's dry summer a number of competitors exceeded 50 tons and five scored over 60, but this year Mr. Ward is the only one to exceed 50 tons.

LINCOLNSHIRE is still waiting for the opportunity to grow sugar-beet. Recently Mr. Fell, M.P., speaking at Yarmouth, put some attractive figures before his audience as to the possibilities of beet culture in Norfolk, and he gave the results of some experimental growing on a farm at Martham. The roots had been compared with those of the German culture with the following results:—The quantity of sugar in 100 parts of juice from the Martham roots was 18·70 per cent., and in German (Magdeburg) beet 17 per cent. The quotient of purity was 88·38 per cent, against 88 per cent. of the Magdeburg roots. The quantity of sugar per 100 parts of roots was 17 per cent. from the Martham examples and 14 per cent. from Magdeburg beet. The analyst, Mr. Sigmund Stein, of Liverpool, observed in his certificate that they were good roots for manufacturing purposes, the saccharine content being highly satisfactory and comparing favourably with Continental grown roots.

THE standard for observation, I understand, is that wherever there is an average saccharine content exceeding 10 per cent., sugar growing can be made to pay. There is little doubt about there being plenty of land both in Lincolnshire and Norfolk suitable for beet growing, and plenty of farmers under certain conditions are ready to grow it. But the conditions, we are told, cannot be secured without Government help. And that is a long story.

November 1, 1907.

Northern Notes.

THE county councils in the north have been making inquiries into the "requirements" of the people under the Small Holdings Act, and generally in the agricultural districts the demand is larger than many persons would have conjectured. In several centres of East Yorkshire the demand of the small holdings already existing are profitably cultivated, and there is no difficulty in obtaining them. In the Sculcoates Rural District (near Hull City) the council reported to the county authority its opinion of the difficulty that would be experienced in equipping the holdings with suitable farm buildings, and that an adequate rent would not be obtainable, as the tenants would only want to pay a rent at the same rate as paid for large holdings. It is doubtful, except in special cases of land in proximity to a town, whether small holdings would be a profitable investment, generally speaking. The chairman of a parish meeting in the Bridlington district states that small farms of twenty to fifty acres are always in demand, and are eagerly seized by farm foremen who have saved up a sufficient sum of money and are anxious to start farming on their own account. In one or two villages the returns speak of "more holdings than sufficient to meet the demand." In another parish not many miles away, ten residents sent in "demands" for small holdings "to be supplied at once."

A REMARKABLE answer was received from the Howden Rural District Council. Howden is celebrated for its fine church and its more celebrated horse fair. There is no demand there, however, for small holdings. The authority has not received a single application, neither has there been any discussion or expression of opinion or desire to acquire land under the Act. This is a purely agricultural locality. In two parishes within the borders of this council every cottager has sufficient land for a cow, and throughout the district there are "innumerable" tenants occupying twenty to fifty acres. No "land hunger" therefore exists in that district.

IN the Norton (Malton) rural district, of thirty parishes, nine sent in applications for small holdings, while the reply from the rest was in the negative. In one parish all the cottages have land attached. This is as it should be in villages.

AN example of deterioration in the value of agricultural land was afforded on Tuesday of this week at a sale in Driffield, Yorkshire. Twenty acres of arable land, "as good as any to be found in England," the auctioneer said, sold for £885 to the sitting tenant, who has paid £40 a year rent. The vendor's solicitor (Mr. Luke White, M.P.) stated that when the land changed hands previously it was sold for £1,600. The land is near the town, and well fenced, but has no permanent buildings upon it.

IN Cumberland the county council have issued a circular letter inviting the co-operation of the urban, rural, and parish councils in making the Small Holdings Act known, and bringing them in touch with applicants. They invite applications for (*a*) small holdings, which may consist of any area from 5 to 50 acres; (*b*) allotments from half an acre to 5 acres; (*c*) right of grazing to be held with the holding. Applicants are asked to state the quantity of land required, their past experience in agriculture, the amount of capital at their disposal, and whether houses or buildings are required or not. Applications will be dealt with by sub-committees, consisting of county councillors, and members co-opted from the urban, rural, and parish councils of the districts.

THIS is a most reasonable and highly-to-be-commended system, as all classes of public men will have a voice in the decisions. Cumberland is, on the whole, a county of little fame, and hence it is expected that, in the purely agricultural districts, there will not be a large demand for small holdings. Applications, however, may come from unexpected quarters. Owing to the Cumberland custom of the farm servants living in with the farmers and the lack of cottages in rural districts, the land is tilled mainly by single young men, who when they marry are generally forced by circumstances to abandon agriculture for some other labouring work. The result is that in the towns and populous mining villages there are many men who have been reared on the soil and of whom some would be glad to return to if they could get "a bit of land for their own."

PASSING along from York northwards the other day we observed that many crops of potatoes had been put into "pies" in the fields; in other places girls and women were at work picking potatoes as they were thrown up by the digger. This is dirty and rather loathsome work for females. The crop between York and Newcastle on dry soils is about an average, and is proving better than expectations. On heavy land much disease is experienced. Prices range from 65s. to 80s. per ton. The best potatoes are delivered at £4, which is a considerable advance on the prices of 1906 at the corresponding period. Dear bread may also mean dear potatoes, and with coals at a high price, and hundreds of men out of work in the North, much distress is anticipated throughout the winter months.

SOME curious names of farms are to be met with in Yorkshire. There is a "Cheesecake" farm somewhere on the Wolds; but many of these can be matched by the names of inns to which land is generally attached. The "Cat and Bagpipes" at Harlsay is one of these. The tenant there for fifty years was a Mr. Fawcett, who has tilled land or helped in the tilling of it for seventy years, and is still in vigorous health.

THE possibility of getting the corn crops harvested earlier in the year is a problem that will require a good deal of working out. Would that it were possible to accomplish so desirable a thing. Any such plan would be welcomed by hundreds of farmers in the North who have still many patches lying out in the fields rotting and growing together. I mentioned in my notes of last week that on Yorkshire wold farms (I hear of two of 300 acres apiece) not a single sheaf had then been gathered. My informant—a valuer in a large way of business—is of opinion that the cereals on these holdings, if every day was fine, would not be harvested much before Christmas, and snow may be expected before all is carted.

SOME of the forest trees are retaining their greenness a long time, notably the ash, no frosts to speak of having as yet been experienced to cause a profuse shedding of the leaves. A continuance of the open weather is hoped for that farmers may pursue ploughing operations while the land is in a "kindly" condition.

October 31, 1907.

THE YORKSHIRE UNION.

A general meeting of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture will be held at the Agricultural Club House, Pavement, York, on Thursday next, the 7th inst., at 2.30 p.m., when Captain Mark Sykes will give an address on "Agriculture and the State," whilst a discussion on the sheep dipping Regulations will be introduced by Mr. Edward Robinson.

The sale of twenty-nine farms and plantations owned by Lord Penrhyn in South Carnarvonshire by auction at Pwllheli Town Hall on Wednesday realised a total of £31,435. Two of seven lots withdrawn were sold privately. In the majority of cases the tenants were purchasers.

The Traders' Association of Eastleigh, Hampshire, have appointed a committee to make inquiries from stock breeders, farmers, and dealers as to the desirability of establishing a cattle and corn market at Eastleigh. At the meeting it was pointed out that Eastleigh has become a most important centre, and the establishment of the railway works there had brought a large population to the district. From a village the place has become a largely populated town.

CORRESPONDENCE.

Bottling Fruit.

SIR,—I thank the writer of "Northern Notes" for his reply to my questions on the subject of fruit bottling by cottagers in preference to jam making. I see that your correspondent agrees that the capital expenditure of 2½d. each for bottles (which can be easily broken) is prohibitive for the average cottager, and he goes on to suggest that old pickle-jars with wide mouths, which may be purchased at marine-stores for about a half-penny each, should be utilised for the above purpose.

I should like to point out that the high price of the receptacles sold for fruit bottling is on account of the stopper, not the bottle, and I should be glad if your correspondent will say what kind of stopper or cover he would use for the halfpenny pickle-jar, assuming that nothing in the shape of syrup or sugar is put with the fruit as a preservative. It seems to me that the whole thing hinges on this, and if fruit can be successfully bottled in unemployed pickle-jars that can be bought at half-penny each, why in the name of all that is reasonable should any person go to the expense of buying specially made bottles at twopence-halfpenny apiece?

Perhaps your correspondent will oblige with a little further information that would be highly beneficial to a lot of people who would not have to lay out even the modest halfpenny on bottles for the simple reason that they have a stock on the premises. Your correspondent refers to the stumbling block in the way of the poor "preserving" fruit by jam making on account of the initial cost of a proper brass pan. Just so, but when a brass pan is obtained it will last a lifetime and comparing the initial cost of home-made jam in a season when fruit is plentiful by the side of jam bought from a shop, even a brass pan would soon pay for itself.

But is a brass pan necessary for the requirements of a cottage? As a matter of fact, I have an enamel pan that has been in use in my house for some years for jam making, and it answers the purpose well, though the initial cost was only a few shillings. I cannot see any real reason why cottage folk should not take advantage of a plentiful crop of fruit by making jam, even allowing for the dearness (comparatively) of sugar.

I am sure it would be cheaper than buying jam at the grocer's, and probably the fact that people will not take the trouble is the real reason why the grocer does such a good trade in jam. However, if your correspondent will kindly give me the information *re* stoppers or covers for the half-penny pickle-jar I should feel obliged to him.—Yours, &c.,

COUNTRYMAN.

October 3, 1907.

Couch-Grass Growing Through the Rough Potato.

SIR,—I enclose you a potato with couch-grass growing right through it. To me it seems odd. But, knowing this weed as a great master, perhaps it may not be very extraordinary.—Yours, &c.,

E. W. H.

October 28, 1907.

*** You are quite right, it does seem odd to see a piece of couch-grass growing right through a potato, and the specimen you sent illustrating this is highly interesting. At the same time it is by no means an unprecedented case, as I have on one or two occasions dug potatoes which had couch grass growing through them. One thing the specimen proves, if any proof is really needed, namely, the remarkable persistency of this weed which will bore its way through a potato tuber instead of steering a course round it, as one would naturally expect. You speak of couch-grass as a great master. I quite agree with the definition, and after an illustration like the one before me, I can believe almost anything of the weed.—RUSTICUS.

Perry and Perry Making.

SIR,—It might be interesting to some of your readers to know that the collection of perry pears at the Brewers' Exhibition, which you so favourably commented upon in your last week's issue, came from Pershore, Worcestershire—a little town which has been noted for its perry for many hundreds of years. The collection contained all the best kinds of perry pears grown in the district lying between Bredon Hill, the most outlying spur of the Cotswold Hills, and Malvern Hill, except the Taynton Squash pear, which, being the earliest of all the perry pears, could not be saved for the show.

It appears that perry making was introduced into the district by the Benedictine monks of the ancient abbey of Pershore in the reign of Henry II., and in many works there are references to its manufacture in connection with the town; amongst them, in Symond's "Hanley Castle," certain royalists in the reign of Charles I. are mentioned as calling at the White Horse Inn near the Lych Gate, "where the natives were assembled drinking their favourite beverage and quoting the old distich":—

"Pershore perry with a toast,
Is the drink that I love most."

In the Victorian Counties History, under the heading "Trades of Worcestershire" is mentioned the perry making of the Pershore district, and especially that "early in the nineteenth century, one Tommy Hope (of the Royal Three Tuns Hotel, Pershore) had in his cellar famous Balm perry (as he called it) which was thirty years old. It was dark as porter, and was kept in vats holding about 500 gallons each."

All trace of the pear from which this balm perry was made is, however, lost. We cannot find that any attempt to produce the perry on scientific lines was made until very recent years, when a local chemist gave it his attention, and the fact that for three years in succession the silver medals for dry perry at the Brewers' Exhibition, and this year the first prizes at the Royal Show at Lincoln, both for perry and dry cider, have found their way to Pershore seems to show that the old industry of the district is worth reviving.

It is thought by some that the very name of Pershore is a corruption of Pear shore, and as the town lies on the banks of the Avon, and pear trees many of them hundreds of years old are to be found flourishing there in every direction, it may be that this is true.

One further fact may be worth recording, that is, that the finest perry comes from the very oldest trees, and that juices of the fruit from younger trees of the same varieties does not show the same richness upon analysis.

When cider apples are scarce perry pears are usually plentiful, and *vice versa*. This year the pears are plentiful, and as the collection proved, are of medium size and of good quality, a sample of juice which we examined showing a density of 1081.

We think more will be heard of Pershore perry in the near future.—Yours, &c.,

PERSHORIAN.

October 31, 1907.

The Harvest in Warwickshire.

SIR,—The harvest is all secured in good ricking condition, but there are still a few spring beans left to carry on the deeper and later soil.

Most of the farmers had such a trying time with the hay, and were therefore afraid to give the corn much field room, and there are in consequence a good many rough samples of grain on the market. The yield is generally satisfactory, some crops that are threshed turning out better than was expected.

Owing to the welcome advance in prices there was a great demand on the threshing machines, and they are fully employed. This takes longer than usual, as a good deal of the corn is long and cut by hand, which rolls up the sheaves, and it does not run through the drum as well as usual.

There is an abundance of keep, and roots are doing well, especially late-planted swedes. The earlier swedes and turnips are mildewed a good deal, and will want some cake with them if fat stock are expected.

Stock of all kinds sell well, except old sows and half-fat bullocks. Good stores are in demand, and lambs suitable for going on to roots sell better than fat sheep.

Hay is very low in price, and the same may be said of straw. At a recent sale of ricks none of the hay and clover made much over £2 in the rick, unless the vendor agreed to cart to station or wharf.

Still, all things considered, 1907 will not rank as one of the lean years, or least expensive.

C. P.

Farm Work in North Lincoln.

SIR,—We are all intensely busy, too busy to thrash, be the pocket never so needy. The season wanes apace, and although the potatoes are nearly all in their pies, yet wurtzels, which are so easily frosted, must be cared for. The Irishmen have worked well and steadily, and so they should, when they earn or get 7s. 7d. per day picking potatoes by piecework. We had a small crop, so by contrary we gave more per acre, and as a result they roll in money.

Heavy rains prevent the seedwheat being sown in the potato land, and all horse work is very heavy, but no doubt a change of weather will put this right, and wheat does not like a dusty bed.

The lambs are doing well on the turnips, of which they eat and enjoy their quantum, as well as plenty of cake. Several were lost from worm in the throat, but are healthy now round the district.

Sharps, bran, &c., are scarce and dear, but as wheat, &c., is also higher, we must make the best of it. I trust prices of farm produce are permanently dearer.

NORTH LINDSEY.

November 1, 1907.

Town or Country Life.

SIR,—In your issue of the 28th I read an interesting letter touching on the rush to the town of the farm labourer. Your writer says he is tired of the hackneyed cry of country lads being lured to the town by lighted streets, amusements, and excitements, and goes on to say, let us be honest and admit it is wages, prospects, shorter hours, and a spirit of independence which prompts him to leave his country home.

Now, in my opinion, that is not all that draws our country lads. A few years ago you did not find many labourers' cottages without a pig-sty and garden, he could grow a few potatoes, &c., and feed a good-sized pig to land him over the winter. But the restrictions have been so severe that his sty has been condemned and pulled down.

Then our education keeps lads at school learning subjects that are no earthly use to most lads in the village; consequently he wants a cuff-and-collar job, so he goes to the town. Now in some cases a farm labourer's wages do not come up to the wages in the town, but in some they do; when you speak of a town man's wage it is so much all told.

Then the farm man's wage has extras not often mentioned. I myself have a man to-day I am paying 18s. per week and £2 extra—hours, 6.30 to 6, 5.30 Saturday—for harvest, house and garden found. House rent costs me £3 10s., rates 12s. 6d. per year, two pints old milk daily, coals, and permission to grow potatoes in the field, and, in addition to this, all the fixtures in his house are valued to me. And often you can find men with all these extras and from 20s. to 25s. per week.

Now for a comparison. I have a friend in business in Manchester who wanted a junior clerk two years ago at 12s. 6d. per week all told. Accordingly an advert. was sent: "Wanted Junior Clerk, 12s. 6d. weekly;" and next morning brings seventy-five applications—some men married, thirty and thirty-five years old.

Now, how does a farm labourer's prospects compare with this? How many of the leading firms employ men over forty-five in our towns (in these days of compensation)? Not many. But how many farms but will keep the labourer until he is seventy! Very few farmers to-day but would pay him more if he could do so.

Find the British farmer a better price for his produce, then he will gladly pay more for his labour.—Yours, &c.,

J. L. BROWN.

Worksop, November 1, 1907.

Barley, Hops, and Substitutes at the Brewers' Exhibition.

SIR,—I have read with interest various Press accounts of the barley, hops, &c., exhibited at the recent Brewers' Exhibition. I remember recently reading a Government return of the ingredients other than malt and hops which were used in the manufacture of "beer." They comprised hop substitutes, glucose, flaked maize, and rice. I cannot quote from memory their amounts in hundredweights, but they totalled an enormous amount.

I see no mention of any prizes given to them. I should imagine that they must vary in quality as do barley and hops, or that as such large quantities have hitherto been used, it must of necessity be of moment to brewers to know their varied degrees of excellence.

As nothing appears to have been mentioned in the Press about them, we must either infer:—

1. That none were exhibited. Query: If not, why not?
2. That the reporters overlooked them.
3. Or that they have fallen into disuse.

Should the latter inference be correct, we shall see no mention of them in future Government returns, and we shall then know that "beer" is malt and hops, as it was formerly, and is not a decoction from these varied substances, as much of it must recently have been.

COLIN CAMPBELL.

Stapleford, Newark, November 1, 1907.

Motors and the Farmers.

Our attention was called to the following extract referring to the recent accident described in our columns. The *Morning Advertiser* of the 17th inst. said:—

"A correspondent in the columns of the MARK LANE EXPRESS complains of having had a flock of his sheep run into by a car, six being killed and two others severely injured, and naturally expresses wrathful indignation. The facts concerning the matter considerably weaken the case of the farmer, for I learn that his flock of sheep was being driven along the highway at night time without a light being used, or if there was a light it was not properly displayed."

Upon this we wrote to Mr. Owtram, who in reply to the above sent us the following letter:—

SIR,—In reply to your letter of the 22nd inst., the

time at which the accident in question took place was stated to be about 7 p.m., and my man said it was "just dusk," the lamps of the car were lighted. Other motorists tell me that if the driver had not been exceeding twenty miles an hour, he could have easily have seen the sheep and pulled up. The accident occurred on a wide, straight part of the main North Road.

The author of the article you enclosed discreetly passes over the conduct of the occupants of the car in bolting after stopping for a moment and seeing the damage they had done. I have, however, to inform you that the owner of the car, after seeing in the papers that the sheep belonged to me, came to apologise and make reparation. I consequently did not take legal proceedings, and have not divulged his name. He admitted that there was absolutely no excuse whatever for the conduct displayed.

Considering that motorists are not taxed for the relief of the highway rates, where is the justification for the suggestion that farmers, simply for the benefit of motorists, should be put to the expense of employing men to carry lights (front and rear) when driving cattle or sheep home from markets, &c., in the evening, as in this case?

Why are not strong representations made by all district councils, &c., for pressure to be put upon the proper authorities to enforce the law as it stands in regard to the speed of motors?—

Yours, &c., HERBERT H. OWTRAM.

Newland Hall, Ellel, near Lancaster,
October 23, 1907.

Royal Cornwall.

The accounts presented at the annual meeting of the Royal Cornwall Agricultural Association showed that the receipts for the past year amounted to £2,419 7s. 10d., and the expenditure to £2,473 18s. 2d., there being a debit balance of £54 10s. 4d. It was explained that, taking into account the balance that had been available, the total loss on the year's working was £146. A member asked whether the loss was due to the bad weather affecting the attendances at the show, and the secretary replied that that was so. The show itself was, however, all that could be expected, and was, in fact, one of the best exhibitions the society had ever held.

The report stated that for 1908 the council had received invitations from Helston and St. Ives, and had accepted the former. The hope was expressed to the deputation from St. Ives that they would renew their kind invitation at the next favourable opportunity. A large number of new members had been added to the society, clearly indicating that its popularity and usefulness were well sustained.

The report of the dairy section stated that there could be no doubt that the Cornwall County Council Dairy School was materially improving the butter making of the county, and the 143 entries very clearly indicated that the Royal Cornwall competitions and exhibitions were becoming more popular and useful.

Mr. Llewellyn (Penzance) spoke of the desirability of cattle being properly weighed before they were sold, and said there should be a weighbridge for that purpose in every market. He suggested that a demonstration of weighing should be given at next year's show.

The chairman, the Hon. J. Boscawen, pointed out that that proposal was outside the operations of the society. The matter was dealt with by the recording of a minute to the effect that Mr. Llewellyn had called attention to the value of the use of a weighbridge in the sale of stock.

Prior to the annual meeting the council of the association met and appointed the following as the committee to arrange the prize schedule for next year's show:—Messrs. J. C. Williams (Devons), W. James (Shorthorns), F. W. Rowe (South Devons), the Hon. J. Boscawen (Channel Islands), P. G. Brown (sheep), G. Nickell, Body, and Robins (horses), Warne (pigs), the Hon. J. Boscawen (dairy section), J. Frayne (horse shoeing), and Mr. J. de Cressy Trefry.

A letter was received from Mr. Trefry advocating a suggestion, emanating from the War Office, that the society should arrange for classes for remounts for the Army. This was approved of by the council, and sent forward to the Prize Schedule Committee.

Devon.

The report presented at the annual meeting of the Devon County Agricultural Society referred to the success which attended the county show at Bideford, and stated that owing to the need for improvement in the manner in which the catering had been carried out, the council for the first time determined to undertake the detail of this department themselves, and supply visitors to the show with a good article at a reasonable price. The results attained both in providing for the requirements of the public and from a financial point of view might be regarded as eminently satisfactory, and it was felt that the experiment should be continued. The council recorded their most cordial thanks to Lord Clinton for so ably carrying out the duties of president, and also to the local committee and inhabitants of Bideford, and the neighbourhood generally for the facilities provided, and the warm welcome given to the association. It was unfortunate that the agricultural societies of Torrington and Barnstaple were unable to give up their local shows in favour of the county show, though they took advantage of the facilities offered to local societies and accepted free admission tickets for their members. The accounts showed a credit balance of £1,093, as against £1,176 last year.

The report was adopted, and the election of the Earl of Morley as president agreed to, as also were the dates suggested for the Plymouth show, viz., May 19, 20, and 21 next year. A discussion followed *re* the action of the Barnstaple and Torrington societies holding their show notwithstanding the fact they accepted free tickets for the county show, and Mayor R. C. Tucker moved:—"That any local agricultural society, which holds its own shown in the same year in which the Devon County Agricultural Association visits its district, be not offered the same privileges as have hitherto been awarded to the members of a local agricultural society that gives up its own show in favour of the Devon County Show." The resolution was, however, considered too drastic, but was eventually carried by 22 votes to 10, on condition that it did not become operative until after 1908.

Prior to the above meeting the council met, and amongst other items considered was a letter from the National Commercial Temperance League, asking the association to follow the example of the Highland Society by taking steps to adopt a regulation prohibiting the free distribution of alcoholic drinks from stands in the show. It was, however, the general opinion that there had never been any ill-effects from the hospitality of exhibitors, and that prohibition was not necessary.

Mr. A. Scott Browne presented the report of the committee on registration of stallions. Professor Penberty, of the Royal Veterinary College, had examined forty-seven stallions, of which forty-four passed the examination, but two of these were subsequently disqualified as they were not pure bred, and one other was sold out of the county, and not so registered; eight stallions which were exempt from veterinary examination were also registered, making a total of forty-nine (as compared with fifty-three in 1906), comprising thirty-one Shires, fifteen Thoroughbreds, and three Hackneys. But for the loss of six ponies which were registered last year, the numbers would have been fully as strong as then. The registration of mares was steadily growing. One new society had started to register this year, bringing the number up to thirteen, which covered five-sixths of the whole county. As evidence of the progress of the registration movement, nine local societies were offering prizes for registered stallions and mares and their progeny amounting to £150. This year £19 was voted by the council as prize money for registered stock, but with this evidence of what had been done by local societies, it was hoped that a larger sum would be voted for the purpose during the coming year. The thanks of the association were due to the guarantors, who had made good the deficits on the first three years' working of the registration scheme, and whose liability had now ceased. The balance-sheet showed a loss of only £9 14s., as compared with £13 14s. in 1906, and £12 in 1905.

The report was adopted, and acknowledgment was made of the valuable services rendered by Mr. Scott Browne and Mr. Bowden on the subject of registration, Mr. Loveys remarking that the work of the committee would undoubtedly lead to an improvement in the breed of horses in the county.

AGRICULTURAL LAW.

Chief or Quit Rents.

SIR,—As a constant reader of your valuable paper, and taking much interest in the legal replies, I should like to have your opinion on the following question:—

We have to pay a payment which is called chief rent, due to the Crown as lord of the lordship or manor.

We farmers have paid it regularly till this year, but we have not paid it this year, and we do not intend to do so, because we do not believe it is an honest payment, though they are only a few shillings. My rent is £900, and the chief rent, as it is called, about 6s. If you please, I should like to know if you think that we must pay them.

A YOUNG FARMER.

[If the quit rent is incidental to the Crown as lords of the manor, I think you must pay. You do not give me any information showing me any good reason why you should not. You say you do not think it is an honest payment—that is, I suppose, that the Crown has no claim; but why? If you will inform me I will endeavour to deal with it.—BARRISTER-AT-LAW.]

Nottinghamshire Notes.

NOVEMBER, the month of fogs, has arrived, and in Nottingham, on Thursday evening, it was impossible to see more than two or three feet ahead. The fog was so bad about nine o'clock that cabmen had actually to lead their horses, it being impossible to distinguish the roadway from the footpaths. In the Hyson Green district I met a dairyman with his milk float at 9.30 who had still over three gallons of milk to deliver, but had decided to abandon all idea of proceeding further on his round, it being well nigh impossible to find the houses in streets where the residences are built in the same style of architecture. He said he left home at 3.30, and generally finished at seven, reaching his farm about an hour later. On Thursday night, however, it would be well after midnight before he got his horse into the stable.

DEATH has this week removed a well-known farmer in this district in Mr. William Widdowson, who occupied for several years the Glebe Farm at Stanton-on-the-Wolds. He had been at work on a straw stack on the farm of Mr. T. Emmerson, at Willoughby, on Tuesday morning, while threshing operations were in progress. Suddenly, without any warning, Mr. Widdowson fell forward and expired from heart disease in a few moments. Deceased retired from farming three or four years back, and had been living at Willoughby, near Loughborough.

THE annual show of the Collingham Farmers' Club was held on Thursday, and, despite the cold and dull weather, there was a large attendance, the event being looked forward to with pleasure by a large number of farmers in the Newark district, while not a few were present from Lincoln way. This year's fixture makes the 67th ploughing match, and bearing in mind that an agricultural and poultry show are also held, it can with truth be said that the club does a great deal of good.

ENTRIES showed a slight decrease in the ploughing competitions, but a reason for this is that farmers are very busy just now owing to a late harvest, and several waggoners and others engaged on farms would have been competitors but for this. Still, the work done was of the best order, every man competing clearly showing that he knew how to handle a plough.

IN the other section of the affair there were 400 entries, against 370 last year, and Mr. R. Dakin, of Sutton-on-Trent, carried off several first prizes in the cattle classes, two cows which won premier honours being especially good animals. In the sheep classes, Mr. J. Slack, of Besthorpe, was well to the fore, and there is no doubt that the existence of the Collingham Farmers' Club is ensured for many years to come.

AN address on "Sheep Dips" was given in the Nottingham University College on Wednesday evening, by Mr. Oliver Quibell, of Newark. The question of sheep parasites, said Mr. Quibell, was one of extreme importance, and he was glad that the gravity of the subject had been recognised by the agricultural departments of the majority of the Governments throughout the world. So far as sheep scab was concerned, the measures adopted had been largely successful. In New Zealand and Australia most stringent measures had been adopted, and the result was that both countries, which at one time were overridden with scab were now practically free.

MR. Quibell said that they were hoping that with the co-operation of the farmer and those interested, that the Board of Agriculture of Great Britain would soon be able to report a similar state of affairs. The good effect of an arsenical dip upon the quality of the fleece of the animal dipped in it was amply proved by the high prices obtained for the wool at the London and provincial markets. The Sheep Dipping Committee had also found that carbolic acid dips were highly effective as parasiticides, yet their lasting properties were very small, and in this respect inferior to arsenical dips. The address was given in connection with the Nottingham section of the Society of Chemical Industry, of whom Mr. Quibell is chairman for the year.

WHILE at Leicester last week I had a walk around the town, and I was very much surprised to see so many dairy shops selling practically nothing else but butter, cheese, eggs, and milk. What is more, nearly all the milk was sterilised and in bottles with patent fasteners. I was told that there was an enormous trade done in this sterilised milk, and that many workmen took it with them to work in preference to tea or beer. What a contrast this is to Nottingham! I question if there are more than two shops in the city selling dairy produce and nothing else, while I believe it would almost be impossible to purchase

For 1907.

GARTONS

DISTINCT NEW BREEDS

OF

SEED WHEATS,

"RED KING"

AND

"WHITE PEARL."

Also Winter Oats, Winter Barleys, Winter Vetches, and all other Seeds for present sowing.

RATIONAL PIG-KEEPING to ENSURE PROFIT

(Revised Edition)

By W. J. MALDEN.

London: Wm. A. May, *Farm, Field & Fireside* Office, 3, Wellington Street, Strand. 1906.

FOR THE BAIRNS

Keep their Feet WARM in cold or wet weather, and save the doctor's bill.

THE CLOG

here shown is made from stout Grain Leather 1 in. thick. Wood-en Soles lined with felt ½in. deep. Lacing throughout.

THEY KEEP THE FEET WARM AND DRY IN THE WORST OF WEATHER.

Sizes, 7's to 10's, 3/3; 11's to 1's, 3/9, post free.

MEN'S AND WOMEN'S CLOGS.

Made of the same material as above, which is THE BEST.

MEN'S, 2 Buckles (as shown) 4/6
MEN'S, 9 in. high in leg, Wellington style .. .. 7'6
WOMEN'S, 4's, 5's, 6's .. 4/3

Post free.

Iron fixed on Soles and Heels if desired.

SEND us a Postal Order stating the size wanted, and by return you will receive a pair of our "WARMFELTS."

E. BROWN & SON, Country Footwear Specialists,

313, ARGYLE STREET, GLASGOW.

a bottle of sterilised milk. There is room in this district for an enterprising firm to start a milk sterilising depôt.

I HAD a chat on Saturday last with Mr. Hardstaff, of the firm of Hardstaff and Brown, the well-known corn merchants in this district, with reference to the question of the registration of corn samples. Mr. Hardstaff admitted that the idea was a good one, but thought that it would scarcely be practicable owing to the average farmer being against any trouble or extra work. That it would avoid much friction on both sides was freely admitted, and Mr. Hardstaff mentioned a typical instance of a farmer not delivering up to sample which has occurred within the past few days.

THE farmer in question brought a sample of blue peas, which Messrs. Hardstaff and Brown bought. He stated that the sample had been taken from a bulk which had passed through the dressing machine. The peas were duly delivered, but the bulk was very different from the sample, and worth from 5s. to 10s. per qr. less money. Investigations subsequently made showed that the farmer in question had no dressing machine, but declares that the sample had not been picked over before being sold. Here then is a case where, had the sample been registered, much trouble would have been saved and the merchants freed from all blame had they refused to accept delivery.

HALF-HOLIDAYS have long been regarded as the right of the working man employed in towns, and from what I hear, labourers are about to demand a half-day's respite from toil weekly in addition to the Sabbath. Speaking to a large farmer in this county in the Cattle Market, Nottingham, on Wednesday, he informed me that two of his labourers had left because he refused to allow them to have their Saturday afternoons off. Both have gone as carters at collieries where this privilege is enjoyed, and now another day man has come forward and says that he is also leaving if he does not get off by four o'clock on Saturdays. This plainly shows the difficulties farmers have to contend with in colliery districts, where work is plentiful.

MALTING barley, of the best quality, is in demand at our local markets, and I learn that up to 38s. per qr. is being paid for really good lots. Merchants are complaining bitterly of the poor samples on offer just now, and declare that they are only fit for grinding. Good barleys are more scarce than usual this year, and farmers with grain of the right sort can almost always get their own price from the big brewers just now.

THE Small Holdings Act was discussed by our county council at Nottingham on Tuesday last, and they decided to take full advantage of the powers conferred upon them by the new measure. Lord Galway said they had two broad principles to consider—first, the discovery of suitable people to take advantage of the Act, people who understood agriculture, and who would afterwards get larger holdings; and, secondly, the position of the ratepayer in the matter, and on those lines he thought they would all be animated to carry out the act as far as possible.

LORD BELPER said he entirely concurred with the suggestions contained in a circular letter sent by the Board of Agriculture. He thought the County Council should take the initiative without waiting for the Commissioners to make suggestions. Hr was sure that if the Act was to be satisfactorily carried out it would be much more efficiently and smoothly worked if they had the help and local knowledge which the members of the County Council possessed. He suggested that the present Small Holdings Committee of the council should be asked to take the initial steps suggested by the Board of Agriculture, which was agreed to.

AT the same council meeting General Warrand submitted the report of the Foods and Drugs Act Committee, which showed that fifty-four samples of new milk had been taken and examined, and nine of them were found to be adulterated. One had been mixed with skimmed milk, and eight with water from 2 to 9 per cent. The opportunity for having foodstuffs analysed at a small cost was being taken more advantage of. One sample examined was sold as fourths, but was found to contain a large proportion of oat husks.

R. K.

November 1, 1907.

At Ely October fair there was a moderate supply of stock, more especially of superior home-breds, and a very fair trade was experienced. Buds and steers sold from £6 to £8, stores from £9 to £14, and milch cows £14 to £20. Horses varied greatly; good agricultural animals reached £65; nags and trade horses changed hands at from £20 to £35.

IMPORTANT TO FARMERS and POULTRY KEEPERS.

How is it your Hens are not laying as they ought?

They require a little

"GARSTANG TONIC"

In the morning's soft food, which will keep them free from Colds, Roup, &c., and in a short time the Egg Production will be wonderfully improved.

All Poultry Keepers ought to know its value. Ask those who have tried it!

Beech Mount, Garstang.

Mr. J. Thomas, Dear Sir,—My Turkeys for last Xmas kept dying off one by one until I was afraid I was going to lose them all; my man, Walter Cross, had heard something of your Powder, so he suggested to me one day that we should try the "Garstang Tonic." We did so, and I can assure you that we lost very few more, and what were left fed up and were as good a lot of Turkeys as ever I had for Xmas. I also gave it to some Irish pullets, and it had exactly the same effect on them, smartening them up, and making them ready in very little time. I can confidently recommend the "Garstang Tonic" as the best preparation ever I have used, and I have tried a good many in my time.—Yours respectfully,

(Signed) Robert Marsden.

To be had from all Grocers and Chemists. Be sure you ask for Thomas's "Garstang Tonic," and don't be put off with any other. If you have any difficulty in obtaining the Powder write direct, and you shall have a tin per return.

Sold in tins 10d., 1/6 & 2/6. Post free 1/1, 1/9 & 2/9.

PREPARED BY

JOSEPH THOMAS, Chemist, GARSTANG.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

Hens work overtime laying eggs if they are given a little Colman's Mustard in the morning food.

(See "The Field," Feb. 6, 1904).

Since the fact was discovered, hundreds of poultry keepers are increasing their egg production by giving a teaspoonful of Colman's Mustard, for every six fowls, mixed in the dry meal before adding the water. It invigorates the ovaries and keeps the hens in good condition. Ask your friends who have tried it.

The best Mustard for the purpose is, of course,

Colman's Mustard

POULTRY.

Turkey Rearing Hints.

The object of everyone who feeds young turkeys should be to get them to eat as much as possible, and to accomplish this pains must be taken. After they are on their feet they should be fed every two hours during the day.

There is not any better food for them than scalded biscuit meal, or specially prepared chicken and pheasant meal, which is a mixture of fine biscuit flour, ground oats, buckwheat meal, and several other nourishing meals.

Do not on any account give the young birds anything which is wet or sloppy. They are very clean in their ways, and like crumbly food, but not anything which adheres to their beaks. Soaked bread should be avoided unless the birds are constipated, when a feed of this may be safely given, as it is relaxing.

The scalded biscuit meal should be given for the first meal in the morning, then a mixture of ground oats and middlings, mixed nice and crumbly, then a feed of split groats, and then biscuit meal again, and so on, always giving groats for the last feed.

After they are a week old, whole groats should be given instead of split ones, and when they are three weeks old small, best quality wheat may be substituted for the groats. The young birds should be plentifully supplied with green food.

A little roup powder added to their soft food twice a day will prevent colds and help the birds very much.

They are very fond of onions, and these, chopped very finely with young blades of grass, make a good mixture for them. The green food for all young birds requires to be perfectly fresh and crisp, and chopped up very small indeed, and should be given between the feeds in the morning, and in the afternoon may be mixed with some fine oatmeal and substituted for one of the feeds of meal.

Those who have the care of young turkeys should always be careful to notice the excrements of the birds, for they are apt to have constipation, and where the back passage becomes clogged there is very little hope of recovery, as the birds are so frail they must have a constant supply of nourishing food, and there must be an outlet for the waste material.

Quite a number of young turkeys die every year from a stoppage at the vent, which could easily be prevented.

After the turkey chicks are two days old they should have fine flint grit sprinkled on the board on which they are fed—twice a day—at the time of giving soft food, so that it adheres to this, and is eaten with the food.

The question of sharp grit for the feathered tribes is becoming much better understood than it was formerly, and we are very glad of it, as this is a very important matter. When birds have their liberty they search about and pick up all the sharpest small stones they can get, which go into the gizzard for the purpose of grinding their food; and it is necessary that this habit of these birds should show us that there is need for some material sufficiently hard and sharp to answer that purpose for our birds which are cooped.

We believe in a supply of fresh water for young turkeys—this being given to them in a perfectly clean saucer, and renewed as often as necessary.

Avoid feeding on a lot of hard-boiled egg, which is much too constipating; good nutritious cereal food is much better for the birds, and the advantage of a good biscuit meal is that it is a perfectly-cooked food.

The addition of finely chopped meat after the birds are a fortnight old is advisable, granulated meat being a good substitute where the fresh meat is not to be had.

It is very important that young turkeys be kept perfectly dry. If they are allowed to get damp, and particularly before they are seven weeks old, they nearly always fall victims to inflammation of the lungs.

In order that they may be kept quite dry it is a good plan te have a covered run attached to each coop. The run should have a wooden top and a strip of wire netting of fine mesh 6 in. wide let in along the centre of the two sides, but not at the end.

The run should be 18 in. high and 30 in. long, and this will give 6 in. of board top and bottom of sides, with the wire netting along the centre, so that the birds have fresh air.

The coop and run should always be placed back to the wind, and should there be a storm or a little shower a sack should be covered over the side of the run where the wind blows, to keep the birds dry; the other side of the run will provide them with fresh air.

We find it a good plan to put dry road dust or peat moss dust, to the depth of at least two inches, on the floor of the run, so that the birds' feet are kept quite dry.

The run should be fastened on to the coop with small hooks, so that the young birds will be quite safe from cats. In the coop where the hen is dry road dust or peat moss dust should also be used.

An Incubating Station.

The Street and District Collecting Depôt, Ltd., held a meeting at "The Bear," Street, Somerset, last Wednesday, to consider a scheme for starting an incubating station and fattening centre in connection with the Egg Depôt. It is pointed out that the difficulties which most poultry breeders have to contend with are (1) hatching enough early chicken; (2) disappointment in disposing of cockerels for table purposes. The committee have often had these matters under consideration, but concluded that they were not a large enough body to stand much chance of success. They, however, now believe that with the recent additions to their ranks and the prospect of still further increase, they may very well be able to successfully negotiate a combined scheme, the two portions of which are essential to each other. It is proposed to start an incubating station with incubators to hold 5,000 eggs to hatch pure-bred birds from eggs bought for the purpose, and to sell day old or six week old chicken, and also to incubate members' eggs at a fixed charge. The objects aimed at will include:—

1. The improvement of laying strain by hatching from good stock.
2. Hatching earlier to obtain more winter eggs.
3. Hatching stock fit for fattening.

It is hoped that members and poultry-keepers will help in the following ways:—

(*a*) By taking as many of these early chickens as possible to rear.

(*b*) By keeping pure flocks of fowls from which the eggs for incubating may be obtained.

The fattening centre is to assist in marketing table poultry, and to make the best prices possible for cockerels for killing. Poultry for this purpose must be of suitable breed to fetch good prices, and there is more profit to be made with early chicken. It is proposed to buy chicken to fatten, and also, if desired, to fatten and market poultry for any member.

The importance of the meeting and movement can hardly be over-estimated as a pioneer of future undertakings and assistance to the poultry industry, not only in this neighbourhood but generally.

ON A TURKEY FARM: A MEAL IN THE FIELD BEFORE BEING TAKEN HOME.

Midland Notes.

MIDLAND agriculturists are watching with much interest the renewed movement towards the formation of an agricultural party in Parliament. Especially is interest strong in Staffordshire, whose Chamber of Agriculture passed an unanimous resolution last May upon the subject, thereby bringing it once again under the notice of the Central Chamber.

ANYBODY who has seen anything of election-eering knows full well that when the day of trial comes the bonds of political party allegiance prove generally too strong to be broken. But there are healthy signs that in many districts of the Midlands a Parliamentary candidate who was agriculturist first and politician afterwards would find no lack of support. It looks as though some recent county council contests, in which farmers have come boldly forward in order to make a stand against increasing expenditure, had done good in this respect. They have done something to arouse the instinct of self-preservation and the fighting spirit, and to demonstrate to agriculturists the power they possess. And the spread of the co-operative movement, which has a strong hold now in Stafford, Warwick, and Worcester, has not been without its influence.

SOME of our Worcestershire folk, who have the very gratified pleasure of getting a living off small holdings, seem to be watching Earl Carrington's oratorical career with rather critical eyes. The other day the President of the Board of Agriculture told of his twenty-five small tenants at Drayton Parslow, in Bucks, who "succeeded in raising 5 qr. of wheat an acre, of the value of £10"—and that on a "poor, cold clay." "My word!" was the comment of a local man, "if I could get a regular £2 a quarter for my wheat, wouldn't I just let the fruit go! But I couldn't." And that feeling is not unusual. Will not Earl Carrington explain how his tenants manage to sell their produce at a rate so much above the average? Or was he speaking of one fortunate season? If so, the point of the argument seems a little blunted.

THE Worcestershire County Council has issued an instructive report upon the experimental spraying for the apple sucker, undertaken by Mr. Kenneth Furley. This, in an ordinary year, is easily the most troublesome pest with which the Worcestershire growers have to deal; and it is hardly less common in other districts.

MR. FURLEY'S report indicates that much in the history of the sucker still remains obscure. Nevertheless, it is a document of real value, for its perusal will save growers from wasting further time, labour, and money over some popular washes which have been definitely ascertained to be ineffective. These include the ordinary and double strengths of caustic soda, the three strengths of paraffin emulsion, lime and paraffin, and paraffin and soda. Of lime, sulphur, and caustic soda, the best that can be said is that in the trials it did kill a few—but very few—of the ova. Apparently the lime and salt wash is the only thing really worth trying.

THE gooseberry-mildew pest keeps up its reputation as the most-talked-of nuisance for a long time past. Outbreaks at Bidford and Salford Priors are among the latest reported, and an unpleasant impression has been produced by the recent friction between the County Council of Worcestershire and Professor W. E. Collinge, who has offended the local authority by asking the Board of Agriculture to look at the almost microscopic traces of disease on certain plantations which have been officially pronounced infected, and therefore condemned to total destruction without compensation.

IT is not the intention of the present writer to take any side in that little quarrel. But surely the contention of the council—that its small contribution to the general funds of the University of Birmingham ought to keep a specialist like Mr. Collinge from criticising its doings where they touch his own department—can hardly be considered admissible. Mr. Collinge may be right or wrong in the view he takes of the disease and its attendant dangers, but in any case he is not a servant of the county.

IT is with regret that I add that after next March this eminent authority will be also unconnected with the University. Agriculturists of the Midlands will be sincerely sorry to learn of his impending resignation from the Department of Economic Zoology, which is his creation, and has clearly proved its possibilities of practical utility. It is understood that the work of this experimental department and bureau of information has expanded lately until it has taxed the resources of its head to the full. It has also drawn considerably upon Professor Collinge's

private means; and doubtless the lack of adequate financial support from the University may be reckoned the chief cause of his retirement.

AMONG minor agricultural events of the week the autumnal competitions of the Droitwich and Bromsgrove Farmers' Club claim a word of notice on account of the wide area the organisation covers and the considerable increase in entries. Lord Hindlip and Messrs. T. P. Hobbes, J. G. Green, T. W. Wall (on whose farm the show was held), W. H. Tilt, W. Wilson, and S. G. Wilson were most prominent in the prize list.

October 31, 1907.

West Country Notes.

NEVER before have the West of England men done so well at the Scotch show as they have done with their cheese at Kilmarnock. In a class of about ninety entries with fourteen prizes, five came to the West of England Cheddar makers, Mr. A. White, of Lambrook, being first; Mr. C. W. Francis, of Templecombe, second; Mr. Joseph Candy, of Doulting, third; Mr. W. J. Hall, a former Mendipper, fifth; and Mr. Theodore Candy seventh. Mr. A. White was also reserved for the championship of the show, and Mr. Joseph Candy took fifth for the truckles.

THE butter classes also saw a couple of awards given to Devonshire ladies, Mrs. Frank Ward, of Tavistock, taking a fifth prize, and Mrs. Mildon, of Morchard Bishop, being also noticed.

A COUPLE of West of England men were found amongst the thirteen cheese judges. Mr. C. Henry White went up from Frome, and Mr. Hugh Mackie, a member of a Scotch family, from Castle Cary to judge.

THE opinion of some of the prize-winners is that a very different standard of judgment prevails in Scotland to what obtains in their own Cheddar district. Cheeses that were passed over at home came to the front in Scotland, and one lot at any rate that were of very different ages were winners in Scotland, which they would hardly have been at the shows of the West.

BUTTER, too, appears also to be judged differently there, and the moral is "travel and learn." There are certainly some points about the Scotch system of judging which commend themselves as superior to the English method hitherto generally in vogue. Judging by points is bound to give more exact results, and be more instructive than what generally occurs at cheese shows in the West.

ONE of the best cheese judges I ever came across not only judged by points, but, being a shorthand writer, made able comments in stenography on each lot as he went along, giving him an immense advantage in exactness over others.

SOMERSET has now its lady master of hounds, and at the end of last week there was a good gathering of sportsmen at the residence of Sir Cuthbert Slade, Bart., at Maunsell Grange, North Petherton, to the opening meet of Lady Slade's new pack of harriers. The district is one where the sportsmen are keen and numerous, and splendid country afford every opportunity one could desire for thorough enjoyment of the chase. The musters are therefore likely to be large, and, with the chivalry which attaches to hunting men, her ladyship may be very certain of ample support in her venture.

DURING the first day of the pack four hares were killed, all after the first giving very pretty runs. The whole of the Bridgwater district is to be visited, and for the present it is understood that the meets will be weekly ones.

VILLAGE life in the winter evenings is getting less and less dull, according to the old ideas of dulness, that is the lack of opportunities for social gatherings. Yesterday I was present at a couple of gatherings in villages at a considerable distance from each other where improved opportunities were being afforded by the efforts of the residents themselves for combined enjoyment. It is wonderful how much can be, and is being, done in this way in almost every direction. The ingenuity, too, with which plans are worked out so that one building shall suit various purposes, shows ready wit and much adaptability.

A CHARGE will be heard at the assizes against a Dunsford farmer, which shows that it is dangerous to try to save oneself trouble and bother once the law has been set in motion. The farmer in question summoned a gipsy for stealing corn, and then compromised the matter with the man by accepting a sovereign from him, it is alleged. He was, however, made to prosecute at the Moretonhampstead Petty Sessions, and then was himself prosecuted for compounding a felony, and committed for trial.

AT Lostwithiel the market committee have decided to purchase some disused mine buildings and convert them into a covered market for cows and calves, an advance which will be welcomed by the farmers using the market.

AT Chard, near the borders of Somerset, Devon, and Dorset the date of the weekly market is under discussion, as complaints are made that the present market day, Monday, is the most inconvenient day in the week. At a meeting of argriculturists and others interested in the market it was decided that Thursday would be preferable, and the subject will be further discussed between the market people and the tradesmen of the town. Under its old Charter Chard has the privilege of holding its market on three days in the week, showing its ancient importance, so that it can select at will Mondays, Thursdays, or Saturdays. Custom fixed Monday as the great market, but circumstances have since altered.

DOWN in Dorset one of those curious freaks of maternity which appear to violate the ordinary laws of natural history is to be seen. A Wareham man found some tiny rabbits, still blind, and took them home for his cat. She had just been deprived of her kittens, and instead of making a meal of the baby bunnies adopted them, and is now nursing them with all her maternal solicitude.

DEVON travelling dairy school is still continuing its good work. Those who have received instruction at the various courses have good reason to speak well of it, apparently. At the Somerset cheese school the manufacture of Cheddar gives place this week to Caerphilly, for which there is a good demand from the South Wales dealers. This is by arrangement with the owner of the farm, who takes the produce and disposes of it, instead of selling the milk to the schoo'.

THE usual details of the make of cheese last sold are issued rather more promptly than last time, with the official confirmation of the price as given last week.

IT appears that 5,663 gallons of milk made 5,561 lb. of green cheese, which, when sold, had shrunk about 4½ per cent. to 5,301 lb. The rennetting temperature was 84 deg.; temperature of scalds, 88 and 92 deg.; acidity of milk when rennetted, 0·20; acidity of whey at end of first scald, 0·17; and when vatted, 0·86. It was vatted on the average at 3.20 p.m. At what time was the rennetting?

November 1, 1907.

DAIRY.

Nantwich Cheese Show.

The Cheshire Dairy Farmers' Association's annual two-day cheese, &c., show at Nantwich was held on Wednesday and Thursday, and, judged by its fine proportions and the quality of the cheese—the dairies' exhibits in the majority of the classes were typical of the best Cheshire cheese made—was as impressive as any of the similar great shows of Cheshire cheese have been during recent years. The cheese exhibits numbered 273, as compared with 281 entries last year, but the aggregate weight of the dairies competing was about the same, namely, between 60 and 70 tons. The great majority of the dairies were of medium size, but there were many cheeses weighing considerably over 100 lb. Most of the dairies were of the coloured make. The prize-winning dairies especially were beautifully made cheese, having all the rich properties that are to be found in the finest Cheshire dairies, while amongst the dairies that only had cards, there were many fine cheese.

The championship dairy, consisting of ten cheeses, each about 100 lb. in weight, was chosen from the class for tri-coloured cheese, irrespective of weight, made, owned, and exhibited by any farmer resident in the association's district. The judges pronounced the class one of the finest they had ever judged. That it contained many fine dairies, and that it was judged by a high standard was suggested by the fact that amongst the exhibitors who did not win cards were several prominent makers of cheese in the county. The first prize, which also carried off the gold medal of the association, was won by Mr. Harry Denson, of Chester—a tenant on the Duke of Westminster's estate—who thus had the rarely-achieved distinction of carrying off in the same year, at the Chester and Nantwich shows, the highest honours that an exhibitor can win, since at Chester, as well as at Nantwich, Mr. Denson was the gold medallist. The dairy deserved its supreme position, for it excelled everywhere—in make, and in flavour and texture. The second prize dairy, exhibited by Mr. T. Charlesworth, of Baddington, well deserved its place in the class.

A second champion prize for the best uncoloured cheese was offered, and was won by Mr. T. Tew, Coole Lane, Nantwich, for his exhibit in the white class, concerning which the judges reported: "An extremely fine class, and we had the greatest difficulty in separating the winning dairies. All the winning dairies were really excellent."

There was a very good display of exhibits of butter. The farmers' class especially contained many excellent samples, and the comment made by the judge that "if we had more butter of the quality I have seen to-day in this class, we should have no occasion to go abroad for a good deal of our butter," is worthy of consideration.

The cheese fair was held on the second day, and the following is the report of Mr. R. Challinor, secretary of the Cheshire Dairy Farmers' Association:—There was a largely increased attendance of buyers, being show day. Trade was brisk in the fair, where there was a pitch of 85 tons. A good clearance was effected at the following prices:—Finest, from 68s. to 73s. per cwt.; medium, from 63s. to 67s.; and the lower grades from 60s. per cwt.

In the show there were 65 tons of cheese. The championship dairy was sold at 145s. per cwt.; first prize dairies made 100s.; second and third prize dairies from 75s. to 80s.; and other prize-winning dairies, and those which were honourably mentioned made from 70s. to 75s. per cwt.

Kilmarnock Cheese Show.

That the annual show of cheese, butter, &c., at Kilmarnock, under the auspices of the Ayrshire Agricultural Association, is losing none of its popularity was proved by the large entries received for the fifty-third show. Considering the unfavourable weather the produce was shown in remarkably good condition. Cheese is the main feature of the show, and this section was responsible for 688 of the total entries. Generally it was rather open in texture, and the flavour showed the effect of the bad weather and the feeding required in consequence to keep the cows in condition, though the section as a whole was of average merit. The competitors forward from England were as numerous as last year, and several prizes went south of the Border. The blue ribbon of the show, the Jubilee Silver Cup for the champion cheese in the exhibition, was awarded to Mr. Alexander Cross, Knockdon, Maybole, who thus took the cup back to Ayrshire, from which it has been absent for some years. He won it with his sweet milk cheese which was first in sweepstake competition. The winning white deep cheese, shown by Mr. A. White, West Lambrook, South Petherton, was placed reserve. These two exhibits came to the front by reason of their superiority in ripeness of quality and richness of flavour, and being less curdy.

At the sale of these on the second day the general tone of the market was dull. Holders were reluctant to sell at the prices offered, and buyers were unwilling to advance. The result was a form of dead slowness in striking bargains. Most of the white Cheddars which changed hands were bought for England. The following fairly represents the course of business:—Flat white, 64s. to 66s.; coloured Cheddars, 66s. to 70s.; white ditto, 64s. to 66s. per cwt.

Butter was very good all over, some samples being quite up to anything previously shown. Grain and seeds were a fine show, and it was the opinion of the judges that better grain had never been shown at Kilmarnock, the exhibitors having been fortunate in securing it in good condition before the floods set in. Turnips and potatoes were exceptionally good, and competition was keen, whilst there was a creditable exhibition of honey.

Preston Cheese Fair.

At the October Cheese Fair at Preston on Tuesday, the pitch consisted of 81 lots and 1,465 cheeses, an increase of 23 lots and 465 cheeses compared with the corresponding fair of last year. There was a brisk demand, and the prices at the corresponding fair of last year were fully maintained, while an advance of 5s. to 6s. per cwt. was shown above those of the last fair. Cheese of medium quality made 67s. 6d. to 70s., fine 72s. 6d. to 75s., while a few superior lots realised 76s.

The last volume of Davy's Devon Herd Book is the thirtieth of the series, and not the thirteenth as was stated in a recent notice of the volume.

At the autumn session of the Association of Municipal Corporations held in London, Mr. Harmood Banner, M.P., presiding, the motor car nuisance was considered and the following resolution passed: "That the attention of the President of the Local Government Board be drawn to the undue speed of motor cars, the noise caused by the hooters, and the emission of vapours and oil, all of which are sources of danger to the public at large; with an expression of opinion on the part of this association that the nuisance is one urgently requiring the attention of his Majesty's Government, with a view to fresh legislation."

SOCIETIES.

Bath and West.

A council meeting of the above society was held at Bristol on Tuesday, the president (Lord Digby) in the chair.

Elections.

The following new members were elected :—

W. Cary and Son, Shepton Mallet.

Right Hon. Jesse Collings, M.P., Edgbaston, Birmingham.

The Earl of Devon, Powderham Castle, Devon.

H. W. P. Hoskyns, North Perrott Manor, Crewkerne, Somerset.

C. Morley, Shockerwick, Bath.

Dorchester Show Dates Altered.

Sir J. Shelley, as chairman of the Show Dates Committee, presented the following report :—

"Since the last meeting of council, when, upon the recommendation of this committee, it was resolved that the society's 1908 exhibition should be held on June 3, 4, 5, 6, and 8, circumstances have arisen which, in the opinion of the committee, render it desirable to reconsider the decision then arrived at. The dates proposed were, previous to their adoption by the council, communicated to the Royal Counties Society, and the correspondence upon the subject which ensued was laid before the July meeting of the Bath and West Council. The Secretary of the Royal Counties Society in his last communication up to that time stated that the fact that the International Horse Show would be held from June 4 to 13, inclusive, might have to be taken into account in fixing the date of his society's show. The council, inferring from this that the Royal Counties Society would be not unlikely to avoid these dates, adopted your committee's recommendation. Since then the council of the Royal Counties Society have met and fixed the dates of their show for June 4, 5, 6, and 8, and they consider that they are justified in doing so on the ground that these dates very nearly correspond with those upon which the society has in most years held its show. Your committee find that during the last eight years (with the exception of the present year, when the date of opening was altered from June 11 to May 27) the earliest date has been June 4 and the latest date June 12 on which the Royal Counties Show has been opened, so that there is some justification for that Society's contention.

"Your committee are strongly of opinion that it would be lamentable if the two societies were in open conflict, as would be the case if both persisted in holding their shows at one and the same time, especially when, as in 1908, they will be in much closer proximity than usual—one being at Dorchester and the other at Southampton. Whilst it could not but affect the friendly feeling which has hitherto existed between the two bodies, there is no doubt but that it would seriously prejudice the success of both shows, besides greatly inconveniencing many exhibitors. Your committee having communicated with the Mayor of Dorchester upon the subject, with a view to eliciting if any objection to a change of dates would be likely to be raised by those whom he represented, have received satisfactory assurances that the town and district would support the society in any action it might deem it desirable to take to avoid the clashing of dates referred to.

"Under these circumstances your committee unanimously recommend that the show dates resolution passed at the last council meeting be rescinded and that the show be held instead on May 27, 28, 29, 30, and June 1."

This was seconded by Mr. C. L. F. Edwards.

In reply to a communication, which was read, from members of the Wilts Agricultural Association, it was resolved that the association be informed that the council sincerely regretted that the association should be inconvenienced by the change of dates, which the council would gladly have avoided had they felt able to do so, especially in view of the very friendly relationship which had always existed between the Bath and West Society and the association. It was further resolved that the association should be furnished with a copy of the foregoing report, in order that it might see the very strong reason there was for the course that had been pursued.

The report, after some discussion, was unanimously adopted.

Stock Prizes.

Mr. Sillifant, as chairman of the Stock Prize Sheet Committee, brought up the committee's report dealing with the prizes and regulations proposed for the Dorchester meeting. The following were among the committee's recommendations :—

That an offer from the Devon Cattle Breeders' Society of special prizes for pedigree milking Devons—to be shown in two classes, one for milk test and one for inspection—be accepted ; that the classes for the Sussex cattle be increased from three to four, so as to allow of yearlings being shown separately from two-year-olds ; and that classes be added for Dorset Down and also for Exmoor sheep.

That in the cider section two classes be added, one for a cask of not less than 18 and not more than 30 gallons of cider made in 1907, and the other for twelve bottles of cider made in 1907 ; the competition in both classes to be limited to *bond fide* farmers who have never taken a first prize at any public exhibition.

The adoption of the report was moved by Mr. Sillifant, seconded by Lord Wynford, and agreed to, power being given to the Stock Prize Sheet Committee to accept, should they see fit, and incorporate in the list, any additional prizes that might be offered by the Dorchester Local Committee, by Breed Societies, or others, so that the issue of the prize list may not be delayed.

Dairy.

Sir C. T. D. Ackland, as chairman of the Dairy Committee, moved the adoption of the committee's report, in which was included the following recommendation :—

That an offer, made by Mr. G. Gibbons, to be responsible for prizes to the amount of £6 for an additional class, be accepted ; such class to be for 3 lb. of butter made up in brick shapes of any pattern, neatness and elegance of style being taken into consideration in judging it.

This was seconded by Col. E. H. Llewellyn and agreed to.

Election to Council.

Mr. R. F. Glyn, of Gaunts' House, Wimborne, Dorset, proposed by Colonel Parry Okeden, was elected to an extraordinary vacancy in the Without Reference to District Division of the council, caused by the election of Mr. C. R. Collins as a vice-president.

Lincolnshire.

The report of the council presented at the annual meeting of the Lincolnshire Agricultural Society embraced the work in connection with the show of the Royal Agricultural Society held in Lincoln in June, and stated that by the facilities given to members of the Lincolnshire Society by the R.A.S.E the membership of the county society had increased considerably, being an increase of 82 in numbers and £176 3s. in subscriptions during the year. At the same time they lost by resignation and death twenty-five members. One new member had paid £50 for a life subscription as a vice-president. The income for the year exceeded the expenditure by £209 4s. 3d., although £139 was expended in the prize list of the Royal and £287 in the local classes for the one day's show.

The society had accepted the invitation of Sleaford to hold their show there this year, but, of course, by the event of the R.A.S.E. coming to Lincoln it had of necessity to be passed over for the year. The invitation had been renewed, and the local committee at Sleaford were now taking active measures to render a visit there next year successful, and hoped for a handsome subscription list. A suitable ground had been selected on the Lincoln Road.

The secretary also read the financial statement, which showed that the credit balance of £497 12s. 3d. at the commencement of the year had been increased to £706 16s. 6d., and that the assets of the society consisted of Consols valued at £1,807 17s., and show plant, &c., £400.

Mr. A. W. Dean moved the adoption of the report and statement of accounts, and said he thought they might congratulate themselves on having had a most successful year. He only hoped the prosperity they had enjoyed this year would be continued next year, and he had no doubt that everyone would do their best to make the Sleaford Show profitable, pleasurable, and successful in every way.

The motion was agreed to.

Col. Hutton proposed, and it was unanimously carried, that the thanks of the society be accorded to Sir John Thorold for his services as chairman during the past year, observing that no gentleman in the county had devoted so much time to the advancement of every branch of agriculture as Sir John, and no member of the council did so much for the Lincolnshire Agricultural Society.

Sir John Thorold, in reply, said he was very glad to have been able to render any service to the society, but he had been greatly assisted during his year by the secretary, Mr. Frankish. He felt also very thankful to Mr. Tindall, to whom the society owed much more than to himself, for with his knowledge of the Royal Society's requirements he had been able to be of the greatest use to them.

Surplus from Royal Show Subscriptions.

Sir John Thorold announced that there had recently been a meeting of the committee that was appointed to collect subscriptions for the Royal Agricultural Show, and they found they had at their disposal nearly £1,000 which had been over-subscribed. It was practically settled by the Finance Committee that, as two-thirds of that money had been subscribed in the city of Lincoln and one-third in the county, the money should be divided in that proportion ; and it was decided to give £500 to the corporation towards the cost of water, &c., supplied to the show, which would otherwise have fallen on the rates, and that the remainder of the money should go to the county, £300 being given to the Royal Agricultural Benevolent Institution and £100 to the Lincolnshire Agricultural Society. Their secretary as local secretary to the institution had sent up a cheque for £300 to the Royal Agricultural Benevolent Institution, and had received an acknowledgment stating that it would entitle the Lincolnshire Society to fifty-seven votes for fifty years, and that they would be at the disposal of the chairman of that society. The £100 to the Lincolnshire Agricultural Society was given partly in view of the fact that the Royal Show having been held at Lincoln this year it would be very unlikely that the county society would be able to visit Lincoln for some years, and therefore they might be subject to losses by visiting towns which might not be so remunerative as Lincoln. He now moved that they accept these gifts and return their hearty thanks to the local committee. The resolution was heartily agreed to.

General Sir Mildmay Wilson was unanimously elected chairman of the society for the ensuing year.

Drying and Curing.

The meeting of hop growers from all districts, encouraged by the occasion afforded by the recent Brewers' Exhibition, gives them an opportunity of comparing notes and discussing their experiences. When their examination of the competing samples is concluded, they naturally form little groups and begin to talk about what they have been doing during the past season. I heard and joined in several of these interesting conversations, and may venture to say that there is no subject which is at present occupying the thoughts of our planters that is more prominent than that of the best system of the management of hops upon the kiln.

While there are some who still advocate the open fire, because, as they say, they can by this means secure a brighter sample, the more advanced of our men recognise the risks attendant upon the older practice, and admit that the preservation of the valuable constituents contained within the cones, and the consequent improved condition from the brewer's point of view are of much greater importance than mere showy appearance. The recent alarm aroused by the strictures with respect to the possible presence of arsenic in hops, adds force to these reflections ; and gradually, but I think practically, our growers are gaining the conviction that they must make arrangements for the curing of their produce by such a process as will avoid the remotest chance of any contamination, and as will secure the delivery of hops to the brewer without any loss of the qualities for attainment of which their labour and capital have been expended. Therefore it is satisfactory to find that the various systems of drying by pure hot air are being carefully and generally examined, and in many instances certain of them have been installed.

It is only by such progressive action that the reputation of English hops can be maintained in the face of keen competition, and I trust that our growers will not be deterred by the necessary outlay from adopting this or that improvement that they may consider most desirable for the accomplishment of their object.

I have just received a copy of a paper written by Dr. W. W. Stockberger, of the Bureau of Plant Industry, Washington, U.S.A., and issued by the United States Department of Agriculture, which contains some instructive remarks on the subject we are considering. Thinking that perhaps some extracts from this paper may be serviceable and suggestive to my readers, I reproduce them as follows :—

The Object of Curing.

The primary object of curing hops is to reduce rapidly their moisture content to such a degree that they may be safely stored and their properties preserved. According to the variety and the degree of ripeness when gathered, freshly picked hops contain 65 to 75 per cent. of moisture, but when in a dry state, fit for storage or marketing, they should contain only 10 to 14 per cent. of

moisture. Increased knowledge of the constituents and properties of hops has extended the idea of curing to include the production of a hop which has not only a fine physical appearance, but which also contains the maximum amount of the desirable principles upon which its intrinsic value is based.

The most important of these principles are the tannin, found mostly in the bracts of the cone, the soft resins, the volatile oil, and the bitter principles which occur chiefly in the lupulin. Curing is all too frequently conducted with regard to the physical appearance alone, and the methods employed often injure the quality of the hop through their harmful effects on the oil, lupulin, &c.

The Theory of Drying.

The removal of moisture from hops constitutes drying. In the atmosphere this is ordinarily accomplished by evaporation, a process which is dependent upon the ability of the air surrounding the drying hops to carry off the surface moisture in a vaporised state. The amount of moisture in the form of vapour which the air can take up depends upon its dryness, since there is a maximum amount of vapour which the air can contain. When this maximum is reached the air is saturated, or at the dew point, and it will then take up no more moisture. In order that drying may proceed, the saturated air must be constantly replaced by drier air, and a brisk artificial circulation therefore hastens the process.

The ability of the air to take up moisture varies with its temperature, and an immediate effect of heat on the atmosphere is to increase its capacity to absorb aqueous vapour. For example, it has been determined that the moisture in 10,000 cubic feet of air saturated with aqueous vapour at 62 deg. Fahr. weighs 8·81 lb. On raising the temperature of the air to 82 deg. Fahr. the 10,000 cubic feet of air can take up 7·86 lb. additional moisture, and by increasing the temperature to 122 deg. Fahr. 42·61 lb. additional can be carried. If, however, the air at 62 Fahr. is only half saturated, 10,000 cubic feet will contain but 4·4 lb. of moisture; then raising the temperature to 82 Fahr. will enable the 10,000 cubic feet to take up 12·27 lb. additional, and increasing the temperature to 122 Fahr. admits of 47 lb. additional being carried.

The volume of air necessary to effect drying within a given time is dependent upon its temperature. Because of its greater moisture-carrying power a small quantity of air at a high temperature will absorb and carry away an amount of vapour the removal of which would require a relatively larger volume of air at a low temperature. If half-saturated air, heated to 162 deg. Fahr., in passing over a moist surface at the rate of 10,000 cubic feet per minute, removed therefrom in that time 130 lb. of moisture, it would require about twenty-three minutes to carry away 3,000 lb. of moisture. If now the same air were cooled to 82 deg. Fahr., 10,000 cubic feet per minute could remove only about 12 lb., and nearly four and a half hours would be required to remove 3,000 lb. of moisture. To carry away the moisture in the same time as the air at 162 deg. Fahr., a volume of air of about 108,000 feet per minute would be required.

In practice is has been found that the air driven through a mass of hops does not become fully saturated with moisture, and only during the early stages of drying does the amount of moisture actually removed approach the quantity which would be removed if the air carried its full capacity. At the temperature commonly used in drying, therefore, a much larger volume of air must be provided to remove a given amount of moisture than apparently would be required from a consideration of the figures given.

A certain degree of heat is always advantageous in drying hops, because of the conditions under which the moisture in them occurs. A part of this moisture is free water, and is the first to be exhausted in drying. The rest forms a part of the sap and tissues, and its removal affects the physical condition of the drying hops. Heat, by raising the temperature of the tissues and cell sap, promotes the passage of water to the surface, where it may be removed by vaporisation. An artificial supply of heat is also necessary to replace that lost by the hops by the process of vaporisation, otherwise the temperature of the moisture held in the cells will remain so low that it will not move readily to the surface and drying will be retarded.

In drying hops, good results, however, are not obtained merely by supplying a high degree of heat below the floor of the kiln. When hops are piled on the floor at the depth of from 14 in. to 30 in., they form an extremely poor conductor of heat. Not only are the hops themselves a poor conductor, but the air, heavy with aqueous vapour filling the spaces between the hops, offers much resistance to the transfer of heat. It thus happens that when heat is applied to the floor of hops, the moisture of the lower layers is driven off, the air in contact with them becomes saturated, and, rising quickly, comes in contact with cooler layers. Here the saturated air is cooled, with the result that its moisture is condensed and deposited on the upper layer until they become wet and soaked. The continuous application of heat thus results in the lower layers becoming dried out and overheated, while the heat gradually working upward through the wet layers of hops subjects them to a harmful steaming process. The difficulty is frequently increased by the practice of turning the hops, as in this way the overdried layers from the bottom are brought to the surface, and again steamed and dried.

I propose to continue my examination of this instructive paper next week, and hope to be able to point out how the difficulties and faults referred to by Dr. Stockberger may be avoided by the adoption of certain arrangements that are within the reach of English growers.

The Trade Position.

London.

The farmers who foregather in considerable numbers at Islington during the Brewers' Show week bring with them an atmosphere suggestive of country life, and the few hours that I spent in the company of growers I met there were very refreshing after a long stretch of drudgery in town. They came from Kent, Sussex, Surrey, Hants, Worcester, and Hereford, and it was interesting to observe the zest with which they examined the competing samples, and to listen to the various opinions expressed by the growers as to quality, and the awards of the judges. Unanimity in such matters is impossible, but in regard to two main points there was no discussion, for all agreed that the general quality of the samples on show was below the average of previous years, and that the state of the market is most lamentable. Another point concerning which there seems to be a consensus of opinion was, that the present condition of affairs must necessitate considerable "grubbing," and with these convictions, they went on their way smiling, and with evident determination, after the true British fashion, to make the best of the circumstances, admitting that "what can't be cured must be endured."

Returning to the Borough, I find that the Exhibition is not favoured by our traders. They allege that it disturbs business, almost even to the point of suspension, and do not hesitate to attribute to this cause the dulness that has prevailed during its continuance.

It was hoped that as soon as this counter attraction had closed, we should hear of a renewal of business, but unfortunately this has not been our experience, and there is no doubt that demand has slackened to such an extent that factors have practically nothing to attend to, and although I do not find that prices are actually lower, the tone of the market is certainly tending towards weakness. It therefore appears to be desirable for growers to examine the position seriously, lest perchance they may find, that they have lost their opportunity. Choice samples are now holding their own, but their scarcity does not appear to enhance their values. At the same time good medium hops are neglected, and if they are pressed for sale lower prices must be accepted. At the bottom of the scale we find that common lots are being bought, and there is thus far no reduction in price of these sorts, but this is explained by the fact that the figures are already too low for further concessions. Thus, I can hardly say that the market is healthy, and the only consolation we can find is that the trade in Americans and Continentals is equally quiet, so that we may conclude that we must look to consumers to explain the position, and that until they begin to move we must be content to wait.

In remarking upon the Government returns of the crop, Messrs. Cattley, Grindley, and Co. say:—

1. Although the crop is only moderate as far as quantity is concerned, there appears ample supply, with imports, to satisfy ordinary demand.

2. The position, however, is complicated by the fact that English consumers do not use more than one-third foreign to two-thirds English hops unless English are very dear.

3. English hops are very cheap, and consumers will prefer the home growth, and particularly the healthy bright hops.

6. Consumers will desire to secure, during the year, twelve months' consumption, say 600,000 cwt., half being healthy, bright English hops, remainder lower quality English and foreign.

5. If the above be correct, the English crop will not suffice, for it is generally admitted that not half the crop is healthy and bright.

6. The acreage will be again materially reduced this winter, as English producers are again heavy losers at present prices.

They estimate that British requirements for the year will induce imports to the extent of nearly 220,000 cwt., and they add that it is their opinion that good, healthy, bright English hops will quickly be cleared at gradually advancing currency.

America.

The hop trade remains in a very quiet and entirely unsatisfactory condion. Latest reports refer to some sales at 8 to 9 cents, with many growers anxious to realise. It is anticipated that the recent financial panic in New York will intensify the dulness of the situation, as money will become tighter, and banks will be even less disposed to make advances to their customers than before. They will thus be compelled to sell their produce at any prices obtainable. The future of this section of the trade is therefore by no means bright.

I have received a cable message from the other side this week, telling me that the market is showing rather a declining tendency, that the brewers' trade is dull, and that growers are more willing to sell. My correspondents express their belief that the market will go lower, and they add that the American financial situation is already affecting the hop market.

Nuremberg.

Somewhat considerable business for export has strengthened the hop market, although quotations have not materially advanced. The principal demand has been from England, for which country market hops are being bought at 26s. to 35s., also Wurtembergs and Hallerdaus at 40s. to 50s. American buyers have also been operating, and there is a fair local demand from local consumers for the better sorts. Although arrivals still exceed sales, the excess is not so great as in former weeks, therefore the tendency of the market at present favours further increase in values.

Bohemia.

The latest report from Saaz speaks of an active demand with marked firmness, and advanced prices to the extent of 5 to 10 crowns (4s. to 8s.). Best qualities were then realising about 105s., and good mediums about 85s. In the Dauba districts similar activity prevails, with very firm prices.

Brussels.

In sympathy with the German and other Continental markets the Belgian position has become slightly stronger. Local brewers are buying rather more freely, and quotations have advanced by a little since last week. At the free hop market held at Assche recently, when 236 bales of hops were submitted to a jury of experts in competition for prizes, the whole of the exhibits were sold to brewers or dealers very much in excess of the current quotations in Brussels. They realised 45 to 60 francs (say 35s. to 47s. 6d.) per cwt. These figures are explained by the general superiority of these selected lots to the ordinary commercial qualities.

Wem Ploughing Matches.

Despite the wet weather there was a large attendance at the Wem and District Agricultural Association's sixth annual ploughing, hedging, and ditching competitions, and considerable interest was taken in the work of the competitors who were more numerous than last year, whilst competition was particularly keen, a referee having in several cases to be called in to decide who should have the first prize. In one class, that for ploughing an acre with a double ordinary plough and three horses, open to men of any age, the two competitors, Alfred Davies and Richard Tibbott, both of Broughton, were so good that the judges put them both first and divided the prizes between them. The awards in the other classes were as follows:—

Ploughing Matches.

Half an Acre with a Single One-way Plough. Open to Men of any Age.—1, James Griffiths, Nill Green; 2, T. Harrison, Stanwardine; 3, Isaac Ratcliffe, Kenwick.

Half an Acre with a Single Ordinary Plough. Open to Men of any Age.—1, Oliver Leadsom, Sleap; 2, Joseph Weston, Cruckmoor; 3, — Chetwood, Noneley; 4, Samuel Dulson, Coton.

Half an Acre with a Single Ordinary Plough. Open to Youths under Twenty-one Years of Age. 1, W. Child, Holbrook; 2, H. Williams, Milford Hall; 3, George Chetwood, The Springs, Ellesmere.

Half an Acre with a Digger Plough.—1, E. Rogers; 2, Mr. Husbands.

Hedging and Ditching Competitions.

Men over Fifty Years of Age.—1, Enoch Smith, Wem; 2, James Cooper, Myddle; 3, Samuel Wilcox, Moreton; 4, John Eaton, Myddle Wood; 5, George Hall, Coton.

Men over Thirty and under Fifty Years of Age.—1, Philip Williams, Frankton; 2, William Price, Cockshutt; 3, John Bebb, Grinshill; 4, A. Dutridge, Eardiston; 5, George Groom, Hadnall.

Men under Thirty Years of Age.—1, Thomas Williams, Ruyton XI. Town; 2, George Tibbett, Myddle; 3, George Preen, Acton Reynald Farm; 4, George Brain, Myddle; 5, John Jones, Marton Grange.

In the absence of Lord Barnard Mr. Nicholas Robinson, the owner of the farm, presented the prizes. At the request of the committee Mr. Frank Bibby, M.F.H., sent his hedger over on the Thursday to do a length of hedge, and his work was followed with the greatest interest.

Fertilisers and Feeding Stuffs.

FEEDING STUFFS.

Some Common Impurities and Means for their Detection.

The purchase of feeding stuffs is one of the most important of the many purchases which a farmer has to make, and seeing that in many cases the money laid out is the largest item in the farmer's annual expenditure it is very necessary that he should know whether he is actually receiving that for which he is paying.

There is no doubt that, frequently, the buyer of feeding stuffs receives, either with or without the seller's knowledge, mixed with the feeding stuffs he buys, many substances he does not want, which, besides lowering the value of the food he has bought, are often positively harmful to his stock. It is perhaps difficult to say how often this adulteration occurs since the cases that come to light are few in number. But, on the other hand, I believe it is for this reason that feeding stuffs are not found profitable to use by so many people, simply because their feeding values are not up to the standard. The farmer is, of course, protected in this matter by the "Fertilisers and Feeding Stuffs" Act, but such protection is in many cases inoperative through the farmer's lack of knowledge of the law, or through there being no sample of the food available after damage has been done, or where nothing untoward has occurred through no question arising touching the purity of the food stuff. For it must be borne in mind that a food may be adulterated with something quite harmless or even of feeding value, yet, because it is not what the invoice declares it to be, it is an impurity, and therefore to be guarded against.

Under the Fertilisers and Feeding Stuffs Act, 1906, it is prescribed that the invoice shall state the name of the article, and whether it has been prepared from one substance or seed, or from more than one substance or seed, and in the case of an article artificially prepared otherwise than by being mixed, broken, ground, or chopped, what are the percentages (if any) of oil and albuminoids contained in the article, and the invoice shall have effect as a warranty by the seller, except as respects percentages provided they do not transgress the following limits of error:—

Linseed cake or meal Rape cake or meal ... Maize products.....	$\frac{1}{3}$th of the percentage of oil and $\frac{1}{3}$th of the percentage of albuminoids stated in the invoice.
Dec. cotton cake or meal, undec. cotton cake or meal, compound cakes or meal (and some others quoted)	$\frac{1}{10}$th of the percentage of oil and $\frac{1}{10}$th of the percentage of albuminoids stated in the invoice.

All other feeding stuffs $\frac{1}{5}$th ditto and $\frac{1}{5}$th ditto.

Further, where any article sold for use as food for cattle or poultry is sold under a name or description implying that it is made from any particular substance, or from two or more particular substances, or is the product of any particular seed, or of any two or more particular seeds, and without . . . indication that it is mixed or compounded with any other substance or seed, there shall be implied a warranty by the seller that it is pure—*i.e.*, is prepared from that substance or substances only, or is a product of that seed or those seeds only.

There is also understood a warranty that any article sold as food for cattle or poultry is suitable to be used as such.

The only certain means of guarding against imposition is chemical and microscopical analysis, which of course the farmer himself cannot undertake. Analysis of every consignment of feeding stuff is, however, an expensive matter—though I am not sure whether it would not be in the long run economical—and in addition it involves a considerable amount of time and trouble in taking and despatching samples.

There are, however, many rough tests which do not require special technical knowledge, and which are easily made, and it is of these that I wish to give some account, in the hope that they will materially assist farmers in dealing with this important matter.

The habit of accurate observation is a very valuable one, and the ability to draw deductions from such observation will often save a considerable amount of money. For instance, if a farmer is in the habit of buying a certain kind of cake or meal, and a consignment comes home which is of a slightly different colour or weighs a little heavier than usual, the chances are that some adulterant has been included, and it would be well to make a careful examination with the object of finding the cause of the change, and making a claim upon the makers if any foreign substance is ultimately found.

Another point which should be obvious is that a vendor of feeding stuffs is not likely to sell good food at less than current prices—in exceptional cases only are bargains possible—and consequently extra precautions should be taken if an apparently cheap lot has been obtained, to make quite sure that the commodity would not be much too dear at even half the price paid.

(To be continued.)

Notes on Agricultural Analyses.

The Essex Agricultural Committee have issued a little pamphlet containing Notes on Agricultural Analyses, compiled by V. H. Kirkham. In addition to some useful information on the character of the different fertilisers and feeding stuffs in ordinary use, it gives the results of a large number of analyses made during the years 1903 to 1905.

In looking over these details, the general high quality of the fertilisers and feeding stuffs sold in the county is manifest, although at the same time there are sufficient instances of inferior quality to indicate the necessity of caution in buying. Thus there are two samples of nitrate of soda, testing only just over 92 per cent. instead of 95 per cent.; superphosphate, 22 per cent. soluble; basic slag, low quality and defective condition; bone-meal not up to guarantee, &c.

The conclusion to be drawn from a study of the analytical results is, that there is not much amiss with the general quality of the fertilisers so long as purchases are made from well-known vendors, and the buyer is willing to give a fair price.

On the subject of basic slag, the remark is made that "for Essex clay soils a low-grade slag with a large proportion of tetracalcic phosphate—that is, phosphate soluble in 2 per cent. acid solution—is undoubtedly much the best to use."

The notes on the character of the Essex soils, as indicated by analysis, are worth a careful study. The analysis of a soil does not afford absolute information as to its proper manurial treatment, but it is a guide. For instance, the soil of a district showed a deficiency of available phosphate for the growth of turnips, and this received striking confirmation from the result of a field experiment, in which a dressing of 5¼ cwt. of superphosphate per acre (probably 4 cwt. would have been enough) increased the yield from 8¼ tons to 13¾ tons per acre. No other artificial manure had much effect, and it may be concluded that on such a soil (hollow-bottomed soil) only superphosphate is required in addition to farmyard manure.

The remarkable increase in the turnips produced by the superphosphate was partly due to the fact that this, and indeed all the artificial manures tried (superphosphate, sulphate of potash, and sulphate of ammonia), saved the young plants from attack by wireworm, or rather from the rooks which, in getting the wireworm, pulled up the young turnips too. The plots dressed with these manures had just two and a-half times as many turnips left in them as the unmanured plots had. There is probably no better method of preventing injury by wireworm than the method of drilling the seed with an artificial manure, since the manure can be used which is needed by the crop.

Much of the Essex land is deficient in lime, and clover crops grown in such soils are very subject to clover sickness. A field experiment was made to see how far the clover sickness might be affected by the composition of the soil. Clover was grown twice in three years on plots dressed with different manures. The second time clover was grown the effect of the manures was remarkable. Very little clover survived on the plots manured with dung or nitrate of soda, while on the plot dressed with ground lime (25 cwt. per acre), and especially on that dressed with basic slag (4 cwt.) and kainit (4 cwt.) a capital plant of clover was obtained.

Prices of Fertilisers.

There is now a brisk demand for fertilisers required for autumn application, particularly for basic slag, superphosphate and potash salts, while we hear of contracts also being made for nitrate of soda and guano for spring delivery.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	12	0	0
Peruvian guano ..... according to analysis			
Superphosphate, 26 per cent.	2	10	0
,, 35 ,,	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.	9	10	0
Fish guano, first quality, scarce & dear	7	10	0
Kainit	2	7	0
Sulphate of potash	10	0	0
Muriate of potash	9	0	6

Inferior Fertilisers.

From a discussion that arose recently at a meeting of the Dumfriesshire County Council, it would appear that, according to the report of their analyst, the fertilisers sold in the district are often not up to the guaranteed quality. The analyst and chief constable were asked to supply the committee with a list of the vendors of such faulty fertilisers, with the object that a sharp watch might be kept on them in future with the view, if occasion arose, of taking legal action against them, as provided for by the Act. The following discussion took place:—

Mr. Charlton: All the samples should be taken under the Act, and if there is any deficiency the offenders should be prosecuted.

The chairman said the committee thought that as the Act came into operation so recently they should, as a precaution, find out in a larger number of cases what was the composition of the articles dealt with.

Mr. Charlton thought they should not make any exceptions. In all cases analyses should be made under the Act, so that the committee could consider, if they thought necessary, to prosecute. He moved accordingly.

The chairman explained that the Board of Agriculture had provided for this other system, and had put great stress upon those administering the Act to take samples with the view of discovering the class of suspects, in order to deal more sharply and more strictly with this class of people.

Mr. Waugh thought the lines on which they had been going were perfectly correct so far as the interests of agriculturists were concerned.

Mr. Moffat (Canonbie), while seconding Mr. Charlton's motion, did not think it was necessary to prosecute in every case He agreed that samples should be taken in accordance with the Act, but that prosecution should only take place where the committee thought it necessary.

Mr. Carlyle thought they should not fetter the hands of the sub-committee. They had been trying to find a way out of the difficulty. He moved the previous question.

Mr. Brown seconded, and on a division 11 voted for the amendment and 2 for the motion.

Warning a Seller.

At a later stage when the report of the analyst was read the chairman said the sub-committee had the analyst's report before them, and among other things special attention was drawn to one paragraph, which stated, with reference to a certain manure, that "the percentage of soluble phosphates that it ought to contain were not stated." The Act of Parliament said that when a seller sells a manure to a purchaser the invoice must contain the percentage of soluble phosphates, and they agreed, subject to the approval of that meeting, that they give notice to this individual seller that he had not complied with the Act—not with a view to prosecuting, but only as a warning. Sellers should take care to comply with the Act in this particular, for the committee would have no hesitation in prosecuting if it was repeated.

Mr. Waugh: Does this manure contain soluble phosphates?

The Chairman: I don't know. We thought it was not desirable to prosecute—simply to warn.

Mr. Charlton: What would the manure contain if it did not contain phosphates?

Mr. James Moffat: It does not say.

The Chairman remarked that it was the first instance of the kind brought to their notice.

Which is most Profitable for Potatoes?

a. A small dressing of dung.
b. A large dressing of dung.
c. A small dressing of dung and artificials.
d. Artificials alone.

The following results obtained in trials made in Lincolnshire by the Midland Agricultural Institute supply an answer to the question, and we may say that the answer is confirmatory of experience gained elsewhere:—

Plot.	Total Yield per Acre. Average of Six Farms. T. c.	Value of Increase over unmanured Plot. s. d.	Cost of the Dressing. s. d.	Profit per Acre. s. d.
a	7 2½	91 3	40 0	51 3
b	8 2¼	135 3	80 0	55 3
c	8 19½	176 6	86 0	90 6
d	7 19½	129 11	46 0	83 11

The results show that the most profitable system is the application of a small dressing of dung supplemented by artificials.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Forage Improved by Fertilisers.

"There is one phase of the question of soil fertility which has a direct bearing upon the feeding of animals, and is worthy of consideration—namely, the influence which fertilisers have upon the composition and feeding value of crops," says Professor Henry Snyder, who read a paper on the subject at a recent meeting in Minnesota. It is well-known that fertilisers, particularly farm manures, increase the yield of forage crops. In addition to this they also favourably influence the composition and quality of the crops. Corn fodder, timothy, and the grasses and hays in general are influenced to a greater extent than are the legumes, as clover and peas.

In trials at the Minnesota Experiment Station, it was found that timothy hay grown on manured land contained 8·75 per cent. protein, while that grown on poor soil contained 6·45 per cent. a difference of 2·3 per cent. in favour of that grown on the first. This is an increase of over 30 per cent. of the total protein content of the crop, due to the use of manure. Equally as great differences were observed in samples of prairie hay grown on rich and poor soil. The forage grown upon the manured land contained not only the maximum amount of protein, but also showed a tendency to contain the minimum amount of fibre. Numerous digestion experiments have shown that forage crops and grains which contain the least fibre are the most digestible, hence the gain in digestible protein resulting from the use of manure is greater, in timothy, than 30 per cent. Forage grown on manured land has a dark, rich green colour, indicating greater activity of the plant cells, particularly of the protoplasm and chlorophyll, the two most active agents which take a part in the production of plant tissues. The larger amount of plant food in the manured soil places at the disposal of the crop a larger amount of building material in the form of the essential elements, and as a result a crop of higher feeding value is secured. Crops feed upon the soil, and if the soil fails to contain the requisite amount of nourishment an inferior crop is produced.

In the case of corn fodder the effect of manure upon composition and feeding value is even more noticeable than with timothy. Corn fodder grown in unmanured land contained 6·63 per cent. of protein, while that grown on manured land contained 9·44 per cent. When the land had been still further enriched by a clover crop, the corn sodder yielded 10·57 per cent. protein. The difference between these extremes is large, nearly 60 per cent. in favour of the corn fodder grown upon well-fertilised land. Let us consider the increased feeding value of the corn fodder grown on the richer land. If 10 lb. of dry matter of the poor corn fodder were fed it would take 2½ lb. of the best farm grains to make up the difference in protein value.

In feeding for milk production, and beef production as well, the largest returns at minimum cost are secured from using the most valuable and nutritious fodder. The quality of the forage is generally the deciding factor in determining economy of production. When forage crops contain the maximum amount of protein, less grain and milled products are required to secure returns than when low protein forage is used. To secure the maximum protein content in forage, farm manures are very valuable, and the farmer who feeds crops grown upon fertile soils has a decided advantage over the one who feeds crops from poor soils. Increasing the fertility of soil through the use of manure will result not only in larger yields, but also in better quality of crops.

The Action of Phosphoric Acid.

The action of phosphoric acid in the plant is not confined to its ripening effect; it stimulates, said Mr. Hall, the early development of the young seedling to a remarkable extent. Farmers are well acquainted with the good start that any crop gets when manured with superphosphate; indeed, it is often used merely to secure a better a plant, though with little expectation of otherwise increasing the yield.

More than sixty years ago this had been noticed by the late Sir John Lawes, and in one of his earliest papers on "Turnip Culture," in 1847, he wrote "whether or not superphosphate of lime owes much of its effect to its chemical action in the soil, it is certainly true that it causes a much enhanced development of the underground collective apparatus of the plant especially of lateral and fibrous root. To what extent this stimulus to root growth is brought about by other sources of phosphoric acid and under diverse conditions of soil has not yet been worked out, but there can be little doubt but that it explains why a phosphatic manuring has such a valuable effect in establishing the plant, even if the gross yield is not ultimately much enhanced. . . . It may be noted that the two crops which most respond to phosphatic manuring, turnips and barley, are both possessed of shallow roots, confined to a comparative limited layer of soil; whereas under ordinary farming conditions wheat responds very little to phosphoric acid and mangels hardly at all, both being deep-rooted plants.

Warmth in the Soil.

The power of a soil to absorb warmth is dependent in a great measure on the amount of moisture in the soil and its colour. The darker in colour a soil is the quicker can it absorb warmth, and the lighter in colour so much the longer will it be in attaining a warm temperature.

Soils containing much moisture are always colder than dry soils, hence the great advantage of draining wet lands.

Soils rich in humus absorb warmth quickly, but also give off the warmth rapidly. With damp clay soil the action is just the reverse. They take a long time in acquiring a higher temperature, but on the other hand retain their warmth better. By the application of farmyard manure, composts, cultivation, and draining the farmer is in a position to improve the condition of his soil.

If wheat is sown in two soils, one dark and the other light, but treated in all other respects in exactly the same way, the crop in the darker soil will mature more quickly and better than the crop in the light soil.

It is one of the advantages of farmyard manure that, in addition to supplying plant nourishment, it produces in the soil a darker colour, and thus by aiding its capacity for absorbing warmth, increases materially its fertility.

The manure on farms varies according to the quality of the raw materials (foods) from which produced. The same rule applies to fertilisers.

In one ton of corn there are about 36 lb. nitrogen, 14 lb. phosphoric acid and 8 lb. potash. In a ton of bran there are 53 lb. nitrogen, 58 lb. phosphoric acid and 22 lb. potash. The bran is consequently much richer than corn in those elements, and it will pay to sell corn and buy bran.

It is claimed, says the *American Fertiliser*, that it takes 7 acres of American wheat to pay for the sugar grown on 1 acre in Europe with sugar beets. The importance of the beet-sugar industry in this country should receive the consideration of every farmer. Sugar is an article for which we have a market at our doors.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).										
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Ammonia, organic as in Guano and													
Bones	17 6	12 6	15 0	—	—	12 6	—	—	15 0	15 0	—	—	—
,, in Sulphate of Ammonia ...	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
,, calculated from Nitrogen in Nitrate of Soda ...	—	—	—	13 0	—	—	—	—	—	—	—	—	—

,, assimilable	1 6	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
,, insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

Cakes and other Feeding Stuffs.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.		s. d.
Albuminoids	2 8	to	3 0
Oil or fat	2 8	,,	3 0
Carbohydrates	1 1	,,	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.			=	Feeding units.
Albuminoids	22·1	×	2½	=	55·2
Oil	5·2	×	2½	=	13·0
Carbohydrates	33·2	×	1	=	33·2
Total feeding units					101·4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

"HAMPEL" MANURE DISTRIBUTOR

Can be used for sowing **Basic Slag, Superphosphates, Kainit, Ground Lime, Bones, and all kinds of Artificial Manure.**

The advantages are **Equal Distribution, Lightness of Draught, Simplicity of Construction,** thereby requiring little repairing and ensuring easy cleaning and **capability of adjustment** for sowing all kinds of manures.

The handling is very simple, no other assistance being required beyond that of the driver, and one horse will pull it with perfect ease.

No. 3 Sowing 8 ft. wide, £11
No. 4 Sowing 6½ ft. wide, £10
If with arrangement to transfer wheels from ends to sides for narrow lanes and gateways, **£1** extra.

WHEAT PAYING ITS WAY.

Now that wheat is once again paying its way we fully associate ourselves with the hope expressed by a Mark Lane correspondent that no artificial inflation of prices will be successful. The details of how such inflation is sometimes brought about will only interest a minority, but it is clear that the farmer is the last person interested to be benefited by the speculative operations of those who hold imported produce only.

The position of the actual grower of wheat is a much more complicated one than that of the importer, and he is often forced to sell by causes which it is not within his power to discuss, or, we might sometimes say, his interest to disclose. What we would now bring before the attention of readers is the welcome fact that if farmers can only manage to hold the wheat crop of 1907 with a reasonable amount of firmness they are practically certain to get a fairly remunerative price for it. Where they cannot so hold they will have our sympathy, but where they are in a position to stand out for a satisfactory price they will have something more than sympathy—namely, the assurance that they are striking a blow for national prosperity and a real revival in our national agriculture.

The breeding of pedigree stock is a well-to-do man's speculation; it is beyond the average farmer's resources. But to grow wheat is not beyond his powers, and the importance of our growing an adequate quantity of wheat within our four seas is of the first order. In case of war a pedigree animal, costing four times the price of an ordinary beast, would not cut up into four times as many joints. The promise of a reasonable profit on wheat growing is therefore a matter of the utmost national concern.

The present price of English wheat on natural markets, where the daily telegram from New York is not considered, and the speculator in cargoes off coast is unknown, is about 38s. for white and 37s. for red. This price pays the farmer, especially as there is a good demand for straw. Can this level, say 37s. 6d. for an average, be maintained; can farmers now sow wheat with a reasonable hope of its ruling a year hence when the grain confided to the soil this November is a crop in stack?

It is, of course, a long way to look ahead, but there are three points which already are clearly to be discerned. The population of the world increases steadily on the whole. If France, Australia, and a few other countries are stationary in this respect the lands of largest population such as Germany, Russia, the United States, and India are adding to their list of consumers at the mean rate of 1 per cent. per annum. Now wheat production is not increasing at all, and the effect of this seems to be a higher range of prices. It is true that Argentina, Canada, and the Punjab show a larger wheat yield year after year, but decline elsewhere balances this, and the total growth of wheat throughout the world is believed to have diminished by about 15,000,000 qr. in the past five years.

The second point to notice is the steadily-increasing use of wheat as food for live stock in the form of meal, and for poultry both as grain and in the ground state. The value of wheat as the best maker of eggs has only come to be generally recognised since the new century was with us. Now, there are 20,000,000 fowls in Ireland for which we have returns, and in Great Britain (for which we have no official data) probably three times as many. If wheat is recognised as far and away the best feed for 80,000,000 birds, it may safely be said that tail corn will cease to be a loss to the farmer. The prices now paid for poultry wheat range from

32s 6d. to 34s. per 448 lb., and are decidedly encouraging.

The third and last point to detain us now is the probability that with international commerce unusually prosperous, and with the United Kingdom doing an unprecedented business both in exports and imports, the cost of grain freights from abroad is likely to rise. Now the extremely low charges for these freights from 1901 to 1906 made it often very difficult for English farmers to sell their wheat at all, except to local buyers. When a ton of wheat was carried from New York to London for half-a-crown less than from Norfolk to London—and this was the case during the years referred to—the English grower was naturally much discouraged. But the probability of this premium on foreign grain continuing is light; the competitive demand of other produce or space on the ships is forcing freights up to terms which seem likely to be well supported so long as general commercial activity continues. The rise in the price of coal will, it is said, induce a further rise in freights. This we cannot discuss here, but the freight market is not likely in the next seven years to be the cause of depression to English producers, dependent on the railways, that it has been in the last seven.

For these reasons we urge farmers to trust in wheat.

ROOT AND GRAIN SHOWS.

We talk of a certain period of the year as the show season, but it really would seem rather as if it extended over the whole twelve months, for hardly have we got over the events of the Dairy Show before notices come to hand telling of the root and grain shows, which are popular and, we would add, useful institutions in many parts of the country.

It is at these exhibitions that the man, who realises that he may still have something more to learn, can see finely-grown samples of grain and study the characteristics of different varieties. And what shall we say of the roots, the mangolds, turnips, swedes, yea and cabbage, as they appear at the shows in November? Generally huge in size and sometimes course, they represent the possibilities of these plants in the hands of the grower. These show monsters are often the result of garden cultivation extended to the farm, and they show what can be done with express culture and liberal manuring

We can claim acquaintance with a few individuals who have cups and trophies adorning their sideboards, won by monstrous roots at November shows, and we know these men to have their own particular pet pieces of ground, fed to a high state of fertility, and on which the exhibition specimens are annually grown.

Whether the monstrous wurzel or swede which calls for the expressions of wonder at the annual root show is the best for feeding and utility purposes is an open question, but that, as Kipling would say, is part of another story, for the fact remains that size has decided fascinations, and the man who stages a number of mighty specimens at the root and grain show feels that at any rate he has achieved something, and has not lived and farmed in vain.

THE STORAGE OF MANGOLDS.

To leave mangolds in the ground after the first week in November means running some risk, and this fact being generally realised, a common operation on farms where the crop is grown (and it should be on all) just now is that of pulling the roots, trimming off the leaves, and storing the former for use when they are in condition later on.

Some people, we think, make a mistake in feeding with mangolds too soon, though sometimes sheer force of circumstances is responsible for this; but it is well to remember that the root is unripe in the autumn, and the food it contains is not in a form that is readily digested by stock, but in storage the starch is converted into sugar, and in the early spring the root is in its best condition and indispensable for the feeding of cattle and sheep.

A common and convenient practice is that of storing mangolds, after they have been allowed to remain in small heaps on the ground for a day or two, in long clamps, where they are protected by a layer of straw, covered with another of earth. In selecting the site for the mangold clamp a fairly high and dry situation should be chosen where the bottom is firm and sound, and for home feeding a good deal of labour is saved by storing the roots somewhere adjacent to the homestead.

Many people let themselves in for an unnecessary amount of mangold carting by neglecting this point; the thing is to clamp the roots as near as possible to the place where they will be wanted. This may of course necessitate extra hauling, but it is more easy to do it now when the roots are in the cart than when the stock is being drawn on for feeding.

Upwards of 700 sheep, being 500 more than last year, were penned at Horncastle sheep fair on Monday. Trade was fair, and prices ranged from 40s. to 46s. for the best class. By auction lambs made 25s. 6d. to 39s. per head, and three-shear ewes 43s.

THE FARMERS' DIARY.

TUESDAY, NOVEMBER 5.—Central Chamber of Agriculture: Meeting at the Surveyors' Institution, Great George Street, Westminster, 11 a.m., to discuss the formation of an Agricultural Party——Great Sale of Underwood at Loxwood —— Ashbourne Cheese Fair——Special Horse and Cattle Market at Beverley —— Fairs at Brecon, Longridge, Portland, Ramsey, and Wells.

WEDNESDAY, NOVEMBER 6.—Royal Agricultural Society (Resumption of Meetings after the Vacation): Council Meeting at noon at 16, Bedford Square——Sale of Shire Horses at Norbury Park, near Dorking——Capel Agricultural Show——Fairs at Swaffham, Oswestry, Norfolk, and Chipping Norton.

THURSDAY, NOVEMBER 7.—North Kent Agricultural Show (Roots, Produce, &c.) at Darenth——Barfrestone, near Dover: Annual East Kent Ploughing Matches —— Entries for the Whitchurch Dairy Show to be sent in——Pony Society's Meeting at 12, Hanover Square——Devizes Cattle Show —— Sale of Shire Horses at Dewstow——Bishop Auckland Annual Agricultural Hiring Fair ——Fairs at Doncaster, Preston, Rochdale, Ripon, and Alston.

FRIDAY, NOVEMBER 8.—Stride's Sale of Southdown Sheep at Midhurst, 11 a.m.—— Lady Dunrany's Underwoods: Special Sale at Dunstall——Downham Cattle and Sheep Fair——Fairs at Hertford, Keighley, Knutsford, Lydney, and Newmarket.

SATURDAY, NOVEMBER 9.—Entries for the Penistone Ploughing Matches to be sent in ——Entries for the Redhill Fat Stock Show to be sent in —— Sale of Hunters at Aldridge's —— Fairs at Carlisle, Egremont, Keswick, Leeds, and Nottingham.

MONDAY, NOVEMBER 11. — Martinmas. — Many fairs held this day, and a good many farm agreements expire at this date, "the mid-quarter"——Agricultural Hiring Fairs at Hexham and Whitby.

Notes of the Week.

"God speed the plow
And bless the mow."

Mow is an old word, fallen out of use, meaning that which is mown, thus the hay and cereal harvest.

The recent heavy rains in Scotland have been disastrous. The loss to farmers is estimated to be over £3,000,000.

An inch of rain represents an enormous fall of water over a district; a statistician has calculated that 1 in. of rain over greater London at 1d. per gallon would amount up to over £7,000,000.

A few weeks of dry weather at the present time would be a great blessing. It would speed the plough.

And weather prophets say we are likely to have it, as the October rains have been so excessive.

The world seems to be suffering from a scarcity of gold. If gold appreciates in value the prices of all products will fall.

"Better times, bigger rents"—the leaderette in last week's issue suggests unpleasant reflections.

A grasping policy at the first sign of better times will deprive the landowners of any public symyathy.

It is the proud boast of an English county gentleman, wrote Washington Irving, to live on his estates and diffuse happiness around him. So it should be.

A curious ploughing match was arranged the other day at Brightlingsea, in Essex. Daughters of farmers competed against daughters of yachtsmen.

The unexpected happened. The yachtmen's daughters won. They seemed as skilful in ploughing the land as their paters in ploughing the deep, or the nobleman who has made a reputation in ploughing a lonely furrow.

Legislation connected with the milk trade and small holdings are two subjects much discussed at farmers' gatherings.

The Government policy is advocated by the peripatetic Earl Carrington, but its wisdom is doubted in agricultural circles.

The Duke of Argyll asks whether, in view of recent and contemplated legislation, the cry of "back to the land" means "capital" or "paupers" are to go back.

Time will show. By wonderful wireless telegraphy we can communicate with friends through a space of 4,000 miles, but unfortunately not ahead over the space of even twelve months.

"If I had my way, I would make every motorist eat 2 lb. of dust every day."

This drastic proposal was made by an old gardener in the witness box the other day. The dust from motor cars had quite ruined his strawberry crop.

The authorities in Belgium have a short way of dealing with reckless motorists.

A motorist, charged with having seriously injured a girl by reckless driving, was sentenced to twelve months' imprisonment and a fine of £720.

Sleaford has honoured itself in honouring Mr. Chaplin.

Ever since the last election many of the constituents seem to have regretted having gone back on the Squire.

Market Drayton October Fair is an important event—but why is it known as "Dirty Fair"?

At a Mid-Sussex elementary school the teacher closed some pregnant remarks on the effect of sunshine on the ripening corn with the question—"And now, can anyone tell me what is the most necessary thing for the harvest, the thing that the farmer prays for, the thing that the labourer must have if his work is not to be valueless? Thomas Buddington, you raised your hand first. It is for you to tell the class what, of course, they already know. Speak, Thomas, speak." "Beer," said Thomas.

A grower of barley named Rawle,
Swept the famed Agricultural Hall.
Than the rivals of Somerset
You ne'er saw a glummer set,
For the prizes he collared them all!
or nearly all.

The great ages of agricultural veterans is frequently alluded to, but imagine a land crab computed to be 3,000 to 4,000 years old. The crab was recently dug out of a rock, and was alive.

To escape a motor car a cow dashed into a house in a village in Surrey and smashed up the furniture. We can't blame the poor animal.

CATTLE.

Notes and Jottings.

IN spite of heavy rains and floods almost throughout the length and breadth of the land, the weather continues so mild that most of the cattle in the grazing districts are still at large, many pastures having a most luxuriant appearance; soon, however, all this will be changed, and the animals will get their first pinch of winter. The majority of them, too, are looking remarkably well at present. Whilst travelling during the present week we saw some remarkably fine lots of Devon and Hereford steers looking fit for the Christmas markets, and looking as sleak and fit as possible in the midst of terrific storms. The manner, however, in which their pastures were being trampelled up and poached in the neighbourhood of their feeding troughs and cribs was not by any means an agreeable sight to be seen.

I NOTICE in one of our daily papers some remarks anent tuberculosis which appear to have emanated from butchers in which the statement is made that there are as many bullocks and heifers affected with the disease as there are milking cows. This is putting a very different face upon the subject to anything I have ever heard or yet seen. I have met and discussed the question with many large and wholesale butchers as well as others having smaller businesses, and with one and all of them the tale of woe has always been that the milking cow and the four-year-old bull are the two classes of cattle which, above all others, are prone to the disease, and the majority of losses by carcases being unsaleable has been amongst these sections.

IT is only reasonable to suppose that the older the animals the more seriously and the more numerously they would be affected. The very fact that these two sections have, in nine cases out of ten, been subject to much warmer and more careful housing is of itself convincing. Heifers and bullocks up to three years old have had very small chance of becoming affected unless they were born so, and both these classes upon the whole, especially in England, Wales, and Ireland, live in many instances an entirely outdoor life. The present season has been a very bad one for finding out animals affected with this or any other disease, the perpetual cold and wet telling a very severe tale, and in driving about the country one sees many individuals in large herds that it is very manifest are suffering from the disease and would have been far better removed and slaughtered.

I NOTICE the Hereford Herd Book Society are offering prizes at the Royal Dublin Society's winter show for the best Hereford crosses; this is a very good step to encourage their breeding, which is well deserved. There is little doubt that the Hereford is one of the best crosses of the present time, especially when annexed to the Shorthorn, that cross being productive of first-class milkers as well as fattening stock. In Ireland very few Hereford crosses are held over for Christmas, their earlier ripening enabling them to be sold in the earlier part of the summer whilst beef is making a better price.

THE great demand for milk all round both at home and abroad is causing a good deal more attention to be paid to the South Devon or South Ham breed of cattle. The enormous size some of the representatives of this breed attain to is almost an overpowering attraction to a stranger; with male specimens in the Royal showyard weighing close upon 30 cwt. alive, their massiveness and market value is at once apparent. We have at present not been furnished with any record of the amount of food consumed by these cattle, but from all appearances it is quite fair to anticipate them as very gross feeders, and this of course means extra expense; however, they appear to be a hardy and useful breed, and will doubtless find their true level with the public.

BEEF markets, except for the very choicest quality, appear to be on the downward grade slightly. Chicago appears to be literally swamped with Western droves, 103,000 odd having been marketed within six days. This is mainly the outcome of the season of the year, as snow and frost will shortly render marketing impossible in many instances. Numbers have doubtless also been much increased owing to the higher price of corn, which is increasing the feeder's bill enormously. Even amongst all these thousands, however, it is said that butchers who are purchasers of the best qualities find considerable difficulty in obtaining their supplies.

THIS week of November reminds us very vividly that Christmas is close upon us, entries being about to close for the fat stock shows. Very shortly the leading topic in fat stock circles will have reference to the prospective champions. Up to the present reports are not very numerous as to the quality of the representatives in many of the feeders' herds, but some feeders prefer to keep their horses dark until the last minute, perhaps not an altogether unwise proceeding. The Angus and Galloways and their crosses will no doubt form a very large proportion of very high class exhibits.

REFERRING to the above two crosses further, the Galloway and Shorthorn appear to be gaining favour very rapidly throughout the country. We have seen many magnificent lots of bullocks of this cross during the present season, bullocks of beautiful symmetry, heavily fleshed, and clothed with a wealth of hair that all feeders delight in. After slaughtering, too, this cross gives very great satisfaction. Where heifers are concerned, Angus crosses are often quite as great a success; both, however, are extremely valuable in the present day on account of our great scarcity of feeding stock.

WE read also that in the west of Ireland the Premium bulls supplied are carrying on an excellent work in the improvement of the store cattle; in that district the Galloway cross is very highly spoken of. In those districts the Dexter and Kerry females form a very profitable foundation for breeding stores when crossed with bulls of any of the beef breeds; the produce in many instances takes after the large breed of the sires. Thus a beast with sufficient marketable size and of the highest quality is raised at a minimum of expense, and where the land is not of the very richest description it is surprising what a good return these little animals make for their cost.

Photo by] [*G. H. Farsons.*

Our illustration above is of the Shorthorn Heifer Queen of Hearts, who was unbeaten as a calf, and this year has won a number of prizes, including First Prize at the Cheshire County Show, Second at the Wirral and Birkenhead, First at the Knutsford, and First at the Flint and Denbigh Show. Her sire was Wild Duke of Geneva 245th, dam Ingram's Beauty 2nd, and she is the property of Mr. S. Sanday, Puddington Hall, Neston, Cheshire.

THE feeding of calves for veal is causing considerable discussion in various parts of the country, probably from the fact that good veal calves have been selling well throughout the season. Various ways of fattening them are adduced from different quarters, but there is no mistake about it that if a really good calf is to be made fit for market the great bulk of his feeding must consist of new milk direct from the cow. Opinions vary somewhat as to whether the little animal should be allowed to help himself, or whether the milk should be first drawn from the cow and then handed to him in the pail. Again experience tells us that the former system undoubtedly has the advantage in many ways; indeed, in every way so far as the calf is concerned. There is no giving him too little at one meal and too much at another, or fear of him being fed from a dirty pail, which might bring on scour and interfere with health and appetite, and not only this, the very act of sucking imparts health and greater progress to the animal. The great drawback to the self-helping system comes when the calf's teeth get strong and his supply of milk is not any too much for him; at such times the youngster is apt to bite the teats mercilessly, and in the summer time when the flies are busy this gives great discomfort to the cow, and often causes her to lose flesh rapidly.

Sale of Red Polls at Ipswich.

The chief feature of the sale of Red Polls at Ipswich was the consignment of Sir G. Farrar, D.S.O., who was disposing of his herd because of the important position he held in South Africa, where he will be stationed permanently. Amongst other herds represented were those of Sir R. P. Cooper, Bart., Sir H. F. de Trafford, Bart., Mr. R. Hervey Mason, the Right Hon. A. E. Fellowes, Sir Joshua T. Rowley, Bart, &c. There was a good attendance of buyers, and some satisfactory prices were obtained, the best being 43 guineas, which sum Mr. Balston, Potter's Bar, gave for Mr. E. Kersey's Lass, calved June 25, 1902. Next came 40 guineas given by Mr. J. E. Hill, Gressenhall, for Sir Walter Corbet's bull Acton Druid. The Hon. A. E. Fellowes, gave 31 guineas for Sir G. Farrar's bull Honingham Adjutant, and Mr. Balston secured Sir J. T. Rowley's bull Triton for 29 guineas, whilst other prices ranged up to 21½ guineas.

Sale of Jersey Cows at Thirsk.

The choice herd of Jerseys belonging to Messrs. Fowler, De La Perelle, and Co., Southampton, was brought under the hammer at Thirsk on Monday, but the prices were not particularly good. A two-year-old heifer, newly calven, was sold to Mr. F. Kettlewell, Thirsk, for 22½ guineas; Mr. W. Hill, Sowerby, purchased a two-year-old heifer, newly calven, for 22½ guineas; and the Rev. G. R. Dupuis, Sessay, a three-year-old heifer, for 22 guineas; whilst a two-and-a-half-year-old heifer, newly calven, was purchased for 21½ guineas by Mr. Jackson, Ormsby. Other prices ranged down to 2 guineas for a heifer calf.

Sale of Guernsey Cattle in Sussex.

Although heavy rain fell all day there was a good company at the sale of Mr. C. E. Hoggs' herd of Guernsey cattle on the 25th ult. at Altrees, Coolham, Sussex. For the best cows there was good competition. Mr. J. C. Forster, of Clatford, gave 27 guineas for Hettie 4th, winner of three first and other prizes, and 21 guineas for Fair Hyacinth 2nd. Mr. H. F. Plumptre, of Goodnestone, Dover, purchased several to add to his well-known herd in Kent, among them being Florrie of the Palatterie at 20 guineas, and Mr. F. N. Hobgen, Mr. G. Barstrop and Mr. G. Long were also good buyers. The pure bred Guernseys averaged nearly £13. Many unregistered cattle were also sold, and these made up to 19 guineas.

Store Stock Sale at Kidderminster.

Messrs. Nock and Joseland held their autumn sale of store stock on Friday, October 25, when when they had one of the finest displays of Hereford cattle ever offered in the district, and good entries of Shorthorn and cross bred cattle, store wethers, ewes, and lambs. In spite of the almost incessant downpour of rain there was a capital attendance of buyers, and all the best bullocks and heifers met a ready sale, but inferior cattle were not wanted. Sheep and lambs, although looking at their worst, met a firm trade at about late rates. The range of prices was as follow:—Hereford bullocks, £8 to £19 2s. 6d.; Shorthorns and cross-breds, £9 to £14 15s.; and in-calf cows up to £18. Wether sheep, 35s. 6d. to 52s. 6d.; and store lambs, 28s. 6d. to 45s.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Mallow Fair, co. Cork, held on October 30, there was a large supply of cattle; demand fair. Calves, 1st class, £4 15s. to £5 5s.; 2nd class, £3 12s. 6d. to £4 2s. 6d.; yearlings, 1st class, £8 to £10 5s.; 2nd class, £6 to £7 15s.; 3rd class, £5 to £5 10s.; two years old, 1st class, £11 to £12 17s. 6d.; 2nd class, £8 7s. 6d. to £10 5s.; 3rd class, £7 5s. to £7 15s.; three years old, 1st class, £14 10s.; Springers, 1st class, £14 10s. to £16 5s.; 2nd class, £12 to £13 10s. Average supply of sheep; demand fair. Lambs, 1st class, 30s. to 34s.; 2nd class, 26s. to 28s. 6d.; one-year-old and over, 1st class, 42s. 6d. to 47s. 6d.; 2nd class, 38s. to 41s. Young pigs, eight to ten weeks old, 20s. to 24s. each.

Aberdeen-Angus Cattle in the Argentine.

For some time there has been under the consideration of breeders of Aberdeen-Angus cattle what steps might with advantage be taken towards developing the interests of the breed in the Argentine Republic. Conferences of breeders took place in July at the shows of the Highland and Agricultural Society and of the Royal Northern Agricultural Society, and at both the question was fully discussed.

The council of the Polled Cattle Society at their last meeting took up consideration of the remit made to them by these meetings, when it was unanimously agreed to provide for competition two challenge cups of the value of £50 each, the one to be competed for at the breeding shows of the Argentine Rural Society held annually at Palermo, and the other at the fat stock shows to be held under the auspices of the Liga Agraria.

In the case of the former show the cup will be given for the best animal of the Aberdeen-Angus breed, and in the latter case the competition will be open to Aberdeen-Angus cattle and their crosses.

It was also agreed to award a gold medal for competition at the Winnipeg Industrial Exhibition, Canada, next year, as also two gold medals for competition at the Highland and Agricultural Society's show at Aberdeen, one for the best male and the other for the best female, and one gold medal each to the Royal Agricultural Society of England, the Royal Dublin Society, the Royal Counties Agricultural Society, and the Bath and West Agricultural Society.

Dairy Cows.

In the course of a letter to the *Yorkshire Post* "Dairy" calls the attention of dairy farmers to the necessity of introducing improved stock into their herds, and his remarks are certainly worthy of their attention. He says:—The frequent prosecutions for selling milk under the standard quality would, one should suppose, have opened the eyes of milk sellers to this necessity, but unfortunately a great many farmers are content to go along selling their milk, satisfied that it is pure, and exactly as drawn from the cow, and quite indifferent to the fact that, notwithstanding this, it may be, and frequently is, much below the standard of 3 per cent. butter fat and 8·5 per cent. non-fatty solids.

Too frequently, quantity and not quality is the goal aimed at, with the result that cows giving a heavy milk yield are kept, without any consideration being given as to the amount of butter fat contained in the milk. For this purpose Shorthorns are usually chosen in Yorkshire, but it is notorious that this breed, taken as a whole, are by no means high in the scale as producers of rich milk. In the "Report of Milk Investigations at Garforth, 1904," it is stated that at the County Council farm, with the mixed milk of about twenty cows, during a series of experiments extending from June 13 to September 9 the minimum butter fat contained in the morning milk was 2·42 per cent., and the maximum 3·60 per cent., and during the whole period the standard per cent. was not reached on fifty out of ninety-five days in the mornings.

Further, the report goes on to say, "When the conditions are similar to those of Garforth, particularly with respect to the breed of cows and times of milking, results of a precisely similar nature are usually obtained. . . . In the Reading experiment the mixed morning milk of eight Shorthorn cows, milked at intervals of fifteen hours and nine hours respectively, contained 3 per cent. or more of butter fat on four mornings only out of forty-two."

Surely this should be enough to show that fresh blood from a milking strain is needed to improve our so-called "dairy cows," and I would suggest that at future shows the Yorkshire Agricultural Society should provide classes for dairy cattle, based upon similar lines to those at the London Dairy Show, and other shows in the South of England, where the milk is carefully tested, and the prizes awarded for the greatest percentage of butter fat contained. By their action of recent years the Yorkshire Agricultural Society is putting a veto on Jersey and Channel Island cattle, which are without a doubt the best dairy cattle in the world, as they have reduced the prize list to a minimum. A very brief examination of the prizes offered at the last show of the Yorkshire Agricultural Society will prove this.

Eleven classes for Shorthorns being given, with prizes (not including specials) amounting to £270; three classes for Aberdeen-Angus, with prizes of £45; whilst only two classes were provided for Jerseys, their prizes being £24. From this it is obvious that the committee are determined to push Shorthorns to the fore, at the expense of all other breeds. It is not to be expected that breeders will go to a considerable expense in sending cattle from a distance under circumstances such as these.

Dairy farmers will sooner or later be compelled in their own interests to introduce Jersey blood into their herds in order to maintain a proper standard quality of milk, and it is no use trying to bolster up Shorthorns as dairy cows.

Shorthorns, as producers of beef, are no doubt hard to beat; let them therefore be bred for beef, and let them give up their claims for a place as dairy cattle. I am not overlooking the fact that individual members of the breed are undoubtedly excellent as milkers, as, for instance, the winner of the butter tests at the recent dairy show, but I am now speaking of the breed as a whole.

Not long ago I tested the milk of a pedigree Shorthorn—bought from a world-renowned herd—and found the result to be 1·5 of butter fat for the morning, and 1·4 for the evening milking, and more recently an ordinary "dairy Shorthorn" which gave an average of 1·9 butter fat and 8·0 of non-fatty solids as a result of several tests. On the other hand, the lowest percentage of butter fat I have any record of ever having obtained from a pure-bred Jersey was 3·6, the average being about 5 0, whilst I have obtained as much as 6·80, and this without special feeding.

Jersey cattle are by no means the delicate animals some people suppose, more especially if English bred and not brought direct from the Channel Islands; and I may say that, having kept several breeds of cattle during the last thirty years, I am of opinion that for hardiness they will equal almost any breed, if, as I said before, they are bred in this country.

The Tring Park Shires.

Lord Rothschild's famous stud of Shires at Tring Park has recently been strengthened by the addition of several promising foals purchased at good figures from tenant farmers; also two yearling colts and a two-year-old colt, all three of which look like growing into good stallions, thus considerably adding to the stallion section of the stud, which is already strong in promising colts.

The value of the Tring stud sires is only too well known and appreciated, and among the societies that have recently hired stallions from the stud are the following:—The Montgomeryshire and District Entire Horse Association, who have hired Childwick Champion for next season; the Kettering Society have hired Lunesdale Kingmaker; the Winslow Society, Blythwood Kingmaker; whilst Mr. Fernie's Hunt Committee (Market Harborough) have hired Birdsall Menestrel and Thrupp Rival.

Clydesdale Horse Society.

No fewer than ninety new members were elected at the meeting of the council of the Clydesdale Horse Society held on October 23, whilst the Carnwath Agricultural Society and Morayshire Farmer Club were affiliated.

On the suggestion of the Editing Committee, it was decided to issue a new index of stallions from Vols. I. to XXX., whilst the prefix "Cawdor" was reserved for the Earl of Cawdor.

The secretary was authorised to issue certificates for certain animals exported to South America about twenty years ago, for which certificates had not been granted, these certificates to be signed by the exporters in the usual way.

It was agreed to give a grant of £70 to the funds for the Clydesdale classes at the Newcastle show of the Royal Agricultural Society, and to ask that a class be instituted for yearling Clydesdale fillies; also to give a list of qualified judges recommended by the council in answer to the request of the Royal Society.

The next meeting was appointed to be held on Wednesday, November 20, in the registered office of the society.

Cold storage acquires new charms when presented in so dainty a pamphlet as that just issued by the Canadian Pacific Railway in connection with their new cool chambers at Sandon Dock, Liverpool. Here we have photographs illustrating rapid handling of Canadian produce from ship to store, and from store to railway. The enterprise of a colonial railway in establishing a cold store in the old country marks, as the writer says, "an epoch in commercial history," and should do much in a quiet way to promote closer trade relations between Canada and Great Britain.

PIGS.

Sale of Highclere Berkshires.

As all pig-breeders know, the Highclere herd of Berkshire pigs, belonging to the Earl of Carnarvon, has gained for itself a world-wide reputation, and it was therefore only to be expected that a large and representative company of breeders would be present at the sale of a number of its choice specimens held on Tuesday last, at Highclere Park, near Newbury. The pigs offered included all the young pigs in the herd, those retained being the boar Sailor Prince, and the older sows with litters at foot. The sale afforded a rare opportunity to obtain some of the old Highclere blood, which is so popular in the United States, as nearly all the pigs offered could trace back to that grand sow Highclere 14th, the Royal Champion of 1897, and naturally breeders took advantage of the opportunity, there being a good demand throughout at prices ranging up to 25 guineas, obtained for an elt by His Lordship. Other chief prices were 22 guineas for an elt, dam Highclere Lucy, and 20 guineas for a boar, the offspring of His Lordship and Jack-of-all-Trades, both prize-winners. A boar, by Sailor Prince, realised 17 guineas, and another by the same sire sold for 15½ guineas, while an elt of the same stock fetched 16 guineas. Other animals sold as follows:—15 guineas, 14½ guineas, 13 guineas, 12½ guineas, 10½ guineas, 10 guineas, 9 guineas, 8½ guineas, 8 guineas, 7½ guineas, 7 guineas, 6½ guineas, 5½ guineas, 5 guineas, 4½ guineas, 4 guineas, 3½ guineas, 3 guineas, 2½ guineas, 2 guineas. About ten lots were bought for exportation to New Zealand and Buenos Ayres. A selection of fat hogs and porkers were subsequently sold, and made good prices.

Amongst the buyers were Lord Middleton, Colonel Van de Weyer (Windsor), Canon Hutton (Lincoln), Dr. Macdonald (Dorchester), Messrs. Hudson (Danesfield), Edney Hayter (Whitchurch), Simonds (Basingstoke), Waring (Beenham), Hiscock (Shaftesbury), Whitmarsh (Monkton), Higham (Addleston), Fricker (Wincanton), Henwood (Tring), Jefferson (Chester), Chick (Dorchester), Carter (Norfolk), Treble (Ware), Brown (Southampton), Toogood (Tunbridge Wells), Sheen (Maidenhead), Carter (Wisbech), Halford (Dorchester), Spencer (Winchester), Gooch (Inholmes), Knowles (Linkenholt), Weston, Booth, Judd, Hancock, Butler, Aldridge, &c.

VETERINARY.

Advice of a Veterinary character, by a M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

Calf.

Sir,—I would feel very grateful if you would at an early date in your valuable paper give me advice in the following case:—I have a fine calf, six months old, which up to a few days ago was in spendid condition. It then got a wetting, from which it took a cough, and immediately swelled up to a great extent, so much so that it was not able to turn or walk except stiffly. It was able to drink milk for a couple of days, but then the glands of the neck got swelled up and something like lockjaw set in, as its mouth could not be forced open to put a bottle in to give medicine. It is now a week in that condition and is still living, but will not be long so.

I am very many miles from a veterinary surgeon, and would be glad to have advice, fearing a similar case may occur among the other calves.

There are three others in the same house with it, and I have not removed them as I did not think it was anything infectious. J. M.

*** The question is, What is or was the matter with the calf? This is by no means clear or certainly to be gathered from the description furnished, although not much fault can be found with this. The early symptoms, including the swelling, appear not inconsistent with tetanus or lock-jaw, which obviously subsequently developed. In bygone days, before tetanus was recognised as an infectious and contagious disease due to a specific blood poisoning from a toxin developed by a micro organism—the Bacillus tetani—it used to be divided into two forms, traumatic and idiopathic. The traumatic form was associated with wounds, particularly of the feet, and the idiopathic to exposure or, very vaguely, "to some peculiar susceptibility to derangement of the constitution itself." Now we know that it is all one disease, that it is due to an organism which may gain entry through a mere scratch or abrasion of the buccal membrane, and that a wound need not be situated in any particular part, or be large or obvious. Assuming that the case is one of tetanus, as there seems every reason to fear that it is, it will be desirable to thoroughly disinfect the premises where the animal has lived and probably died.

We will refer to the subject again shortly.

CONTAGIOUS DISEASES OF FARM ANIMALS.

Extract from To-Day's Farmers' Club Paper by Professor Penberthy, of the Royal Veterinary College, who deals particularly with Glanders and Anthrax.

The first meeting of the Farmers' Club after the recess was fixed to take place to-day (Monday) at 4 p.m., the chief feature being the reading of a paper, entitled "Contagious Diseases of Farm Animals, with special reference to Glanders and Anthrax," by Professor Penberthy, of the Royal Veterinary College. The secretary of the club has kindly sent us an advance proof of the paper, from which we take the following:—

A critical review of matters relating to contagious diseases during the sixty years which have intervened since the subject of cattle diseases was first discussed by this club might possibly be of interest and practical value, but time and space forbid entering deeply into this or any aspect of the subject chosen for me. However, it is well to keep in memory the "bridge which has safely carried us over," and I venture to think a brief retrospect may not be without some value.

In the forties of the last century sheep-pox was rampant and claimed a large number of victims, entailing immense monetary loss. Forty years ago two counties only in England were free from cattle plague. In the first three weeks of 1866 38,400 head of cattle were attacked with that fatal malady, while from June 24, 1865, to September, 1867, 278,927 were attacked, and 56,911 healthy animals slaughtered to prevent spread of the disease, a total of 335,838 animals, entailing a loss of more than £5,000,000 in two and a half years. In 1871 foot-and-mouth disease existed in ninety-two counties in the United Kingdom, and during the year there were 52,000 outbreaks and 691,560 animals affected. In 1883, in seventy-five counties in Great Britain, there were 18,732 outbreaks and 461,145 animals affected.

In 1887 pleuro-pneumonia existed in seventy counties; there were 2,007 outbreaks and 5,330 cattle attacked.

These plagues were all imported from abroad, and probably in every instance by live animals. After suppression at stupendous cost, their recurrence has been prevented by a simple measure prohibiting the importation of live animals, except at certain places for immediate slaughter without removal from the place of landing.

A dozen years ago rabies existed in forty-one counties, from which 438 cases were reported, the record of the previous year being 672. No case has been reported since 1902. The quarantine of imported dogs has apparently been effectual in securing immunity from this terrible malady. Sheep-pox has not existed in English sheep for several years. Cattle plague was stamped out thirty years ago, and has made no re-appearance in the United Kingdom. Pleuro-pneumonia has been non existent since 1898.

There is every reason for supposing that the foregoing diseases are now exterminated, and it is certain that if they reappear the contagion must be imported from abroad. This immunity has been secured at immense cost and annoyance to the farmer and the community at large, and by a vigorous policy upheld by successive Governments against the violent assaults of those of limited interest, sentimentalists, and vote-hunting individuals and associations. The authority which would submit the country to any risk in this direction by premature alteration of the existing law must be prepared to take the responsibility of undoing that which has been secured at such tremendous sacrifice, and of extinguishing the flickering hope of the agricultural industry.

Of the more important diseases scheduled under the Contagious Diseases (Animals) Act, and Orders of the Board, there now remain sheep scab, glanders, anthrax, and swine fever. The result of operations against sheep scab during the past thirty-seven years are shown by the following figures, which speak for themselves:—

Year.	Outbreaks reported.	No. of counties.
1870	2,573*	6
1887	1,596†	75
1896	3,536	79
1903	1,792	73
1906	534	63
1907	428‡ (in 41 weeks)	

Though there would appear to be a slight recrudescence, the present state in relation to sheep scab must be regarded as highly satisfactory, compared with any previous period.

Glanders.

The paper then deals exhaustively with the subject of glanders, tracing its origin, and showing the number of outbreaks in various years.

* 76,718 sheep attacked.

† 26,383 sheep attacked.

‡ Compares with 322 in corresponding period 1906.

As regards the nature of glanders, Professor Penberthy says:—

The very minute microbe, on which it depends, finds conditions most suitable for its development in the horse. It multiplies best at temperatures between 90 deg. Fahr. and 100 deg. Fahr.—*i.e.*, about body heat and a little lower, but such as rarely obtain in this country in the soil or the surroundings of horses. It is destroyed by desiccation and after exposure for some time to sunlight, so that, under sanitary conditions, it probably lives and remains effective only a comparatively short time outside the body of the affected animal.

These results of the experimental study of the virus have provided, amongst other matters, some grounds for modification of our views concerning the part played by stables which have been occupied by animals affected with glanders, and especially as to how long they remain dangerous. At one time attention was mainly centered on the assumed importance of the contaminated place or thing, and it was customary to have the stable pulled down or "gutted" and renewed. To-day it is believed that disinfection of places and things can readily be effected, and that a plentiful supply of sunlight and removal of all moist dirt are of the greatest assistance in this direction.

The wide variation in the manifestations of the disease render hopeless any attempt to fully describe what is to be regarded as diseased or suspected. We will, however, venture to mention some conditions which should determine the person in charge of a horse, ass, or mule to notify his suspicion to the constable nearest to the place in which the suspected animal is. A generally swollen limb, particularly if there are small elevations, abscesses, or sores on it, the so called "farcied" leg, similar swellings in any part of the skin, or elongated tube-like swellings, "farcy pipes," having in their course small nodules or abscesses discharging an amber-coloured liquid, are suggestive of the form of glanders usually known as farcy. Discharge from the nostrils, or more especially one nostril, and a swelling between the jaws, sores or ulcers in the nostril, slight bleeding from the nostrils, are symptoms often regarded as typical of glanders. During the existence of these indications the animal usually feeds well, but may lose flesh and condition, be easily fatigued, and frequently have a cough. The foregoing have sometimes been placed in the category of chronic farcy or chronic glanders. The malady may show itself in an acute form, in which extreme depression, high temperature, great constitutional disturbance, hurried breathing, and small abscesses, generally distributed over the skin, may be noticeable. This has been named "acute farcy." At other times the general symptoms just described may be accompanied by much swelling in the space between the jaws, discharge from and ulceration of the nostrils, so-called acute glanders. Such cases usually end fatally in a few days at most. As a rule, the glanders bacillus produces small seed-like nodules in the lungs, which do not evince much activity. It may, however, produce acute pneumonia or pleurisy, or both, whose specific nature cannot be determined until after death, and then only by microscopic examination or inoculation.

Every horse which has been stabled with one suffering from glanders must, until proved to be free from the disease, be a suspected animal. Mallein will in the great majority of cases confirm the suspicion or remove it, and with its aid the eradication of glanders can, at least, be attempted with reasonable hope of success.

Anthrax.

In the course of his remarks on anthrax, Professor Penberthy says:—

Anthrax has a wide distribution over the globe, but is more common in hot than temperate regions, as a high temperature favours the development of the anthrax germ outside the animal body. It is regarded as a disease of the country rather than of the town, though occasionally it has done serious damage in town stables and byres.

Though by inoculation very readily communicated to all farm animals, for some reason anthrax, under ordinary circumstances, is much more common in cattle. The returns for 1906 report a total of 1,330 deaths of animals of all species. Of these, 999 were of cattle, 83 of sheep, 213 of swine, and 34 of horses. How far cases occurring in cattle, sheep, and horses depend on each other is not easy to ascertain, but it appears probable that animals of these several species do not usually acquire the disease directly from each other, but from the same or distinct sources.

With swine the case is quite different, for though it is quite possible for pigs to become affected by taking the virus from an independent source, the great majority become infected by

eating portions of the carcase offal, blood, or discharges of animals dead of the malady. The total number of cases and the numbers at single outbreaks, shown in the annual returns, are considerably affected by figures against swine. On theoretical grounds most of these cases are avoidable.

Anthrax is not limited to farm animals, as the majority of mammals are susceptible. Dogs and other flesh-eating animals may contract the disease in the same manner as swine. Rabbits, mice, sparrows, &c., are readily infected by inoculation. Occasionally deer become naturally infected, and in the return for 1889 it is shown that 461 died of the disease. Anthrax gains its greatest importance from the fact that it is communicable and often fatal to man.

The total economic loss from anthrax must be regarded as small. In Great Britain there are 35,600,000 susceptible farm animals, and in no year up to the present time has a larger number than 1,589 deaths been recorded; and though to a man whose worldly possessions consist only of three acres and one cow loss to the individual may be most serious, a national insurance of 3d. a score would cover all risks, at £15 a head for cattle, 50s. for sheep, £2 for swine, and £30 for horses.

The main fact concerning anthrax which affords the material for practical application is that it is caused by bacilli, which swarm in inconceivable myriads in the blood, where they can be found only a short time before death, and may be identified by microscopic examination, if this is carried out before putrefaction sets in. As this process begins later on the outside than internally, the blood of the ear is selected, a practice which is easy and safe, because little or no blood is spilled, and the part can be easily disinfected.

If the carcase be buried, as the animal dies, without any shedding of blood, putrefaction kills all the bacilli, and when complete all danger from anthrax is gone. If by any means the bacilli become exposed to air, and the temperature is not below 60 deg. Fahr., or above 110 deg. Fahr., they may multiply. If the temperature is above 65 deg. Fahr. and below 105 deg. Fahr., germs or spores form inside the bacilli, but this does not occur unless the bacilli have free access to oxygen (air). Bacilli are easily destroyed, a temperature of 160 deg. Fahr. being fatal in a short time.

On the contrary, spores are very resistant; putrefaction does not destroy them, and under circumstances favourable to them in the dried state they live for years outside the animal body. They withstand a very high temperature of dry heat, 110 deg. Fahr. above the boiling point being necessary to immediately kill them. In the moist state they are killed by five minutes' exposure at the boiling point (212 deg. Fahr.).

It will be seen that temperatures usually obtaining in Great Britain do not favour the development of spores. In fact, in the greater part of the year, on this account spores do not form; but there is just the possibility of this occurring should the blood be exposed while the carcase is warm, or in the heat of summer.

In dealing with anthrax the most important consideration is the prevention of spore formation. From the above facts it will be seen that if any suspected material to be used as food is subjected to boiling for five minutes all danger of its producing anthrax is averted.

The prevention of anthrax is, of course, the cardinal consideration. The stockowner's protection of his own interests is closely associated with the performance of the duty imposed on him by the State to notify at the earliest opportunity his conviction or suspicion. In the present state of our knowledge the first case of anthrax in a place is an accident, usually due to circumstances beyond our control; subsequent cases, most frequently to neglect of precautionary measures at our disposal. It is natural to ask the question, How can one know when an animal is dead of anthrax? The answer is, that of his own knowledge the ordinary stock-owner cannot tell that any animal dying suddenly did *not* die of anthrax.

It is perfectly clear that he should suspect all such animals, give notice immediately to the nearest constable, and make provision for preventing access to and egress from the place in which the carcase is, and that it should not be touched. On the arrival of the inspector all the owner has to do is to render facilities and abstain from doing a few things, such as the removal of milk of a diseased cow from the place in which she is or has been, &c. The restrictions following confirmation of the existence of anthrax are not irksome. Where the provisions of the Anthrax Order are adopted promptly, the dangers from recurrence of anthrax as a result of the first case are remote.

In cattle and sheep there are no distinctive or suggestive symptoms during life except a high temperature, which may exist several hours before death, but in almost every case illness is so short that the animal is found dead. Pigs usually have very much swollen necks, which cause loud breathing. Horses are affected in various ways, but there are no diagnostic symptoms. If it is practicable, the subjection of the constituents of the various cakes when in the moist or semi-liquid state to a temperature of 212 degs. Fahr. for five minutes would remove all possible danger from this source. Indian and other meals containing anthrax spores in a dry state would require a much higher temperature to render them safe.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an inch.

By Messrs. STRIDE & SON.

MADAMS, SCOTLAND, UPPER AND LOWER NORTH PARK FARMS, MIDHURST, SUSSEX.

By Mr. W. BAINBRIDGE.

WALTON HALL, WARRINGTON.

THURSDAY, NOVEMBER 14, 1907.

OWING to alteration and re-organisation of the Walton Herd of Pigs, owned by Sir Gilbert Greenall, Bart., a Second Important Sale for this season, consisting of upwards of
100 HIGH-CLASS LARGE AND MIDDLE WHITE PEDIGREE BOARS, SOWS, GILTS, and YOUNG PIGS, including many winners and descendants of winners from this celebrated herd, will take place on Thursday, November 14, 1907.

Further particulars and Catalogues of W. BAINBRIDGE, Land Agent, Walton House, Warrington.

Forthcoming Sales.

Owing to alteration and reorganisation of Sir Gilbert Greenall's well-known Walton herd of pigs, a second sale will be held at Walton Hall, Warrington, on Thursday, November 14, when Mr. W. Bainbridge will sell 100 Large and Middle White pigs, including many winners and descendants of winners from this famous herd.

Mr. Gavin Low's next sale of Irish store cattle will take place on Thursday next at 50, Prussia Street, Dublin, the catalogue consisting of 12,000 head, comprising Polled bullocks, Horned bullocks and heifers, Aberdeen-Angus and Hereford crosses two to three years old, also a large entry of young stock, including over 190 choicely bred Aberdeen-Angus and Hereford cross bullocks and heifers seven to eighteen months old.

On the 20th of this month Mr. E. G. Hothersall, auctioneer, of Preston, will bring under the hammer at Lower Burrow Farm, Scotforth, near Lancaster, and Mr. C. J. Tong, of Hambleton, near Poulton-le-Fylde. There will be a luncheon at 11.30, and the sale will commence at one o'clock. Catalogues can be had of the owners or the auctioneer.

Sale of Sheep at Ashford.

The demand for Kent rams was very fair at Ashford Market on Tuesday, when Messrs. W. and B. Hobbs disposed of numerous consignments. Of these, ten of Mr. Alfred Amos's registered tegs realised a total of £47 10s., or an average of £4 15s. per head, with a range of prices of from £4 to £7 5s.; nine of Mr. T. Vicker's pure-bred Kent tegs, with a range of from £3 10s. to £5 15s., realised a total of £41, or an average of £4 11s. per head; a consignment of fourteen pure Kent tegs from Mr. A. Sutton's flock realised £48 10s., or an average of £3 9s. 3d. per head; a few of Mr. Ashley Dodd's Kent ram tegs fetched from £2 to £3; and Mr. C. Bates' grass-fed Kent tegs made from £2 5s. to £4 15s. A very small, but very useful, lot of Kent ram tegs from Mr. T. Hills's flock made from £3 5s. to £4 15s.

The Decadent Thoroughbred—"Good" and "Bad" Relative Terms—Bad Horses—A Reason—Pedigree—Selecting a Sire—Pedigrees of Sires.

The Decadent Thoroughbred.

SOME writers and speakers—they are generally men with a theory to propound—are never tired of denouncing the Thoroughbred and all his works. We are treated (?) to lugubrious discourses as to the evil effects of short distance races and the training of two-year-olds, and it is very curious that those gentlemen who write the most strongly against the abuses of our present system and their results know very little of the history of the Thoroughbred horse. We are told that it is no matter whether a horse has upright shoulders, long weak pasterns, and indeed, all the faults of conformation he can have, so long as he is able to win a five furlong race. Of course, this is an exaggeration, as so many strong statements are. It surely need not be insisted that a horse's conformation must be somewhat on correct lines to enable him to gallop at any pace, and to have good action a horse must necessarily be truly shaped. But I am not going to assert that the Thoroughbred is all we could wish him to be. I have always held that, taking one year with another, our Thoroughbred horses show no real deterioration. We have good years and we have bad years. We always have had, and we always shall have. As there were brave men before Agamemnon, there have been bad Thoroughbreds before the present year of grace, in which, I am sorry to say, there are a lot of bad ones.

"Good" and "Bad" Relative Terms.

I WONDER how many men pause to consider what a very little difference there really is between a good Thoroughbred and a bad one; that, in fact, as applied to a good year or a bad year, the terms are relative? This may at first sight seem a contradiction, but it is not. The test by which we try the Thoroughbreds of one year with the Thoroughbreds of another is racing, and in racing half-a-dozen lengths mean a good deal. But the best horse of a bad year, though infinitely inferior to the best horse of a good one as a racehorse, may be little or no worse for general purposes. I mean that he may be as good, and that he probably is as good, in every respect, speed alone excepted. This is a point that is not sufficiently considered by the critics of the Thoroughbred.

Bad Horses.

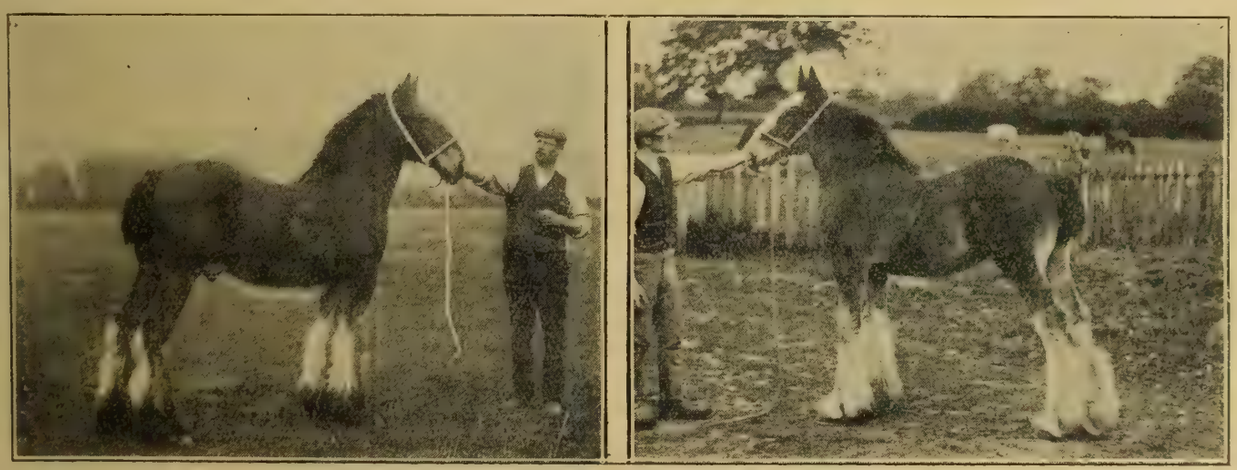
I HAVE already said that we have a great number of very bad Thoroughbred horses at the present time. I may go even further than that, and say that we have a very large proportion of bad Thoroughbreds at the present time. Such a statement would not be difficult to prove, but this is neither the time nor the place to give an analysis of the form of horses. At the same time we have several very good horsee, as good horses as ever we had, always taking an average of years in making the estimate, which is the only fair way. Men who jump to a hasty conclusion say two-year-old racing and short distance races are the cause of the falling off. But in the halcyon days of which they love to talk, two-year-old racing went on uncontrolled from February to the end of the season, and there were half-mile selling handicaps. I think we must look to something else than our racing methods for a reason for the numerous bad Thoroughbreds we hear about and see.

A Reason.

I HAVE spoken on a former occasion of the foolish way in which yearlings are forced with stimulating foods to secure growth—how some breeders force them as if they were bullocks destined to early maturity and the shambles. This fat has to be got off, of course, to the injury of the legs, and the longer the operation of getting the fat off is postponed naturally the greater the strain and more difficult it will be to get off. This system no doubt is injurious to the young horse, and I personally never could see the use of putting fat on just to take off. A superabundance of fat never deceives a good judge, and excessive growth at an early age is not an unmixed benefit, even from the racing point of view. Balance is more conducive to speed than size, a fact which we see exemplified every day and times in a day. But we must go further back to find the root of what mischief there is. Not many years ago I was standing at the ring side with a friend, who is one of the best judges of horses I know, and he expressed his disappointment at the poor lot of horses that appeared in the ring, summing them up graphically as "a lot of bad horses with good pedigrees" Here is the root of the matter. Mares are mated with fashionable sires, with a view to the sale ring, and in the sale ring it succeeds—for a time.

Pedigree.

THIS fashion in pedigree is decidedly an evil, but curiously enough, though men talk about the evil, more or less in whispers, *bien entendu*, they seem to forget it when the time comes round to buy. At least many of them do, and the very fact of a man not having a long purse makes him frequently get hold of a really good horse in spite of himself. A high-sounding pedigree, he soon learns to know, means spending a great deal of money, and not always securing a good animal. For a pedigree may be as fashionable as you please and yet may not be a good one. A mare may be mated with the best horse in the world and the produce be valueless, simply because the strains do not nick. I have a great objection to giving instances, because one should always write carefully about any man's private business lest by any means one should do him an injury. But Sir Tatton Sykes' yearlings of 1904 form such a strong proof of my contention that I cannot help referring to them. The unfashionably bred Spearmint—no one could call his dam, Maid of the Mint by Minting, her dam Warble by Skylark, a fashionably-bred mare—brought the lowest price of the nine sold, yet he won four times more than all the rest put together. Nor does this craze for fashionable sires prevail amongst Thoroughbreds alone. Every other breed suffers from it more or less, and the lighter breeds more than the heavy ones. Hackneys have certainly suffered greatly; so have Hunters, and cases could be found amongst Cleveland Bays and Yorkshire Coach Horses.



Selecting a Sire.

I THINK most practical men will agree with me that in selecting a sire the breeder should devote a great deal of attention to conformation. It should be unnecessary to urge the necessity of this, but it unfortunately is not. For example, if a Hackney wins a prize or two in good company and has extravagant action, he will meet with a lot of patronage, and many breeders will never give a thought to whether he goes straight or not, or to whether he is likely by his shape to nick with their mares. The consequence of this policy is found in the number of upright shouldered, "destiny" horses, that it is impossible to get anything approaching a remunerative price for. It is, of course, not so easy to prove cases of this kind with a Hackney as it is with a Thoroughbred, for there are not so many reliable data to go upon, and a very important consideration—one, too, that is frequently lost sight of—is that practically every Thoroughbred is registered, whilst only the best of the other breeds, or, at any rate, only those of which the owners have a high opinion, find a place in the respective Stud Books.

Pedigrees of Sires.

THERE is one maxim which stands out as proved by experience. The horse with a long pedigree—a horse that is descended from a long line of illustrious ancestors—is the most impressive sire, and therefore care should be taken to select a horse of undoubted descent. But I very much question whether what I may call individuality of any ancestor more than six generations back has a marked effect on the young horse. Sometimes one may think one sees it, but practically I think that so far as individual traits are concerned they may be said to die out in six generations. This, however, by no means implies that a horse seventh in direct descent from a carting mare, with six top crosses of Thoroughbred blood, would make a good hunting sire. He might show no signs of his carting ancestress—he probably would show no such signs. But he would not be such an impressive sire as, for instance, the Arab, who is the most impressive sire in the world, a fact owing to his exceptional purity of breeding.

THE LOOKER-ON.

TWO PRIZE-WINNING SHIRE FOALS.

A Colt Foal by Redlynch Forest King out of Dorothy of Waresley, winner of First Prizes at the Northampton, Essex, Bedfordshire, and Tring Shows; First Prize and Cup at Hatfield and Waltham Cross Shows; and Second Prize at Peterborough. Bred by Mr. Nicholson, of Leek, and the property of Mr. J. G. Williams, Pendley Manor, Tring.

Filly Foal by Sterling Jameson, dam by the Sterling Harold's Last. Bred by Mr. Egerton Orme, Ash Etwall, Derby. This foal has won the following prizes:—Two Firsts, Eadie Cup and Champion Cup, at Tutbury; Two Firsts, Whitehurst Cup and Society's Cup, at Belper; Three Firsts, Whitehurst Cup and Bennett Cup, at Derby; and First Prize at the Peterborough Show.

The Midland Railway Company have made every arrangement for the convenient and careful transit of exhibits to and from the International Poultry and Pigeon Show at the Crystal Palace, Sydenham, on the 12th, 13th, and 14th inst. For the convenience of exhibitors special through vans will be run to the Crystal Palace station on Monday, November 11, by various special trains, whilst consignments from the branch lines and intermediate stations at which the specials do not stop will be placed in these through vans at the various junctions, thus ensuring direct transit. Rates for the conveyance of exhibits, together with particulars of special trains, can be obtained at the various stations on the line.

WHICH IS THE BEST SEPARATOR?

This is a question intending purchasers of a Separator often ask themselves, when reading or hearing the glowing accounts given by various makers with reference to their machines, each of which is claimed to be *the* best.

We might be tempted to say the same of our "HELICE" Separators, but bearing in mind the saying that "Self praise is no recommendation," we have arranged with our agents to submit one of our machines for trial, free, to any bona fide enquirer. If you are going in for a Separator, send us a P.C. *now*, stating capacity of Separator required, and name of your Implement Dealer.

The "HELICE" is not the lowest in price, but it is *the cheapest* when materials, workmanship, durability, and efficiency are taken into consideration.

Users all over the globe have said it, and we are sure you will agree with them after having tried one, that the best Separator of all is—

THE HELICE!

SHEEP.

Notes and Jottings.

THE Southdown Sheep Society's council meeting, held last week, was a memorable one, for we understand that no less than eighty-one new flock-owners were admitted into membership. So large an increase in the membership of any society is a matter of great interest; it shows that those who are interested in this particular breed have realised the advantages of becoming members of the society, and so large an accession of strength is altogether, we think, without parallel.

IT may be that a considerable number of these new members have been obtained by reason of the determination of the council to close the Flock Book at the end of the current year. Be this so or not, the fact of so many breeders becoming members of this particular society must be to the advantage of the breed.

THE question as to whether or not the Flock Book should be closed, or, indeed, whether this or any other flock book should be closed is a matter upon which great difference of opinion exists. There are several ways in which the same object could be obtained without actually closing the book, but the Southdown Society has decided to take this step. It is hoped that it will be one that will work to the advantage of the breed, but there is room to doubt whether it would not have been far more to the advantage of the breed for the Flock Book to have remained open with very stringent conditions of entry.

THE South Devon sheep-breeders, at their meeting held on Thursday last, received a report which was most satisfactory, in connection with the progress of their breed during the past five or six months, for during that period there had been exported to New Zealand a consignment of sheep numbering thirty-one, which is the largest consignment of South Devon sheep ever sent out of this country.

THE above reference to the reports of three meetings of sheep societies held recently, all tends to show how rapidly the membership of these societies is increasing, and also proves the great value of the work that these societies are doing for the respective breeds which they represent.

THE ability of the individual to push his particular breed in the world's market is very limited, but when aided by the co-operation of all who are interested in the breed, a society representing such combination can undoubtedly, with greater effect, bring forward and push to the front the interests of the breed it represents.

A POINT that is worthy of consideration is whether or not the combined Sheep Breeders' Associations, as represented by the National Sheep Breeders' Association, are doing all they St. Albans, their purchaser being Mr. D. MacClenan, who was exporting them to Uruguay.

FLOCKMASTERS have been urged, in these notes quite recently, to see that no opportunity is lost to prevent the spread of lameness or footrot amongst their flocks. Unfortunately the period of wet and damp weather experienced recently has enabled this disease to spread very rapidly, and several large flock owners, with whom the writer has come in contact during the past week, have informed him that there is plenty of work to be done in looking after lame sheep.

WHETHER or not the exposure of such sheep in the public markets should be prohibited is a question upon which there would doubtless be great difference of opinion, but it does seem exceptionally hard to find that owners of sound flocks run great risk of having their flocks infected, by reason of sheep with lameness (it may be foot rot or other lameness), being allowed to be exposed for sale in the public market, or being permitted to travel to and fro on the public highway.

FEW but those who have foot-rot in their flocks can ever realise the enormous amount of trouble, cost, and loss that such a disease occasions in any flock that happens to become infected with it.

IT is a well-known fact that to secure the most profit out of any class of live stock the first essential is that that stock shall be kept in a thoroughly healthy and good condition, and consequently, no matter how trivial the ailment may be, any stock that is suffering in the slightest degree is stock that is not doing its best for its owner, and neither is that owner doing the best for himself by allowing any such ailments to remain unattended to or unchecked.

The Lonk Shearling Ram shown above is the animal with which Mr. Edward Smith won a First Prize at the Royal Lancashire Agricultural Society's Show this year.

THE Kent or Romney Marsh Sheep Breeders' Association at its last meeting received a most satisfactory report. Eleven new members were elected, eight of which were owners of flocks. Five of these flocks, however, will not be eligible for registration until the year 1910, for under the conditions of entry of this society it is necessary that before a flock can become eligible for inspection and registration, only registered sires must have been used in that flock for the previous four seasons.

ANOTHER item in connection with this council meeting, which is of interest to all who are breeding Kent or Romney Marsh sheep, is that since August 27 last, 333 export certificates had been issued for sheep sent abroad, 190 being for rams, and the remainder for ewes.

IN addition to this large number being sent, the secretary also reported that he had received that morning another application for forty export certificates, ten of which were for rams, and thirty for ewes, the whole of these being sold from the flock owned by the Earl of Verulam, at Gorhambury, should do, or could do, in respect to securing greater freedom of trade, or of conditions of importation of stud sheep into those countries which at the present time are large customers for this class of stock.

IT was mentioned at the meeting of the Kent Sheep Breeders' Association how essential it was that some renewed efforts should be made to secure, if possible, some reduction of the lengthened period of quarantine enforced by the Australasian Colonies against British sheep imported into those Colonies.

THE subject is one that has been considered several times, but in view of the energetic action of our Board of Agriculture in stamping out sheep scab, there surely may be a chance that now that sheep scab has been practically got within control in this country, and that there is no possible danger of its being exported with stud sheep, that some reduction of this long period of quarantine may be secured through the united efforts of the whole of the Sheep Breeders' Associations of this country.

Southdown Sheep Society.

The decision of the Southdown Sheep Society to close the Flock Book at the end of the present year against the further admission of unregistered sheep has brought about a rush of flockmasters anxious to register their flocks, and at the last meeting of the council no fewer than eighty-one new members were elected.

The council having decided that it was desirable to inspect every flock tendered for entry in the Flock Book, arrangements were made for the inspection of the whole of the flocks belonging to new members.

At the same meeting the matter of prizes for Southdowns to be offered by this society at country shows in 1908 was discussed, and it was decided to renew their offer as in the year 1907, with the addition of a special prize of £5 5s. at the Sussex County Show for the best pen of nine Southdown ewes or ewe lambs. The complete list of prizes to be offered by this society for Southdowns in 1908 will therefore be as follows:—

ROYAL AGRICULTURAL SOCIETY.—Champion gold medal, value £10 10s., or £10 10s. in cash, for the best two-shear or shearling ram; silver medal for the best pen of ewes or ewe lambs; prizes of £10,

£5, £3, for two-shear rams; prizes of £10, £5, £3, for pens of three shearling rams.

ROYAL COUNTIES.—Champion gold medal, value £10 10s, or £10 10s. in cash, for the best ram or ram lamb; silver medal for the best pen of ewes or ewe lambs.

BATH AND WEST.—Prizes of £10, £5, £2, for two-shear rams; silver medal for the best ram or ram lamb; silver medal for the best pen of ewes or ewe lambs.

SUSSEX COUNTY.—Champion gold medal, value £10 10s., or £10 10s. in cash, for the best ram or ram lamb; silver medal for the best three ewes or ewe lambs; special prize of £5 5s. for the best pen of nine ewes or ewe lambs.

EAST KENT, ESSEX, GLOUCESTERSHIRE, OXFORDSHIRE, SUFFOLK, TUNBRIDGE WELLS.—Silver medal for the best ram or ram lamb; silver medal for the best pen of ewes or ewe lambs.

Inspection certificates were submitted in respect of eleven new flocks, and, as the report in their case was satisfactory, the flocks were accepted for registration in the Flock book.

A letter was read from Mr. Jeremiah Colman, stating that he accepted with pleasure the invitation of the council to become president-elect.

A report was received from the General Purposes Committee detailing the arrangements which they had made in regard to advertising the closing of the Flock Book against unregistered flocks, and advertising the society in foreign and colonial papers.

The representatives of the Southdown Sheep Society on the Council of the National Sheep Breeders' Association for 1908 were unanimously elected as follows:—Mr. Herbert Padwick (vice-president), Sir Thomas Barrett-Lennard, Bart., Mr. Allan Cooper, and Mr. Henry Webb.

The report of the International Conference of Sheep Breeders held at Lincoln in June last was duly received, and, in compliance with a request from the association, the council suggested that Mr. Herbert Padwick should be nominated as president-elect.

Hampshire Down Sheep Breeders' Association.

A meeting of the council of the Hampshire Down Sheep Breeders' Association was held at Basingstoke on Monday, the Hon. A. H. Baring (president) in the chair.

After the reading and confirmation of the previous minutes and the announcement of apologies for absence from several members by the secretary, forty-five new members were elected. The annual meeting was fixed for Wednesday, December 11, at the Agricultural Hall, Islington.

The reports of the Editing and Finance Committees were presented and passed, and the secretary announced the issue of 440 export certificates, being an increase of about 200 on the past year.

It was decided to continue the shepherds' prize competition as before.

It was decided, on the motion of Mr. Kerr, to allot a registration number to every flock entered in the Flock Book.

It was decided, on the motion of Mr. White, to adopt an official tattoo earmark consisting of the letters H.D.

It was resolved to present prizes to the amount of £28 for Hampshire Downs at the Royal Show to be held at Newcastle. The business of the meeting concluded with a vote of thanks to the chairman.

Old Barton Lincolns for the Argentine.

Mr. John Anderson, of Chapel Farm, Barton-on-Humber, Lincolnshire, shipped on the 26th ult. thirty specially selected Lincoln yearling rams per Messrs. Lamport and Holt's steamer *Romney*, from Alexander Dock, Liverpool, to the order of Mr. Robert Taylor, for Buenos Ayres.

The annual autumn clearance fair for sheep and young cattle at Kirkby Stephen took place on Monday, when the show of sheep was considerably larger than last year. Prices:—Blackfaced ewes, 20s. to 28s.; wether lambs, 8s. to 14s. 6d.; gimmer lambs, 12s. to 17s. 6d.; tups, £1 to £5; grey-faced wether lambs, 23s. to 25s.; gimmer lambs 27s. to 28s.; gimmer shearlings, to 42s.; Wensleydale shearling tups, £5 to £9; tup lambs, £3 to £4; young bullocks, about £5; yearlings, £6 to £6 10s.; two-year-olds, £9; three-year-olds, £11 to £12; gelt cattle, £12 to £13.

At Grantham October Fair there was a fairly good show of cattle, but trade was slow except for young stores. The supply of sheep was small, and there was an average show of horses. Quotations: Strong three year-old bullocks made up to £18 each, two-year-olds £11 to £12, yearlings £5, year-and-a-half-olds £7, milk cows £18 to £22, heifers in profit up to £18 each, in-calf heifers to £17 each. Horses: Good Irish colts £25 to £30, ponies £14 to £18. Wether sheep 50s. to 55s. each, lambs 35s. to 40s. each.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

Among other matters considered at the last meeting of the Darlington Chamber of Agriculture was the subject of rural education, and the following resolution was carried:—"That this Chamber of Agriculture, in supporting Mr. Dymond's (the school inspector) report, make the following recommendations: That in considering the suggestions for partial exemption in certain cases in rural schools after the age of twelve years, due regard should be given to the high standard of education obtaining in the county; that more latitude should be given as to the time of the holidays; that first-hand observation of such things as form the rural surroundings of the school, both natural and industrial, should be introduced; and that in rural schools this should take the place of hygiene and temperance in standards 6 and 7; that the younger children should be encouraged to bring flowers, leaves, and other natural objects to school, and to draw them, to germinate seeds, &c., and that the older scholars should form collections of grasses, weeds, and seeds, injurious insects, &c.; that the reading, arithmetic, geography, drawing and other lessons should have closer reference to the surroundings and the probable future of the scholars." The question of the formation of an independent agricultural party in Parliament was also considered, and it was resolved that the Chamber support the views which it was proposed to bring before the Central Chamber to inaugurate such a party.

At the last meeting of the Buckinghamshire Chamber of Agriculture, Mr. W. Weston introduced the subject of the great desirability of the Central Chamber of Agriculture bringing fresh pressure to bear upon the Government to procure information as to the produce of other countries. Seeing that only one-sixth part of the food supply was raised in this country, it was of the greatest importance, he said, that the farmers should be in possession of official information as to the yield in other countries. We had consuls and a lot of secret service money was spent on other matters, but it did appear to him that the interests of agriculturists were sadly ignored. He hoped that the Central Chamber of Agriculture would impress upon the Board of Agriculture the importance of obtaining and disseminating throughout the country early estimates of the crops and yields of foreign countries, so that the English farmers might have the opportunity of benefiting from the information. He moved a resolution to this effect, and it was unanimously adopted, the members expressing their cordial approval of the proposal.

At a largely attended meeting convened by the Mayor of Blackpool, Councillor S. Hill, and held in the Town Hall on Tuesday, it was decided to re establish the Blackpool Agricultural Society and to hold annual shows. It is seven or eight years since the old society fell out of existence, but the interest displayed at the above meeting was such that a strong committee was at once formed to carry the movement forward. The scheme is receiving influential support, the Mayor being assisted by numbers of aldermen and members of the Town Council.

The council of the Gloucestershire Chamber of Agriculture voted 15 guineas towards the local expenses of the visit of the Royal Agricultural Society to Gloucester in 1909, and this was approved at the last general meeting of the Chamber. At this meeting several subjects were discussed amongst them being the draft Larceny Bill which was heartily approved of. The Workmen's Compensation Act was also dealt with, and the following resolution was passed:—"That in view of the fact that the Government has, by the Workmen's Compensation Act, 1906, rendered it necessary for employers to insure against accidents of all kinds happening to their employees, the Government ought, through one of their departments, to afford facilities for such insurance without the necessity of having recourse to insurance companies." Whilst in the discussion on agriculture education the Vice-President, Mr. C. Bathurst, referred to the report of the Departmental Committee on Agricutural Education, not yet issued, and counselled members to be careful how they received it. He thought some of the evidence given was wholly wrong and misleading, and that the witnesses, so far as they were allowed to express their opinions, expressed opinions which were not representative of the agricultural community as a whole.

Mr. Victor Cavendish, speaking at a banquet of the Matlock Farmers' Association on Thursday, referred to the Small Holdings Acts, and said he disapproved of the suggestion in the House of Commons debates that agriculturists were dead alive and not up to their work. However, the Act was law, and he hoped they would try to make it a success, though he doubted whether it would lead to any fundamental changes. He believed the success of agriculture could be better secured by Farmers' Associations. He suggested that pedigree breeding of stock was vital, but could hardly imagine its success among the pots and pans of small holdings and allotments. Good cattle rearing and horse breeding was of the utmost importance, however, and it would be found to pay by even the small holder to have pedigree stock rather than the common stock so prevalent.

The Banbury Agricultural Association are to be congratulated on having had a successful year, for at the annual meeting a balance in hand of £35 4s. 8d., as compared with £22 14s. 4d. at the beginning of the year, was reported. Mr. J. F. Starkey was unanimously elected president for the ensuing year, and Mr. Ralph Cartwright and Captain Yates were added to the list of vice-presidents.

On the proposition of Mr. T. Christian the Fareham and Hampshire Farmers' Club, at their last meeting, passed the following resolution:—"That this club heartily approves an independent Agricultural party being formed in the House of Commons, and urges the Central Chamber of Agriculture to consider the best mode of creating and maintaining such a party." Mr. Christian expressed the opinion that there was scarcely an intelligent agriculturist in the land who would not approve of the formation of such a party as proposed. Agriculture was left out in the cold in the House of Commons because farmers were not represented there. He urged the necessity for sinking their political differences and working with more co-operation.

Prices of Irish Agricultural Produce.

A return of prices of crops, live stock, and other Irish agricultural products was issued last week. Summing up the changes that have taken place since 1840, the return says that four periods may be distinguished.

First, the period from 1840 to 1852, in which, excepting wheat, prices were low, and fluctuated considerably.

Second, from 1853 to 1865—the period of rising prices, and in the cereals, of high prices.

Third, from 1865 to 1884—the period of high prices generally; in these years, and especially from 1871 to 1878, there was a remarkable concurrence of high prices among the different agricultural commodities After 1878 considerable fluctuations occurred, and the level of prices fell somewhat lower until 1884.

Fourth, there is the period from 1884 to 1907. This period began with the great fall in prices from 1884 to 1887. From 1887 to 1896 prices showed considerable fluctuations, and in the years 1892 to 1894 the level of prices was in several commodities lower than from 1885 to 1887.

During the past ten years, 1897 to 1906, the level of prices has to some extent improved, and there has been a more general stability in prices than in the ten years preceding.

The coroner for South-East Warwickshire held an inquest at Warmington on Thursday on Mr. Owen Wady, aged 59, of Warmington, one of the best-known farmers in Warwickshire. The deceased was gathering pears, and, ascending a ladder reared against a tree, missed his hold, falling thirty feet to the ground, and injured his spine. A verdict of accidental death was returned.

Owing to the heavy rain last month the farming outlook in the Wigton district of Cumberland is, says the *Manchester Courier*, quite a deplorable one. On many farms there is much outstanding grain, and with the blackened "stooks" in many cases standing in water, the corn is beginning to sprout in the ear, and the damage is great. In the higher districts not half the cereal crops have yet been harvested; in fact on some backward farms cutting operations have not yet been completed. Potato crops have also suffered from the continued wet.

At the special meeting of the Worcestershire County Council on Monday, the Gooseberry Mildew Committee stated that the Board of Agriculture had been asked to make an order for the destruction of bushes affected with gooseberry mildew, and recommended that compensation should not be paid for diseased bushes, only for sound bushes or crops damaged in the process. In their report the committee said they informed the Evesham deputation that they were unable to recommend the council to resolve to pay any compensation for diseased bushes it might be necessary to destroy, but if they considered damage was done to sound bushes or to any crops in the destruction of diseased bushes compensation should be paid. An amendment urging the payment of compensation was before the meeting, but ultimately the report of the committee received adoption.

LIST OF

FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d. to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock, The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits.—Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training and Trimming Trees and Shrubs. By D. Grant McIver. A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit.
Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24.—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

THE FARM.

No. 44.—The Agricultural Annual and "Mark Lane Express" Almanac.
The Farmers' Red Book. Brimful of Facts and Figures relating to the Farm and Markets. Compiled by well-known Writers on Agricultural Subjects. Profusely illustrated. 272 pp., 8vo. Price 1s., by post 1s. 4d. Published early in December each year. L.

LIVE STOCK.

No. 47.—Rational Pig-Keeping.
To Ensure Profit. Revised Edition. By W. J. Malden, late Principal Colonial College, Hollesley Bay, Suffolk; Superintendent Royal Agricultural Society's Experimental Farms, Woburn; Professor of Agriculture, Downton College; Agricultural Superintendent, Royal Dublin Society, etc., etc. Illustrated. Dealing with Principal Breeds, Selection of Stock, Housing, Foods, Breeding, Management, etc. In paper, price 1s., by post 1s. 3d.; in cloth, price 2s., by post 2s. 3d. L.

No. 48.—Goat-Keeping for Amateurs.
A practical Manual on the Management of Milch Goats. By H. S. Holmes Pegler. Illustrated with four full-page plates, and other engravings. In paper, price 1s.; by post, 1s. 2d.

No. 49.—Horse Buying and Management.
A Practical Handbook for the Guidance of Amateurs in Buying a Horse, with Illustrations as to its After-management. By Henry E. Fawcus. Illustrated. In paper, price 1s.; by post, 1s. 2d. G.

No. 51.—Diseases of Horses.
Their Causes, Symptoms, and Treatment. For the Use of Amateurs. By Hugh Dalziel. In paper, price 1s.; by post, 1s. 2d. Cloth gilt, price 2s.; by post, 2s. 2d. G.

No. 52.—Book of the Pig.
The Selection, Breeding, Feeding, and Management of the Pig; the Treatment of its Diseases; the Curing and Preserving of Hams, Bacon, and other Pork Foods; and other information appertaining to Pork Farming. By Professor James Long. Fully illustrated with Portraits of Prize Pigs, Plans of Model Piggeries, &c. New and Revised Edition. In cloth gilt, price 6s. 6d.; by post, 6s. 10d. G

No. 52d.—Live Stock Handbooks.
Illustrated. Cloth gilt, lettered, 3s. 6d. each, post free 3s. 10d.; or the Set of 5 vols., 17s. 6d., carriage free V.

1.—Sheep: Breeds and Management. By John Wrightson, M.R.A.C., F.C.S., &c.
2.—Light Horses: Breeds and Management. By W. C. A. Blew, M.A., and others.
3.—Heavy Horses: Breeds and Management. By Dr. George Fleming, C.B., F.R.C.V.S., and others.
4.—Cattle: Breeds and Management. By William Housman.
5.—Pigs: Breeds and Management. By Sanders Spencer. V.

GARDENING.

No. 65.—Multum-in-Parvo Gardening.
Or, How to Make One Acre of Land produce £620 a year, by the Cultivation of Fruits and Vegetables; also, How to Grow Flowers in Three Glass Houses, so as to realise £176 per annum clear Profit. By Samuel Wood, Author of "Good Gardening," &c. Sixth Edition, Crown 8vo, sewed. 1s. C. I.

VEGETABLES AND FRUIT.

No. 70.—Tomato-culture for Amateurs.
A Practical and very Complete Manual on the Subject. By B. C. Ravenscroft. New Edition. Illustrated. In paper, price 1s., by post, 1s. 2d. G.

POULTRY.

No. 76.—Paying Poultry.
A Handbook for all Interested in Poultry keeping. Illustrated. 164pp. 8vo. In paper, price 1s., by post 1s. 2½d.; in cloth, price 2s. 6d., by post 2s. 9d. L.

No. 77.—Popular Poultry-Keeping.
A Practical and Complete Guide to Breeding and Keeping Poultry for Eggs or for the Table. By F. A. Mackenzie. Second Edition, with Additional Matter and Illustrations. In paper, price 1s., by post 1s. 2d. C.

No. 79.—Profitable Poultry Farming.
Describing in detail the Methods that give the Best Results and pointing out the Mistakes to be avoided. By J. H. Sutcliffe. Illustrated. In paper, price 1s; by post, 1s. 2d. G.

BEES.

No. 81.—Book of Bee-Keeping.
A very Practical and complete Manual on the Proper Management of Bees, especially written for Beginners and Amateurs who have but a few Hives. By W. B. Webster, First-class Expert, B.B.K.A. Fully Illustrated. In paper. Price 1s., by post 1s. 2d.; in cloth, price 1s. 6d.; by post 1s. 8d. C.

FERTILISERS AND FEEDING STUFFS.

No. 84.—Artificial Manures.
How to Make, Buy, Value, and Use. A Hand-Book for Agriculturists, Chemical Manure Manufacturers, Gardeners, and others concerned in similar pursuits. By Alfred Sibson, F.C.S., Consulting and Analytical Chemist, Author of "Agricultural Chemistry," "Everyday Chemistry," "Food, Feeding, and Manure," "A Lecture on Superphosphate," &c. Late (for eight years) Assistant Professor of Chemistry in the Royal Agricultural College, Cirencester, and First Assistant to Dr. Voelcker's Private Laboratory. Formerly Student of the Royal College of Chemistry and the Birkbeck Laboratory of University College. Revised and Rewritten by the Author and A. E. Sibson, F.C.S. Third Edition. 143 pp. 8vo. In cloth. Price 1s., by post 1s. 2½d. L.

FODDER.

No. 87.—Fodder Crops.
Uses. By C. G. Freer Thonger, M.R.A.C., F.C.S. 53 pp. 8vo. In paper. Price 1s., by post 1s. 1½d. L.

ACCOUNT BOOKS.

No. 106.—Utility Poultry-keepers' Account Book.
A very Useful Book for Amateur Poultry-keepers, showing at a glance the Daily, Weekly, Monthly, and Yearly Statement of Profit or Loss Account. By A. Hunt. Second Edition. In stout boards, price 2s., by post 2s. 3d. L.

No. 107.—Jee's Milk Book.
An Account Book for Farmers, Dairymen, and Consumers, showing Profit or Loss at the end of each Week; can be used for a period of three years. Price 2s., by post 2s. 3d.

LAW.

No. 108.—Law for the Householder. By a Barrister-at-Law. A book written for the layman and not for the lawyer, its object being to supply ready information to the householder, on matters of direct personal interest to himself. In paper, price 1s., by post 1s. 2d.

MISCELLANEOUS.

GALVANISED CORRUGATED SHEETS, best quality, 24 gauge, 14s.; 26 gauge, 15s. 6d. per cwt.; second quality, 24 gauge, 13s.; 26 gauge, 14s. per cwt. BARBED WIRE, English make, 10s; foreign, 14s. per cwt. Wrought Iron Standards, 6ft. 6in. long, 1s. 3d. each. Roofing Felt, Wire Netting, Black Varnish, Red Oxide Nails, Bolts, Nuts, Screws and Washers.—M Dept., BUTLER, Bell Works, Wolverhampton. Established 1828.

OIL ENGINES.—Simple and reliable. Prices from 10 guineas. No lamps after starting. Lists free; no fancy prices.—CLIFFE OIL ENGINE WORKS, Morton Bingley.

RABBIT CATCHERS, Bird Catchers, Farmers' Sportsman Nets, Traps, Snares, Decoys. Every description Ropes, Tarpaulins, Rick Cloths. Illustrated Catalogue 1d. —YOUNG (M.L.E.), Net Trap Manufacturer, Crewkerne, Somerset.

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines, Thrashing Machines, &c. second-hand, for Sale, cheap, or to be Let on Hire-purchase Full list free. Inquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions.—HENRY LEWIS & SONS, Thames Bank Iron Works, Reading.

10,000 YARDS Strained Wire Fencing. Improved Steel Bulb Tee Standards. Low prices.—W. J. MULLINGS, St. Agnes Ironworks, Bristol.

TARPAULINS, for Waggons, Carts, Vans, Threshing Machines, &c. Black, Yellow, Green, or White. Waterproof Horse Cloths, Hay Sheets, Hay Cord, Sacks, Coal Bags, &c.—E. PARNALL & Co., Manufacturers, Bedminster, Bristol.

RABBIT NETTING.—Long Nets, with patent lines top and bottoms in Brown, Green, or Tanned. Special NETTING TWINES. List sample, free.—E. PARNALL & Co., Netting Works, Bristol.

BREWERS' GRAINS. — Dairy Farmers supplied by contract or otherwise. — Write for price to GEO. CRUTCHER, 195, Queen's Road, Peckham.

FARMERS' OIL COATS, 8/11; Sou'westers, 1/9; Overall Leggings, 2/9; Tarpaulin Sheets, 9 by 7, 12/6; Gig Rugs, 10/6; Army Leggings, 2 4. Carriage paid. Price List.—CARLISLE RUBBER COMPANY, Carlisle.

CATTLE FENCING. — 17-Strand Wire Rope, ⅜in. Diameter, 5s. per cwt.; Steel Water Troughs, dished, ⅜ in. thick, 2 ft. 6 in. × 1 ft. 6 in. deep, 7s. 6d. each.—ROSSE WORKS, Leeds Road, Bradford.

LADDERS, with wood sides, galvanised tube round, from 6d. per round, carriage paid.—JONES & Co., Sedgley.

GALVANISED Iron Mangers from 5s. each. Write for prices of stable fittings. — T. CHARLES, 10, Albert Embankment, London, S.E.

SACKS.—Sound, clean, once used, 280 lbs., 6½d.; 224 lbs., 5½d.; 140lb., 3d. each, carriage paid. Special Pig Meal, 12s. 240 lb., send for sample.—G. T. MURRAY, Green Lane, Stoneycroft, Liverpool.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Wire Netting.—Best Galvanised. Reduced prices per roll of 50 yds. 3 in. mesh, 2 ft., 4s.; 3 ft., 5s. 5d.; 4 ft., 7s. 2d.; 2 in. mesh, 2 ft., 5s. 1d.; 3 ft., 6s. 10d.; 4 ft., 9s. 2d.; 1 in. mesh, 2 ft., 8s. 5d.; 3 ft., 12s.; 4 ft., 16s. Seasonable Topics.

The Question of Rent.

WHETHER it would be possible to devise a scheme or sliding scale for the adjustment of farm rents, or even whether such a thing is desirable, is a question we leave open, but the system at present prevailing does not strike us as being altogether satisfactory. Just now things are better than they have been of late, prices are higher, and the outlook is more promising. Quite so, and while landlords think that they should share the increased prosperity by receiving more for the land, tenants consider that they should have full advantage of the better times to make up for past years of adversity. Each party looks at it from his own point of view, and we can hardly say that either is unnatural, as they both have their interests to look after. On the other hand, when times are bad and landlords return a part of the rent, they do it voluntarily, and are prompted doubtless by a spirit of generosity; but after all there is a flavour of charity about it, and when a man returns a portion of his due in a time of adversity it is not unnatural that he should expect a little more when things improve. It would seem that a more business-like way would be for rents to rise and fall in accordance with the price of agricultural products; but the question is a knotty one, and being suitable for discussion, perhaps some of our readers would like to express their views on it.

Mutual Help.

ONE of our correspondents recently deplored the lack of sympathy between farmers, and pictured a brighter state of affairs if, say, when one man had finished his harvest he would be more willing to lend his horses and wagons to assist a neighbour who might be behindhand. We realise the spirit in which the suggestion was made—pure neighbourliness and good feeling—and we admire it, but like Socialism, which in principle appears right and just, there is the possibility of the thing not working so well in practice as in theory. If every farmer was keen, alert, industrious, and persevering, they might help each other out with mutual advantage; but with human nature as it is, some men would never require help, while others would always be in need of it. In any district where climatic and other conditions are the same, the men who get promptly through the harvest and keep pace with the work are the keen farmers, and it is the sluggards who lag behind. To expect a man who has done his work to help another who has neglected his opportunities is like the kind of Socialism which uggests that the industrious should divide their earnings with the lazy. The idea is unpractical, and though we agree with mutual self-help, there must be modifications.

Aristocratic Dairymaids.

IF any young ladies of the smart set wish to bring their names prominently before the public, all that they need do is to enter as students in a dairy school and they can leave the rest to the daily Press (the halfpenny section). A short time ago Lady Helen Grimston, daughter of the Earl of Verulam, thought well to take a course of instruction at the County Dairy School at Chelmsford, and the fact was promptly made known to the world by the daily Press under glaring headlines; while one enterprising organ published a series of illustrations showing Lady Helen engaged in various dairying operations, as if there was something very wonderful about an earl's daughter learning how to make butter. For our own part, we congratulate Lady Helen Grimston on making herself practically acquainted with the routine of dairying, and if other daughters of nobility would follow her example they would be more usefully employed than playing bridge or mastering the art of "Diabolo"; but at the same time, if a lady of noble birth chooses to learn the work of a dairymaid, surely she is at liberty to do so without having fame thrust upon her by an enterprising halfpenny Press.

Rats, Birds, and Legislation.

THE Scottish Chamber of Agriculture recently passed a resolution that the attention of the Board of Agriculture be directed to the importance of taking legislative or other steps without delay, with a view to the destruction of rats and birds from which agriculturists suffer serious loss every year. Whether any suggestions we made as to what methods of destruction should be adopted we do not know, but if the Board acts on all the resolutions that have been passed by various agricultural bodies of late there will be no fear of its members joining the army of unemployed. Happily, perhaps, for its own sake, the Board is not easily flurried and carries its burdens lightly. But to return to the rats and the birds, legislation for their destruction is rather a novel idea, and if we should get an Order dealing with them it would probably cause more commotion than gooseberry mildew. Perhaps the agriculturists in the south have not so much faith in the Board as our friends in the north, but the farmers in Kent and the adjoining counties protect themselves against the above pests by means of rat and sparrow clubs, which are quite thriving institutions in many villages. At this time of the year rat and sparrow clubs are very active bodies, and reports reach us frequently telling of the number of rats' tails and birds' heads that are presented at the periodical meetings. As the Board may move slowly, we commend the idea to the Scottish Chamber of Agriculture.

Defenders' Expenses in Milk Prosecutions.

IT has been said that a defendant in a milk prosecution never gets off, but this by the way, and we fully agree with the resolution passed by the Scottish Chamber of Agriculture, to again impress on the Board of Agriculture the justice of claims by successful defenders in milk prosecutions to be repaid their expenses incurred in rebutting a presumption of guilt created against them by statute, and urge that legislation should be introduced for this purpose without delay. There is nothing about this but what is perfectly reasonable and fair, and with the law getting more stringent on one side, justice should certainly be done to the other. Because a man figures as a defendant in a milk prosecution case it by no means follows that he is guilty, and if on the other hand he succeeds in proving his innocence, it is quite unfair that he should be out of pocket by it. Indeed, it is an open question whether a successful defendant in a milk prosecution case should not be compensated for time and inconvenience, apart from purely out-of-pocket expenses.

Home-made and Factory Jam.

A SHORT time ago we ventured to suggest that housewives should take advantage of the plentiful supply and cheapness of plums by laying in a store of home-made jam instead of being entirely dependent on the grocer for this commodity. In doing this we are charged with making a "discovery" by a paper, which perhaps a few of our readers have heard of, called the *Fruitgrower, Fruiterer, and Florist*, which journal, by the way, sets itself up as being an omnipotent authority on all things horticultural, and it seems to take the greatest delight in criticising, always adversely, statements that are made in other journals. While giving the *Fruitgrower* credit for its extreme smartness we would in the interests of other journals besides our own suggest to our contemporary that it should not lay claim to *all* the knowledge but give other people credit for knowing—*well, just a little bit.* But to return to the jam. We willingly credit the skilled jam factor with making a wholesome and moderately cheap article, but any suggestion that home-made jam cannot be produced at a lower cost when fruit is plentiful and cheap shows a lamentable ignorance of the whole matter. "Comparatively few housewives can make jam in quantity that will keep," writes the *Fruitgrower*. What a reflection on the capabilities of British housewives! Cannot make a bit of jam even!

We should like to see our contemporary proving the statement, or trying to do so, before a score of ladies we could mention, armed with jam spoons. And again our contemporary asserts "that fewer still have the necessary storing places for their jams when they are made." However did they manage before jam factories sprang into existence? The *Fruitgrower* observes that "the skilled jam-maker of to-day substitutes the old-fashioned domestic source of supply." What a fund of knowledge there must be behind such a statement, and what nonsense it is! Jam is still made in thousands of British homes cheaper than it can be bought at the shop, and if it were made in thousands of others there would still be plenty of business left for the jam factor. We leave our readers to form their own opinion of a journal that goes out of its way to actually discourage such a useful home industry as jam making.

Should a Government Insurance Department be Formed?

THERE can be no doubt that the burdens of farmers have been increased very largely of late years by the money they have to pay in order to remove their responsibilities under the Employers' Liability Act to the shoulders of insurance companies, and at a recent meeting of the Canterbury Farmers' Club it was decided to suggest to the Central Chamber that an effort be made to induce the Government to establish an insurance department, where agriculturists and others could insure their employees at a moderate rate and on more favourable terms in respect of the older workmen than is now the case. Whether, of course, a Government department would be able to give better terms than an insurance company is in a position to do is a point at issue, but when we think of workmen in agriculture, age should certainly be considered in the rate of premiums, and, of course, the risks in some occupations are greater than in others. We do not think that agriculturists as a rule complain about the terms offered by insurance companies, but the matter is an interesting one, and we shall welcome expressions of opinion on it.

Cider and Cider Making.

IT is a common sight in the West of England just now to observe wagons and carts standing in orchards filled, or partly filled, with apples and pears that fall or are shaken from the trees o'erhead. These are for the cider mill, and the complaint this year is that apples are scarce, so that the amount of liquor made will doubtless be below the average. Most people know that there is cider and cider, and grave charges have been made—indeed, they are still made—about the unmentionable things that get picked up with the fruit in West Country orchards and pass along with the apples through the cider mill. But matters have improved of late, and the admittance on part of the most successful cider-makers that cleanliness and care in all things have had more to do with their triumphs than anything has not been without its effect. But there are various grades of cider in the West, and perhaps that over which the least trouble is bestowed is the "cider for the men." One needs educating to drink some of this liquor, which in certain cases is too much for even the hardened palate of the West Country labourer, and very different indeed is it to the cider one is in the habit of sampling at the Brewers' Exhibition or the Bath and West Show.

Agricultural Politics.

BY A LOBBYIST.

The New Agricultural Party.

At last we are within sight of the formation of an agricultural party. However, for the moment the Organisation Committee of the Central Chamber has in its suggestions gone rather beyond what is immediately practicable. Apparently, this body is possessed by the dream not merely of a party within Parliament, but of a party with a definite electoral machinery in the constituencies. Well, for awhile this is not realisable. I doubt, indeed, that though there are 150 Parliamentary divisions in which the agricultural voters are predominant, you would get a majority of the voters even in three of them to accept a candidate who held himself aloof from the distinctive partisan-issues of the moment and contented himself with a prosaic, humdrum programme of rural reform. It may be that the mere formulation of a set of interrogations for the partisan candidates does not yield much profit; it may be that the candidates answer in the affirmative without attaching much value to the pledge simply for the sake of gaining votes. However, in the House of Commons itself you might easily call into existence a solid phalanx of members pledged to act in harmony with the designs, say, of the Central Chambers themselves. Of course, this implies that those Chambers must have a clear conception of rural necessities and not be afraid to expound them. Those Chambers would then have to lead Parliamentary opinion instead of being, as they too often have been, a tepid uninspiring echo.

* * *

Those Admirable Purposes.

Now, I think the resolution which Mr. Bridgman, M.P., intends to move at the Birmingham Conservative Conference might at least provide the basis of a common policy. I pray no Liberal will be appalled by the origin of these suggestions. After all, a Conservative may be occasionally a wise reformer. First of all, Mr. Bridgman would facilitate the purchase of land by simplifying and cheapening the cost of transfer. Why, a couple of decades since this was the ambition of the united Liberal party. Cheapen and simplify the cost of transfer, make it less a harvest for the lawyers—so ran their anticipations in those days—you would usher in a new Jerusalem as roseate and happy as that of which William Morris sang. In the second place Mr. Bridgman would encourage co-operative agriculture by a grant out of the public funds. Now, the very language of the Small Holdings Act shows that this is an anxiety which has the sympathy of the Government. As a fact, an organised system of co-operative distribution is an inevitable and inherent factor in any successful scheme of *petite culture*; and a national endowment of such a system would be the first surety of that success. We cannot afford to permit this inevitable element of the new agrarian economy to depend upon a fluctuating, variable, voluntary sympathy. In the third place, Mr. Bridgman would relieve the land from a part of the weight it now bears of local and general taxation. Why there are at least a hundred Liberal M.P.'s who are convinced that this burden is the great enemy to many of their own ambitions. How can those ambitions be realised when the local guardians of the public purse are afraid of their responsibility for public expenditure being the subject of electoral criticism and, perhaps, of punishment. Why, the Radical will never realise his educational ideals so long as the State refuses to make the cost of that education a national charge.

* * *

Other Immediate Duties.

Of course, such a tripatite purpose as this will not be resounding enough for many politicians—for instance, for the bold-vision'd men who only desire to hit their sublime heads against the stars. It will be laughed to scorn by the politicians who are clamorous for what they describe as a bold and wide-sweeping scheme of land reform, and who believe that a just incident of such a scheme is a many-millioned policy of land nationalisation. It will not satisfy those who believe that the redemption of the countryside can only be secured by a complete scheme of Protection. The association of either such a purpose with the suggested organisation would, however, wreck the whole business. It is inevitable that this agricultural party must—when great and far-reaching partisan issues are debated, even though they have a direct influence on agriculture—be content with subordinating and, sometimes, of effacing itself. It must be, rather, content to associate itself with what I will call the intimate life of the farmer rather than with deep-delving principles and economics. As a fact, this tripartite purpose is only an evidence of what this party might accomplish; these three subjects do not by any means exhaust its potentialities. A prefatory anxiety should be to give a more practical character to the Board of Agriculture. At present it is little more than a skeleton; the new party should seek to give a useful rotundity to its shrunken framework. A second anxiety should be to secure a part of the proposed motor tax as a national contribution towards the maintenance of main roads. These provide an admirable field for the exhibition of intelligence and persistence, and, withal, are sufficiently far removed from the party area as to be uninfected with its bitterness.

* * *

The Organisation must be Flexible.

The supreme, gratifying point in the situation is that the farmers' organisations are now alertly awake to the fact that they must work out their own salvation—they must do something more than be loyal to a glib-tongued, ready-promising, acquiescing-in-everything partisan. Mr. Jesse Collings is right when he describes the method which, in its most practical moments, never does more than submit a series of cut-and-dried interrogatories, which in their formality sometimes permit of a deceptive answer. The farmers must be their own friends—there is no necessity in thus championing their own interests to be arrogant, assertive, and dogmatic. Indeed, it is necessary that the organisation should be flexible in its character and be wary of adopting sides on great Imperial issues. It must be content with seeking to benefit the farmer in what I have described as the intimate side of his business. Why this Small Holdings Act alone—with the possibility of its being worked in a manner unfriendly to the tenant-farmers—provides such a party with ample opportunities for vigilance.

* * *

Lord Carrington's Reassurance.

And here let me say how wisely-inspired Earl Carrington is in seeking to reassure the farmers that this Small Holdings Act will not be worked in a manner inimical to their interest. I do not say that the fear that the Act may become an instrument of danger or annoyance to the farmers is altogether justified. Lord Carrington is himself possessed by a fund of practical sympathy with the farming class. "I derive all my income from land," says he, "and is it likely under those circumstances that I should initiate legislation which would operate to the hurt of the farmers?" Justified or not, however, the fear has had many expressions. Labourers are to be given compensation, and they are deprived of their employment as a sequel to the creation of small holdings; and as a matter of common fairness, the administration of the Act ought to be sympathetic in the most practical degree towards the farmers. It would be poor demagogism to disadvantage and hurt one class of the rural community simply in order to benefit another class hitherto occupying a less important social and economic status. But this poor demagogism is not within the intention of Lord Carrington. True, he is an enthusiastic pro-small-holder; but he does not believe that in order to evolve his colonies of small holders it is necessary to disinherit and despoil the tenant farmer. And verily I think that a Minister who is responsible for the Butter Act and the Dogs Act, who has secured freedom of cropping, compensation for damage by winged game, and compensation for unreasonable disturbance, and who has been the ally of Mr. John Burns in the resolve to put an end to the putrescent food trade by which American cupidity benefited and the honest British food-producer was hurt, has some claim to appeal for the confidence of tenant-farmers. "I do not intend," says Earl Carrington, in effect, "to kill a tenant-farmer in order to make a small-holders' holiday."

A decision of interest to those who hire shooting rights was recently given in Dunmow County Court by his Honour Judge Tindal Atkinson. Edward Livermore, a London tea merchant, who hires shooting at Dunmow, was sued by Thomas Smith, a farmer, of Dunmow, for damages resulting in the loss of two fox terrier dogs. Mr. Livermore admitted that he shot the two dogs in question, which were valued at £7 2s., and claimed justification in so doing, because he found the dogs chasing a rabbit on the farm where he had the shooting rights. He contended that the dogs were poaching, and said that in order to save his rabbit's life he shot them. His Honour found the plea of justification fully sustained, and said that if the dogs had not been shot the rabbit would inevitably have been killed. To save the rabbit's life Mr. Livermore was justified in shooting the dogs, although the rabbit was only valued at 6d. Judgment was given for defendant, with costs. Leave to appeal was granted.

THE HARVEST IN THE NORTH OF ENGLAND.

Many statements and rumours have been going the rounds of late as to "the most disastrous harvest" in the North of England, and with a view to getting some definite information on the subject, we have made enquiries of numerous Northern Farmers as to the exact state of affairs. It will be seen from the following statements that happily the Harvest has not been such a disastrous one as has been made out. Nevertheless, in too many instances, notably the Later and Colder Farms, the Corn Crops have indeed been practically a failure owing to the wet weather of October; but there is also a brighter side to the picture, for where Early Harvesting was the rule some good Crops were secured.

In the Bedale district the season has been a very good one on the light land and early farms, most farmers having secured all their crops in good condition before the weather broke, but on the later and colder farms the prospect is very bad indeed; the crops on these farms did not ripen in time to be secured during the fine weather, and thousands of acres are still sodden and sprouted in the fields, whilst a large quantity has been secured during the prolonged wet weather in very bad condition; much of this has been threshed out and sent to the nearest kiln to be dried.

This summary of the outlook in Bedale is borne out by another correspondent who writes:—The deplorably wet weather experienced during the past four or five weeks, coming as it has done on the top of a very backward season, has, on the higher lands in North Yorkshire to a great extent ruined an otherwise good harvest. In many places, notably south of Barnard Castle, in the Garne district, in parts of Wensleydale and the upland farms near Thirsk, much corn is still rotting in the fields, no change having been afforded for many weeks past of getting it to stack in anything approaching to dry condition. Many excellent crops of barley and some of wheat are ruined, and oats are growing (sprouting) at the top of the "stooks," in some places giving a green tinge to the whole of a field. A much better state of things prevails in more forward districts and at lower altitudes, where, owing to the corn having ripened earlier, it has been safely got in good condition before the break in the weather.

In the Danby district the season is considered the worst for farmers that has been experienced for many years. Potatoes are only about half a crop owing to the early frosts; turnips have done well, but there was nothing like the usual quantity sown owing to the wet weather; whilst there is plenty of corn, though late, but it has been the worst season known for securing it, a good deal being out yet (November 6), though a little was got on Saturday last.

Coming to the district of Leyburn we have to record a very disastrous season for the majority of farmers. Some have finished harvest, but a very large majority of corn is still in the fields, and if not now, will very soon be useless, whilst there are many heated stacks amongst those which have been carted. A fortnight ago there were hopes of getting in the corn in a more or less damaged condition, but heavy winds, rains, and floods thoroughly soaked the sheaves of corn to the centre before the majority could be secured, whilst that which was carted and stacked before the deluge heated in the stack and was spoilt in that way.

Further evidence of the bad state of affairs in the Leyburn district is afforded by the remarks of a correspondent, who writes:—The corn crops as a rule were above an average, and what has been led and thrashed is very good, but there is a large breadth of land where never a stook has been led, and some barley I know will yield nothing; it has simply been thrashed out on the field. It is indeed a bad look out on farms with backward land. The high land farmers, however, have on the whole had a favourable season, where they have no ploughing land.

Round about Pickering the harvest has been a long and expensive time. About here there is corn that has been cut and in stook for six weeks, and certainly would have been gathered in but for the expense of hired labour. The high lands and dales have never had a chance; only partly cut on October 5, when the weather broke, and there has been no chance to get dry corn since, that is not to thrash; it might do to stand in stack for three or four months, but corn that was harvested in September was in splendid condition. Wheat was only a moderate yield, and damaged a little with frost on September 4. Barley seems to be yielding above an average, but oats are the best crop of the season by far.

Coming to another part of the Pickering district we have a better state of affairs to report, for on the whole the harvest has been secured mostly in fair condition, except a small portion that was out late. Wheat, generally speaking, is not yielding well, much of it being frozen has spoiled the sample. Barley is yielding fairly well, and best samples are making more money, and seems to be the farmer's sheet anchor. Oats are selling well; a good crop and fair yield.

An inspection of several farms around Richmond was disheartening, for though there was plenty of straw and good ears, it could not be secured in anything like keeping condition, consequently the bulk is standing in the fields in a sad condition. Some good farmers have barley and oats on good land, of which they have not got a sheaf led owing to the frequency of the rain.

Regarding the agricultural outlook for the district comprising the market towns of Ripon, Thirsk, and southwards to York, the season, although a sunny day has been somewhat of a rarity, has not been unfavourable for farm crops generally. Almost all crops are a good average, and mostly well harvested. North of Thirsk and district the outlook is much less favourable, a large proportion of the corn having been caught in the recent October rains, rendering it at the present time practically unfit for any purpose, and doubtless will prove of very small value at any time.

There have been some very good crops of corn about Whitby, and corn which was ripe before September 4 yields very well, but there is still a lot of corn about yet, owing to the fact that for the last six weeks the weather has been wet and misty nearly every day, with the result that in many places the corn is growing quite green in the stacks. Potatoes that were set early on dry land are just a fair crop, but those set late on wet land are a very poor crop, for the frost on September 4 in the valleys killed all the tops and turned them black. Turnips have done well lately, but there will not be quite an average crop, and many were late in getting sown on account of the wet weather.

In the Knaresborough district of the West Riding the harvest was fairly good the first month, but since the weather broke there has not been a chance to cart any corn, and there are several pieces still in the fields in this part. Oats and barley are an average crop, and generally a good sample where carted in good condition. Wheat is various, but generally it did not ripen properly owing to the cold weather and frost, and will not yield according to the straw, and some is a very bad sample, no better than hen corn. Farmers are very anxious to get some wheat sown, but through the continued wet weather there has been no possibility of getting on to the land; in fact, one of our correspondents remarks that he never knew so little sown at this date for fifty years. Turnips and mangolds are a light crop, but have done well the last month, but are pulling up very small. Potatoes are not as good a crop as last year in this part of Yorkshire. There is not much disease, and it has been a difficult time for getting them raised, owing to the continued wet weather.

The harvest in the Driffield and Holderness district was a very late one, but fortunately there was a spell of fine weather, and all the corn

SCENES AT THE NORTH KENT PLOUGHING MATCHES AT DARENTH LAST WEEK.
1. The Champion Iron Balance Plough. 2. The Champion Turnrise Plough.

was got in well except on the high wolds, and there is a lot of corn out and wasted on the high backward farms. Stackyards are very full this year, and as an oat year this will rank as the best for very many years. Beans are a great crop all over; but it is early to say how they will turn out. Corn yielding well; but owing to very wet weather lately, threshing not very forward. Mangolds are not as good as last year, and it is considered that both turnips and swedes will not take the eating they did last year. The long spell of cold, wet weather checked them so much early on.

From another part of Driffield we are informed that for a late harvest it has been a good one, but in some backward situations it will have been the reverse, for there was some corn still out on the 1st of this month. Oats and barley are the best crops. Swedes and turnips have improved very much lately, so that there is now a good prospect of plenty of meat for the stock during the winter. Clovers are well set, and give promise of a good crop.

Another Driffield farmer has had a good harvest all round, and remarks: "I trust I may never experience a worse season."

Round about Stillingfleet (East Riding) wheat is a fair crop, but will not yield as well as might be expected owing to the cold, wet weather in June. Barley will be below the average, but oats have been a heavy crop, and much laid, causing much expense in harvesting. Several patches of corn are still in the fields, and will be practically wasted. Potatoes are a good crop on high, dry potato land, but on wet or heavy soil, a very light crop and a good deal of disease. Turnips a fair crop, but mangolds below an an average, having suffered for want of sunshine.

In the district of Howden, East Riding, there is very little corn out. The crops have been, as a rule, very good. Wheat is a little over the average, and barley about the average. Oats are a very good crop, long in the straw and yielding very well. Root crops are variable. Where farmers have planted old seed potatoes the crops are very poor, many not more than 4 or 5 tons per acre. Good new seed and well tilled, from 8 to 10 tons per acre. Wurzels are a light crop, but swede turnips are very good.

The corn crops in the north-east district of Durham are excellent, and decidedly above the average. Those that were cut in the first fortnight of September were secured in splendid order, but where they were later in ripening they encountered a change in the weather which greatly retarded harvest operations. During the last week in September and throughout October rain fell nearly every day, and it was only by taking advantage of every available hour that crops could be secured, and even yet in the later parts of the district there is still a great deal in the fields. It is not, however, so much spoilt as might have been expected, but it will be a good while yet before much of it is in order for threshing. The rainy weather has greatly benefited the turnip crops, and potatoes, especially of the later varieties, are a better crop than was expected.

A Disastrous Harvest in Scotland.

It is a doleful tale that is revealed in the report on the Scottish grain harvest of 1907, given in a recent issue of the *Scotsman*. That it has become "the worst harvest in the memory of living men" is, says our contemporary, the general verdict. It is stated by men who have been farming land in Scotland for forty or more years that only twice, in 1872 and 1879, have they experienced a harvest nearly so disastrous. Certainly, bad as the "Seventy-two" harvest was, it was a few degrees better than that of the present year.

Dismal "Seventy-nine" has long loomed as the blackest year in the memory of the older race of Scottish farmers, but there are many men now struggling with sodden crops on farms in Scotland who are prepared to affirm that the amount of damage sustained by the Scottish corn crops in the process of harvesting will this year be greater than in 1879.

Happily in other respects the present year forms a favourable contrast to that lamentable year. In 1879 the owners of live stock fared just as badly as those who depended upon the produce of arable farms. This year the returns from livestock have been on the whole highly satisfactory, while everywhere the stock are likely to pass into the new year in the best of health—a pleasant contrast truly to the experience of stock-owners twenty-eight years ago. Moreover, the turnip and potato crops, deficient as they may be in different parts, are this year superior to what they were in 1879.

But if the comparison with 1879 be confined to the grain crops, it assuredly cannot be said that the advantage lies with the present harvest. Speaking generally, the grain crops at the beginning of harvest were this year greatly superior to those of 1879, but the weather during the past four weeks has been so extremely inclement that the damage inflicted on the crops in process of harvesting has been in a large part of the country almost unprecedentedly severe.

ROYAL AGRICULTURAL SOCIETY.

Finance—Farm Prizes at Newcastle—Stock Prizes—Judges at Newcastle—Implements at Newcastle—Selection—Dairy and Produce Prizes.

A monthly council meeting was held at 16, Bedford Square, W.C., on Wednesday. The following being present:—Trustees: The Earl of Coventry, Earl Egerton of Tatton, Lord Middleton. Vice-Presidents: Mr. J. Bowen-Jones, Mr. Percy Crutchley, Mr. J. Marshall Dugdale, the Earl of Northbrook, the Hon. C. T. Parker. Other members of the Council: Mr. George Adams, Mr. Charles R. W. Adeane, Mr. T. L. Aveling, Mr. S. N. Bankart, Mr. John Barker, M.P., Mr. H. Dent Brocklehurst) Mr. T. A. Buttar, Mr. R. G. Carden, Sir Richard P. Cooper, Bart., Sir H. F. de Trafford, Bart., Mr. Henry Dudding, Mr. J. T. C. Eadie, Mr. J. W. Glover, Mr. R. M. Greaves, Sir Gilbert Greenall, Bart., Mr. W. Harrison, Mr. J. H. Hine, Mr. R. J. Bayntun Hippisley, Mr. R. W. Hobbs, Mr. J. Howard Howard, Mr. W. F. Ingram, Mr. Ernest Mathews, Mr. W. A. May, Mr. T. H. Miller, Mr. T. S. Minton, Mr. Ralph Palmer, Mr. C. M. S. Pilkington, Mr. H. F. Plumptre, Mr. G. G. Rea, Mr. F. Reynard, Mr. C. C. Rogers, Mr. John Rowell, Mr. E. W. Shackle, Mr. R. Stratton, Mr. G. Taylor, Mr. A. P. Turner, Mr. E. V. V. Wheeler, and Mr. C. W. Wilson.

The following members of the Newcastle local committee were also present:—Mr. Johnstone Wallace and Mr. A. M. Olivet (local secretary).

In the unavoidable absence of the president, Mr. Cornwallis was called to the chair.

The minutes of the last meeting of the council, held on July 31, 1907, having been taken as read and approved, the election of thirty-three members was proceeded with.

Finance.

Mr. Adeane reported that the draft balance-sheet of the society's recent show at Lincoln had been submitted, and instructions given for its final examination by the society's accountants and auditors.

Privileges for Local Societies.

The question of granting privileges to members of the Northumberland and Durham Agricultural Societies who are foregoing their local shows next year in view of the society holding its 1908 Show at Newcastle-on-Tyne had been considered, and the committee recommended that the following privileges be given to the members of the two societies:—

"That all members of the Northumberland and Durham Agricultural Societies, who are not members of this society, subscribing not less than 20s. for the year 1908, and having paid a subscription in 1907, will be allowed to enter stock, &c., at the same fees as members of the Royal Agricultural Society, and have a free admission to the show for the whole of the meeting. Members being annual subscribers of 10s. in 1907 and 1908 will have free tickets giving admission to the show each day."

Mr. Adeane, in moving the adoption of the Report, said that the committee had had the Lincoln Show accounts before them on the previous day, and had passed them for audit. He hoped to be able to present them to the council at their meeting in December. In order to allay the curiosity which was naturally felt with regard to the result of the Lincoln Show, he would like to inform them that, subject to audit, the net profit was £5,056, exclusive of the £2,000 allocated to the show account from the ordinary account.

Farm Prizes at Newcastle.

Mr. Cornwallis (Chairman) reported that the Local Committee had intimated that £1,018 would be given in prizes for Hunters and Polo ponies (to be ridden), Harness horses, draught horses, and for jumping classes. A band contest and sheep-dog trials will be arranged by the Local Committee, to be held on the Saturday of the show—*i.e.*, July 4. Prizes for farms in Northumberland and Durham would be offered as follows:—

1. Mixed and arable farm exceeding 50 and not over 600 acres—First prize, £60; second prize, £30; third prize, £15.

2. Mixed and arable farm exceeding 50 and not over 250 acres—First prize, £35; second prize, £25; third prize, £10.

3. Dairy farm, 50 acres and upwards—First prize, £35; second prize, £25; third prize, £10.

The prizes to be provided by the local committee and the expenses in connection with the judging to be defrayed by the society.

A suggestion that prizes should be offered in connection with the Newcastle Show for Plans of Farm Buildings had been made by Sir Richard Cooper, who had also offered to provide prizes of £50 and £25 for such a competition. The committee recommended that this generous offer be accepted, and that it be referred to the Stock Prize Committee to make the necessary arrangements.

The committee recommended that the following classes be provided for horse-shoeing in the Newcastle showyard:—

	PRIZES.				
	1st.	2nd.	3rd.	4th.	5th.
Class I.— Hunters	£3 10s.	£3	£2 10s.	£2	£1 10s.
Class II.— Cart horses..	£3 10s.	£3	£2 10s.	£2	£1 10s.

They had considered and approved certain recommendations made to them by the Stock Prizes Committee.

Scheduling Tuberculosis.

A suggestion that the Board of Agriculture should be advised to schedule tuberculosis had been considered, and, after very full discussion, the following resolution had been unanimously adopted:—"That in the event of the promotion of legislation dealing with the question of tuberculosis and other diseases of cattle, the council of the Royal Agricultural Society of England is of opinion that any regulations for dealing with this question should be issued by the Board of Agriculture and not by any other Department."

Mr. Adeane said that as the question of tuberculosis was coming to the front very much in this country and great interest was being taken in it, it was desirable, as there were possibilities of legislation in the near future, that the interests of agriculture should be watched. He therefore proposed, with the view of ultimately forming a powerful and representative committee of farmers and breeders of cattle to watch the development of this question, "That a committee be formed to communicate with other societies for the purpose of watching the interests of agriculture in view of possible legislation with regard to the tuberculosis question." He moved that the following should be members of the committee:—Lord Northbrook, the Hon. Cecil Parker, Mr. J. Bowen-Jones, Mr. Richardson Carr, Mr. Ernest Mathews, Mr. Claude M. S. Pilkington, Mr. Richard Stratton, and Mr. George Taylor, with power to add to their number.

Mr. Stratton, in seconding, said that they were threatened with legislation of the most harassing description, and not only legislation, but the local authorities, who appeared to be faddists, were inclined to harass the agricultural interests in every possible way and in a most unnecessary manner. It was in his opinion desirable that the society should take the lead in support of the agricultural side of the question.

The Earl of Northbrook expressed his willingness to accept Mr. Adeane's resolution as an addition to the report of the Veterinary Committee. He felt that it was very necessary to endeavour to do what they could to protect the farmers' interest in this matter. They did not know what form the proposed legislation was going to take, but the committee felt strongly that though it might be the business of the Local Government Board to deal with the matter of the pure milk supply to the consumer, when it came to the question of dealing with farm stock and the treatment of cattle, the matter would be more properly dealt with and would be more satisfactory to the agricultural interest if it were dealt with by the Board of Agriculture than by any other department. Personally, he did not agree with the idea of recommending the board at the present moment to "schedule" tuberculosis, because he had good reason to believe, in the first place, that the suggestion would not be entertained by the Board, and as there was a prospect of general legislation on the question, he thought it would be very inopportune at this moment for the disease to be scheduled. Speaking for himself, he thought that if they advised the Board to schedule the disease and their request was acceded to, they might get more than they expected or wanted. It would mean not only notification, but inspection, and in some cases compulsory slaughter of animals, for which compensation would have to be paid by the local authority, and he thought that in most counties it was felt that now with the obligations to compensate for the slaughter of animals suffering from anthrax, swine fever, and glanders, the burden was quite sufficient. If they were to deal with this great question, and if there was to be compulsory slaughter, he thought that a certain proportion of the compensation should be borne by the Exchequer.

The resolution was then unanimously agreed to.

A meeting of this committee was subsequently held at which the Earl of Northbrook was elected chairman. There were also present Mr. Pilkington, Mr. Taylor, Mr. Stratton, and Mr. Ernest Mathews. It was decided to invite the various cattle and county agricultural societies to send one or two representatives to attend a meeting to be held in the afternoon of the Wednesday of the Smithfield Cattle Show week—viz., December 11, at the Royal Agricultural Hall, Islington.

Stock Prizes.

The committee had prepared a draft prize-sheet, which they recommended should be printed

and circulated amongst the council for their consideration in anticipation of the final settlement of the prize-sheet at the December meeting. The following additions and alterations were recommended :—

That the fee for each entry in the jumping and pace and action classes be £1 instead of 30s., and in the foal classes 10s. instead of 30s.

At the option of exhibitors in the classes for riding and driving horses, and heavy horses in gears, these horses need not be brought into the show-yard until the morning of the day on which they compete, and will be permitted to leave the yard at the close of the day's proceedings.

Polo ponies will not be measured at the show-yard if their Hurlingham certificates are produced at the time of entry.

Where in any class of cattle (Milk Yield and Group Classes excepted) there are ten different exhibitors making entries, a fourth prize of £3, and in the case of fifteen different exhibitors making entries, a fifth prize of £3 will be given. Where there are only two prizes and six persons make exhibits a third prize of £4 will be given. In the case of sheep and pigs the third prize will be £3, the fourth prize £2, and the fifth prize £2.

That the wording of the classes for Three Shearling Ewes be altered from "of same flock" to "bred in same flock."

The committee recommended the acceptance with thanks of various offers of champion and other prizes from the breed societies.

Mr. Reynard, in moving the adoption of the report, stated that, thanks to the generosity of their friends, the breed societies, and the liberality of the Newcastle Local Committee, they had been able to draw up a very comprehensive and attractive prize sheet. By the assistance given them they had been able to increase the first prizes in the most important of the horse classes from £15 to £20, and in the cattle, sheep, and pig classes to offer third, fourth, and fifth prizes where the exhibitors exceeded a certain number.

Judges at Newcastle.

Mr. Reynard (chairman) reported that the judging of horses at the Newcastle Show would commence at 10 a.m. on the first day, and of cattle, sheep, pigs, poultry, and produce at 9 a.m. The committee had selected the names of gentlemen to act as judges of the various classes of live stock, poultry, &c., at the Newcastle Show. Instructions had been given for the issue of the invitations forthwith, and for the publication of the names in the prize sheet.

Implements at Newcastle.

Mr. Greaves (chairman) reported that the regulations for the trials of manure distributors, to be held in connection with the society's show at Newcastle, had been considered and approved, and they recommended that the following prizes be offered :

	First prize.	Second prize.
Class I. Artificial Manure Distributors	Gold medal ..	Bronze medal
Class II. Farmyard Manure Distributors	Gold medal ..	Bronze medal

The committee had considered the implement regulations, and approved the following amendments, suggested by the sub-committee appointed at the last meeting.

In Regulation 9 delete the words "and to deliver the implements within six months of the show."

Omit Regulation 10 relating to selling price.

Regulations 32 and 33 as to the application for and display of reference cards on the exhibits to be emphasised in the letter to exhibitors and their enforcement insisted upon.

Regulation 34 as to the exhibition of duplicates to be omitted.

The amendment of Regulations 44 to 61 relative to machinery in motion, engines, boilers, &c., to meet present-day requirements, more particularly in connection with the storage of petroleum.

Petroleum for engines in motion must be stored either in the feed tank of the machines or in closed metal vessels of two gallons capacity each, the amount so stored at one time not to exceed six gallons. Petroleum will be provided and sold by an agent duly appointed by the society.

In cases of engines used as power for driving, &c., the following to be inserted in place of existing regulations as to pressure gauges, &c. :—

In the cases of engines (other than new) used for driving machinery, the certificate of a recognised boiler insurance company not later than two months prior to the show must be produced for the inspection and authority of the consulting engineer before the boiler can be worked.

Regulation 64.—The charges to exhibitors for the restoration of broken ground to be made by the society and not by the contractor.

Regulation 71 as to implement or improvement being new to be omitted.

Selection.

Mr. Cornwallis (in the absence of Sir John Thorold) reported that the secretary had submitted a list of attendances of council and committee meetings by the members of council representing the divisions of "Group B," who retire by rotation at the next annual general meeting. The committee had considered the time and place for holding the annual general meeting, and they recommended that the meeting should take place at the Royal Agricultural Hall, Islington, at 2 p.m., on December 11 next (the Wednesday of the Smithfield Show). The committee suggested that the existing trustees and vice-presidents of the society be recommended by the council for re-election at the annual general meeting. The dates of the meetings of the council for 1908 were fixed as follows :—January 29, February 26, April 1, May 6, June 3, July 1 or 2 (in Newcastle show-yard), July 29, November 4, December 9.

A letter had been received from the joint honorary secretaries of the Conference of Road Engineers and Road Users, inviting the society to nominate a representative on a committee which had been formed "to act as a deputation to the Government or other official bodies concerned, and generally to give effect to the resolutions arrived at by the conference." The committee recommended that Mr. Christopher W. Wilson be nominated as the society's representative. The secretary had reported the receipt of letters from members of council, intimating the committees on which they desired to serve, and instructions had been given for the preparation of a list to be submitted to the next meeting of the committee of selection.

Dairy and Produce Prize.

Mr. Mathews (chairman) reported that the committee had agreed upon a schedule of prizes for dairy produce, which they had referred to the Stock Prizes Committee for inclusion in the prize sheet for the Newcastle meeting. The suggestion by Mr. John Watkins, the judge of cider at the Lincoln Show, that a class for dry cider should be provided at the society's show next year had been considered, and the committee recommended that the suggestion be brought forward when the prizes for produce at the society's show, to be held at Gloucester in 1909, are under consideration. The committee recommended that two classes for Cheshire cheese should be given at the Newcastle Show, as follows :—

	£	£	£
Three coloured Cheshire cheeses of not less than 40 lb. each	3	2	1
Three uncoloured Cheshire cheeses of not less than 40 lb. each	3	2	1

A communication had been read from the secretary of the Northumberland and Durham Dairy and Tenant Farmers' Association as to a local fund being raised to be devoted to classes for dairy cattle and milking competitions in connection with the society's show next year.

The Report of the Annual General Meeting.

The report of the council to the annual general meeting of governors and members, to be held at the Royal Agricultural Hall, Islington, at 2 p.m. on Wednesday, December 11, was prepared and ordered to be issued.

The council adjourned until Wednesday, December 11, 1907, at 11 a.m.

AN AGRICULTURAL PARTY.

Discussion at the Central Chamber.

The chief topic of discussion at the meeting of the Central and Associated Chambers of Agriculture held on Tuesday was the report of the Organisation Committee, which recommended the foundation of an Independant Agricultural Parliamentary Party. The committee stated :

Your committee are of opinion, and they believe it is one generally held, that the industry of agriculture is not represented in the legislature in a degree that its relative importance, industrially and politically, demands, and therefore it does not receive the consideration that is necessary for its advancement that is so freely offered to it—with such marked results—in other countries. In making this statement your committee desire to recall that there are about 150 Parliamentary divisions in which the voters are chiefly agricultural, and it is, therefore, not through any lack of material that there has been this marked inactivity. The question your committee are asked to consider is how can the present representation be shaped into a working party, and how can it be so effectively increased that agriculture can demand more attention from Parliament and from the Government of the day. On a matter of such importance it is necessary that some definite line of action should be decided upon by those interested without loss of time.

Your committee have no hesitation in saying that the obvious answer to the question laid before them is, by strengthening and consolidating existing agricultural organisations, and by the formation of others in unorganised districts. It is, however, unfortunately the case that the continued efforts of forty years have failed to bring more than a moderate percentage of agriculturists into line, and this forces your committee to the conclusion that more attractive proposals are necessary to bring about the requisite combination than those hitherto laid before the farming community.

The Lincoln resolution proposes the formation of a distinct agricultural party. Your committee feel that this is the ideal for which to strive, despite the financial consideration such a policy would involve. It must be obvious that with a section of the House of Commons returned as agricultural members by agriculturists, pledged to promote beneficial measures and to resist injurious legislation, and quite independent of the whips of other sections of the House, agriculture will receive more of its due share of attention than it does now, or has ever done in the past.

It may be urged that an individual cannot sit in the Imperial Parliament simply as an agricultural member, since wider and more important matters than even British agriculture must claim the attention of Parliament. But there are numerous precedents of members who nominally represent particular divisions, but in reality represent particular interests which may or may not exist in their respective constituencies. Moreover, every Parliamentary candidate will always have to give expression to his views on imperial and general questions, and unless those views commend themselves to the voters he will fail to be returned.

The second part of the Lincoln resolution suggests the formation of a joint committee, composed of members drawn from all parties. Your committee would point out, however, that the Parliamentary Committee of the Central Chamber is potentially all that is required. It is composed of members drawn from the two great parties, and there is nothing to prevent other parties being represented upon it. The Parliamentary Committee has never been influenced by party considerations, and there are manifest objections to multiplying unattached committees. The one fault that can be found with the present Parliamentary Committe is that, collectively, it might show more activity, and that its individual members ought to attend its meetings more regularly. If this can be said of a committee which has the stimulating force of the Central Chamber to stir it into action, there is no reason for supposing that one which has not this impetus behind it will be more active. There is also the danger that with two committees—if the second one be formed—there would be overlapping, and therefore waste of time, possibly friction, and, more particularly, many things that are at present well done would be left undone, as they might fall between the two committees in a well-intentioned endeavour not to interfere with each other's work.

One proposal laid before your committee is that agriculturists should select their own candidate, subject to the approval of the Central Chamber, and inform the "party" associations that they have done so, and claim their support. It is further suggested that in a division where the predominant vote is Liberal a candidate acceptable to the Liberals should be chosen, and conversely in the case of a Conservative constituency. It is claimed that this course would involve a minimum of expenditure, though it is pointed out that a central fund would, of course, be a necessity to fight a battle in some semi-rural districts, and, in certain cases, to aid suitable and successful candidates to bear the expenditure of Parliamentary life. Your committee record this proposal without comment.

As this report deals with a matter which affects so vitally the future of agriculture in this country, your committee recommend that before any decision is recorded by the council it should be referred to the local chambers for their immediate consideration. With regard to the suggestion in the present report your committee desire to support the first part of the Lincoln resolution advocating the formation of an "Independent Agricultural Party." They are of opinion, however, that the second suggestion of the secretaries would only end in disappointment, and in waste of time and money. Your committee consider that it is better boldly to face all the difficulties involved in the creation of a new Parliamentary party, and recommend the formation at once of a central fund for electioneering purposes. This fund should be kept quite distinct from the current account of the Central Chamber, and should be administered by a special committee nominated by, and consisting of, members of the Central Chamber.

Your committee think that if care is taken, much expense may be avoided by selecting constituencies where a Central Chamber candidate would be generally acceptable, and would, therefore, not be opposed.

In conclusion, your committee are strongly of opinion that the value of such a party as that proposed depends far more on its absolute independence and singleness of aim than on its numerical strength, and recommend that the efforts to establish it shall at first be concentrated on those constituencies whence it would be possible to secure a thoroughly compact and reliable body.

Mr. Kidner moved that the report be received and sent to local chambers for their immediate consideration. For many years, he said, they had seen that whenever questions concerning agriculture came up in Parliament members who were expected to represent the industry were driven into one lobby or the other by party whips.

They must all realise that in fighting Bills and forwarding legislation the Central Chamber would be enormously assisted by a compact body in the House to back up their views.

Mr. Latham, in seconding, said he thought agriculturists were very much behindhand in not coming years ago to the conclusion embodied in the report.

Mr. Biddell doubted the wisdom of the committee's proposal. Time after time they had had separate organisations, but nothing had come of them, and he thought it better to give extended support to the Central Association they had than to weaken it by establishing another.

Mr. J. W. Dennis remarked that unless agriculturists were prepared to organise in the same way as other industries did, they would be swamped by their neighbours.

Mr. Trustram Eve considered that a good deal could be done through existing agencies, and in time an independent party would follow. But the question was of so great importance that he strongly urged that it be referred to a special committee for further consideration with a view to drawing up a concrete scheme for submission to the chambers throughout the country.

Mr. Christian said the matter bristled with difficulties, but still he did not think it would be insurmountable if they were prepared to pay the price. What was the price? What were the two greatest barriers against the formation of such a party as they desired? The first barrier was party politics. The second was the lack of organisation amongst agriculturists themselves. Were they preparad—Radicals and Tories—to carry out what was suggested? If they waited for the extreme men they would never get them. Were the members of the present parties prepared to sink their political differences? They could not get the party that they wanted without votes, and what they had to consider was how they were going to get the votes? Where were the votes? His landlord had got one vote,, but his labourers had got nine. This was the case on one farm. How many of those votes would they be able to get? They had Mr. Jesse Collings's scheme, and a very good scheme it was. If they got increased ownership they would give a great impetus to such a party as was wanted, but that was a matter in the far distance. He thought so because in his own neighbourhood he did not find a keen desire either for ownership or for occupation, on the part of the agrarian population. They ought to have the labourers with them. He was getting old and was coming to the end of his tether as an occupier of land, and when he thought about his labourers, honest men who had worked faithfully for him for years, he thought about their future. What had they got to look forward to? They ought to have some great agricultural union with a large benefit society for workmen connected with it, and carried on with the help of the landlord and with the help of the State. If they went on such lines they would get the labourers with them What was wanted was that those who criticised the programme should show them better.

Mr. C. Turnor believed a good many farmers and landowners, and, he hoped, labourers also, were in favour of an independent agricultural party. To approach boldly the formation of an independent party was the ideal thing, but by using means already existing they could save the huge expense of fighting an election campaign. He therefore moved by way of amendment that the subject be referred to a special committee.

Mr. Courthope, M.P., in seconding, said they must send to the local chambers something more definite than anything contained in the report. He would like to see an agricultural party, but he did not think they could find the funds to run independent agrarian candidates in 150 constituencies. They should make full use of existing opportunities. If it were known that the farmers of an agricultural constituency were determined to have an agriculturist to represent them, both political parties would vie with each other, and the farmers would have two suitable men to choose between without cost to themselves.

Mr. Jesse Collings, M.P., supported the report. He said the amendment meant shelving the question, and was really an invitation to the council to run away from a proposition fairly put before them. It was no good putting questions to candidates of the existing political parties. They would answer them in any way the questioner liked. Party politicians had no conscience. Given a prospect of a vote they would promise everything to everybody everywhere. He personally admired the Irish agricultural party, and knew no party but the agricultural party. They never said "Thank you" when they got what they asked for, but immediately asked for more and got it.

After further discussion the amendment was withdrawn, and Mr. Kidner's proposition adopted.

Swine Fever.

Mr. Amos, calling attention to the action of the Board of Agriculture in reference to swine fever, said that when a man reported that one of his pigs had died under suspicious circumstances, and sent the carcase to the Board for examination, his farm was kept shut up for at least a fortnight, even after it was known there was no swine fever. That did not encourage people to report suspicious cases.

It was stated that the Board of Agriculture had been written to on the subject, and had been given instances of delays varying from fourteen days to six weeks.

Milk Supplies.

Mr. Fitzherbert-Brockholes moved the adoption of a report of the Dairy Products Committee on the subject of the lines to be followed by general legislation dealing with milk production. Their principal recommendations were:—"That adequate legislative steps shall be taken to secure the proper (*a*) lighting, (*b*) ventilation, (*c*) cleansing, (*d*) drainage, (*e*) water supply, of cowsheds in both urban and rural district areas. That every local authority shall only register such premises as they may deem suitable. That all premises occupied for the purpose of milk selling shall be inspected not less than twice in each year. That all cattle used for the purpose of milk selling shall be examined (especially for tuberculosis of the udder) by qualified veterinary surgeons appointed by the County Council, not less than twice in each year. That every animal which appears to show symptoms of tuberculosis of the udder shall be isolated and slaughtered.

Mr. Sadler seconded, and the report was adopted and ordered to be sent to members of the Government and to the County Councils Association.

Scottish Chamber.

A meeting of the directors of the Scottish Chamber of Agriculture was held at Edinburgh on Wednesday. Mr. Harry Hope, chairman of directors, who presided, at the outset thanked them for electing him to his office. He thought their conference had been a very successful one, and although they had not Lord Carrington present he was sure he was expressing the opinion of the directors when he said that they would be glad to see him at their next conference if he was still in charge of the department. Referring to the harvest, he said that this year they had had the most disastrous harvest that there had ever been in the memory of even the oldest farmer in Scotland. He was quite sure that this season would have a disastrous and painful effect upon many. They did not know how the rents were going to be met out of the produce of this year. All that brought to their mind the fact that, in all sytems of land tenure, they had got to frame them in accordance with Nature's laws.

The resolution of the conference urging greater attention to agricultural education in rural schools was submitted, and it was unanimously resolved to send it to the Board of Agriculture and to the Secretary for Scotland, and that Mr. Struthers, the secretary to the Scottish Education Department, should be asked to receive a deputation on the subject.

A somewhat lengthy discussion followed on security of tenure and fair rent, the subject being introduced by Mr. Dunlop, Midland, Fenwick, who moved the following resolution:—"That, in the opinion of the directors, security of tenure and fair rent, applicable to all tenancies, would give an immense stimulus to the agriculture of Scotland by bestowing upon farmers that feeling of independence and security which encourages intensive farming and the desire for co-operation."

Several members, however, spoke against the resolution, and on a vote being taken only three were in favour of it, whilst seventeen voted against it.

A letter was read from Mr. Ainsworth stating that he had had a word with the legal advisor to the Board of Agriculture on the point as to whether any amending words could be put into the Agricultural Acts Consolidation Bill with reference to sheep valuations, as was suggested at the conference. He feared that this would be impossible, as if they introduced amendments on any one point it would lay the whole of the Bill equally open to amendment. He (Mr. Ainsworth) undertook to see what was delaying the Bill, and to try to get it advanced as soon as possible.

Highland Society.

At the meeting of the directors of the Highland and Agricultural Society, held at Edinburgh on Wednesday, Dr. Wilson, of Carbeth, presiding, the secretary stated that the accounts for the Edinburgh Show of last summer had not yet been audited, but the profit would amount to about £2,300.

He also read a letter from the Duke of Buccleuch intimating that he was desired by His Royal Highness the Prince of Wales to convey an expression of His Royal Highness's entire satisfaction and approval of all the arrangements that were made and so successfully carried out during the two days on which their Royal Highnesses the Prince and Princess of Wales visited the show last July.

With regard to next year's show at Aberdeen, the secretary reported that the prize money offered would amount to £130 or £140 more than at the last Aberdeen show, eight years ago. The following special prizes had also been intimated:—

By the Duke of Richmond and Gordon, president of the society, champion bronze medals for the best animal or pen in each section of live stock; by the Polled Cattle Society, gold medal for the best breeding male, and for the best breeding female of the Aberdeen-Angus breed; by the Ayrshire Cattle Herd Book Society, special prize of £10 for the best animal of the Ayrshire breed, entered in that society's herd book; by the Shorthorn Society, special prizes of £25 each for the best male and female of the Shorthorn breed; by the Clydesdale Horse Society, the Cawdor Challenge Cup for best Clydesdale mare or filly; by Sir John Gilmour, of Montrave, £18 in prizes for yearlings by Thoroughbred stallions; by Captain Clayhills Henderson, of Invergowrie, £27 in prizes for Hunter brood mares with foal at foot; by Hunters' Improvement Society, gold medal for best Hunter filly not exceeding three years old; and by the Society of Border Leicester Sheep-breeders, £10 for best pen of Border Leicester sheep.

To commemorate his twenty-fifth year as a steward, Dr. Gillespie was presented with a photographic group of stewards, the presentation being made by Mr. Middleton, Glastulich. In reply, Dr. Gillespie said that he had been a director also for twenty-seven years, remarking that while others had done the work as stewards he had been put into the ring for ornament. He had a good deal of the agricultural element in him, and he would continue as long as he was able to do all he could for Scottish agriculture.

The Science Committee reported that they had had under consideration the question of the spread of anthrax and the desirableness of having a thorough investigation into its causes. Even though it were ascertained that foreign food did occasionally cause outbreaks of anthrax, the Board of Agriculture took up the position that stockowners would not be in favour of excluding these foods, and therefore they did not feel inclined to ask the Treasury to vote a sum of money to inquire into the disease. There was, however, a feeling among farmers that something should be done to investigate the effect of foreign cakes, and the committee asked authority to expend £100 in such investigation. This was unanimously agreed to.

The secretary reported the result of the conference with the Ayrshire Cattle Herd Book Society Committee regarding milk records. The deputation from the society had attended on the previous day, and had had a most satisfactory discussion of the whole matter with their committee, and he submitted a rough scheme suggested for a basis.

Oxfordshire.

At the annual meeting of the Oxfordshire Agricultural Society, Viscount Villiers (the president) had a very pleasant duty to perform in congratulating the society that, in spite of the terrible weather at the Banbury meeting, there was no financial loss, but a surplus of £100 on the year's working.

The thanks of the society were cordially expressed to the president, Viscount Villiers, for his valuable services; the mayor and corporation of Banbury, the local committee and hon. secretaries for promoting the success of the show; and the noblemen, gentlemen, and societies for their handsome contributions in special prizes.

Sir Alex. Henderson, Bart, was elected president for the ensuing year, and his Grace the Duke of Marlborough president-elect, whilst to the present list of vice-presidents were added Admiral Clutterbuck, Mr. G. Randell Higgins, Mr. James H. Morrell, and Dr. Somerville, Sibthorpian Professor of Rural Economy, Oxford.

We are pleased to note the following resolution was unanimously passed:—"That the General Purposes Committee confer as to enlarging the scope of usefulness of the society and report in due course to the council."

The invitation from the town of Abingdon was cordially accepted, and next year's meeting will be held in that town on Wednesday and Thursday, May 21 and 22.

At the Mid-Somerset Agricultural Society's second annual cider and apple show at Shepton Mallet, the display of cider was one of the largest ever held in the West of England, and constituted certainly a record for this society, the total entries numbering forty-seven, against thirty-nine last year. Moreover, every lot, except one (withdrawn), was in its place. On the other hand the interest in the apple section was not keen, owing to the great deficiency in the crop this year, and although gentelmen's gardeners, nurserymen, amateurs, and cottagers failed to fill any of the classes allotted to them, the farmers rallied well round the society, and sent in not only a very attractive display of cider fruit, but also a good number of cooking and dessert sorts. The prizes were well distributed over the orchard areas, though some of them were limited in their representation.

POULTRY.

Purchasing Birds for Breeding.

One of the questions which will be now occupying the mind of the poultry farmer is the selection of birds suitable for breeding stock. Whether the objective be exhibition points or utility features the importance of this matter cannot be too strongly urged. The utility farmer should be keenly alive to the necessity of periodically importing new blood into his yards so as to obtain that additional vigour in his flock which will result in an increased egg-return, strong fertility, and healthy offspring.

The fancier who desires to perpetuate any particular feature of marking or type will doubtless do much to attain his object by judicious line-breeding, although even here the introduction of unrelated stock is often necessary in order to minimise the danger of too close in-breeding.

For whichever purpose new birds are required the greatest care must be exercised in purchasing, and no birds that are not, like Cæsar's wife, "above suspicion," should be allowed to come into the reckoning.

No matter where one buys, all fresh purchases should be isolated for a week or ten days before being permitted to mix with the home flock. By this course the chance of introducing disease into the yards is practically nullified.

The question where to buy naturally enough vexes many novices. Although there are numbers of thoroughly honest breeders to whom one can go in perfect faith, there are also, unfortunately, many who do not hesitate to palm off inferior specimens as first-rate stock. The writer, who has purchased birds from many parts of the country, has sometimes received most weird creatures under the name of Buff Orpingtons. Yellow legs, feathered legs, jet-black tails, striped hackles,

Photo by] **A CHAMPION SALMON FAVEROLLE HEN** *[Clarke and Hyde.*

white lobes, have all appeared with more or less frequency.

In order to avoid such experiences as these, by far the best plan is, of course, to inspect the birds for oneself before purchasing, but if this is impracticable the safest course is to send to one of the well-known breeders, stating one's exact requirements. The cost may be a little more, but the possession of reliable birds will repay the additional outlay.

In introducing new blood into the flock, the most popular system at present seems to be the purchase of cockerels. There is an old saying, and a true one withal, to the effect that the male bird is half the pen. Why, then, should not the farmer reserve some of his own-bred cockerels, whose merits he knows, and import females to mate with them? One-year-old hens, which are usually more reliable than pullets for breeding purposes, and which are certainly preferable to mate with young males, are always plentiful at this season of the year at reasonable prices.

Another important point to be borne in mind by intending purchasers is the question of locality. Birds, equally as much as human beings, are very susceptible to change. Buyers should endeavour as far as possible to obtain their birds from localities similar in conditions of climate and soil to their own farms.

CORRESPONDENCE.

Potato Disease.

SIR,—When time permits I should like to ask all potato growers to examine with a sharp knife the string end of the tubers, noting carefully the different maturity as shown in the separate tubers that are lifted from the same root. Also to take an inquiring walk across the potato grounds with the same implement to examine the haulms (locally called) or stems that are fully ripe, and note the different signs of life contained, these to be the preparation in readiness to receive the reports of the two Colonies from "down under" as to the success of their pickling of potato sets. Until the reports are received it is out of place to attempt to do anything more than prepare ourselves as practical growers to tackle in earnest the long-continuing disease.

The old people who have come through the non-disease days of the closing thirties and suffered through the early forties, when the disease spread throughout our islands, may be able to help us by referring back to their uses of lime.

And also during the period of waiting may I suggest a visit to the old establishment of Nature:—

(*a*) The provisions.
(*b*) The pure laws of reproduction.
(*c*) Balances.
(*d*) The sun as our incubator, with the husbandman as attendant.

Are compartments solidly furnished with every requisite to complete their several departments?

Mention has been made in back numbers of the MARK LANE EXPRESS respecting blank grains showing in different portions of the barley heads. For the last two seasons I have called attention to the cause in our local papers, but time and space will not permit at present to deal with such a "wide" subject in your columns, because someone of the establishment of Theorists, Faddists, Fungus and Co. may want to fire a shot into it. Then I should have to level my heavy piece also, and as we are now going through the dull season of the year perhaps it would be best left over until the bright days of spring.—Yours, &c.,

November 7, 1907. PLOUGHTAIL.

Are Times Better for Farmers?

SIR,—I fear your articles—"Better times, bigger rents," "Wheat paying its way"—are somewhat misleading.

Those of us who have been badly hit by the droughts of the past years, who have been drained by the high prices of feeding stuff, and who have cashed little of this year's harvest, feel rather hurt at the wonderful accounts of the result of this year's harvest that are appearing in all the newspapers—agricultural and otherwise.

Several extra millions of money are supposed to be rolling about in farmers' pockets. "There is many a slip," &c., and April next will be soon enough to estimate the actual result of this year's working.

In this district we have many signs of the impecuniosity of farmers, rates bad to get, accounts overdue, and no more labour on the land than is absolutely necessary to work the land, no improvements in hand.

The increased demand for land is caused by other things than the price of produce; one of the most important of these hereabouts is the fact that workpeople (ploughmen, waggoners, stockmen, domestic servants, village tradesmen, carriers) have saved money and are competing for, and in many cases occupying, the farms held by their former employers. Nearly half the land in some parishes is already held by these people, who employ less labour than their predecessors—one of the causes of rural depopulation. They are very hardworking and thrifty, and are content so long as they are able to feel at the end of each year they have made some little progress.

If it were not that this saving portion of the country folk is a small one, this form of competition would be much keener than it is.

The following is a balance-sheet of an acre of wheat reckoned as part of a 10-acre field of this year's harvest, and is about an average for this district:—

Outgo.	£	s.	d.	Income.	£	s.	d.
Rent and rates	1	5	0	4 qr. wheat at 35s...	7	0	0
Ploughing	0	10	0	Consuming value of straw	0	10	0
Rolling (twice)	0	2	0				
Harrowing (5 times)	0	5	0				
Drilling.....	0	1	6				
Seed	0	12	0				
Dressing and tenting	0	1	0				
10 loads dung	1	10	0				
Carting dung	0	10	0				
Spreading	0	2	0				
Hoeing	0	6	0				
Hedging and ditching	0	1	6				
Harvesting, binder	0	5	6				
Stooking	0	1	0				
Carting, men	0	3	6				
,, teams	0	3	6				
Thatching	0	2	0				
Thrashing	0	6	6				
Salt, 3 cwt.	0	9	0				
Delivering	0	4	0				
Sack hire	0	0	4				
Insurance and workmen's comp.....	0	1	0				
Cost of fallowing (proportion)	0	16	0	Loss	0	8	4
	£7	18	4		£7	18	4

Leaving out anything for the innumerable petty expenses, cost of management, interest of capital invested, all of which must be paid before actual profit comes in.

These figures are as accurate as I can make them after long practice, and any criticisms of them will be welcome.—Yours, &c.,

SON OF THE SOIL.

North Lincolnshire, November 7, 1907.

AGRICULTURAL LAW.

Rating Questions.

SIR,—Will you kindly help me by your advice. I own and occupy a farm of 800 acres, and also own the impropriate tithe, which is commuted at £105. This tithe is charged with a fee farm rent amounting to £47 per annum. What I wish to know is, can I deduct the amount of the fee farm rent from the tithe for rating purposes? To be perhaps plainer, am I liable to be rated on the full value of the tithe, less usual deductions, or minus the fee farm rent and deductions for collecting, &c.?

Of course, if I sold the tithes I should only get their value less the fee farm rent; and all I get as income from the tithe is what is left after the fee farm rent is deducted.

If you can help me I should be much obliged, as it would strengthen my case before the assessment committee.—Yours, &c.,

ENQUIRER.

*** I do not see on what ground you can claim to deduct the amount charged on the tithe. You are rated in respect of occupation, and, as I understand, the fee farm rent is charged on the tithe.

BARRISTER-AT-LAW.

Trap Accident.

SIR,—I have had a severe trap accident by my horse shying at a heap of sanitary pipes laid by the roadside, and I think they ought to be able to pay compensation, as my new trap is broken and my horse lamed, and I have received severe injuries. I have had medical attendance for six days, and it will be a good while before my left arm becomes all right. I think when people lay things down in such careless places, they ought to pay compensation for it. You will perhaps reply in your next issue.—Yours, &c., J. R.

*** Though the local authority would not be liable for non-feasance—that is the omission to do something which they ought to do—they are liable for misfeasance—that is an act of nuisance on the road. The question would be, was it a reasonable consequence of leaving a heap of sanitary pipes on the road that a horse should shy at them? I am inclined to think that the behaviour of the horse was what might be expected, and that, therefore, the person who placed the pipes on the road would be responsible, even it were a local authority.—BARRISTER-AT-LAW.

Northern Notes.

I AM afraid that, unwittingly, in conjunction with your printer, I must plead guilty to libelling the county of Cumberland in my last notes, as there I am made to say that that county is one of little fame. I imagine I wrote, or intended doing so, "one of little farms." I hope this apology to my Cumberland friends will be regarded as satisfactory.

MAY I briefly reply to "Countryman's" letter in the MARK LANE EXPRESS of November 4? He asks what form of cover may be substituted for the metal one (a screw top) in bottling or preserving fruit. I would suggest two layers of clean paper, failing a "bung" of cork or wood, which should be close fitting; and if the latter is available, it should be covered over with paper, pasted or gummed down to the sides of the receptacle. If paper only is used, the object should be to obtain a hermetically-sealed jar, impervious to the air. Butter paper, which "turns" grease, might be suitable for the purpose; but I would, in any case, recommend a double layer of good white paper, well pasted or gummed down. As to jam-making, I have heard of enamelled pans being used, but there is always the danger of pieces of the enamel coming off, and these are a source of great danger to vital organs if swallowed. The cottager too poor to invest in a brass pan, would not have much difficulty in borrowing one from the farmer's wife.

HONEY and hares are said to be scarce this season. Cottagers are making 9d. per lb. of their honey crop; in the shops the retail price is 1s. The honey as a rule this year is very good, and it is surprising that more attention is not devoted to apiculture. The hobby is an interesting one, and is followed by many persons of leisure, who work on the latest scientific lines. In rural districts the old "skep" hive is going out of fashion.

AS to the scarcity of hares and other game, the men who take small shootings will be hit rather hardly, and there will be a diminution of acceptable gifts among their friends. The Earl of Feversham, I notice, has sent a hare to each recipient of out-relief in the township of Helmsley. This is a kind and commendable act.

THE rainfall on the Wolds of Yorkshire in October, as registered by a close observer of meteorological affairs, reached a total of 5·115 in., rain falling on twenty-three days, and on the last day the precipitation approached to very nearly one inch. The rainfall for the ten months of this year now equals 20·560 in., which is about a normal amount. In September a measurable quantity of rain fell on seven days only. The recent rains have placed very large areas of land under water in the North, and it was not an uncommon sight last week to see in the swollen rivers an occasional dead sheep among the *débris*. Considerable damage to live stock and property was occasioned.

THERE still remains in the cornfields quantities of grain which should in the ordinary course have been under thatch a month or six weeks ago. The value of all that remains uncarted is reduced to a minimum, and farmers and the friends who take an interest in agriculture are much concerned about the financial part of this year's results. Some landlords come to the aid of their tenants without asking; others afford no relief in a bad season, as they seem to expect that by setting one season against another the farmer's income is equalised. This does not always hold good, and certainly the men who have been very badly hit by the weather working disaster upon their crops will need to be relieved from paying a proportion of their rents.

THE harvest is always, by some growers, awaited anxiously in the hope that the early realisation of a portion of the crops will enable them to lay out the proceeds in stock for winter and spring feeding. How tantalising it is for a farmer to be gazing at a bunch of fifty or 100 lambs, which are just what he wants, but finds his pockets empty, and he has to turn sorrowfully away. Such men, with their crops wasting in the fields, claim our sincerest sympathy. May we throw out the hint to farmers generally to let the newspapers know of every case of generosity by landowners to their tenants? The force of example may be an incentive to others of a closer-fisted nature, to "go and do likewise."

IT cannot be denied that while the heavy rains have prevented the gathering in of cereals, the root crops have reaped advantages, and they are progressing in an extraordinary manner. Ploughing has made some further progress, but not since my last, as it has been a very wet time, and November opened with field work considerably in arrear. On the Wolds a good breadth of the winter wheat has been drilled in a fair tilth; in the same neighbourhood two or three farmers are in a plight unprecedented in their experience, as they have not recovered a quarter of their corn crops!

THE Ryedale Farmers' Club recently discussed the question of Martinmas hiring of servants. The talk was principally on the point of "illegal" hiring—*i.e.*, of making bargains between master and man before November 23. One speaker suggested that for a servant to accept a "fastening penny" or "fest" before November 23 was to be guilty of obtaining money under false pretences. But what of the farmer offering money under such circumstances? No; we are inclined to the opinion that no alteration can hastily be made or is practicable in the hiring of farm hands, nor are we inclined to share the belief of another speaker that these hirings will die a natural death in a few years.

AN unfortunate dispute about the pen charges for pigs is reported from Wakefield. The dealers and the market authorities are at variance as to the tolls, which are regarded as excessive. The system of charging so much per pen has been altered, it appears, to a toll for each head of swine. The West Riding Chamber of Agriculture has decided to ask the Governors of Wakefield Charities—who own the market—to revise the tolls. A reference to the Board of Agriculture's "Official Returns" of market prices for October 31 shows that no pigs of any sort were entered at Wakefield that week. In the interests of the trade it is to be regretted the dispute has reached so acute a stage.

November 6, 1907.

Midland Notes.

NOVEMBER has opened with fog and flood worthy of its dismal reputation. The Severn and Avon have overflowed lately in many places; so have the Teme, Lugg, and Arrow; and many fields along the courses of these streams are deeply inundated.

WE are congratulating ourselves upon the quite respective prices lately ruling for British wheat; but the chorus is by no means unanimous. In a journey last week of about a dozen miles in South Warwickshire, the writer noticed three large fields in which crops of wheat had been abandoned in the stook. When seen the grain was sprouting and the straw blackened, half-rotten and almost worthless. Incidentally, nothing is more common now than complaints of bad hay. Roots will be plentiful, but evidently first-rate dry fodder will be at a premium this coming winter.

EVIDENTLY the Small Holdings Act is going to be administered in the Midlands with all enterprise, and proper consideration for the welfare of the classes it is meant to benefit. So much is fairly deducible from the debates and the practical steps which are already being taken by the county councils. They may not like some of the principles embodied in the Act, but they are ready, at any rate, to do what they can with it.

IN the case of Warwickshire, the Rev. Provost Talbot announced that the Small Holdings Committee intended to circularise the district and parish councils and the parish meetings, pointing out the general provisions of the Act, and requiring information as to the demand for small holdings and allotments in each locality. On the other hand, it is good to hear it definitely stated that the committee reckon it "no use for people to apply for small holdings unless they are prepared to put into the concern certain constituents on their own part." In other words, they demand that applicants shall show "some capital, some experience, and willingness to work." All which is encouraging to men of the right class, but not to incompetent theorisers from the towns.

SHROPSHIRE, it appears, is delaying action for the present, agreeing cordially with Sir Offley Wakeman that it would be "a thousand pities if by any impulsive action they embarked on schemes which turned out failures either by placing unsuitable people on the land or people in unsuitable positions." Shropshire, it seems, has already 3,845 holdings of between one and five acres, and 5,157 more between five and fifty.

AT the instance of a Board of Agriculture inspector, the Moreton-in-Marsh Farmers' Dairy Company, Limited, has had to defend a prosecution for selling a mixture of condensed milk and butter under a false trade description, and as a result the Wolverhampton stipendiary imposed two fines of £10 each and costs, amounting to £20 10s. more. The evidence showed that the offending butter was sent out in boxes labelled "Guaranteed pure butter and to contain under 16 per cent. of moisture," but on analysis the Board of Trade discovered an abnormal quantity of curd and preservative. Later on when the inspector visited the premises he found barrels of colonial butter there, along with churns of condensed milk and the machines by which the notorious "milk blended" butter was turned out.

I DO not desire to comment on the case in detail. The defence admitted that addition to the natural butter was made "for the purpose of flavouring." Farmers, I think, will agree with the stipendiary that no need for such flavouring ought to exist. We know that colonial and foreign butters of the poorer qualities are certainly inclined to err in the way of strength. But is it not said that stuff of this description should be vended, whether improved or not by blending, by trading concerns possessed of such titles as this "Moreton-in-Marsh Farmers' Dairy"? In the eyes of the public a conviction like this, widely reported as it has been, tends most unjustly to cast discredit on the whole agricultural co-operative movement.

I NOTE with regret two deaths. Mr. Owen Wordy, who was well known in south-east Warwickshire, met his end sadly while gathering pears. A slip of the ladder and a missed hold resulted in a 30-ft. fall and spinal injuries, to which the unlucky farmer shortly afterwards succumbed. He was fifty-nine years old. The death is announced also of Mr. Augustus Butcher, one of the directors of Lea, Ltd., the Kidderminster spinning firm. Mr. Butcher lived at Bewdley Hill, Kidderminster, and he was known among wool dealers far and wide. He was president for some years of the Northern Wool Buyers' Association, which has its headquarters in Liverpool.

November 8, 1907.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended November 2, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (8,591), 8,826; sheep and lambs (2,211), 4,196; horses (210), 327.

Fresh meat:—Beef (109,895 cwts.), 87,497; mutton (56,599), 54,038; pork (11,878), 13,026.

Salted or preserved meat:—Bacon (104,405 cwt.), 90,106; beef (2 001), 2,904; hams (18,556), 19,896; pork (1,965), 2,918; meat (13,055), fresh, 13,499, salted, 1,498; meat, preserved (7,937), 20,849.

Dairy produce and substitutes:—Butter (71,227 cwt.), 66,865; margarine (22,831), 17,106; cheese (63,342), 78,870; milk, fresh in cans or drums (—), —; cream (90), 63; milk, condensed (19,883), 19,783; milk, preserved, other kinds (229), 53.

Eggs (great hundreds):—(449,459), 492,157; poultry (value £5,676), £4,389; game (value £2,521), £4,483; rabbits, dead (not tinned), (32,162 cwt.), 45,580; lard (33,869 cwt.), 35,314.

Corn, grain, meal, and flour:—Wheat (1,004,200 cwt.), 1,615,700; wheat meal and flour (314,500), 446,600; barley (759,900), 861,900; oats (327,100), 270,200; peas (46,460), 35,290; beans (40,200), 3,110; maize or Indian corn (677,800), 1,127,600.

Fruit (raw):—Apples (144,882 cwt.), 180,860; grapes (56,641 cwt.), 78,309; pears (15,849 cwt.), 8,944; plums (5,935 cwt.), 195.

Hay 3,548 tons), 1,079; straw (720 tons), 1,858; moss litter (1,986 tons), 1,260; hops (13,523 cwt.), 7,668; locust beans (35,720 cwt.), 30,000.

The seventeenth annual general meeting of Prentice Brothers, Ltd., will be held on Saturday next, the 16th inst., at the offices of the company, the Chemical Works, Stowmarket, at 11 a.m. The report of the directors states that, after placing £100 to the reserves for bad debts (making a total of £4,100 now standing to this reserve account), and a further £300 to the reserve for general purposes, the net profit for the year, together with the sum brought forward from last year, amounts to £3,955 2s. 1d., and is available for dividend. Out of this sum the directors recommend the payment of dividends at the rate of 6 per cent. per annum on the preference shares, and 6 per cent. per annum on the ordinary shares, leaving a balance of £1,249 6s. 7d. to be carried forward. Both dividends to be paid on December 1, less income tax.

Lincolnshire Notes.

OUR curiosity is allayed. Mr. Adeane, chairman of the Finance Committee of the Royal Agricultural Society, informs us that the net profit of the Lincoln Royal Show is £5,056, exclusive of the £2,000 allocated to the show account from the ordinary account. This will satisfy both our curiosity and our pride. It is a splendid result. Against it the £2,028 gained at Derby sinks into insignificance, whilst the losses of from £3,000 to £10,000 which were so consistently sustained at Park Royal, become mere memories by the splendid prospect which it opens out. The new era for the Royal Society has now begun in earnest.

A CURIOUS situation has arisen on the Lincoln Cattle Market. The Lincoln and District Butchers' Association, in view of the drastic inspection of meat imposed by the sanitary authorities of the city, has established an indemnity fund. Members contribute in the following sums:—1s. for a bull, 1s. for a cow, and 6d. for a beast or maiden heifer, and out of the sum so realised the association compensates any member who may suffer a *bona fide* loss through the condemnation of an animal on the ground of the presence of tuberculosis. The fund is however, proving insufficient, and the association has therefore asked farmers who send stock to Lincoln market to contribute an equal amount.

THEIR argument is that it is almost impossible to detect a tuberculous condition in any live animal, and that the butcher frequently purchases a beast at a good market price and apparently in sound condition, to find it condemned by the meat inspector after it has been slaughtered. The Butchers' Association contends that the farmer is entitled to bear at any rate an equal share of the burden, hence the demand.

MANY farmers have agreed willingly, but some have refused. The latter the butchers have notified that unless they can fall into line with the suggestion members of the association will decline to bid for their stock or to purchase it without a guarantee as to its soundness. This threat they are carrying out, and several farmers had to bring their cattle back unsold from the Lincoln cattle market on Tuesday. I have not heard the end of the incident. No doubt an arrangement will be arrived at eventually. Pending legislation, it is only reasonable that the farmer and the butcher should share the great risks which attend the slaughtering and the preparation of carcases for human food.

THAT the law of trespass is both inadequate and unjust will be generally admitted. The Lincoln Chamber of Agriculture last week discussed Mr. Courthope's successful Bill, which provides that any person stealing, destroying or damaging plants, roots, fruit, flowers or vegetable products on cultivated or enclosed property, shall be deemed guilty of an offence under Section 37 of the Larceny Act of 1861. This will go so far to relieve an anomaly, but the opinion of the Chamber is very strongly that trespass alone, apart from the question of damage, should carry liability to prosecution. They did not say as much by resolution, but they did adopt a general expression of opinion that the law should be dealt with in a much simpler and more practicable method.

IT was a pity that the chamber had not the advantage of the presence of Mr. Christopher Turnor, whose letter re the new Central Land Association was read with so much interest. The aims of the new organisation are comprehensive. It is to be non-party, and its principal concern, like that of the Lincolnshire Farmers' Union, is to increase the agricultural influence on the local councils, the local political associations, and in Parliament. Secondarily, it seeks to secure a larger membership of chambers of agriculture and other agricultural societies, and to encourage the organisation of the rural labourers on non-party lines.

THESE are excellent ideals, which every agriculturist, master or man, should adopt and work for. Let us hope that the various agricultural associations who have adopted political permeation as their motto will work for it side by side. There never was a better chance for the political salvation of agriculture so long as all parties to the cause can agree and pull one way. And before they can do that they must, of course, settle their own little domestic differences. Why not start doing that at once?

LINCOLNSHIRE still holds the record for wool. In Mr. Rews' very interesting report to the Board of Agriculture are some pertinent comparative tables. It seems that in Lincolnshire the average weight for ewes is 10 lb., and for other sheep 13 lb, as against 6¾ lb. and 7¾ lb. respectively, for the West Riding. In the case of Derbyshire, the average works out at 7¼ lb. and 9¼ lb. respectively, and for Notts 8¼ lb and 10¼ lb. respectively.

MR. COLIN CAMPBELL had a useful all-round talk with the farmers of Grantham at the branch dinner of the Lincolnshire Farmers' Union. He does not believe in consolidation, but he does want to see landlords, farmers, and labourers each with a union of their own, sitting around a joint board to talk about the consolidation of agricultural interests. He urged the formation of a mutual insurance amongst the farming class, and renewed his feud against the destroying motor car. Farmers are being driven off the roads which they largely pay for, and the matter is becoming really serious. The chairman of the Farmers' Union wishes to see motors licensed according to their power, so that motorists may pay for the roads, which appear to be made for them.

THE excellent show of roots and farm produce was one of the best of the year, and it is a distinct pity that it did not attract a greater and a more intelligent interest amongst the local farmers. Competition is very keen, and much interest was taken in the competition for the silver medal championship prize for the best exhibit on the field. This was ultimately awarded to a remarkably fine exhibit of Johnson's Prize Medal Golden Globe Mangel, grown by Mr. H. Lockwood, of Boston West.

THOUGH Lincolnshire was not strongly represented at the Brewers' Exhibition, one or two of the prizes came into the county. Two awards for Chevalier barley were sent to South Lincolnshire. The winners were Mr. J. Thurlby, of Baston, a farmer well known in the Bourne district, and chairman of the local branch of the Lincolnshire Farmers' Union, and Mr. F. Holmes, of Greatford. Mr. Holmes also won in the Northamptonshire section, and carried off a special for seed. Mr. Holmes' crop was grown on loam over gravel, after turnips, from Webbs' seed and with Webbs' manures. It was sown on March 6 and cut on August 22, and came out at 4 qr. Mr. Thurlby's was the same class of land and Webbs' seed, but the crop was grown after seeds with Fison's manure. It was sown February 27 and cut August 27, and also came out at 4 qr.

LINCOLNSHIRE FARMERS' UNION.

GRANTHAM BRANCH.

The annual luncheon of the Grantham Branch of the Lincolnshire Farmers' Union took place at Grantham on Monday, and was very well attended, practically all the well-known agriculturists of the district being present Mr. R. C. Bemrose presided, and proposed the loyal toasts, which were enthusiastically honoured.

Mr. R. N. Morley, of Leadenham, in proposing "The Lincolnshire Farmers' Union," said if they were shopkeepers instead of farmers they would not have so much advice offered to them by people outside as to how they should conduct their business. They could hardly pick up a paper but they found some asthmatical haberdasher or superannuated tinker writing to tell them how to manage their business. He did not think farmers were more backward in the management of their business than anybody else, and he believed that at the present day they were more alert than their forefathers. He was sorry that some of the representatives of the old farming families had not yet fallen into line. He did not know why, but he hoped that soon the scales would be removed from their eyes.

Mr. Colin Campbell, chairman of the Union, replied, and in doing so congratulated Mr. Golding, the hon. organising secretary, upon his successful work in connection with that branch of the Union. With regard to the movement for the consolidation of agricultural interests, he said they as a Union were in favour of consolidation, but they did not wish to take all three classes connected with the land into the Union. He would prefer that the landlord should have his organisation, the farmer his union, and the labourer his They were told that the labourers were going to organise. They as a union would not go against the labourers; in fact, they would do all they could to help them. When those three organisations were formed they could have a joint board to talk about the consolidation of agricultural interests.

On the question of insurance, most of them know to their sorrow that as year succeeded year their premiums went up—not only fire premiums, but employers' liability premiums also. What they wanted was to devise some better scheme of insurance. There were two alternatives. They would either have to go to some office for a substantial reduction or they would have to start a mutual insurance society of their own. In the past they had had many advisers and sympathisers, but now was the time for sacrifices. He wanted them to show their sympathy by taking shares in a mutual insurance company. Members would reap direct benefit from it, and it would be the means of drawing them closer together.

Passing on to the subject of motor traffic on the roads, Mr. Campbell said the Motor Car Act expired this year, and a new Bill would have to be brought in. He thought the Lincolnshire Farmers' Union ought to take a very active part in pointing out to the President of the Local Government Board the lines on which it should be drawn. He had every reason to believe that if they sent up a deputation they would be received in a most sympathetic way and their recommendations would be considered. He was connected with the Highways Committee of the Kesteven County Council, and he knew of the large amount of damage done to roads by the motor traffic. This was a very serious thing indeed for farmers, who had to pay the rates and did not use motor cars.

Mr. T. Roberts (Croxton), in proposing "Success to the Grantham Branch of the Union," reviewed the history of the movement in the district, and observed that farmers were now beginning to realise that the Union was going to benefit them individually. Still there was room for more in the Union. With reference to motor car traffic, they as farmers paid a very large proportion of the cost of maintaining the roads, but to all intents and purposes were being driven off them by gentlemen who came from a distance, did not pay anything towards the local rates, and did not pay much in the district from which they came. These gentlemen were not satisfied with a portion of the road, they wanted the lot. He had been turned upon his back out of his trap; he had had to get out of the way by taking a young horse over the hedge; and he had a horse which, instead of being worth 70 or 80 guineas, was only worth seven or eight pounds, in consequence of being startled by a motor. Unless they spurred up the Lincolnshire Farmers' Union to take action with respect to the alteration about to be made in the law, they might find that instead of having a portion of the road they would not be allowed upon it at all.

Mr. Palmer, giving the health of the hon. secretary of the Union, congratulated the Grantham Branch upon the fact that its membership had increased from twenty-five to 100.

Mr. F. Godson proposed "The Chairman," and remarked that at one time landlords and agents thought that farmers by their union were going to kick the landlords. At the present time all landlords and agents in the county were pleased to see the Farmers' Union doing so well.

The Chairman said he was proud of the fact that he was one of the pioneers of the Farmers' Union. They were not antagonistic to either landlord or labourer. They could not tell what benefits would accrue, but if all farmers joined they might do wonders. He agreed with Mr. Campbell that they ought to have an insurance society of their own. With regard to motor cars, he would like to see them bear a licence according to their power. If roads were to be made for motors, then motorists ought to pay for them.

The new Lord Mayor of Cardiff is Alderman Illtyd Thomas, valuer to the Board of Agriculture and Fisheries, for which body he also acts as estimator of the yield of produce and crops for the Cardiff and the Bridgend and Cowbridge Unions. Alderman Thomas, who lives at Maesylai, the residence attached to Ely Farm, where his ancestors have resided for over 300 years, will be the youngest mayor or lord mayor Cardiff has had, with the exceptional instances of the Marquess of Bute and the Earl of Plymouth (as Lord Windsor).

The annual show of seed corn under the auspices of the United East Lothian Agricultural Society, postponed from October 18, was held in the Corn Exchange, Haddington, on the 1st inst., when entries were very few, but the quality of square head wheat (red chaff) was pronounced a good average for the last ten years. There were no entries in the classes for any approved white or red variety, duly named. The awards were:—One quarter square head wheat (white chaff)—Sir David Baird, Bart., Whitekirk. One quarter ditto (red chaff)—1, James Shields, Longniddry; 2, G. B. Shields, Dolphingston. Corn—T. Elder, Stevenson Mains, and T. Dale, Lochhouses.

What Are We Doing?

Moving about the Borough day by day, I find that a cloud rests upon the minds of our traders, who, almost without exception, declare that they have never experienced a more unsatisfactory season than the present one. The hopes for improvement in the demand, and consequent advance in values, with which they have encouraged each other from week to week, appear to be extinguished, and the experience of the last few days has intensified the dulness that has continued too long. Certainly we know that some considerable business has been done recently in special large growths, but from what I hear, the prices realised have been most disappointing to the growers, who would not have sold at such low rates, had they not lost faith in the future of the market. But even these large transactions have not assisted the general trade, which has apparently settled down to an almost stagnant condition.

Consequently we hear of lower prices being offered, and in some cases accepted, for all descriptions. Even the choice lots, of which there are only a few left, are feeling the effect of the universal depression, and holders are evidently inclined to give way rather than miss the chance of a sale. Foreseeing the uncertainties of the trade this year, I have not failed to warn my readers of the possible results of delay in selling, and I again repeat, that the market is in a very perilous position, and that it behoves prudent men to be on their guard lest they be taken by surprise and suffer accordingly. I would that I could write more hopefully, but my impressions are too vivid to enable me to make any other forecast.

Other Views.

I am glad to note that the serious trials, through which our growers are now passing, have been the subject of correspondence in certain London newspapers. It proves that the interest in our industry is wider than is sometimes recognised, and we should welcome these utterances, even when we cannot agree with them.

One writer raises the question, whether "the methods at present in use in the English hop gardens are economically sound, and the best possible, to secure a profit on hop-growing." He argues that, as the arable farmer has successfully met foreign competition, by the selection of improved varieties of seed corn, by working with strict regard to economy, and by the abandonment of expensive high farming, hop-growers should meet their present difficulties by similar means. He advises that we should follow the example of our Bavarian competitors in excluding male plants, and thus producing hops of higher market value.

Attention is also called to the encouragement of the life cycle of the aphis blight, by the proximity of orchards of damsons to the hop gardens, and it is asked if the costly system of washing for blight is economically wise, inasmuch as although the aphis is thereby destroyed, the natural protectors of the plant—the ladybirds—are killed by the same process. The writer would rather know that a small crop was grown at a minimum cost, than that a large yield was secured at an outlay that only results in loss to the grower.

This letter was followed by one from Mr. John Gretton, of Burton-on-Trent, in which he expresses his conviction "that the modern system of forcing and high cultivation of English hops does not pay the grower. His expenses are very great, and his risks are much greater than under the old system, owing to his much heavier outlay, and the decreased vitality of the hop plant." He adds: "The result of high and artificial manuring has been to glut the land with stimulants at great cost, and to force the growth of the hop plant, until its vitality is weakened and it readily becomes a prey to disease. To ward against this evil further expense is incurred in washing and spraying with various chemicals. The extent to which the process has gone is shown by the fact that practically as many hops are now grown upon about 48,000 acres as formerly on 65,000 acres. And they realise a less price per hundredweight, for the hops are of less value to the user, who is the brewer; they become thin and husky, and contain less of the essential properties which give flavour and character to the ales and provide the keeping qualities."

Mr. Gretton goes on to say—

"When my experience commenced, twenty-five years ago, fine, rich, thick Kent hops were common; now they are rare. The seasons will not explain the difference, for some few English growers who continue the old methods still have healthy and saleable hops year after year. Scientific opinion is not always reliable in dealing with every aspect of the growth of plants and the cultivation of the soil; in this case the scientific forcing of hops in England has failed to pay the grower in the long run, and has deteriorated the character of the hops and their value to the brewer. It is, unfortunately, probable that the 'stocks' in many of the plantations are permanently deteriorated, and that the remedy will be to grub a portion of such plantations in successive years and to commence growing new stocks of the best character under healthy, natural, and less costly conditions."

The views of a practical man of such long experience as Mr. Gretton, who, as a consumer of our own produce in one of the most scientific breweries in the world, must have full knowledge of his requirements in this department of his business, are most worthy of acceptance by our growers. Taking the two letters together, what is the lesson they are meant to teach us? It is simply this as I read between the lines—that "quality" should be the first consideration of the English grower, and that "quantity" should be subservient thereto. Our planters are always proud of a big crop; they display it to their visitors, and are congratulated on their success. I know it is hard to settle down into the dull rut of contentment with more limited results; but we may be encouraged to look favourably at the question from this point of view, when we think of the experience of our Bavarian and Bohemian competitors, whose excellent qualities are more or less superseding ours, in our own market, and who are happy in gathering crops not exceeding 4 to 5 cwt. per acre. They make hop growing pay, for although their selling prices are not infrequently low, their outlay is so small that a margin of profit always remains. If we cross the Atlantic the conditions are very different. There, every planter aims at a heavy crop, and he is able to realise it at small cost, because it is grown on virgin soil, with very little expenditure for manures or cultivation, and under such climatic advantages, that even when sold at prices that would spell ruin for the English grower, profit accrues to the American.

Our Foreign Trade.

The figures furnished by the Board of Trade returns for the last month show that the tide of our imports is rising, despite of the serious depression of our home demand. During October we received from the United States 3,082 cwt., and from other countries 21,208 cwt., making our total imports for the month 24,290 cwt. Our exports have improved somewhat, as we have shipped 1,566 cwt. of English and 361 cwt. of foreign hops. The balance against our market is, however, much too heavy, being 22,363 cwt. Since September 1 our imports have amounted to 33,893 cwt., and as we have exported only 2,264 cwt., the adverse balance for the first two months of the season is 31,629 cwt. Considering the slowness of the sales of our native produce this season, and the poor prices realised by our growers, the figures I have quoted are sufficiently serious to create much anxiety as to the future of the trade, and I am not surprised that attention is being given to the present position of affairs. I earnestly trust that the danger that is too evidently ahead, will cause our reasonable fears to assume a practical form, and that our legislators will be compelled to listen to us when we insist upon measures for the salvation of our industry.

Drying and Curing.

The following is a continuation of my extracts from the paper by Dr. Stockberger, of the U.S. Department of Agriculture, partly dealt with in our columns last week:—

The Theory of Drying.

It is evident that a rapid and continuous removal of moisture is desirable, and to accomplish this draught and ventilation are necessary. A strong draught is essential to insure a rapid movement of the heated air through the layers of hops, since by rapid replacement of the air in contact with the moist hops, time is not afforded to approximate the point of saturation. Hence the air can undergo quite a degree of cooling in the upper layers without reaching the dew point and depositing its moisture. Top ventilation is also necessary to remove the vapour-laden atmosphere from above the hops, otherwise the point of saturation would be quickly reached, and the moisture deposited on the sides of the kiln and on the hops themselves.

Draught and ventilation as well as drying, are very dependent on the temperature and humidity of the atmosphere. A definite upward movement of the air in a kiln occurs when heat is applied at its base. The cold air outside the kiln being heavier than the warm air within, constantly tends to establish an equilibrium of pressure by flowing down to the base of the heated kiln. As a direct consequence, the heated air is forced upward, and the cold air taking its place, is in turn heated and will follow the same course. A continuous circulation is thus established, its velocity and volume depending on the difference in density of the outside air and the air within the kiln.

The changes of temperature in the external atmosphere have very marked influence on draught. It is generally observed that the best draught is secured about two or three o'clock in the morning. This is about the time when the greatest temperature differences exist between the outside and inside air, with a corresponding difference in pressure, resulting in stronger draught. This advantage, however, is largely offset by the great increase of humidity in the atmosphere at night In the daytime, when the outside temperature is high, great difficulty frequently arises in securing a draught without at the same time overheating the hops. Usually a difference of about 50 deg. F. between the temperature under the kiln floor and that over the top of the kiln is necessary in California to cause a sufficient pressure to force the air through the hops. In Oregon a difference of 30 deg. Fahr. is generally sufficient to accomplish the same result. Assuming that a difference in temperature between the atmosphere and the air in the kiln of from 30 to 50 deg. Fahr. is needful to cause a proper draught through the hops, it is apparent that the greatest care must be exercised to avoid damage to the hops by overheating.

Many of the difficulties attendant on the use of natural draught have been overcome by recourse to forced draught. By this means a large volume of air is driven through the hops, instantly setting up a good circulation of air and rapidly carrying off the moisture. Drying is also possible at a much lower temperature, and this method presents many other advantages, among which is absolute control of a low even temperature, giving an increase of soft resins, flavour, aroma, and weight.

Nature of the Curing Process.

When the hops are placed on the floor of the kiln, the cells which compose their tissues are still alive. Proper curing consists in bringing about the death of these cells through the gradual withdrawal of water from them at a moderate temperature. Within each cell are many chemical substances which remain separated as long as the cell is alive, but which are thrown out of solution by the loss of water from the cell and left in a form in which they are very readily soluble. If the removal of water does not proceed steadily, or if the vapours are allowed to settle back, moisture condenses on the hops and is quickly reabsorbed, and coming in contact with the readily soluble substances, dissolves them. In this condition these substances cause discoloration, and the hops are injured in other ways.

Death of the cells may be caused without much water loss by sudden exposure to high temperature. In such a case the chemical substances no longer remain separated, but flow together and form new compounds with resultant changes in colour, aroma, and other desirable qualities. The cells may sustain a considerable water loss before they are killed, provided the temperature is kept below a certain point, say about 10 deg. Fahr. As soon as the death of the cell occurs and the flowing together of its compounds begins, drying should be forced somewhat more rapidly, in order to reduce the amount of water present as fast as possible, but even at this stage of drying the temperature can probably not long exceed 140 deg. Fahr. without injury to the quality of the product.

(To be continued.)

Agriculturists and Birthday Honours.

The King's Birthday Honours List, published on Saturday, contains, we are glad to see, some names of gentlemen well known in the agricultural world, though perhaps, with but one exception, the honours are given as political rather than agricultural awards. The one exception is in the case of Mr. Charles Whitehead, who has been made a knight. Mr. Whitehead, who is well known in connection with the Royal Agricultural Society, was the first agricultural adviser to the Privy Council. Then he became technical adviser to the Board of Agriculture, but owing to an accident was obliged to resign the post in 1900. Himself a practical farmer, he has written much on questions interesting to all kinds of cultivators. Mr. Whitehead was born in 1834, and resides at Maidstone.

The others we noticed named in the list are Mr. Jeremiah Colman, of Gatton Park, Reigate, who is equally well known to our readers as a member of the well-known mustard firm and a most successful breeder of Shorthorns; Mr. Clifford John Cory, of Llantarnam Abbey, Monmouthshire, a breeder of Hunters and a member of the Hunters' Improvement Society; and Mr. Alfred Apperley, of Stroud, Gloucestershire, a well-known sheep breeder and a director of a woollen cloth weaving firm. Mr. Colman and Mr. Cory have been made baronets, and Mr. Apperley a knight.

Nottinghamshire Notes.

DURING the past few days the daily newspapers have been recording the fact that in Scotland there is still a large amount of corn not yet cut. It will perhaps surprise some of my readers when I state that in this county and also in Derbyshire there are still several fields of barley standing—one piece in Derbyshire was far from being ready to cut at the beginning of this week. Even at Bestwood, only three miles north of Nottingham, there is a field where the sheaves of barley are still laying on the ground where the reaper left them, while a number of farmers have up to the present been unable to gather in the rakings, which of course are now grown through and the corn ruined.

WHEAT sowing is a slow process in this neighbourhood, the land being so wet, and farmers have found it impossible to do any good with their horses on the arable land where the soil is of a clayey character. Here and there, however, may be seen a few fields which have been drilled with wheat, while odd pieces may be found where the wheat can be seen in rows from one end of the field to the other. Speaking for the farmers as a whole, only a small acreage of wheat has so far been got in around this district.

POTATO lifting operations in Notts have been seriously impeded by the constant rains, and many acres of tubers have yet to be got up. This week I have made a number of inquiries not only around Nottingham, but also in Newark, Mansfield, Worksop, and the Retford districts as to how potatoes are yielding, and on the whole I find that they are turning out even better than a year ago.

MR. H. HEATH, J.P., C.C., of Bestwood Park, near Nottingham, is by far the largest potato grower we have in this district, for he usually sets between forty and fifty acres with tubers, and this year has grown about forty acres. Not only that, but Mr. Heath is one of those gentlemen who is nothing if not up to date, and spares neither time nor money in order to secure the best possible seed not only from various parts of England, but also from Scotland, Ireland—aye, and even South Africa.

THE Irish people are ever complaining of the injustices meted out to them by the English people, therefore I think it only right that for once they should have their due praise. Mr. Heath in the spring of this year obtained a quantity of Up-to-Date seed potatoes from Ireland and also Scotland, together with some of the same variety that had been grown in England. These he planted in one of the best fields on the farm, and from the first week that the tops forced their way through the ground, the Irish seed has done the best. A similar state of affairs has been revealed at the Kingston Agricultural College Farm, where Professor Blackshaw, for experimental purposes, set the seed obtained from the three different countries side by side, and it was possible at a glance to distinguish the Irish tubers.

DURING July I accompanied a party of agriculturists from Derbyshire round the institute's farm at Kingston, and after Professor Blackshaw had remarked on how well the Irish potatoes were looking, an old-fashioned farmer turned to me and remarked, "It's all right now, there's plenty of top; but how many 'taties' will there be at a root? It's them that count!"

IN order that I could witness the difference in the yield Mr. Heath very kindly had a row of each variety dug up while I was watching, and I can safely bear him out in his statement when he declared that the Irish tubers would average 14 tons per acre, Scottish 10 to 11, and English 7 to 8.

FARMERS should note the above results, and as Mr. Heath intends to buy a considerably larger quantity of seed tubers from Ireland next year for setting, other agriculturists might take a hint and profit thereby.

TAKING the various reports on potato growing in the county as a whole, I find that those set on the heavy or clay soils have done the best during the past season, and many crops will yield from 9 to 10 tons per acre, while on the light sandy land from 8 to 9 tons per acre will be the average. They are now fetching a very good price, wholesale dealers paying from £4 to £4 10s. per ton for good eating potatoes, and the tendency appears to be in the direction of still higher rates. So far very few diseased tubers have been found.

MR. ARTHUR A. AVIS has been importing some fresh blood into the herd of Large White Yorkshire pigs at Stoke Bardolph during the past week. He has purchased from Mr. F. J. Hollingworth, of Weston-on-Trent, a fine boar known by the name of Weston Prince Albert, and a young unnamed boar by the above. Also Weston Maggie, Weston Duchess 3rd, and Weston Betty, the latter having a litter of nine about a month old.

MESSRS. JAMES FORSHAW AND SONS, of Carlton-on-Trent, near Newark, have purchased six capital foals from Lancashire having Present King II. as their sire. They include one from Mr. Taylor, of Bretherton, near Preston, already a prizewinner; a brown colt from Mr. C. P. Yates, Catherall Hall, Garstang, near Preston; a brown filly from Mr. W. Sutton, Dutch Barn, Chorley; one from Mr. R. Wiggans, Lime Kiln Farm, Lostock Hall, near Preston; a black foal from Mr. T. Bretherton, Grimsargh, near Preston; and a very promising bay foal, which promises to develop into a valuable Shire stallion, from Mr. Walmesley, Runshaw Moor, near Chorley.

WORKSOP Statute Fair on Wednesday for the annual hirings was of a very tame character, and might as well be passed over, for there were very few farm hands in want of situations, and only a small number of men and girls put in an appearance. In fact, there was little difference to be noted on Wednesday from any other Wednesday, which is the usual market day.

FARMERS gathered together in strong force at Bestwood on Tuesday, the occasion being the 65th annual ploughing match and show of the Bestwood Park Agricultural Society. The ploughing took place on the Goosedale Farm, in the occupation of the owner, the Duke of St. Albans. Some excellent work was done, and Mr. Ralph Cowing, agent to the Earl of Harrington at Elvaston Castle, one of the judges, declared it to be equal to anything done in Derbyshire.

THERE were also competitions for hedgings, which was done in a manner that showed the men took more than a passing interest in their work. A man named Parker, who has won prizes in many parts of the Midlands, did his work so well that it would be almost impossible for a rabbit to get through the hedge. The men all round protected the stools well and made excellent fences out of overgrown hedges.

BESTWOOD is noted for its root crops and sheep, and there were a number of classes for both. The land is generally of a sandy character, and turnips and mangolds attain enormous proportions. Mr. James Acton again secured for his seventh or eighth consecutive year the first prize for mangolds—but he always grows them in the same field.

DINNER was partaken of at a neighbouring hotel in the evening, when the company included four of the members of the Nottingham Town Council, Mr. J. A. Trumper (agent to the Duke of St. Albans), and the leading farmers of the district. The speeches were for the most part devoted to the Small Holdings Act, most of whom were in favour of the measure. It was generally agreed that the Act would meet a long-felt want, and one speaker mentioned that several applications had already been made for small holdings in that district. Mr. J. T. Farr, who farms a large holding at Staunton, near Newark, who is also a member of the Notts County Council, spoke strongly in favour of small holdings, and I believe he has already let off a portion of a farm which he owns in Lincolnshire to a former labourer in order that the man could keep his sons at home instead of them going out to Canada.

MR. HENRY RHODES, who was another of the judges, humorously referred to a paragraph which appeared in the MARK LANE EXPRESS some months back describing him as not a thorough farmer—this in spite of the fact that he had farmed for over thirty years and now occupied over 300 acres. "This is," he laughingly explained, "because I am also a manufacturer." I might say that Mr. Rhodes is a large blouse and Shetland shawl manufacturer at Hucknall, only a few miles away, while he is in addition a landowner, and lets off one of the most ideal small holdings to an old couple who make a good living off a few acres of land. R. K.

November 7, 1907.

The Collingham Farmers' Club's sixty-seventh annual ploughing match and agricultural and poultry show was held in dull but dry weather, and was well attended, whilst the entries were good, numbering 400, as compared with 370 at last year's exhibition, and the quality of stock had also improved. There was a slight decrease in the entries for ploughing, but this was accounted for by the fact that the farmers were exceptionally busy, owing to the late harvest. The poultry and dairy produce was good in quality, but the roots, although numerous in entry, had suffered from the wetness of the season.

For 1907.

GARTONS

DISTINCT NEW BREEDS

OF

SEED WHEATS,

"RED KING"

AND

"WHITE PEARL."

Also Winter Oats, Winter Barleys, Winter Vetches, and all other Seeds for present sowing.

SEED GROWERS AND EXPERTS,

WARRINGTON.

A well-known gamekeeper has discovered that Mustard given to hens in the morning food, wonderfully stimulates their egg-laying capacity.

(*See "The Field," Feb. 6, 1906.*)

Hundreds last winter tried the following plan with excellent results. "For every six fowls take one teaspoonful of Colman's Mustard and mix with the dry meal prior to the addition of water." Ask some of them. You will be surprised at the results they got.

The best Mustard for the purpose is, of course,

Colman's

Fertilisers and Feeding Stuffs.

FEEDING STUFFS.

(Continued from last issue).

Water.—Excess of water over the natural amount contained in a food is a method of adulteration which is to be guarded against in both cakes and meals, but more especially in the former. It is a profitable form of adulteration, and, moreover, one not often looked for, even by careful farmers. Assuming that in a linseed cake, for instance, the natural amount of moisture present is 11½ per cent., and a means is found for preparing the cake with 14½ per cent, moisture in it, there is in every 100 tons the substitution of 3 tons of water for 3 tons of cake, and this at £12 per ton means a handsome profit to the manufacturer. Besides the purchase of water at £12 per ton, the farmer is liable to lose in another way through this excessive amount of moisture, for cakes so made do not keep well, and frequently go mouldy even when stored for a few weeks.

The method of detection and calculation of the percentage of water in a food is one which every farmer could do at home in a rough, though sufficiently accurate manner. It is this :

A fair sample of the foodstuff is taken by crushing, say, two to three cakes per ton, picked at random from the lot, into small pieces and thoroughly mixing. From this a small portion, say 1 lb., is taken and crushed in a mortar, or by similar means, to powder. It is, of course, important that all samples be taken as soon as possible after receipt of the consignment, and that they be mixed on a dry, clean floor or in dry, clean vessels.

The next step, having obtained the pound or so of the feeding stuff in a powdery condition, is to weigh out very accurately two or three small portions of it on a good balance—say, 2 oz.—and put these portions into weighed clean and dry saucers, or similar non-absorbent receptacles.

The best way to do this is to weigh the saucer first very accurately, put on a 2 oz. weight, and then add the food stuff until the balance is again equal. Probably few farmers will have in their possession a balance sufficiently accurate for this purpose, but a small apothecary's balance and weights could easily be bought for a small sum, and this would do excellently.

The 2 oz. samples (or whatever weight be selected) have now to be dried in order to drive off all the moisture. This might be done in an ordinary oven, provided it were kept at a good heat; the proper temperature is 212 deg. Fahr. The samples will probably require about three hours, but should be taken out every half-hour, allowed to cool, and quickly weighed. They will be found to have lost weight. After weighing the samples are replaced in the oven each time until two successive weighings show no alteration, or at any rate a very slight one. When this occurs it is safe to conclude that all the moisture has been driven off, and therefore it is equal to the difference between the weight at starting and the final weight. For example, taking a sample weighing two ounces, after three hours' drying it might weigh 1⅞ oz., after a further half-hour's drying it might still weigh 1¾ ozs., therefore the moisture contained in 2 oz. is equal to ¼ oz., and 100 oz. 12½ oz. or 12½ per cent.

Or if apothecaries' weight were used :—

Weighed out 1 oz. cake,		
First weighing.....	250	grains.
Second weighing...	242	,,
Third weighing ...	242	,,
Moisture in 1 oz....	46	,,
Moisture in 100 oz.	16 oz. or 16 per cent.	

As, however, it is not always convenient to use the kitchen oven for so long a time, a substitute can be made by taking an old biscuit tin and threading it across about half-way up with wire, thus making a shelf for the saucer and its contents, and heating the tin from below by means of a spirit or oil lamp. When the lid is on the temperature soon rises to the required height. It is always necessary to see that no charring takes place and that the powder does not cake together to a solid mass.

I do not pretend that a determination of moisture made in this rough way would be sufficiently accurate to form the basis of a demand for an allowance on the price paid for the feeding stuff, but it would certainly give an indication, and if by this means the percentage of moisture were found to be too high it, would pay to have a proper analysis made by a competent analyst on which to base a claim for such allowance.

The percentage of water natural to the various feeding stuffs is given below, though, of course, a variation of 10 per cent. up or down would be permissible :—

	Per cent.
Beans	14·5
Brewers' grains	76·6
Dried grains	12·0
Decorticated cotton cake	10·1
Undecorticated	11·5
Linseed	12·3
Linseed cake	11·5
Maize meal	14·4
Peas	14·3
Rape cake	10·4
Rice meal	11·5

Sand.—This is another common impurity, and is used on account of its weight and the difficulty of detecting it with the naked eye. Sand should not be present in greater quantity than about 1 per cent. of the whole bulk. In some cases accurate observation of the weight of sacks or loads will show that something has been added which has increased their weight.

The following are normal weights of a few common feeding stuffs :—

	Per bushel.
Dried grains	20 lb.
Broken decorticated cotton cake	50 ,,
Broken undecorticated cotton cake	38 ,,
Linsed	52 ,,
Linseed cake (broken to walnut size)	43 ,,
Maize meal	47 ,,
Rice meal	66½ ,,

An increase of weight may therefore show adulteration with sand or water, though it must be remembered that these weights are approximate only.

A simple test for sand is the gritty feeling experienced when a little of the cake or meal is crushed between the teeth.

A further test which can be easily carried out is to put a little of the suspected cake or meal into a tumbler of water; the sand will immediately fall to the bottom whilst the meal will float, and in this way the adulteration can be detected. The test can be made with a weighed quantity of meal, being a fair sample, and when the sand has settled the water and meal can be carefully decanted off, the sand dried in the oven and weighed, and the percentage proportion calculated from the figures obtained. In the case of cakes the sample must of course be ground to a powder.

The search for excess amounts of sand and water, if present, are determinations which should be made in every case where it is possible. The next things to consider are faults and impurities common to the various individual feeding stuffs.

(To be continued).

Effect of Sesame Cake Feed on Milk.

Complaints have been rife in dairying districts in Germany that the flavour of milk and the quality of the butter were being influenced unfavourably by sesame cake in the cows' rations. It was therefore decided to test carefully the effect of the cake. The trials were carried on for several seasons, and led to the following results :—

1. The yield of milk increased in a satisfactory manner by the addition of 2 lb. of sesame cake per cow per day. The further addition of 1 lb. per day did not further increase the yield.

2. The percentage of fat in the milk did not vary from that of milk from cows receiving no sesame cake.

3. The cheese made from the milk did not turn out well, as it developed a somewhat bitter taste.

4. About the quality of the butter there was a difference of opinion among the experts. The effect of the sesame cake remains therefore in this respect an open question. It would certainly be wise not to exceed the quantity of 2 lb. per cow per day, and to be careful that the cake is in good condition.

Superphosphate for Beans.

The bean crop does not require applications of artificial nitrogen, but phosphate of lime in the quickly-acting form of superphosphate is of great advantage to it. Thus in some experiments made by the Department of Agriculture, Cambridge University, it was found that the crop was increased by nearly 12 bushels by the use of superphosphate, and a mixed manure, of which superphosphate was the chief ingredient, produced a crop of 59 bushels per acre. Muriate of potash, when employed alone, seemed to have an injurious effect rather than to do good, but when combined with superphosphate it increased the average crop by about 2½ bushels. A suitable manure on clay soils (described as stiff boulder clay in the report) was found to be per acre—

4 cwt. superphosphate.
½ cwt. muriate of potash.

Rape Dust.

Result of Analysis.

The sample contained :—

Nitrogen	5·15
(Equal to ammonia	6·25)
Ash	16·90
(Containing sand	9·30)

"Rape Dust" is correct in the assumption that the sample contains an exceptional quantity of dirt; at the same time the percentage of nitrogen is up to the average. The vendor of the meal should have given a guarantee as to the percentage of nitrogen, and if he did not the purchaser should inform the clerk of his county council, so that steps might be taken to prevent this breach of the Fertilisers Act in future.

Winter Feeding of Cows.

The winter feeding of dairy cows is a subject upon which dairymen have to devote a great amount of attention, because upon it depends in a measure their balance at the bank.

As affording guidance in the matter, the general conclusions published by the Highland and Agricultural Society, arrived at as the result of investigations into the Influence of Food on Milk Yield, may be studied with advantage :—

1. A heavy allowance of concentrated food, of not less than 12 lb. per cow per day, may cause an increase in the milk yield as compared with a more moderate allowance.

2. The increase thus caused will be in a great measure of a temporary character, and is much more marked early in the lactation period than it is as the period advances.

3. Although a heavy ration will produce more milk at first than a moderate ration, there is a limit beyond which the ration cannot be increased with profit.

4. An allowance of as much as 12lb. per 1,000 lb. live weight per day may, as a rule, be regarded as excessive, having regard to profit.

5. When cows begin to fall off in their yield as the lactation period advances, an increase in the concentrated food does not check this falling off except temporarily; and conversely a decrease in the concentrated food under similar conditions does not cause a more rapid falling off in the yield.

6. With regard to the butter-fat in milk, it is doubtful, provided the cows receive a sufficient amount of concentrated food to keep them in good condition, whether an additional amount in the ration has any appreciable influence in increasing the percentage. The same applies even in a greater degree to the "solids not fat."

7. The morning milk of an average lot of cows, even when well fed, may frequently be under the standard in butter fat during the earlier part of the lactation period, when the day interval between milkings is shorter; an augmented ration of concentrated food causes but little improvement in this respect.

8. A heavy ration causes a greater increase in the average live weight of the cows than a moderate one, the gain being greatest towards the end of the lactation period, when the cows are falling off in yield.

9. The character of the cows has much more to do with determining the quantity and quality of the milk than the actual amount of concentrated food in the daily ration so long as the cows receive enough to keep them in a thriving condition, and it is a mistake to suppose that, once this limit is reached, an increase in the concentrated food results in a permanent increase and improvement in the milk. It may, indeed, have the opposite effect.

10. Finally, as the results obtained in the experiments indicate, a heavier ration of concentrated food may be employed with profit earlier in the lactation period than can be done as the period advances, it seems probable that the most economical method of feeding dairy cows, having regard only to the milk produced, would be to make the ration largely dependent upon the amount of milk the cows yield. In other words, the full ration should be given when the cows are in full milk, and as they fall off in the yield the allowance should be gradually curtailed until, at the end of the lactation period, it reaches the minimum necessary to keep the cows in good condition. It is difficult to say at present what quantity of concentrated food constitutes a full ration, further than that, having regard to profit, it is certain that it should not, on the average, reach as much as 12 lb. per 1,000 lb. live-weight per day.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in an early issue of each month.

Barley Cultivation.

The circumstance that the best sample of barley at the recent Brewers' Exhibition was of foreign growth created some sensation and served as an object lesson to our growers. Of recent years great efforts have been made in Bohemia and Bavaria to improve the cultivation and to produce a grain, which would give satisfactory results from the brewers' point of view. The points to which attention has been principally directed are :—

1. The choice of uniform seed.
2. The careful selection of the previous crop.
3. Thorough cultivation of the soil.
4. Judicious application of fertilisers.

It is recognised that uniform seed is a necessary condition for the production of good malting quality, and that the variety cultivated must be adapted to the soil and climate. For instance, in Bohemia, after trying the Chevalier and Imperial, the growers have gone back to the native varieties which require less moisture and ripen earlier. In the opinion of the local experts, the two English kinds can be grown with success only in heavier soils than they have at their disposal and in localities favoured with a plentiful rainfall during the period of the crops' growth.

In the choice of the preceding crop, the grower takes into consideration the condition in which it will leave the soil, and the proportion of nitrogen that will be left over. The barley crop requires a mild, loose soil, free from weeds, but still a soil containing a fair quantity of available plant food—thus, a soil in good condition, both physically and as regards nourishment. Looked at from these points of view the previous crop should be one requiring thorough working of the soil and liberal manuring, and it must be a crop that uses up a large proportion of the nitrogen supplied to it. It is important that the nitrogen left in the soil for the barley crop should be in right proportion to the mineral constituents, phosphate of lime and potash. An abundance of nitrogen is injurious to the barley as it produces a grain rich in nitrogenous substance and poor in starch, a quality which does not suit brewers. For this reason, clover, lucerne, and similar crops which collect nitrogen are avoided. Sugar beet is considered one of the best crops to precede barley, as the soil is thoroughly well worked and manured for the crop, and it uses up a large proportion of the nitrogen applied.

The barley crop requires that the soil should be thoroughly well prepared for the seed. It must be ploughed deep in the autumn, but not spring ploughed, so as to preserve in the soil the moisture necessary for the crop. As regards the application of fertilisers, farmyard manure is not applied direct ; it is too slow for a crop which is in the ground a short time, and the organic matter in the manure is not desirable. The most appropriate manures are found to be superphosphate and kainit applied about three weeks before the seed is sown ; if the land is at all heavy the kainit is replaced by a more concentrated form of potash, sulphate of potash. If the crop is backward a little nitrate of soda is applied, but in small quantities of about 40 lb. to the acre at a time, as required by the appearance of the growing plant.

Water and Plant Foods.

It is important that the soil receive a sufficiency of moisture or the crops will not thrive. Soluble fertilisers dissolve in water, but all fertilisers are not alike, some requiring more water than others before being taken into the bodies of plants. An average corn crop requires about 700 tons of water per acre, the potato crop 625 tons, oats 600 tons, other crops also requiring large quantities. It is estimated that 2,000 tons of water fall upon each acre during the year in this region, and no fertiliser or manure can give satisfactory results unless the soil contains a sufficiency of moisture. It is important, therefore, that all crops receive careful cultivation, so as to conserve the moisture in the soil, the harrow or cultivator, after each rain, being efficient implements for destroying robber weeds and assisting to render plant food more useful and valuable.

In one week an acre of ground in July loses 9 tons of water, says an experimenter. It takes 309 tons of water to make one ton of dried matter in corn. It takes 422 tons of water to make one ton of dried matter in potatoes. Decayed matter will hold water better than anything else. One hundred pounds of sand will hold only 22 before it runs out ; 100 lb. of clay soil will hold only 10 ; 100 lb. of humus (decayed matter in our soil), 84 lb. of water. It takes the humus to make things grow ; it is wetter in dry weather and drier in wet weather. Our soil is wasting its fertility by losing its heat. Bacteria will only grow between 54 and 96 deg. of heat.

Farmyard Manure.

The most valuable part of the manure heap is the rich dark liquid that drains off it. We cannot too often remember that every pint of drainage represents a waste of money, and after heavy rain on an unprotected heap the loss is serious. As has been pointed out, if a child loses a halfpenny it is scolded ; if it should lose a shilling quite a fuss is made ; and yet many farmers do not bother their heads about the large amounts that are yearly lost by careless management of the manure heap.

Nitrogen Loss in Mixtures.

It is well known that if nitrate of soda is mixed with superphosphate or any other fertiliser that has been treated with acid, chemical action is set up resulting in the loss of valuable nitrogen ; but the serious character of the loss is not appreciated. Farmers sometimes mix the two ingredients together and do not apply the mixture at once ; we have heard of cases where a farmer has got a manufacturer to make the mixing for him with the intention of using it directly, but circumstances have prevented the operation, and the mixed manure when finally applied must have been of very poor quality.

In some experiments to ascertain the extent of the loss in such mixture, it was found, when the mixed material was stored for some weeks in bags in a warehouse, which happened to be rather damp, that the effective loss was 60 per cent. of the nitrogen, and in other trials of a shorter time the loss varied from 6 to 24 per cent., according to the age of the superphosphate.

Gypsum is sometimes added to such mixtures in order to improve their condition and to lessen the danger of loss, which it does to a certain extent, but the best course is to avoid such mixture altogether. The nitrate of soda and superphosphate should be applied separately, and if it is desired to dress the crop with a combination of nitrogen and phosphoric acid, it is better to use a safe mixing, such as sulphate of ammonia or nitrogenous guano and superphosphate.

Poor Quality.

At the meeting held last week of the committee of the Highland and Agricultural Society, the chemist to the society submitted his report.

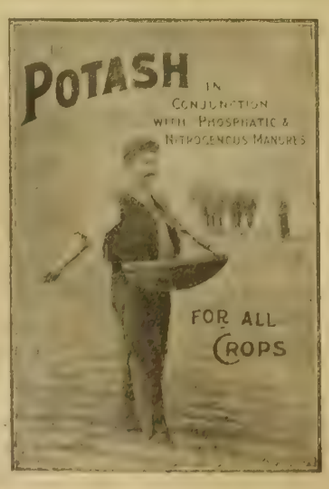
As on previous occasions, deliveries of lime were unsatisfactory in several instances. One parcel sold as containing 70 per cent. caustic lime tested only 60·8 per cent.

Another sample showed 62·9 per cent , and a third sample not more than 41·9 per cent., a very poor quality.

Ground Bones.—This was a mixture of steamed bone flour, ground corn, and finely-ground bone. It had a composition resembling bone meal, and was much more finely ground than is usual with bone meal. Scotia Slag.—This sample was not well ground. Only 69 per cent. passed the standard sieve. The solubility, on the contrary, was high—over 91 per cent. Linseed Cake.—This sample was sent as a linseed cake, but was a mixed or composite cake containing niger and rape seed, as well as linseed. It also contained cereal offals and flavouring materials. Dairy Meal.—This meal was guaranteed to contain 8 per cent. of oil. It was found to contain 7 per cent. It was a very ordinary mixed food, without any special qualifications as a dairy meal.

How to Test Seeds at Home.

The crop is dependent on the purity and germinating power of the seed, and farmers cannot be too careful to make sure that the seed supplied to them is satisfactory in both respects. The operation of seed testing is now carried out at most agricultural institutions, but a farmer can make a simple test at home in the following manner :—



Strips of cotton-flannel, first sterilised in boiling water to destroy any fungi which might be present, should be folded twice and placed in a dinner or soup plate. The seeds are then laid between the folds of flannel, so as not to touch each other, and a second plate put over the first, thus forming a moist receptacle. The strips must be kept well moistened, but not saturated—preferably with water that has been sterilised by boiling and allowed to cool. Two or three lots of seeds may be tested in the germinator at one time, but each lot should be contained in a separate slip and numbered to avoid error.

How to Do It.—A definite number of seeds taken as they come from an average sample are counted out for each germination test. For seeds in rather small lots, as garden seeds, fifty to one hundred will answer, while for cereals, grasses, clovers, and others used, in extensive cultural operations, about two hundred should be used and the tests duplicated when any doubt exists about the results. The tests should be examined from day to day, and the sprouted ones removed and counted, the number being recorded on a sheet of paper.

The length of time required for germination is dependent upon several factors, chief of which are moisture, temperature, vitality, and varietal differences, six to ten days being sufficient for most kinds. When tests are made during the winter or early spring months, at which time it is usually most convenient, the germination should be conducted in a moderately warm room, so that the temperature will not fall below 50 deg. Fahr. at night and remain between 70 deg. and 80 deg. Fahr. during the day. In the case of lucerne and certain other of the clover family, a small percentage of the seeds will remain apparently sound at the close of the germination test. Allowance is usually made for these, one-third being counted as viable—*i.e.*, capable of growth.

The Purity Test.—The careful farmer will often find it desirable to make the purity test for seeds. For this purpose a definite quantity of seeds by weight is taken from an average sample and separated by hand into the following lots :—(1) pure seed of the variety desired ; (2) inert matter, including dirt, chaff, injured seeds, &c. ; and (3) foreign seeds, including weed seeds. The amount of pure seed in a pound or bushel is now easily estimated, and after its germination test has been made, the planter knows its exact value. By the purity test, also, the introduction of noxious weeds will be lessened, since one will not knowingly sow foul seed, and samples suspected of containing harmful weed seeds should be referred to the experiment station.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

KAINIT,

SULPHATE OF POTASH,

MURIATE OF POTASH

FOR ALL CROPS ON ALL SOILS.

CHEMICAL WORKS late H. & E. ALBERT,

15, Philpot Lane, London, E.C.

"HAMPEL" MANURE DISTRIBUTOR

Can be used for sowing **Basic Slag, Superphosphates, Kainit, Ground Lime, Bones, and all kinds of Artificial Manure.**

The advantages are **Equal Distribution, Lightness of Draught, Simplicity of Construction,** thereby requiring little repairing and ensuring easy cleaning and **capability of adjustment** for sowing all kinds of manures.

The handling is very simple, no other assistance being required beyond that of the driver, and one horse will pull it with perfect ease.

No. 3 Sowing 8 ft. wide, £11
No. 4 Sowing 6½ ft. wide, £10
If with arrangement to transfer wheels from ends to sides for narrow lanes and gateways, **£1** extra.

J. & H. KEYWORTH & Co., LIVERPOOL.

THE
WIREWORM
has had its day where **VAPORITE** is used. No worm or insect pest can live in a soil treated with **VAPORITE.** It is the simplest, safest and surest exterminator of crop destroyers. Just scatter lightly over the soil and plough or dig it in. Harmless to plant. Deadly to pests. *Send for Booklet No. 10a*

"THE SUPREME POINT OF ECONOMY."

To Reach the Supreme Point of

ECONOMY IN FATTENING

Two Main Factors are necessary: The BULLOCK and the FEED.

As a PRACTICAL STOCK-FEEDER YOU have probably selected a first-class fattening breed. That being so,

As EXPERIENCED FARMERS, and SPECIALISTS IN FEEDING STUFFS, WE HAVE A COMMUNITY OF INTEREST WITH YOU. It is of course your desire to fatten your beasts upon the lowest possible expenditure.

THAT MEANS the time occupied must be reduced to a minimum.

THAT MEANS the Feeding Stuffs must be rapid in their results.

THAT MEANS the actual money spent must be hammered down to the bedrock limit, consistent with quality.

SILCOCK'S FATTENING CAKE,

Because it embraces these THREE PRINCIPLES, may accurately be termed "CONCRETE ECONOMY" IN FATTENING. These compounds are the product of long years of study of the Science and Practice in the Art of Cattle Fattening.

Their success is evidenced by the THOUSANDS OF SATISFIED USERS who have helped to build up the TREMENDOUS OUTPUT we are now doing.

YOU have this further DOUBLE ADVANTAGE.

WE guarantee every bag, and we protect you from contingencies by binding ourselves to pay **three times** the value of any deficiency that may be found, and we are so confident of your future experience that we merely ask you for

A TRIAL ORDER. WE SHALL ABIDE BY RESULTS.

HEAD OFFICE: **R. SILCOCK & SONS**, STANLEY HALL, UNION STREET, LIVERPOOL.

EGGS IN WINTER.

You will get a supply of Eggs from your Hens and Pullets in Autumn and Winter by feeding them each morning upon

MEALEGG,

Smith's Poultry Laying Meal,

11s. per cwt. at any Station in England for Cash.

Numerous unsolicited Testimonials.

OUR SLEEPY SOCIETIES.

I.

This being the time when the agricultural societies are most awake appears to be the best chance of asking them if they cannot take some useful preparation which will keep them on the alert throughout the year. The twin attractions of Guy Fawkes Day and the Lord Mayor's Show suffice to invest the first ten days of November with a strange charm, so that within that brief period we see the Farmers' Club, the Central Chamber, and half a score of county and local chambers all once more upon their feet and holding meetings. On Thursday even the Pony Society awoke from a repose, which had endured since June 6, and cantered merrily round Hanover Square.

Our chief appeal would be to agricultural organisations to throw off a somnolence which deprives them of all power during the critical period of the Parliamentary season, the period when agricultural measures assume their final form, and for good or evil are made or marred. At present what happens? No sooner has the agricultural public come away from the show-yard of a happily rejuvenated "Royal," than the Central Chamber emulates the dormouse and the Farmers' Club ceases to shed enlightenment from its erudite papers and intellectual debates.

The idea, of course, is that from early July to the completion of wheat sowing and root raising the agriculturist is too busy to attend to societies. Now if this idea could be enforced on the general world it might be well enough; but while the Central is hybernating, the Farmers' Club an absentee from the Whitehall Rooms, and the hundred or more of small local organisations and chambers all in the land of Nod, the Government of the day is busy defining milk as a solid, butter as a preparation from horses' hooves, or bread as an ingenious combination of maize and rice-flour. We do not say that the sespecific definitions have yet been made statutory, but they might have been for all that our watch-dogs would have known. The industrial and commercial interests are always on the watch.

The nature of our political life is such that there are two main periods of legislative and enacting activity in every year. The first of these is from the middle of July to the third week in August, when even the Labour leader is yearning for his grouse moor, and the Bills which from mid-July had been debated daily are either dropped or passed. The second is from the rising of Parliament to the return of influential people to town in November. It is in this second period that the Government offices are active, issuing orders, publishing blue books, promulgating orders, and generally taking advantage of the fact that Parliament will not meet again till February, and that critics may be supposed to be out of town. It need hardly be said that we do not defend, far less admire, this procedure. The Dog Days are not those best fitted for the crisis of legislation, and all important actions of the Government offices should be put through in time to be made the subject, if necessary, of discussion at Westminster. We have, however, to live in the world as we find it, and we venture to suggest that the agricultural societies might observe the same conditions.

The Central Chamber should be in more or less permanent session while Parliament is sitting, and the Farmers' Club, with the rare advantage of its rooms being at Westminster, should be the rallying point of the agricultural interest during the same vital period. Agricultural representatives should be able to consult from day to day with small committees of experts knowing the details

of the particular Bills under discussion. When there arises that situation, so distinctive of England with its worship of Compromise, when a settlement is proposed between Liberals or Conservatives, or between Lords and Commons, the agricultural M.P.'s or peers who have been watching the Bill should be able to call a representative meeting of agriculturists to decide promptly whether or no the settlement was—

(i.) Acceptable.

(ii.) Workable.

A step in the right direction would be the appointment by the Central Chamber of small permanent—or rather sessional—political committees, which in cases of technical discussion should have power to associate with itself the best men on the particular issue.

The watching the procedure and orders of Government departments might well form the work of a separate committee, which should be so far plenipotentiary as to be able to object in the name of the Central Chamber, of the Farmers' Club, and of agriculturists in general to any unwise or untoward step.

So much for the moment of somnolence on the political side. We shall hope soon to be considering the sleepy show societies and their failure to organise success.

MASTERS—MEN—IMPLEMENTS.

III.

IMPLEMENTS.

That "a bad workman finds fault with his tools" is undoubtedly often correct, be the tools or implements never so good. To find a good master, good men, and good implements all on one farm is, ordinarily, an unusual occurrence.

As already stated in my first article of this series of "Masters, Men, Implements," "Masters must have a good supply of implements." But the word "must" often has to give way to "ought," and this latter to the still further lower scale of having but very few, and even these of an almost valueless kind.

In speaking to a friend of mine a little while ago, I asked his idea of how it was that, when both implements and horses kept getting in a worse state on a farm, the occupier kept his head above water at all? He replied that he (the occupier) was living on his capital. This is undoubtedly correct: money that should be spent on necessaries for the land is kept for the grocer and other such tradesmen.

It is a very pitiable sight to see the little struggling farmer struggling with his struggling implements but almost non-struggling horses. [Horses are here classed as "implements," but there is soon whoa! or woe to the men who use them as such. Be careful with and thoroughly attend to them, by all means.] Yes, there can be but little chance for the poor fellow who cannot afford to keep his things in proper working order. Bad times, perhaps a delicate wife and two or three ailing children, or, worse still, bad land at a high rent, have pulled him down the hill.

Now we will take a sad leave of the poor, old, untidy, and unreliable jimcracks, and proceed to the neat master's place where, without being at all reckless, he has nevertheless been very wise in his selection of, perhaps, mostly new and good implements. On such a farm a day's work can, as a rule, be relied upon; anyhow, it is not the fault of the tools in use. Accidents happen, we know; but an accident is absolutely different from a known defect not made good. The difference is as daylight and darkness in comparison.

The "man with money" generally goes to the agricultural engineer and buys the best of the best of all. This is only the position of those who live in the Land of Goshen, or in that locality: we have not many such in Essex. But it is indeed a pleasure to see such capital things at work. Do not buy often if you can help it, but be sure and buy good if you anyhow can.

Now some general remarks on the ordinary usefulness or otherwise of the things a farmer requires to efficiently carry on his business.

Horses are "implements" as far as they can be, good creatures; but, as stated before, be sure you do not use them in any such way. Good, willing ones should be kept; or, if not, the best should be had as far as one's means will possibly allow. To get in debt is almost certain failure in the end. Always keep an eye to the horses' shoes, and see the animals are efficiently shod too.

As to machines. I remember the old "horse-power," as we used to call it, coming to our farm. Many of your readers no doubt remember them too—to their sorrow, perhaps, as far as hard work for the horses was concerned, but it was the best machine then, and we were fairly content to use it. But, oh! What a mess! Corn and chaff nearly all in one heap. (How differently done now).

Then there was the flail. Many and many a day I have heard it going. Old-style scarifiers, ploughs, and lots of other things are now almost obsolete, and a good thing too.

Steerage drills are better for horses, man, and master than those with shafts. The only slight drawback is that, in turning so sharply as has to be done, the land is turned up a little by one wheel. I do not see how this is to be remedied.

Ploughs are an all-important item. If the plough is not properly handled, what other implement can do its work well after it? Different lands, different makes and weights.

Zigzag harrows are well known as the proper ones to generally use; crome, &c., are excellent too.

Three cylinder rolls are also much to be preferred to those with only two.

On horse-hoes opinions vary a great deal. Simplicity and efficiency can very well go together; some folks think you must have a formidable fore-carriage filled with almost innumerable tools or the crop will not be properly freed from weeds. It is not always so by any means. A plain little hoe used by a good little man and the nasty little weeds will quickly die.

Horse-rakes, drag-rakes, and wood rakes take their turn in the year's work. After the toppler the horse-rake is next best, and if a hand can be spared in hay-time, let him have a drag-rake and keep level with the wagon, if there are not sufficient men or wagons to keep a horse rake going.

Wagons and carts should not be too heavily built; heaviness does not mean strongness.

Harness cloths, hurdles, sacks, &c., it is best to buy new, as a rule, when starting farming.

If the tenant has money to spare and is fairly sure not to want it, he can purchase such implements as hay-shakers, manure distributors, and so on, and can also erect hay and corn sheds of iron; most of this class of implement and convenience may be handy, but at the same time certainly not a necessity.

If an occupier has a 300 or 400 acre farm, it is much better to buy a thrashing machine than to lay money out on things he can more conveniently do without. There is generally work to be had at one's neighbours. Since farming has been at a low ebb, the great difficulty sometimes is to get the threshing bill settled, it is true; but, as a body, it seems to be a generally admitted fact that farmers are a very fairly honourable set of folks.

In conclusion, my advice is to be careful to try and purchase such implements only as are suitable to your occupation, and when you buy pay at once if you possibly can. The year's discounts will in all probability pay for your Christmas turkey, if you care to have one, and something to spare for a little of that "that maketh glad the heart of man." J. B. M.

THE FARMERS' DIARY.

TUESDAY, NOVEMBER 12.—Whitchurch Dairy Show, first day—Special Autumn Sale of Horses at Salisbury—Sending-in Day for Ashford Cattle and Fat Stock Show—Fairs at Chelmsford, Lynn, and Douglas.

WEDNESDAY, NOVEMBER 13.—Whitchurch Dairy Show, second day.—Downham Special Cattle and Sheep Market—Denbigh Special Sale of Pigs—Edinburgh Great Agricultural Fair, "All Hallow's Day," Old Style—Wolverhampton Horse Sale—Fairs at Dunstable, Leek, Kingston, and South Shields.

THURSDAY, NOVEMBER 14.—Great Horticultural Show at Edinburgh (and on the 15th and 16th inst.)—Special Sale of Heavy and Agricultural Horses at Wimborne—Ploughing Matches at Lyndene, near Penistone—Sending-in Day for Yorkshire Fat Stock Show at York—Special Sale of Sir Gilbert Greenall's Pigs at Walton Hall, Warrington—Special Sale of Store Cattle at Dublin—Fairs at Carmarthen, Ulverstone, and Uttoxeter.

FRIDAY, NOVEMBER 15.—Bolton, Huddersfield, and Sheffield Horticultural Shows—Special Sale of Heavy Horses at Lynn—Special Pig Market at Carmarthen—Fairs at Lincoln, Yeovil, and Biggleswade.

SATURDAY, NOVEMBER 16.—Fairs at Lancaster, Malton, Durham, and Kendal.

MONDAY, NOVEMBER 18.—Sending-in Day for Preston Cheese Show—Sending-in Day for Wadhurst Stock Show—Nuneaton Great Horse Market—Special Live Stock Market at Welshpool—Fairs at Andover, Bridgnorth, Darlington, Horsham, Rugby, Boston, and Stamford.

Notes of the Week.

Colder and drier weather may be expected is the forecast of the weather wise. So may it prove to be.

The leaves are falling fast from the trees. As Walter Scott wrote—

"November's sky is chill and drear,
November's leaf is red and sear."

The plough is now busy over a wide tract of the country—

"One ploughs, another sows,
What the harvest, no man knows."

The same old story, said a magistrate the other day as he listened to the usual excuse of a grocer who sold margarine for butter, and was fined 10s. and 14s. 6d. costs.

The same old story, and the same old inadequate fine.

Another Irish grievance.—Nobody knows, writes an Irish paper, the amount of margarine sold as Irish butter. Nobody knows how many inspectors in English cities are in the pay of the fakers, or how many millions we lose by it.

"What does John Burns know about a cow? I question whether he knows the head of a cow from its tail," said a speaker in a discussion on the coming milk legislation.

"We must educate him," said another speaker.

"Come hither, Burns, my little boy,
And throw away that silly toy,
This cow inspect that you may know
Its character from top to toe."

"Please, sir," said Burns, "I'm not a wit,
And can't make head or tail of it."

The cow is a useful animal, said a little school essayist. "It gives us milk in summer and butter when it freezes."

And of a horse another wrote: "The horse is a noble animal which stands on four legs, one at each corner; when irritated it ceases to do so!"

In London there are about 12,000 shops where milk is sold.

It is risky to drink raw milk, say some doctors, but according to the *Lancet* there is real danger of contagion in a pack of cards. "After being used over and over again they become hotbeds of microbes."

The Bank rate of 7 per cent. is a factor of "interest" to many people.

Coming agricultural events for next year are beginning to cast their shadows ahead.

The Royal Agricultural Society's next meeting at Newcastle is being discussed. It will receive a fresh impetus from the great success at Lincoln.

Arrangements are already being made for the next International Horse Show at Olympia. It will be a really International Exhibition, and attract competitors from all parts of the world.

"All's well that ends well" may be said of the termination of the railway crisis.

We can now rest in peace without the fear that our supplies of Christmas cheer will be cut off.

Poor old Guy Fawkes! He is in a moribund condition. The Fifth of November used to be an

event in the country, but its honour has departed from it. R.I.P.

The movement towards a real independent agricultural party is going ahead. Every farmer should give it a push forward.

Agriculture in politics will become a factor to be reckoned with.

County Unions, such as the Lincolnshire Farmers' Union, form an ideal basis for the advancement and support of the movement.

The failure of the crop over a huge district of India is sad to contemplate. It means, according to the reports, that about forty-five millions of people will be starving.

Famine is also stalking through wide provinces of Russia.

While we in England are apt to grumble if the cost of living moves up a little.

Birds are vermin, in the opinion of the Scottish Chamber of Agriculture, which urges legislation for their destruction.

The dense fogs of London are to be made the object of an experimental attack by bombardment with cannon 60 ft. long.

The week of the Smithfield Fat Stock Show is the usual time for the visit of the thickest fog. Visitors would not be sorry to miss the "London particular."

The Salvation Army has won the thirty-guinea cup at Norwich Poultry Show. Its hymn was a lay.

It is reported that the hens engaged in the great international egg-laying contest are acting up to their expectations.

They are laying eggs, and it is said some of the owners are laying odds on their birds.

The "Nantes Butter and Refrigerating Co." propose to send to England 250 tons of butter weekly. It is a sign of *l'entente cordiale* that British farmers could dispense with.

Germany may be called the home of the brewery trade. There are about 51,000 breweries in the world, and of these 26,000 are in Germany.

One of the first books treating scientifically of brewing was entitled "On the Divine Noble Gift, the philosophical highly dear and wondrous art of brewing beer."

CATTLE.

THE OX WARBLE FLY.

An interesting and instructive paper entitled "The Ox Warble Fly: Best Means of Prevention and Remedy," was read at the recent meeting of the Gloucestershire Chamber of Agriculture by Mr. Drysdale Turner, Director of Agricultural Instruction for the County. For some time, he said, it had been known that these warbles in the backs of cattle were caused by a fly (the *Hypoderma bovis*), which deposited its eggs on the hide during the previous summer. It was also considered that the egg was placed either on or just below the surface of the hide, was quickly hatched, and the young maggots made their way under the skin, locating themselves along the back of the animal. Doubt had been felt, however, for some years whether the soft ovinositor of the above fly, as described by Miss Ormerod, was able to pierce the hides of cattle, or whether the soft young maggots, as hatched, were able to gnaw their way to the under surface.
